The CHAIRMAN said it was not necessary for him to enter into any explanation, nor make any observations on the present occasion, further than to assure the shareholders that the minds of the Directors were unchanged on the importance and advantages of the Stafford and Rugby line of railway, but such was the state of trade, and the present prospect of the times, that the Directors did not think it expedient to go forward with the undertaking at the present moment. Mr. Wheeler would, however, read the report drawn up by the Directors, and then leave the shareholders to judge for themselves.

Mr. WHEELER then read the following

REPORT.

"The present meeting has been called by the Directory, under that clause of the subscribers' agreement which authorises the Board to call a general meeting of the subscribers, and provides that the majority of the persons present at such general meeting (to consist of not less than forty persons, holding in the aggregate 3,000 shares in the Company,) should have full power to determine whether, and upon what terms and conditions, the undertaking should be abandoned, and the Company dissolved, and the affairs thereof wound up, and to make such provisions for those purposes as to such meeting should appear expedient.

"It is not the intention of the Directors to advert to the circumstances attending the defeat of the bill submitted to parliament in the last session.

"Looking at the present condition of railway property in general, and the unexampled depression under which the trade of this district is now labouring, they are of opinion that it is not desirable immediately to renew the application to parliament for power to construct the line. But, retaining their conviction of the value of a railway through the Trent Valley, and wishing, at the same time, to consult the convenience of the shareholders, they recommend that the unexpended funds of the Company be distributed, and that all further proceedings be postponed until a more favourable state of circumstances shall warrant the shareholders in authorising the prosecution of the undertaking. In the mean time, it will be satisfactory to the shareholders to be apprised that no new expenses will be incurred, and that their liability will be determined upon the receipt of their proportions of the balance of the Company's funds."

JAMES BURT, Esq., moved the first resolution:

"That the report now read be received and printed for distribution, under the sanction of the provisional Directors."

Dr. ASHTON seconded the resolution without remark.

The CHAIRMAN said if any gentleman had anything to say on the resolutions he would be most happy to hear him.

Mr. BAKER wished to know what responsibility attached to any of the shareholders if the resolutions read by Mr. Wheeler were adopted. In those resolutions it was proposed that the Company be not dissolved, although they were not to go on with the undertaking.

Mr. WHEELER explained, and said that the very act of a shareholder receiving back his money absolved him from all further responsibility, as by the deed of settlement it was necessary for the shareholders to meet previous to any session of parliament, in order to give the Directors authority to act with regard to any application to be made to the said parliament. The resolution was passed unanimously.

Mr. G. R. CHAPPELL moved the next resolution.

"That it is not expedient to abandon the undertaking; but that, in pursuance of the recommendation of the Directors, the unexpended funds be distributed amongst the Shareholders, and the further prosecution of the undertaking postponed."

In moving this resolution he did think it necessary the Directors should give some explanation why they did not wish to dissolve the Company. The Company had been at a very great expense in getting up plans and making surveys for the line, and if they were now to dissolve, and give up their right to these plans and surveys, any other Company might avail themselves of the result of their labours, and adopt all the plans and surveys which had been got up with such care and at so great an expense to the Company. These plans, by such an act, would become the property of any other Company that might be formed for carrying out the line. He did, therefore, think it was necessary to maintain the right of possession to these plans by keeping the Company together in its original state of formation—perhaps it would be but proper in him, as one of the Directors, to say a few words with regard to Mr. Tootal, to whom he was sure the shareholders were much more indebted than to any other man. It would be in the recollection of many gentlemen that when this Company was first formed, Mr. Tootal pledged himself that the expense incurred should not be more than five shillings on each share, and he (Mr. Chappell) was glad to say that that pledge had been fully redeemed. It was true they were defeated, and that defeat was accomplished by the shareholders of the Grand Junction line; for they well knew that if the Stafford and Rugby line was obtained, it would deprive them of an enormous traffic, which they would otherwise receive. Notwithstanding their defeat, he thought the best thanks of the Company were due to Mr. Tootal, for the very active, persevering, and economical manner in which he had conducted the affairs of the Company. (Applause.)

The resolution was seconded by Richard Birley, Esq., and passed unanimously.

On the motion of the Rev. Mr. Molyneux, seconded by Mr. P. F. Willert, John Hyde and Edward Langworthy, Esqrs., were appointed Auditors of the accounts of the Company.

EDWARD TOOTAL, Esq., rose to return thanks for the honour the shareholders had done him by the kind manner in which they had received the mention of his name. He was not prepared to address them on that occasion, however singular it might appear. He would, however, endeavour to speak the real sentiments of his heart, which, he would assure them, were still unchanged as to the importance of the undertaking He had been very peculiarly situated, both in his connection with the Stafford and Rugby and the Extension lines of railway. He had been personally brought into contact with an immense number of landowners, through whose land these lines were to pass, as well as with a very great number of members of Parliament, and although they had lost their undertaking, the Company had still maintained their honour with every gentleman with whom they have had the slightest dealings, during the whole of their proceedings. Indeed, there was not a single person with whom he came in contact that would not speak well both of the Company and himself. One thing he might say, and that with the most perfect confidence, that if he had served himself as he had served the Company, he would have been much better in his own circumstances, and if he had served his God as he had his brother shareholders in this undertaking, he might at least say he was a good Christian. He was aware of the great responsibility he had taken upon himself, and he was proud of the honour that day conferred upon him by the shareholders, in thus warmly expressing their feelings, and unanimously testifying their approbation of his efforts to promote the undertaking. He regretted exceedingly that he had not succeeded in accomplishing the object sought in the last campaign, but this failure was not attributable to any lack of exertions on his part, or the part of the Directors. There were many matters connected with their defeat, and the parties by whom they were opposed, but he did not think they were worth explanation at the present meeting. As the shareholders were aware, an undertaking of so extensive a nature must be attended with great outlay of money, yet he must say that everything was done that could be done to keep down expense as much as possible. He was not aware of a single case of dissatisfaction or complaint that was ever made by any person with whom he had to transact business, and that circumstance alone repaid him for the many sleepless nights he had passed, during his connexion with the directorship of this intended railway. It was, indeed, a consolation for him to know that the Company had left a good name behind them. In some of the railway papers (and he confessed he did not read those papers with as much interest as he used to do) he observed that at a meeting at Tamworth some time ago, Sir Robert Peel freely expressed himself in reference to this Railway and the obstacles that had been thrown in the way. Sir Robert Peel says "There have been few occasions on which your local and peculiar interests have been brought under the consideration of parliament; but when they have, I have not permitted either private avocations or public business to interfere with my attention to those interests which affected your local concerns. I may not have been successful—I allude now to the measure for the facility of communication by railways. The combination of powerful parties with railway companies and canal companies may have defeated the measures which I thought you were entitled to expect. (Cheers.) But at any rate it was not my fault. I gave, notwithstanding the pressure of public business, the utmost attention to them, because I thought the public interest would be advanced by them, and your local interests also promoted. In our late contests for this important line of railway, many remarks had been made by parties who might fairly be supposed to be capable of judging, and most of the opinions delivered were strongly in favour of our favourite project. He happened to have been in London on one occasion, where he met with Mr. Saunders, who was one of the most intelligent men connected with railways, and he, amongst others, very warmly expressed his approba-

Digitized by Google

tion of the undertaking. This gentleman was examined before the committee of the House of Commons, which sat some time inquiring into matters connected with railways; and in a report of the proceedings of that committee Mr. Saunders is asked many questions by Lord Granville Somerset, and amongst other things in reference to the Stafford and Rugby line, he says:—"Take a case which was submitted to Parliament this year; a proposition to unite a portion of the Grand Junction with a portion of the London and Birmingham Railway, whereby it was presumed that a saving of nine or ten miles in distance might be effected; supposing the railway to have been formed, would it not have been in the power of the Grand Junction and the London and Birmingham Companies to have completely neutralised the accommodation which that shortening of the distance otherwise might have afforded to the public?—I do not think so; it is possible that, during a period of hostility between parties, they might be blind to their own interests, and they might act at that moment upon false views; but I think if that railway were made, it is so manifestly the object and so palpably the duty of the London and Birmingham Railway to get all the traffic they can upon their line, that they would immediately come to an arrangement which should bring to them that traffic, and that when it was brought to them they would conduct it in the best possible manner. I think that branch railways, come from where they may, must be looked upon as beneficial to the trunk railway. In the case of the Stafford and Rugby Railway, at the present moment, it is obvious that the London and Birmingham would rather receive all their traffic from the Grand Junction at Birmingham, and carry it along the whole line, than receive it partly at Birmingham and partly at Rugby; but the moment the line was made, which left it no longer a matter of doubt whether the Manchester, Liverpool, Wales, Ireland, and Scotland people would go by one line or the other, the London and Birmingham Company would instantly see that they must make arrangements to receive the traffic, and conduct it in the best style; I cannot conceive that they could take any other course. As to the result of the undertaking, had they been successful in their application to Parliament, he had no doubt it would have been a most profitable speculation, and would have realised at least 15 per cent. to the shareholders. Again he begged to thank the shareholders for the kindness they had that day shown him, and he assured them that their approbation was a sufficient reward for all his exertions to promote the accomplishment of the Stafford and Rugby Railway. (Applause.)

Mr. G. R. CHAPPELL said, he thought it ought to be known to the shareholders that, during the whole of the time this question had been before Parliament and the country, none of the Directors ever received a single farthing but their expenses.

Mr. RAWSON wished to know whether, in the event of a portion of the present Company joining themselves with other parties, the money received for the plans would go to them, or be divided amongst the whole of the present shareholders.

Mr. WHEELER satisfactorily explained this question by stating, that all or any moneys received for the plans of the present Company would be equally divided amongst the present shareholders.

Mr. TOOTAL said, that from some observations which fell from him, some gentlemen might be led to think that he would again exert himself in the formation of new Railway Companies, or in promoting their establishment, but he begged to assure them that no earthly consideration could induce him ever again to take any part in railway proceedings.

The CHAIRMAN said, as one of the Directors of the Company, he must tender his thanks to Mr. Tootal for the very active and unremitting exertions he had used in this undertaking.

Thanks were then voted to the Chairman, and the meeting separated.—*Manchester Chronicle*, Aug. 11.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* WALKER AND ANOTHER, AND THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

Midland Circuit, Warwick, 7th August, 1841.—This was an indictment against the Birmingham and Gloucester Railway Company for a nuisance. The bill was found at the January sessions, and having been removed into the Court of Queen's Bench by writ of certiorari obtained by the Defendants, it came down to be tried on the Civil side.

Mr. Serjeant Goulburn, Mr. Humfrey, and Mr. Daniel appeared for the Prosecution, and Mr. Hill, Q.C., Mr. Clarke, and Mr. Spooner for the Defendants.

It appeared that the Company had erected a bridge for the purpose of carrying their railway over Montpelier-street, at Highgate, near Birmingham, which street it crossed nearly at right angles. The 46th section of the Company's Act of Parliament provides "that where any bridge shall be erected by the said Company for the purpose of carrying the said railway over or across any public carriage road, the span of the arch of such bridge shall be formed, and shall at all times be and be continued of such width as to leave a clear and open space under every such arch of not less than 15 feet, and a height from the surface of the road to the centre of such arch of not less than 16 feet, and the descent under any such bridge shall not exceed one foot in 13 feet."

By the 48th section of the same Act it is provided that "whenever the said railway shall cross any public footpath not on a level, the said Company shall raise or lower the said footpath so as to preserve an ascent or descent, as the case may require, of not more than one foot in 13 feet."

The span of the bridge in question over the carriage way was 16 feet, being one foot more than the span mentioned in the Act, but about four feet less than the original width of the road. The Company had at first intended to obtain the required height of 16 feet under the arch by lowering the surface of the road, but at the request (as was stated) of some of the neighbouring inhabitants, who apprehended inconvenience from such a declivity, they had only lowered the road about seven feet, leaving a headway of 10 feet 8 inches.

When, however, the bill of indictment had been found against them, they excavated the road about five feet more, but not (it appeared) sufficiently by about six inches, to give the full height of 16 feet. This excavation rendered it necessary to build retaining walls of 96 yards in length, to support the footpaths on each side of the carriage way, the thickness of these retaining walls being an encroachment on the original width of the carriage way till they reached the bridge. At first no provision had been made for the footpaths, but subsequently the piers of the bridge had been cut through, and the footways had been carried through them, descending under the railway by steps, and ascending in the same manner on the other side.

Mr. Serjeant GOULBURN opened the case on behalf of Mr. Unett, the prosecutor, the proprietor of an estate in the neighbourhood, and contended that the Company were bound to preserve the road of its original width, and had no right to contract it by means of their bridge. That the width of 15 feet mentioned in the Act, was a provision only applicable to cases where the road had been originally of no greater width, or of less width than 15 feet, and was the minimum, not the maximum width which the Company were bound to leave. That the Company were not justified in lowering the surface of the road, but ought to have obtained their height of 16 feet from the surface of the road to the centre of the arch, by taking the railway across the road at a higher level. That with respect to the retaining walls, they were an encroachment upon the approach to the bridge, and were not justified by the Act; and, with respect to the footpaths, the Company had no right to contract their width where they were carried through the piers of the bridge, nor to carry them underneath the railway by means of steps.

Mr. Justice PARKE, on the counsel for the prosecution calling Mr. Hornblower, an architect and surveyor, of Birmingham, as the first witness, suggested that the case appeared to be a question of law upon the construction of the Act of Parliament, more than a question of fact, and inquired if the facts could not be agreed upon. It was ultimately arranged that Mr Hornblower's examination should be proceeded with as the shortest way of eliciting the facts which were proved by him to the effect above stated.

Mr. Justice PARKE then ruled, 1stly—That the Company were not bound to preserve the road of its former width, but had a right to contract it by means of the bridge, provided they left a width of not less than 15 feet. 2ndly—That the Company had a right to lower the surface of the road, in order to obtain a height of 16 feet under the arch; and that they might lower the road either before or after they had built the bridge. 3rdly—That the Company had no right to contract the carriage-way in its approach to the bridge by the retaining walls. 4thly—That the Company had not complied with their Act by carrying the footpaths under the railway by means of steps, but as this place appeared the most convenient to the public, and as the sloping of the footpath in lieu of steps would render it necessary to underbuild the houses, the Court would not compel the Company to alter the footpaths. That there was nothing in the Act to require the Company to preserve the footpath of its original width, in passing through the piers of the bridge.

At the suggestion of the Judge, and by the consent of the parties, a verdict was entered for the Crown, the Company entering into a rule to widen the carriage-way by pulling down the retaining walls and throwing them back into the footpath, and undertaking to lower the road still further, so as to leave a height of 16 feet clear from the surface of the road to the girders of the bridge.

The costs to be taxed by Mr. Hilditch.

WILLIAM ELKINGTON *v.* JOHN FERGUSSON AND ROBERT GRUNDY.

Warwickshire Summer Assizes, Aug. 6.—Counsel for the plaintiff, Mr. Balguy, Q.C., and Mr. Whitehurst; for the defendants, Mr. Humfrey. An action to recover 86*l.*, for services rendered by the plaintiff, a solicitor of Birmingham, as agent in that town for "St. George's Harbour and Railway Company." From the evidence adduced, it transpired that in 1835, Mr. Pimm, of Liverpool, suggested a scheme for improving the navigation of St. George's Channel, by opening an asylum harbour at a bay situated between Great and Little Orme's-head; and after the appointment of a board of Directors, the plaintiff performed certain services, as an agent of the Company, between the early part of 1836 and the month of September in that year, for which he claimed remuneration. The printed prospectus was handed in and partly read; the name of Mr. Elkington was therein mentioned as the agent for Birmingham. Mr. Pimm, being called, deposed that about the latter end of January, or beginning of February, 1836, he resided in Liverpool, and was appointed Secretary to the Company; that about the same time both the defendants were elected and acted as Directors; that from both of them witness received verbal instructions to employ Mr. Elkington, in reference to distributing prospectuses, ordering advertisements, selling shares, and opening an account with the Birmingham Banking Company; that both the defendants were present at a meeting which was held in London, in August, 1836, for the purpose of promoting the success of the speculation, during which time Mr. Elkington's bill for business done was received; that witness did not remember seeing either of the defendants acting as Directors after the month of May; that he was engaged before a "Select Committee of the House of Commons on Harbours of Refuge," in bringing evidence as to the utility of a refuge harbour in the Channel; that he was himself examined before that Committee, and actively employed in the service of the Company till the month of September; that Mr. Elkington, jun., was engaged in London about a week, in obtaining the co-operation of noblemen and gentlemen having property along the line of a railway, which it was intended should communicate with the harbour.

Several communications from Mr. Smith, the solicitor of the Company at Liverpool, and Mr. Pimm, the secretary, to Mr. Elkington were read, in which a variety of directions and information were given in reference to the affairs of the Company, such as the receipt of applications for shares from the plaintiff, the allotment of the same, the insertion of advertising notices and paragraphs in the local

Digitized by Google

newspapers,—the expense of which formed part of plaintiff's demand. Mr. James Blackburn, clerk of the Banking Company at Birmingham, proved the opening of an account, by Mr. Elkington, for the Harbour Company; he also produced the Script-book, and several letters of allotment of shares, and stated that checks were drawn upon the bank occasionally and paid after they were countersigned by the plaintiff, as the person opening the account. Mr. Henry Elkington, son of the plaintiff, proved the repeated communications between his father and the Company, and extent of business transacted on their behalf, from Jan. to Sept. 1836.—This witness also deposed that when he was leaving London, after transacting the business alluded to in Mr. Pymm's testimony, he was desired by a meeting of the Directors, at which both the defendants were present, to forward to them his father's bill of costs.

Mr. HUMFREY, for the defendant, contended that Mr. Elkington gave credit to Mr. Pymm; and that the charges in the account delivered in by the plaintiff, were made upon too extensive a scale.

His LORDSHIP said that the items charged previously to the middle of March, could not be recovered, inasmuch as there was no evidence to prove that the defendants had acted as Directors before that period.

Verdict for the plaintiff, 40*l*.

THE QUESTION OF SUNDAY TRAVELLING ON RAILWAYS.

LETTER IV.

To the Editor of the Railway Times.

SIR,—My last letter showed that the Sabbatic institution is universal and perpetual, not only because ordained before the Jewish ritual, which was peculiar and temporary, but because its beneficial uses admitted by my opponents, are both so general as to repudiate all idea of exclusiveness, and so necessary as to render it inconceivable for them to have been withheld from the present dispensation, or to have been left by the Great Lawgiver to "the wisdom of the world."

It may be objected that this *à priori* argument is inadmissible because it proceeds on a supposed knowledge of what is to be expected from the Divine Governor. To the principle of the objection I fully subscribe. We cannot anticipate the divine conduct, because, to go no further, the finite cannot comprehend the infinite. But I deny the applicability of the objection to my argument. I have not in the sense of the objection argued, *à priori*, for I have simply followed the order of the Divine revelation, and asked whether without express warrant we were justified in the expectation that God would suspend, withhold, or omit a provision he had himself made for objects he had himself pronounced to be all-important under circumstances he had himself declared to be more full of grace and mercy. This is a legitimate and unpresumptuous argument. And it is not uncalled for. If the proofs for the perpetuity of the Sabbatic law were all direct, positive and plain; if they did not rest partly on inferential ground, and if there were nothing in Scripture that seemed at first sight to look the other way, such argument had been needless: my course had been clear. Every one knows it is otherwise. The course, therefore, I have pursued, is just and conclusive.

We proceed to the next point, *God has issued a law.* This law is either repealed or it is still in force. Now, there are, I confess, some things which, loosely taken, have the appearance of a repeal. These I shall not shrink from examining. But in order to that examination it is important that we be well aware what they involve, what, if interpreted as I contend they must be, they agree with, and what, if interpreted as you would interpret them, they disparage. I observe—

First—That the Sabbatic Law forms one commandment in a code which, as a whole, has never been repealed. That the Moral Law, of which the Decalogue is the compendium, is not repealed, I shall not argue at any length. Where we find its enactments specifically quoted as binding, by inspired Apostles writing under the present dispensation, the case is or should be clear enough. St. Paul, after a variety of evangelical precepts, thus sums up his epitome of social duties, "Owe no man anything but to love one another; for he that loveth another hath fulfilled the Law. For this thou shalt not commit adultery, thou shalt not kill, thou shalt not steal, thou shalt not covet, and if there be any other commandment, it is briefly comprehended in this saying, namely, thou shalt love thy neighbour as thyself." (Romans xiii 8, 9.) And again, "Children obey your parents in the Lord for this is right. Honor thy father and mother, which is the first Commandment with promise." (Eph. vi. 1, 2.) I shall have occasion to quote other passages by and bye; at present this is full warrant for my assertion that the Decalogue is unrepealed. It is no answer to say that these passages are a re-enactment of the moral law, and that till the Fourth Commandment be found amongst them it is not re-enacted. I affirm boldly that these passages are no re-enactment—that there is no such thing as re-enactment properly speaking, in the whole New Testament—that the Epistles are letters, not laws—that they incidentally refer to, incidentally enforce, always assume, what they do not plainly declare to be abrogated—but that they do not in any case assume the formality of law, and are not therefore to be judged of as if they did assume it. This will be more distinctly shown in my next letter; at present I bluntly affirm that the moral law is neither repealed, nor re-enacted, but assumed in the New Testament. Such a passage as that in the second of Ephesians, "Having abolished in his flesh the enmity, even the law of commandments contained in ordinances," is not opposed to my assertion. There is a sense in which the whole moral and ceremonial law is enmity or condemnation to all who fail, as all fail, to fulfil it; and in this sense, it is altogether abolished, "Christ being the end of the law *for righteousness* to every one that believeth." (Rom. x. 4—11.) But this is evidently not the sense of the word "law" in this passage; for the Apostle in speaking of those ceremonial enactments which were exclusive, which were the middle wall of partition between Jews and Gentiles, and which he calls Commandments of *ordinances*—these, he says, are taken away absolutely. The moral commandments, though taken away as a covenant remain, as he has elsewhere shown us, for a rule of life. This will further appear as we proceed. I observe, then—

Secondly—That the law of which the Decalogue is the compendium, is always spoken of as a whole. It is distinct and distinguishable from that ceremonial and civil polity, which was peculiar to the Jewish nation. It was separately issued—under circumstances of unexampled solemnity—written by the finger of God himself—written in stone, the emblem of perpetuity—and, when the tables containing it were broken, re-written in like manner; and, though a series of the most minute ceremonials had been enacted in the interim, without the introduction of a syllable of new matter, or a word of reference to the ritual. Moreover, the ordinance, of all others, the most characteristic of Jewish nationality, and which, if anything merely ceremonial, temporary, exclusive, could have been inserted—I mean circumcision—was neither inserted nor noticed, as if to imply that these laws were of more universal import and of longer duration. There was this distinctness in the Decalogue or moral law from what was national and peculiar—this totality of that code in itself, as thus distinguished. And this is traceable throughout. The Jews always so understood it. Christ speaks of it in this sense. He says, "Thou knowest the commandments;" quoting, in explanation, the six of the second table of the Decalogue. (Mark x. 19.) In exact conformity was his whole practice, when arguing or teaching. St. James, writing when all that had been ceremonial had "ceased to be obligatory," appeals to the "*royal law* according to the Scriptures"—speaks of being convinced of the law as a transgression—adds, that "whosoever shall keep the whole law and yet offend in one point is guilty of all;" and as if to leave no doubt as to what law he meant, quotes two consecutive commandments, the sixth and seventh, from the Decalogue. (James ii. 8, 9.) To the same precise effect St. Paul says, "He that loveth another hath fulfilled the law..... Love worketh no ill to his neighbour, therefore love is the fulfilling of the law." I will quote no more. The Decalogue being thus plainly in force, and thus plainly spoken of in its totality, I need scarcely urge—

Thirdly—That without most positive, unequivocal warrant and obligation, it can be nothing short of blasphemy to detach the Fourth Commandment from it. To blot what the unseen finger of the Great Lawgiver has written, can surely be no common crime, even though committed in ignorance: but to do this, in the case of the one law in the whole code before which he has written the word "Remember," is what a devout man may well recoil from with more than common horror, till he have the most clear and indisputable authority for so doing. I observe—

Fourthly—That the character of the Fourth Commandment, its position in the Decalogue, and the notice of it in the Holy Scripture, both as to Jewish and Christian times, concur to mark its indivisibility from the rest of the Decalogue. The character of the law is important. It has been boldly spoken of as ceremonial; and its ceremonial character has been asserted for its distinction from the rest. Now I flatly contravene the distinction. That there is in the Fourth Commandment what some call ceremonial, I dispute not. But that the great principle it embodies is ceremonial, I deny. That man should set apart one day in seven, rather than one in three, five, or fifteen, may be called, if people please, ceremonial or arbitrary. To me it seems that, if the world were created, as we know it was, in six days, there is an intrinsic propriety in creation resting, if at all, when God bade it rest; and that this day of rest should not be taken from the creative cycle, which would have disturbed the historic harmony of the arrangement, but be superadded to it as a distinct day set apart for special purposes; as also that it should be the seventh in order, rather than any other day, so long as creation and creative goodness were the great objects of commemoration. But if all this were ever so arbitrary, the great moral principle remains untouched. That creation *should* acknowledge creative claims, visibly, regularly, devoutly, is no mere thing of ceremony, or time, and place; but the natural result of the relationship between the creator and his works. It is, in the face of it, false to call the Sabbatic law a ceremonial one. As well might we call the law of marriage or parental duty, ceremonial. The vindication of what belongs to my neighbour may surely be called ceremonial, if the vindication of what belongs to God be so called.

But the structure of the Decalogue and the position of the Fourth Commandment in it, are remarkable. Analyse that wonderous code; it is ranged on two tables, divinely designated the *First and Second Commandments.* Now I ask you, Sir, to mark one or two features of both. The second table begins with the assertion of the parental relationship; the first, with that of the Great Father of all. I will not run out into fanciful analysis; it is plain, however, that the second, third, fourth, and fifth duties of the second table flow as naturally from the principle of love to man as our brother, related to us by ties of which the parental is the commencing link, as the second and third of the first table from love to him who has made us his children. It is also plain that there is no specific duty owing to man which one who respected the endowments of his neighbour, therein severally guarded, would not feel, on its being revealed to him, disposed to obey. And in like manner, one who really acknowledged from the heart that the Lord was his God, who did not corrupt his notions of him by carnal ideas and images, nor dare to think or speak of him with irreverent levity, must possess the essential principle of all holy obedience. But there is a precept superadded in each table, and the addition of which is not a

Digitized by Google

little remarkable. In the second it might have seemed that, if love reigned so far as to bridle the conduct—in other words, if love *worked no ill* to his neighbour—the law was fulfilled, there was no need of further precept. But there is a further precept; and, what is stranger still, a precept that was virtually involved in the preceding; for Christ tells us, that he that hateth has committed adultery, and St. John says, that he that hateth his brother is a murderer. The same principle applies of course throughout; consequently the foregoing precepts, having an inward as well as outward force, had in point of fact forbidden all that the superadded precept forbade. Is the Tenth Commandment then superfluous? Is it not the key-stone of the arch? Will outward acts be withheld whilst the inner ones are not controlled? Will he who looketh to the heart be satisfied if they be? And will such acts be controlled without a positive law?

Now the same precise arrangement obtains in the first table. I will not say that abstinence from secular employments at any particular time, or for any definite periods, is in the most distant way involved in the other precepts of that table. But I do say, that from the general principles of knowledge, love, and reverence to God, which those other precepts inculcate, it would follow that some portion should be set apart from secular to holy purposes. The notion that every day may be a sort of Sabbath, is too absurd for refutation. Men cannot be lifting up holy hands in social worship, or listening to the words of life, whilst toiling from morn to night, in the treadmill of trade. A man must work whilst he works, or at all events we should not have steam engines or railroads. Everything is beautiful in its season. God's subjects can serve him in the counting-house, and in the church. But the services are distinct; and the Fourth Commandment marks the distinction. Man is to work for six days, and he is to rest on the seventh. Here, as in the parallel case, there is a special provision made by law, for what common sense and upright reason would seem to read in the foregoing precepts—a provision not only marking the portions in which the involved duty is binding, but making it clear and indisputable that it is binding. There is an equal need of clearness in both cases. However reasonable that if I am to keep my hand, I must keep my heart, from what belongs to my neighbour, we all know how often this duty is done by halves. And in like manner, however reasonable that if as a private individual and a member of society, I fear and love God, I must set apart stated periods for what fear and love require, there is a tendency to shrink from this, to be engrossed, in other things, or even to plead necessity for avoiding the plain dictates of God's service. The answer is, that the Fourth Commandment is no more superfluous in any sense, than the first. Man will not break off worldly engagements without a positive law. The treadmill will not stand still to let him, without some positive law. The carnal mind will bury itself in its native earth without a positive law. God will be defrauded of all his honours without a positive law, and without this identical law all this will take place. Without specifying authoritatively set apart and reserved to God by special sanction, the other precepts to have no other gods, to worship him in spirit, and to speak of his name as becometh so awful a one—all this will and must be lost amidst worldly businesses and pleasures. On this I will not dwell here. I have asserted already. I repeat it here to mark the force of the Sabbatic precept in the Decalogue, and how its position makes it an essential member of that indivisible code.

There are other considerations bearing on the same point, and with considerable force. The peculiar and reiterated emphasis laid every where by the inspired Prophets on Sabbath observance and desecration, would seem to mark God's estimate of the precept, and his jealousy for its infraction. These are at once so frequent, solemn, and familiar, that I will not swell this letter by quoting them. But I must, ere I conclude, lay some stress on the fact, that in those passages of prophecy which shadow forth the Christian dispensation, express mention is made of the Sabbatic law and its observances. In Isaiah, for instance, it is declared "also the sons of the stranger, that join themselves to the Lord, to serve him, and to love him, to be his servants, every one that keepeth the Sabbath from polluting it, and taketh hold of my covenant, even them will I bring to my holy mountain, and make them joyful in my house of prayer; their burnt offerings and their sacrifices shall be acceptable on my altar, for my house shall be called a house of prayer for all people." (Isaiah, lvi. 6, 7.) Now it is plain, *first*, that this passage must be one of the many which have obtained for Isaiah the name of the Evangelical Prophet, for the house of God was never a house of prayer for all people till "the middle wall of partition was broken down;" *secondly*, that the term burnt offerings and sacrifices are emblematical, since these ceased when the middle wall of ordinances was broken down, whilst believers, though scattered and strangers, were addressed without distinction as "an holy priesthood to offer up spiritual sacrifices" (1 Peter ii. 5.); and, *thirdly*, that the word "Sabbath" could not be emblematical, for the sabbath was an emblem of nothing but the eternal rest, and this prophecy bears manifest reference to the state of probation. The expression, "keeping the Sabbath," can only be taken in its *obvious* sense, for keeping Sabbath during the time of probation must mean, if it mean anything, abstaining from work. Here then is a direct proof, that among the precepts of the Decalogue which we have seen to be still binding, the Fourth is expressly spoken of in connection with Gospel times, and spoken of as particularly marking those, who heretofore strangers, were now joined to the Lord. I feel, Sir, that whilst entering on the elucidation of Scripture, I am in danger of passing the limits prescribed to me in your columns; else I should quote at greater length in illustration of this point. But another passage yet remains, of unanswerable significancy. Our blessed Lord, prophesying of that period when the rites and ceremonies of the Jewish ritual should be null and void, and prophesying to those who, unlike their infatuated fellow countrymen, should have clearly understood and clearly asserted that that they were so, makes express mention of the Sabbath as in force notwithstanding, "*Pray ye that your flight be not in the winter, nor on the Sabbath day.*" (Matthew 24, 20.) Into the reasons of this prayer I need not enter, even to speculate; all that belongs to us at present is plain and indisputable. The disciples who lived at the destruction of Jerusalem were perfectly emancipated from mere Mosaic obligations. I may almost say that the Acts of the Apostles open with a distinct practical disclaimer of Judaism, in the conduct of Peter touching things clean and unclean; and the Epistle to the Galatians proves, both doctrinally and practically, that mere ceremonial restrictions were amongst Christians set aside. The very Apostle of the Circumcision lived as a Gentile, and not as a Jew. (Gal. 2nd, 14.) How is it then, that in an instruction so important as that of Christ's prophesy before us, by obedience to which the Christians actually escaped from the devoted city, so seemingly gratuitous a notice should be taken of the Sabbath, if the Sabbath were nothing but a Jewish rite, and that notice so solemn as to make it subject of special prayer, and that prayer proceeding on the existence of restraints on locomotion?

I will conclude this letter by observing, *fifthly, that the peculiar character of the Christian dispensation seems to write a tenfold force on the Fourth Commandment, and to make its dissevereation from the Decalogue a peculiar offence.* Greater light and greater obligation may be called convertible terms in religious matters. The one will not be denied as regards the relation of Christianity to Judaism; the other must follow as a matter of course. Will any one argue, that if God claimed then one day in seven as his own, that it will not be a violation of all analogies that we give him less now? If the Fourth Commandment was so important in his view in the time of comparative ignorance, will it be deemed by him to be less so when he has shed upon us such light? The conclusion is inevitable; but it receives yet a further force from the peculiar advantages, the more abounding grace and love, of the gospel dispensation. Our service is no longer shadowy or burdensome; God promised in his new covenant to write his laws on our hearts. Does their being thus made pleasant render them less binding? Christ's yoke is called easy, and his burden light, not because its obligations are relaxed, or its essential principles dishonoured, but because the renovatory power of an Omnipotent Spirit will enable us to bear it, and feel honoured by bearing it. It is thus with all the moral law: and what read we here of the Sabbath? That God will not only bring those who keep it to his holy mountain, but *make them joyful* in his house of prayer.

On the whole then, were it permitted me to make a reverend application of a common expression, I would conclude this letter by saying, that in taking the Decalogue as we are bound to do, we must *take it without reservation "for good and all."* It is binding on us as God's law, and it is binding as a whole. Thus at least it appears so far, and thus it must be held till it can be shown by proof positive and unequivocal to be otherwise. Whether grounds sometimes urged to the contrary as regards the Fourth Commandment are valid, I propose to consider in my next communication; meanwhile I subscribe myself,

Sir, your obedient servant,

AN ANTI-SUNDAY TRANSITARIAN.

Bristol, August 9, 1841.

BRIGHTON AND CROYDON RAILWAYS.

To the Editor of the Railway Times.

SIR,—I cannot quite understand the Brighton Company's policy in not stopping between Croydon and London. If they stopped but twice they would hardly lose five minutes and still be able to accomplish, when they opened throughout, the whole distance to Brighton in two hours.

I should say stop at Sydenham, also at the point of departure from the Croydon Railway, a little beyond the Norwood station, especially as to the latter because, as it is, they have a man stationed there to attend the switches, and considerably diminish their speed in there changing from one to the other line.

The Chairman, at the late meeting, said they left the Croydon Company to bring them their intermediate passengers themselves; but how can they do so without great inconvenience to those passengers who, from the Croydon station to the Brighton Croydon station, will have a mile or so of common road to travel, and three times change their vehicles? Better sure than this would it be for them to take a Croydon train to London Bridge, and then retrace their steps by the Brighton Company's carriages, and thus lengthening their whole journey, if from Sydenham, say 12 miles, if they do not mind the extra shilling.

Can you enlighten at all on this point a subscriber to your paper, *ab initio*.

And your obedient servant,

Z. A.

London, August 11th, 1841.

SUGGESTED RAILWAY IN THE EAST RIDING.—A Correspondent recommends the construction of a railway on an economical principle and to be worked by horses, from the Hull and Selby Railway at the Howden station to Market Weighton, a distance of 8 or 9 miles. The line, he observes, is a perfect level, and the land of small value, so that the railway would cost very little; whilst it would be the medium by which many thousand acres of wold land not inferior to any in the kingdom would pour forth its corn, stock, and wool, to the markets of the West Riding, and by which coals, lime, bricks, draining tiles, and all goods required for the agricultural towns and villages would pass in return.—*Leeds Mercury.*

YORK AND NORTH MIDLAND RAILWAY.—Call of Second Instalment of £5 per Share.—The Directors of the York and North Midland Railway Company having in pursuance of the provisions of the Act, resolved to make a call of £5 per Share, payable on or before Wednesday, the 1st day of September next. Proprietors of £25 Shares in this Company are hereby required to pay on or before that day to any of the undermentioned bankers, the sum of £5, on each of their respective shares, viz.:—

London—Messrs. Barnett's, Hoare, and Co.; Sir R. C. Glyn and Co.
York—City and County and Union Bank.

The Bankers have been instructed to charge interest after the rate of 5 per cent. per annum, on all sums paid after the 1st day of September next.

GEORGE HUDSON,
Chairman of the Board of Directors
GEORGE BAKER,
Clerk of the Company.

Railway Office, York, 4th August, 1841.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn.....Newcastle-upon Tyne
Joseph Bothway.....Plymouth.
John Thompson and Co.....Wigan.
J. T. Tregellas.....Truro.
Thomas Mooney and Son.....Dublin.
Coates and Young.....Belfast.
James Kibble and Co.....Glasgow.
James Gunn.....Leith.
John M. Beatts, 14, Clement's-lane, High street, Dundee.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of ten months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

BRITISH COLONIAL BANK AND LOAN COMPANY.—This Company was formed for the purpose of affording to capitalists a safe opportunity of availing themselves of the high rates of interest produced by the investment of money on landed securities in the Australasian Colonies; and though others plans were embraced in the original prospectus, this formed the leading, and has become the principal and almost the sole, object of the Company.

A capital of 100,000*l.* having been subscribed in this country, the Directors commenced the business of the undertaking by sending a Manager to Sydney, where he arrived last Christmas, and the Reports which the Directors have received since his arrival have satisfied them that the undertaking was founded upon a right principle, and that the advantages which they originally ventured to hold out to the shareholders may be more than realised, for the Manager has been enabled to the time of his last dispatches to advance, on mortgage of real estates, the whole of the funds which were put at his disposal, together with a considerable sum raised from shareholders in the colonies. In the selection of such securities he has secured the assistance of the Crown Surveyor and the Crown Solicitor, whose certificates of value and title upon each transaction have been transmitted to the Board.

The rate of interest obtained on these securities varies from 10 to 15 per cent., the average rate being 11 per cent.

The information transmitted to the Directors having satisfied them that much larger investments may be made with equal advantage, they propose to increase the capital of the Company by a further issue of 2,500 shares of 40*l.* each, at a premium of 2*l.* per share.

Two calls of 5*l.* each have been paid upon the present shares of £40, and another call of £5 has been made payable on the 12th of October next.

Persons taking the new shares will therefore pay £12 per share on subscribing, £5 on the 12th of October next, and the remainder in calls of £5 per share, which, by the deed of settlement can be made only at intervals of three months.

It is to be observed that the premiums which, in justice to the present shareholders, the Directors feel bound to charge on the new shares, will not be applied to the benefit of any individual, but will be added to the funds of the Company, and thereby increase the value of the shares.

Application for shares may be addressed to the Secretary, at the office of the Company, 13, St. Swithin's-lane.

By order of the Board,
HERBERT COMPTON, Chairman.

13, St. Swithin's-lane, August 4, 1841.

N.B. The half-yearly dividend of 6 per cent. on the colonial shares paid up in full may be received at the office of the Company on Thursdays, in every week, provided the particulars of such shares be left with the Secretary on the preceding Tuesday.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY.—NOTICE is hereby given, That in pursuance of a Resolution of the Board of Directors, Proprietors of New Shares, in the said undertaking, are required on or before Friday, the 20th day of August next, in addition to the Deposit of 1*l.* 10s. stipulated for at the Allotment of these New Shares, to pay into any one of the undermentioned Banks, the farther sum of 1*l.* 10s. as a First Call on each New Share held by them respectively, viz.:—

Edinburgh—Royal Bank of Scotland.
Glasgow.—Ditto.
Greenock.—Any of the Banks there.
Liverpool.—Liverpool Commercial Bank.
Lancaster.—Lancaster Banking Company.
London.—The Chief Officer of the London and Westminster Bank, Throgmorton-street.
Dublin—To Messrs. Labertouche and Stafford.
Londonderry—Branch of the Provincial Bank of Ireland.

Discount at the rate of 5 per cent. will be allowed on all payments made previous to the 20th August, and the Bankers have been instructed to charge interest from that date until payment

By order of the Board of Directors,
J. E. ERRINGTON, Manager.

Railway Office, Greenock, July 24, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.—NOTICE is hereby given, That pursuant to the provisions contained in a certain Act of Parliament made and passed in the Sixth Year of the reign of his late Majesty King William the Fourth, and also another certain Act of Parliament made and passed in the Seventh Year of the reign of his late Majesty King William the Fourth, the tenth Half-Yearly General Meeting of the Birmingham and Gloucester Railway Company will be held at the Waterloo Rooms, Waterloo Street, Birmingham, on Friday, the 20th day of August, 1841, at Twelve o'Clock precisely.

Notice is also hereby given, That the BOOKS kept by the Birmingham and Gloucester Railway Company, for entering the memorials of the Transfers of Shares in that Company, will, in pursuance of the provision of the Acts of Incorporation, be CLOSED from Wednesday the 11th, to Friday, the 20th day of August, both days inclusive.

(Signed) C. R. MOORSOM,
Chairman of the Board of Directors.

Waterloo-street, Birmingham, July 27, 1841.

In one handsome 4to volume, with 17 splendidly-executed Engravings, including a Railway Map of the United Kingdom; Price £1 11s. 6d.;

THE RAILWAYS OF GREAT BRITAIN AND IRELAND, practically described and Illustrated by FRANCIS WHISHAW, Civil Engineer, M. Inst. C. E.

"This is one of the most striking and valuable works that have lately issued from the Press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle*.

"Mr. Whishaw is a discriminating statistician, and has a thorough acquaintance with his subject."—*Athenæum*.

"No railway capitalist who studies his own interest will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid Engravings."—*Railway Times*.

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal*.

"The completest view of railway statistics yet produced."—*Morning Chronicle*.

"A complete history of all the railways in the United Kingdom."—*Liverpool Mercury*.

"Full of sound practical information, derived from the fountain head itself."—*Observer*.

"A more complete and satisfactory account of the Railway System of Great Britain could scarcely be devised."—*Courier*.

"Here the practised engineering skill of the author manifests itself"—*Manchester Courier*.

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times*.

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald*.

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal*.

"A text-book on railways for the next half century."—*Maidstone Gazette*.

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier*.

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times*.

London: SIMPKIN, MARSHALL, and Co.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times

NORTH MIDLAND RAILWAY.—Most expeditious and pleasant Travelling between ENGLAND and SCOTLAND.—LONDON TO EDINBURGH IN 27 HOURS, out One Night only in Railway Carriage.—The Public are respectfully informed, that on and after Monday, 2nd August, 1841, The *Chevy Chase* coach will leave Darlington at half-past Nine in the Morning, on the arrival of the London Mail Train, and arrive in Edinburgh by Twelve o'Clock the same Evening.

The London Mail Train leaves London for York and Darlington at Nine o'clock in the Evening. Time is allowed at York for Breakfast.

No change of Coach between Darlington and Edinburgh.

Passengers wishing to sleep on the Road, may leave London by the 9 15 a.m. Down Train, and go on to Darlington, which they will reach at 11 p.m.

FARES.

London to Darlington—first class per railway	£3	10	6
Darlington to Edinburgh—inside coach	2	10	6
Total	£6	1	0
London to Darlington—first class per railway	3	10	6
Darlington to Edinburgh—outside coach....	1	11	0
Total	£5	1	6
London to Darlington—2nd class per railway	2	9	0
Darlington to Edinburgh—outside coach....	1	11	0
Total	£4	0	0

The *Chevy Chase* leaves Edinburgh at Half-past Five in the Evening, arriving in Darlington next morning, where an hour is allowed for breakfast, after which passengers may go on by railway to London, arriving there at Eleven o'Clock, p.m.

By order,
H. PATTESON, Secretary.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, n Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

TO RAILWAY CONTRACTORS, BUILDERS, and Others.—To be sold by AUCTION, by Mr. BACON, on the North Midland Railway, near Higham, in the county of Derby, on the 18th and 19th days of August, 1841, about 160 Earth Waggons, equal to carrying two yards each, with 30-inch wheels; 150 tons of flat bottomed railway bars, 40 lbs. to the yard; large quantity of planking and barrows, two stone drags, three carts, quantity of quarry utensils, cranes, sheers, bars, pully blocks, lathe, blacksmith's tools, iron, &c. &c.; six horses, 40 sets of chain and two sets of shaft gearing.

The above materials are about four miles from Buckland Hollow on the Cromford and Erewash Canal.

The earth waggons, railway bars, carriages, cranes, sheers, and quarry utensils, to be Sold on the first day's sale.

Also, to be SOLD BY PRIVATE CONTRACT,

Two LOCOMOTIVE ENGINES, with 10-inch Cylinders, 4 feet 6 inch Coupled Wheels, and 18-inch Stroke, with Tenders complete, in good working condition.

To be seen at the North Midland Railway Works, Derby. Application to be made to Mr. BACON, of Alfreton; or to Mr. RICHARD TRUBSHAW, Higham, near Alfreton, Derbyshire,

---

TO RAILWAY COMPANIES AND IRON MANUFACTURERS.—LOSH, WILSON, and BELL beg to recommend to parties employing or manufacturing Rails their improved Machine for straightening them, in which by a simple and powerful application of the screw they are rendered perfectly even without being disfigured by hammer-marks.

For terms and description apply to the makers, Walker Iron Works, Newcastle.

26th July, 1841.

ON SALE.—TWO NEWLY-FINISHED SIX-WHEELED LOCOMOTIVE ENGINES, with 12 inch cylinders, copper fire boxes, 5 feet driving wheels, and of the usual gauge.

The engines embody all the latest improvements in their valve gearing and motions.

Canal Street Works, Manchester.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet street, Middlesex.—Saturday, August 14, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 190. Vol. IV.—No. 34.] SATURDAY, AUGUST 21, 1841. [Price 6d.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £ and each, and for a term of not less than Three Years, and to grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing Interest at the rate of 5 per cent. per annum.

The above Loans are in substitution of others heretofore advanced to the Company for a term of years, the Debentures granted for which are now expiring.

Interest Warrants, for the whole term for which the Loan is made, payable half yearly, on the 1st January and 1st July, at the Company's bankers in London and Birmingham, will be delivered to the Lender with the Mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent, and are to be addressed to the Secretary, at the Company's Office in Waterloo street, Birmingham, to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford court, Throgmorton-street, London; or to Messrs. Laurence, Casenove and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 21st day of July, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—NEW SHARES—THIRD CALL—£5 PER SHARE.—The Directors of the Birmingham and Derby Junction Railway Company having resolved that an instalment of £5 on each of the New Third Shares in this undertaking, created under the provisions of the Act relating thereto, passed in the session of Parliament 3 Vict. cap. 51, payable on or before the 3rd day of September next, should be called for, Proprietors of such New Shares in this Company are hereby required to pay, on or before that day, to any of the undermentioned Bankers, the sum of Five Pounds on each of their respective New Shares.

BANKERS.

London—Messrs. Glyn, Halifax, Mills, & Co., Lombard-street.
Birmingham—The Birmingham Banking Company.
Manchester—The Manchester and Salford Bank.
Derby—Messrs. W. & S. Evans.
Burton-upon-Trent—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield—Messrs. Parker, Shore, and Co.

The Bankers have been severally instructed to charge Interest at the rate of £5 per cent. per annum, according to the provisions of the Act above referred to, from the 3rd day of September next, on all sums which shall be tendered after that day.

(Signed) HENRY SMITH,
Chairman of the Board of Directors.
(Signed) THOMAS KELL, Secretary.

Waterloo-street, Birmingham,
August 11, 1841.

BIRMINGHAM and DERBY JUNCTION RAILWAY—ADJOURNED MEETING.—Notice is hereby given, That the Half yearly General Meeting of Proprietors of the Birmingham and Derby Junction Railway Company, held in pursuance of the provisions of the Act of Incorporation, at the Waterloo Rooms, Waterloo street, Birmingham, on Tuesday, the 10th day of August, 1841, was then adjourned, in consequence of the non-attendance of a sufficient number of Proprietors, as required by the Act, for the Election of Directors, to Thursday, the 26th day of August, 1841, at the same place, for the Election of Three Directors in the place of the same number, who will retire by rotation, and for other purposes.

The Chair to be taken at One o'Clock precisely.

(Signed) HENRY SMITH,
Chairman of the Board of Directors

Waterloo-street, Birmingham, August 11th, 1841.

Extract from the Act of Incorporation, Section 93.

"And be it further enacted, That no Proprietor of any share, on which any call made shall be unpaid, shall at any meeting of the proprietors of the said Company be allowed to vote, either personally or by proxy, until the money called for in respect of such share shall have been fully paid.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best rate of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s 6d.; in paper covers, 1s; mounted on canvass, in cloth case, 2s 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Paternoster-row, Hyde & Co. and G. Bell, Fleet-street, Mann, Cornhill, and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY FOR 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S

RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth. *Railway Times* Office, and Hyde and Co., Fleet street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by all booksellers.

BIRMINGHAM AND GLOUCESTER RAILWAY.—ALTERATION OF TIMES.—The public is respectfully acquainted, that the trains work to and from the London and Birmingham Railway station, where passengers and parcels are booked to all stations on the line, and also to Bristol and Bath.

The station at Camp Hill will be discontinued in future, except as a station for goods in and out of Birmingham.

Only the Mail Trains run on Sundays.

(a) Calling at Bromsgrove, Droitwich, Spetchley, (Worcester, Ashchurch, (Tewkesbury,) Cheltenham.

(b) Calling at all the stations.

(c) Calling at Bromsgrove, Spetchley, (Worcester,) Defford, Ashchurch, (Tewkesbury, and Cheltenham.

By order,
GEORGE KING, Secretary.

AS ENGINE DRIVER.—Employment Wanted on a Railway, by a young man thoroughly acquainted with the structure of the Locomotive Engine, and its management; also with the rudiments of Mechanics; Steam, and its uses: and that part of Chemistry useful to the Practical Engineer. The Advertiser has obtained a Certificate of qualification from the Polytechnic Institution.

Applications, post paid, to be addressed Z. Z., care of the Publisher of the *Railway Times*.

TO ENGINEERS.—Applications by Letter, pre-paid, with stated terms for constructing a canal in the north of Europe, are requested to be made to Mr. Adolphus Lindgren, No. 1, Crown Court, Old Broad Street, London, before the 1st of September next.

PARIS AND ROUEN RAILWAY.—By the Seventh Article of the Statutes of the Company, the Fifth Payment of One-tenth of the Capital was due and payable on the 12th July, 1841.

The Shareholders are therefore requested to pay the Call of 25. per Share, together with interest, at the rate of 5 per cent. per annum, to either of the under-mentioned Bankers, viz.:—

London—Messrs. Stone, Martins, and Stones.
Liverpool—Messrs. Moss and Co.
Paris—Messrs. Jacques, Laffite, and Co.
Paris—Messrs. Charles Laffite, Blount, and Co.

By Order of the Board of Directors,
ADOLPHE THIBANDEAU, Secretary.

Office of the Company, Rue Basse du Rempart 32,
Paris, August 12, 1841.

CIVIL ENGINEERING TAUGHT FOR HALF-A-GUINEA PER LESSON.—In addition to the principles of Civil Engineering, which has now become so important and profitable a profession, the advertiser, an Engineer of many years standing, will for Fifty Pounds teach the mode of Designing and Manufacturing Machinery, so that the pupil will acquire a knowledge of turning wood and metal, and be enabled to draw and construct complete Steam Engines and other Machines. For this purpose they will be provided with tools, and beautiful models of Steam Engines and other Machinery, and persons desirous of being connected with Railways will find this a desirable opportunity.

Address, A D., Queen's Library, Portman-place, Edgeware-road.

HULL AND SELBY RAILWAY COMPANY —GENERAL MEETING.

A GENERAL meeting of the shareholders was held on Saturday last, Henry Broadley, Esq., M.P., J. R. Pease, Esq., George Liddell, Esq., and several other Directors, were present; but the shareholders were not so numerous as on former occasions, the whole number not exceeding forty persons.

The CHAIRMAN, on opening the business of the meeting, said he was happy to find it unnecessary to offer any remarks on the condition of the Company; as it was clearly stated in the report before the meeting; and which he requested the Secretary to read, adding that many of the Directors being present they would be ready to give any required explanations.

Mr. PHILLIPS, Solicitor to the Company, having read the notice convening the meeting,

Mr. LOCKING, the Secretary read the following

REPORT.

In accordance with resolutions which were passed at the general meeting of proprietors held in February last, that a meeting should be held in the month of August, and that the intended Report should be circulated amongst the proprietors before such meeting, the Directors beg leave to present the following account of their proceedings during the past half year:—

Lord Seymour's Bill for the regulation of railways containing very stringent enactments supposed to be injurious to the good working and management of railways, your Directors thought it their duty to present a petition to the House of Commons against it. The Bill was subsequently referred to a Select Committee, who made a Report thereupon, in which they suggested the removal of the most objectionable clause; but the close of the session prevented further progress in it. Your Directors also presented another petition to Parliament in favour of an alteration in the mode of levying the passengers' proposing a per centage on the receipts instead of the unequal, and, as they think, unjust rate now paid; and it is believed this plan would have been adopted but for the reason above stated; it is, however, hoped the object will be accomplished in the ensuing session.

An application being made to Parliament by the York and North Midland Railway Company, for power to lease the Leeds and Selby Railway for a term of years, your Directors considered it to be important to obtain the introduction of a clause in the Bill, requiring equal charges to be made upon all goods, &c., in like circumstances; and they succeeded in their application, the clause forming a part of the Act which was passed.

Since the annual meeting in February last, an additional mail train has been put on the line, in compliance with a requisition from the Post-office authorities; but the time appointed is so inconvenient for the general traffic that your Directors entered into a correspondence with those authorities with a view to a better and more economical arrangement, but they are sorry to say without success; the remuneration to be paid for the conveyance of one of the mails has been settled by arbitration; the charge for the second is not yet fixed.

The deodands which were levied upon the engine, &c., when the accident occurred near Howden, have been quashed on an appeal being made against them to the Court of Queen's Bench.

An application was made by the Committee of the East Riding Agricultural Association, for a wool market to be held in the Company's warehouse; and your Directors being of opinion that such a market would not only be a convenience to the parties interested but beneficial to the railway, the request was at once acceded to; they have also consented to grant monthly tickets to parties residing on the line of railway, allowing them to pass as often as they think proper on the payment of one fare daily; this has been done as an experiment, and the Directors are not pledged to continue the plan if it be not found beneficial to the Company.

Agreeably to the resolution of the last meeting of proprietors, advertisements were issued that the Company would be ready to receive money on their bonds, paying 5 per cent. interest; and of the sum of 50,000*l.* authorised to be thus raised, 47,200*l.* has been already subscribed.

Although it has been throughout the anxious wish of the Directors to limit their expenditure as much as was consistant with providing that accommodation which increasing traffic might render necessary, nevertheless, in order to accommodate the Manchester carriers especially, they have agreed to erect five additional sheds, or warehouses, without which their business could not be carried on; and a fair and equitable rent, however, will be paid to the Railway Company for the occupancy of those buildings. An extra outlay has been caused by rails being wanted for additional sidings, and also in providing the requisite number of turn-tables, cranes, weighing-machines, &c., as well as two more locomotive engines, with coupled wheels, for the goods' trains. These circumstances, whilst they are highly encouraging as to their bearing on the future prosperity of the undertaking, necessarily make the total expenditure of the Company greater than was anticipated. The payments and liabilities to the present time somewhat exceed 600,000*l.*, whilst the amount of capital and loans is only 583,000*l.*

The general depressed state of the trade of the country, combined with a winter of unusual severity and a subsequent long continuance of very unfavourable weather, had the effect of preventing that increase in the traffic on the line which, at the commencement of the year, was very confidently anticipated; a considerable quantity of goods has, however, been conveyed by the rails, and your Directors are happy to state that arrangements have been recently completed with the Directors of the York and North Midland Railway which have already had the effect of causing all the goods that are sent by railway from Manchester, Sheffield, Leeds, York, &c., to come through to Hull in the same way; and when trade generally improves—a change which may be reasonably looked for at no distant period—our very moderate charges will no doubt have the effect of considerably increasing the receipts of the Company.

Your Directors have great pleasure in stating that the Dock Company most readily acceded to the request which was made to them to provide additional shed room on the west side of the Humber Dock, and it is not doubted that they will continue to furnish such further accommodation as circumstances may render necessary.

The number of passengers conveyed on the line between the 1st January and 30th June, without the slightest accident, was 88,068 of all classes, making a total of 198,046 in the first year of the railway being opened; the statement of the traffic account exhibits a balance of 4,069*l.* 10*s.* in favour of the Company, and your Directors therefore recommend that a dividend of 10*s.* per share shall be made payable on the 15th September next.

Since the last meeting the sum of 5,890*l.* has been received on account of unpaid calls, and it is reasonable to expect that a favourable opportunity may be presented ere long of obtaining payment of the sums yet due from the proprietors.

TRAFFIC ACCOUNT,

From 1st January to 30th June, 1841.

PAYMENTS.

Dividend paid		£3,537	0 0

The Report of the Resident Engineer, Mr. Gray, was also read. It was very satisfactory, stating that the number of workmen had been reduced, and the embankments consolidated. By using steam expansively in the engines, a great diminution had been effected in the consumption of coal. An additional water tank had been constructed at Hessle, and additional sheds had been erected for the accommodation of the Manchester traders, and in a short time the Hull terminus would be as complete in all its accommodations as the terminus of any other railway.

Mr. SEATON moved that the report be received and adopted.

Mr. BEAN seconded the resolution, which was carried *nem dis.*

The CHAIRMAN then repeated that if any of the shareholders wished to make inquiry, as most of the Directors were present, they would be glad to give every information in their power.

Mr. PULLEYN, of Leeds, expressed a wish to know if the dividend of ten shillings was to be paid out of the half-year's profits? He did not see how it could be afforded; the sum required would be 4,000*l.*, and there did not appear on the face of the traffic account a sum equal to the purpose.

Mr. HENWOOD explained—The long and the short of it was to be found in the cash and credits of the Company. 3,000*l.* were in the bankers' hands, and the outstanding accounts for goods, many of which has been got in since the end of June, when the estimate was made out, would make a sum larger than they should have to pay.

Mr. LIDDELL said, the gentleman seemed to think that they were making the dividend out of last year's balance. [Mr. Pulleyn assented.] Such was not the case; the dividend would be paid from the difference between the receipts and expenditure of this year's traffic.

Mr. MOOR, of Manchester, inquired whether the sum of 16,000*l.* in the construction account applied to the maintenance of the line during the half-year. He thought it a heavy amount.

The CHAIRMAN replied he was glad the question had been put, and explained that the addition of the expense of maintenance arose from a desire to make the railway complete. The works had been originally pushed on for the purpose of having the line opened at the prescribed time, and much of it had been required to be re-laid to render it permanent.

Digitized by Google

Mr. Moor said, he was deputed by many shareholders in Manchester, who considered that the first half-year's dividend ought not to have been made; and he should be inclined to oppose a present dividend, as it would leave no provision for depreciation of stock. He did not think the Directors would do themselves or the shareholders any good by so doing. The property was still theirs, whether they divided it or not, and therefore he thought it would be better left for contingencies. He felt perfectly satisfied of the permanent success of the railway when its resources became fully developed, and had no doubt that by the transit between Hull and Manchester, the weekly receipts for goods only would shortly be increased to 600*l.* or 700*l.*

Mr. Carlill said, he thought it would be imprudent to make a dividend under the circumstances, as it appeared they had not sufficient funds to pay all that would be required of them—in other words, their debts exceeded their capital, on which account he should second a motion, if one were proposed, that there be no dividend.

The Chairman expressed his opinion that the resolution which had been carried for the Report's being received and adopted, included the payment of a dividend. They met under circumstances different from those of the last meeting, as they had had time to read and digest the Report, and he should consequently submit that a dividend was carned.

Mr. Gresham observed, in answer to an allusion to the expense of working the railway, implied in the remarks of Mr. Carlill, that in all undertakings of the kind the actual expense invariably exceeded the estimate, and sometimes doubled it. The cash of the working account should not be applied to the construction account, and therefore it was quite clear they had it in their power to pay a dividend of 10s. per share, and this dividend they ought to pay, for to many of the proprietors it was an object of some consequence, as they were not in a condition to forego it, and they certainly had a legitimate claim to receive it.

Mr. Henwood observed, that from the 30th June up to the present time there had been a great increase in coaching, as well as in the quantity of goods conveyed on the railway; and in his opinion they were only just starting, as it were. (Applause.) The shareholders were entitled to the dividend, which had been fairly earned.

Mr. Liddell agreed with Mr. Henwood. He thought their prospects better than ever, as they had come to an agreement with the lessees of the Leeds and Selby Railway, from which they had already experienced a great increase in their traffic returns. He thought with Mr. Moor that the last dividend was injudicious, but he did not see the same objections to one now, and would support the motion because there was good reason to expect that, in future, their expenses would be less and their receipts much greater.

Mr. Carlill inquired if the expense of supporting the bridge at Selby was included in the construction account.

Mr. Locking replied, it was.

Mr. Carlill hoped the cost of working the line would be reduced, as it was much greater in proportion to the receipts than that of the York and North Midland Railway.

Mr. Locking said, every possible care was used to prevent the expenditure being more than could be possibly avoided. The interest due on the loan was included in the account up to the 30th June.

Mr. Henwood remarked, that the expense of keeping the permanent way in repair had been greater than it would be in future, owing to the haste with which it was got ready for opening on the 1st July.

Mr. Moor said, it appeared that about 20,000*l.* more would be wanted, and he wished to know how it was to be raised.

Mr. Henwood observed, that the sum alluded to was virtually a loan already.

Mr. Moor then asked if all the steam tugs had been discontinued.

Mr. Locking said, they had.

Mr. Sidebottom then begged leave to move, that in compliance with the Report, a dividend of 10s. per share be made payable on and after the 15th of September, and that the book for transfers be closed from the 1st September till the 15th, to prevent the inconvenience always experienced when they remained open.

Mr. Carlill said, he considered the question now open to an amendment on the motion.

Mr. Phillips explained it was not, the dividend having already been adopted in the Report.

Mr. J. Foster said, he had examined the accounts for the year, and was convinced they would be justified in declaring a second dividend of 10s. a share. He had the greatest confidence in the Directors, and that they would suffer none to beat them in their exertions to benefit the proprietary. (Cheers.) He therefore seconded the motion.

The resolution being put, was carried by a large majority, and

The Chairman then closed the business of the meeting by thanking the shareholders for their attendance.

Mr. Henwood proposed a vote of thanks to the Chairman, which was seconded by Mr. W. H. Dikes, and carried by acclamation.

Mr. Broadley, after acknowledging the kindness of the meeting, expressed his conviction that the Directors would carry out the intentions and wishes of the proprietors to the utmost of their ability, being conscious that whilst they did so it was for their own individual benefit as well as that of others. Great savings, he felt convinced, would be effected; and as they had heard from Mr. Moor, it was probable their receipts for goods alone would increase to 600*l.* or 700*l.* a week. In fact the undertaking, as had been well observed by Mr. Henwood, was still in its infancy, and it must be gratifying to them to perceive the progress they had made within a few weeks past. Besides, they would recollect that the last half-year was the worst, that the winter was both long and severe, and trade worse than usual. Having surmounted these difficulties, the prospect before them was more pleasing, and of better promise. They might fairly calculate on several months to come being in their favour, and that next year they should be able to declare a much larger dividend. (Applause.) The Directors and shareholders then withdrew.—*Hull Times*, Aug. 11.

LONDON AND BLACKWALL RAILWAY COMPANY—GENERAL MEETING.

The Half-Yearly General Meeting of the Proprietors of the London and Blackwall Railway Company was held on Thursday, at the London Tavern, Bishopsgate Street; William Routh, Esq., in the Chair.

Great interest was attached to the proceedings in consequence of the promised explanations in the matter of the charges and counter charges made in the case of Mr. Alderman Humphery, M.P., late a Director of the Company. The large room of the tavern was crowded.

The usual preliminaries having been gone through,

The Chairman said, the meeting had been convened in the usual manner, and for the usual purposes; but for reasons, which he would by and by state, the Directors were anxious that he should, for the present, defer any remarks which he might have to make upon the Report or upon the general condition of the Company, in order that they might at once proceed to other business which was of the greatest interest and importance, not only to the Directors but to every gentleman present. In order that such business might come formally before the meeting the Secretary would now read the Report of the Directors.

The Secretary (J. Warmington, Esq.) accordingly read as follows:—

REPORT.

At the last half yearly meeting the Directors stated their expectation that the works on the extension line from the Minories to Fenchurch-street would be completed for traffic in the course of the month of June. The state of the weather, and some other circumstances, occasioned an unavoidable delay of four or five weeks in the opening, which took place on the 2nd of the present month.

The plan proposed by the Engineers of the Company for working the extension line has been attended with entire success. No impediment of any description has interfered with the perfect accomplishment of all that had been anticipated; and the Directors venture to state, without fear of contradiction, that as a work of science of a very high order, it needs only to be seen to be admired.

With equal confidence do the Directors regard it as a work of great utility to the public, and of advantage to the proprietors. In the arrangements of the terminus at Fenchurch-street, every attention has been paid to the convenience and comfort of passengers, and ample space, the want of which was much felt at the Minories station, is provided for any increased amount of traffic. All possible consideration has at the same time been given to the protection of the public, and to the prevention of annoyance to the neighbourhood.

The experience of a twelvemonth has done much towards bringing the working of the railway to a state of perfection; and if the peculiar mode of traction adopted on this railway yet admits some slight improvement, the Directors are able to state, as well upon the authority of their Engineers as from the most minute attention and anxious consideration they have themselves given to the subject, that the time is not remote when any existing defects will be entirely removed.

The adoption of the wire rope has been attended with complete success. It has never broken, although some portion has been in use for twelve months. In working the whole line with wire rope, care has been deemed necessary in watching the effects produced upon it, and the Engineers have therefore advised that it should proceed gradually; but they are satisfied that ere long the hemp rope will be wholly removed from the line, except so far as a small portion may be required to afford the necessary elasticity in starting the trains. When this is accomplished, a great reduction in the annual expenditure, as compared with the hemp rope, will be effected.

The association for the formation of a Company for running steam-boats between the terminus of the railway at Blackwall and Gravesend, in the establishment of which your Directors have taken the greatest interest, has been eminently successful in its proceedings. Three vessels have been built expressly for this station—namely, the *Railway*, the *Brunswick*, and the *Blackwall*—all of the highest character for accommodation and speed. In the last four months, during the greater part of which time only two of these boats were running, they have carried 140,500 passengers.

By starting from the Brunswick pier at Blackwall, steam-boats are able to make the passage each way in an hour and ten minutes with, and an hour and three quarters against, the tide; and by making six trips during the day with each boat, the owners are enabled, with benefit to themselves, to charge fares less by one-third than the boats which go up to London Bridge.

The advantages to be derived from this plan became at once obvious to the proprietors of those favourite boats the *Father Thames* and *Sons of the Thames*, who have accordingly made arrangements with the Railway Company for the use of the Brunswick pier, at which these boats now call on every trip, so that a communication between Gravesend and Blackwall is now kept up every half-hour during the mornings and evenings, and every hour during the middle of the day.

The great success which has attended the experiment of providing boats for the Brunswick pier station, entitles the Directors to urge the shareholders, in the strongest manner, to assist both in the prosecution and extension of the enterprise, by contributing towards the requisite capital, in the mode which has already been submitted to them.

The Woolwich trade has been in perfect operation, and during the last four months the numbers carried have been about 150,000.

With reference to steam-boat traffic, the following facts cannot be too often repeated, namely—

1st. That the distance from the centre of the City to the Blackwall Railway terminus in Fenchurch-street, is no further than to the steam wharfs at London Bridge.

2nd. That in going by the railway instead of the river, a saving is effected of, on the average, three quarters of an hour.

3rd. That the use of the railway will wholly obvi-

Digitized by Google

ate the extensive damage to property, and loss of life, incurred by accidents from steamers in the Pool.

Much consideration has been given by the Directors to the subject of increased fares. But, although the present fares are unquestionably low, (perhaps lower than any other railway in England), the Directors would deprecate any increase, until the present rates have had a fair trial, with the advantages of the extension line.

The attention of the engineers has been directed to the preparations for an extensive goods traffic. Arrangements for the accomplishment of this very desirable object are now in a forward state, and will shortly be brought into operation.

The total receipts from passengers' traffic for the past year amount to 32,650*l.* 13*s.*

The Directors have called on the Engineers for a statement of the cost of the three most important items in the expense of working the line, viz. ropes, sheaves, and fuel; and from the information given by them, and the attention the Directors have themselves paid to the other outgoings, it appears to them that the weekly expenses, including rates and taxes, will not exceed 500*l.*

For the present it is probable that the working expenses will not be less than that sum; but as to the future, the Directors have the authority of the Engineers for stating that a considerable saving will be effected in many of the items. Any additional expense attending the carriage of goods, will, of course, depend on the extent of that description of traffic.

In conformity with the resolutions adopted at the recent special general meeting, held on the 16th of the last month, the proprietors have had shares in the new capital allotted to them, according to the numbers held by them in the original capital.

The half-yearly account, together with a general statement up to the 30th of June last, of the receipts and payments, is in the hands of the proprietors, and with the Report, would have been delivered sooner; but that the Directors fixed the meeting earlier than usual, being desirous that no time should be lost in affording an opportunity for explanations, rendered necessary by the recent discussions on the transactions of an ex-Director of the Company.

The Directors conclude this Report with the following general observations:

The number of passengers carried on the railway, during the year ending in July last, has been 1,864,756. It is clear, that a great increase to those numbers is necessary in order to realise the expectations which have been entertained by the shareholders and Directors.

It must be borne in mind that this railway was established mainly for the steam-boat traffic of the River Thames. Up to the present time the business of of the railway has arisen chiefly from sources which had either not been taken into account at all, or from which no such amount was expected as has been derived.

Until very recently no inroad had been made on the old modes of conveyance. Proprietors may be aware that not a single steamer has been displaced from the Pool; nor could it well have been expected, until the extension of the line to Fenchurch-street had been opened. And although the passengers taken by the three boats which have during some portions of the last four months confined themselves to the Brunswick Pier, amount to so many as 140,500, yet these form but a small proportion of the multitudes passing Blackwall to or from the London Bridge wharfs.

Sanguine expectations had been entertained by many that on the opening of the railway to the Minories, the bulk, if not the whole of the steam-boat traffic on the river would have immediately found its way to the Brunswick Pier. But time must be necessary for the accomplishment of so great a change. Habits have to be altered, and prejudices and conflicting interests to be overcome. Steam vessels have been long connected with the wharfs to which they at present resort; and this connection cannot be severed on the instant.

The decided advantages offered by the Brunswick Pier, in connection with the railway, have been demonstrated by the success of the steam-boats on that station, and the Directors entertain no doubt whatever, that the proprietors of steam vessels generally will soon be convinced that it is greatly to their interest, if not absolutely necessary for their self preservation, to proceed no further up the river than Blackwall: and, seeing that the traffic yet remaining to be made available to the railway is most abundant, the Directors continue to have unabated confidence in the complete success of the undertaking.

N.B.—Several amounts have been paid since the half-yearly balance, and others remain to be paid for coals, rope, clothing, &c. which will appear in the next half-yearly account.

The CHAIRMAN said he would for the present waive every other topic introduced into the Report, for the purpose of at once coming to that paragraph in it which alluded to the transactions of an ex-Director of the Company. He was glad to see that gentleman now present, and could only regret that he was absent on the occasion when the matter was first mooted, because if the explanations which he hoped would now be given of his own conduct by the gentleman referred to, had been given then, and if the charges against his late colleagues, which he trusted would now be pressed, had then been brought forward, much obloquy would have been avoided and much mischief averted from the Company, which had damaged it at a time when it stood most in need of support. (Hear, hear.) As to the charges which had been brought against Mr. Alderman Humphery, he (the Chairman) had nothing to add to what had been stated at the late special meeting. On that occasion he (the Chairman) had in answer to questions, informed the proprietors that it had come to the knowledge of the Board that one of their number had sold shares which he did not possess, and that a discussion on the subject had taken place at the Board, which had led to the resignation of the party implicated in the transaction. This was all the information that he gave—this was all that he could give. It would be known to the meeting, that since that period Mr. Alderman Humphery had sent forth a paper reflecting upon the character of his late colleagues, in answer to which the Secretary had publicly pledged himself, that at this meeting the Directors would be prepared with an explanation. Such pledge he (the Chairman) would now renew, and he hoped and believed that when these explanations had been given, they would be deemed satisfactory. (Hear, hear.) It was, however, but an act of justice to Mr. Alderman Humphery, that he should first be heard, and he trusted that not only would that gentleman give an explanation of his own conduct, but that he was prepared to support the charges which he had brought against the Board. (Hear, hear, hear.)

Mr. WILLIAM CRAWSHAY begged to be allowed,

Digitized by Google

before Mr. Humphery commenced his explanations, to state what had come within his own observation, as his name had been mixed up in the affair. He would state the whole transaction from first to last, in justice to himself and Mr. Humphery. A great deal had been published on this subject highly derogatory to the character of Mr. Humphery, but it had yet to be proved. It had been said that he had been speculating, not only in 100, but in many hundred shares, but as yet he had seen nothing but assertion in support of the charge. He had had no communication with Mr. Humphery subsequent to the late special meeting, and it was only as a simple act of justice that he now stood forward to state what had come within his own knowledge.

A PROPRIETOR (interrupting,) wished to know the name of the speaker.

Mr. CRAWSHAY gave the desired information, and added that he was a holder of 1,000 shares in the undertaking. Mr. Humphery had come to him, on a particular day, he forgot what—[Mr. Alderman HUMPHERY—On a Saturday.]—and signified a wish to purchase 100 shares, at 9 discount. He (Mr. Crawshay) had expressed his surprise at this, as the shares were then at 10 discount in the market. Mr. Humphery had offered him 1,600*l.* for these 100 shares, whereupon he represented to him that they could be had in the market for 1,500*l.* Mr. Humphery replied that he did not mind *that*, as he wanted the shares that day. He (Mr. Crawshay) then asked Mr. Humphery to put his offer into writing, which he immediately did, as he (Mr. C.) told him that he was not very well acquainted with transactions in shares, although he saw clearly enough that it was equivalent to giving him 100*l.* He asked Mr. Humphery whether he had any objection that the offer should be named to Mr. Routh (Chairman of the Company,) who was in the next room, and Mr. Humphery said he had not. Mr. Routh was accordingly called in, and shewn Mr. Humphery's handwriting, when Mr. Routh said that he too was little acquainted with the selling of shares, but that he would not part with any portion of his shares for stock-jobbing purposes. Ultimately he (Mr. Crawshay) declined to sell, as he thought it much better to be able to attend the general meeting without having altered his position in regard to the number of his shares, especially as it was likely that some little disappointment would be felt and expressed at the comparative smallness of the Company's earnings. He begged to state distinctly that Mr. Humphery had not made the least objection to putting his offer into writing, nor to informing Mr. Routh of the transaction. It had been said that Mr. Humphery had sold hundreds of shares, but he (Mr. Crawshay) had made every inquiry, and could find no trace of any such transaction, beyond what was supplied in the paper already referred to.

The honourable proprietor here exhibited the document, which, although without signature or date, was admitted by Mr. Humphery to be in his handwriting. The following is a copy of it:—

"I have sold 100 shares at 8 dis., say for 1,700*l.* I will buy of you 100 at 9 dis., and pay immediately 1,600*l.*, and will give you the call for 100 shares this day month, if you wish to have them back."

Mr. Alderman HUMPHERY said, he had to thank his friend, Mr. Crawshay, for what he had stated—[Mr. CRAWSHAY—Not at all.]—as it would have been difficult for him to have explained the transaction more fully. It was perfectly true that he had sold 100 shares, and he was ready to admit that if he had given the matter due reflection he should not have done it. It was, however, the first transaction of a similar kind in which he had been concerned, for he solemnly pledged himself that he had never before been engaged in buying or selling a single share. He had never trafficked in shares, notwithstanding it had been so alleged; and he should not have sold those which he did sell, had he not felt satisfied that it was the highest price he should ever be able to obtain for them. It had been said in print that he had been buying and selling, selling and buying from January to June, with a view to influence the market and to depreciate the property of the Company, but this was wholly unfounded. He had never held a share in any railway but the Blackwall, and he defied any person to prove that he had ever bought or sold beyond the extent stated. (Hear, hear, hear.) He had not read the account of the special meeting until his return to London from Dublin, when he found that several things had been stated to his disadvantage which were not correct. The Chairman was reported to have said, that when the transaction was discovered, a meeting of the Board had been called. Now no meeting had been *called* on his account, for Mr. Routh had been informed of the affair on Saturday, and the usual meeting of the Board was held on Tuesday. At that meeting the Chairman told his colleagues that one of the Directors had sold 100 shares. He (Alderman Humphery) at once admitted that he was the party, and a strong feeling was in consequence excited against him at the Board, which had induced him to tender his resignation. But that he had any wish or any intention to depreciate the shares of the Company he must totally deny. On the contrary, he had used every exertion to promote the prosperity of the undertaking ever since he had the honour of being re-elected by the proprietors last year. He had never done anything to injure the property, but rather everything to serve it, in proof of which he would read a note which he received from the Secretary, dated 16th October, 1840. [The honourable gentleman here read the note.] It was to the effect that it had been agreed at the last Board meeting—at which Alderman Humphery was not present—to issue a promissory note for 10,000*l.* in order to pay for the works and other expenses incurred, and the Alderman was requested to affix his signature to the document inclosed and return it by the bearer. He accordingly did sign it, and would he have done so, he would ask, if he had not felt an interest—and a very strong interest too—in the prosperity of the railway? Mr. Salomons, one of the Directors, in a letter which he had thought proper to publish, had stated that money had been raised on the credit and influence of some of the Directors. Now his (Mr. Humphery's name) was attached to the promissory note, [the other names were here read,] but he did not find the name of Mr. Salomons there.—

Mr. SALOMONS. For the very simple but sufficient reason that I was not then a Director.

Mr. CRAWSHAY would suggest that the matter of the promissory note should not be further gone into than was necessary to illustrate the interest which Mr. Humphery alleged he took in the undertaking. No good end could be answered by going into details. (Hear, hear.)

The CHAIRMAN was not aware that any inconvenience would arise from the fullest discussion on the subject. He would merely state that Mr. Humphery and the other Directors who had signed the note had ample security.

Mr. Alderman HUMPHERY doubted that fact.

Mr. SALOMONS would take upon himself to say, on the part of the Board, that Mr. Humphery should at once be relieved from any liabilities on that account, if he felt so disposed.

Mr. Alderman HUMPHERY was glad to hear it.

Mr. CRAWSHAY was aware that Directors of Railway Companies were obliged oftentimes to incur much personal liability in order to further the interests of their several lines. As Chairman of the Northern and Eastern Company, he himself was placed in a similar position, and although he cared not if the whole world knew it, so far as he was concerned, yet it might not be pleasant to those who had advanced the money to have the subject openly discussed in a public meeting.

Mr. Alderman HUMPHERY would not mention the names of the lenders in this instance. He had no security, and defied any one to show the contrary.

A PROPRIETOR said he had the security of the shareholders.

Mr. Alderman HUMPHERY did not believe that the shareholders were at all liable, or at all likely to relieve him or any other Director from what they had taken upon themselves in such a matter as this. Mr. Salomons had said that he would release him.—

Mr. SALOMONS.—And I say so again. (Hear, hear, hear.)

Mr. Alderman HUMPHERY would therefore not pursue this part of the subject further. It showed, however, that he had taken great interest in the undertaking, since he had rendered the whole of his property liable for it, and therefore could not wish to depreciate it. He would repeat that he had never trafficked in shares: What would they have said if he had bought 2000 shares at 4, 5, or 6 discount, and if he had borrowed of his bankers 30,000*l.* or 40,000*l.* to pay for them; what would they have said if he had thus cleared the market? Would they not have felt obliged to him? But if he had allowed these 2000 shares to ooze out at 2 or 3 premium, and thereby put from 2,000*l.* to 3,000*l.* into his pocket, they would have called him a clever fellow and not a jobber, because he had the money to pay for them. He thought it would be a good regulation if parties when they sold shares were bound to deliver them. He had seen in the *Times* lately, a notice of a case where a gentleman had agreed to deliver certain shares at 10 premium, trusting to a promise on the part of the Directors of the Company that the shares should be handed over to them, but the Directors subsequently refusing to do so, he was compelled to go into the market and purchase at 22 premium, in order to fulfil his contract. The resolution which the Directors had passed against him would imply that he had gone to the strong box of the Company and taken out of it shares belonging to some other person and sold them, whereas he had only delivered the 100 shares he sold—part his own, the remainder borrowed from a friend.

Mr. CRAWSHAY thought it was better to let the matter as to the sale of the shares rest where it was. If nobody had anything further to allege against Mr. Humphery than the sale of these shares, he thought the affair assumed a different complexion from what had been at first supposed. (Hear, hear.) He would repeat that there had been nothing underhand in Mr. Humphery's proceedings so far as these 100 shares were concerned, and he was sure that at the time Mr. Humphery did not consider that he was doing wrong.

Mr. Alderman HUMPHERY said, if he had thought there was anything wrong in the transaction, it was not likely he would have applied to the largest shareholder in the Company, nor allowed the matter to be mentioned to Mr. Routh. The Chairman had said he was bound to explain the charges he had brought against the Directors in his letter published in the *Times* of July 27.* Now, with respect to that letter, he would premise that he was much irritated when he wrote it; and would not any one under the circumstances have felt thus irritated when so offensive a resolution had been levelled at him? He had told the Chairman that he should not be present at the special meeting, and yet he was assailed in his absence. The Secretary in his published letter had said that he (Mr. Humphery) might have attended the meeting if he had chosen, for that he was in town while it was being held. He had never said that he should not be in town—as he did not intend to set out for Dublin till next day—but having parted with all his shares he had no longer any right to be present at the meeting. No sooner had the resolution been passed than papers of the worst description were forwarded to the most influential of his constituents in the borough of Southwark, accompanied by anonymous letters, and not only so, but paragraphs of a very hostile and offensive description taken from the London newspapers, had found their way into the whole of the Dublin papers to meet him at the Dublin Docks. (Laughter.)

A PROPRIETOR said, the meeting could not help *that*. Most likely these annoyances had originated in political hostility.

* See *Railway Times* of July 31.

Digitized by Google

Mr. CRAWSHAY thought it was useless to go into such matters, unless the honourable gentleman was prepared to bring the charge of having acted so home to the Directors or shareholders. (Hear, hear, hear.)

Mr. Alderman HUMPHERY said, he had alluded to these matters merely to show the grounds for irritation which existed. To come however to the specific charges contained in his letter to the *Times*, he had said, and he would repeat, that the calls of Mr. Salomons and other Directors were in arrear. When he left the Board on the Tuesday previous to the special meeting, the arrears on calls were above 20,000*l.*, and Mr. Salomons was one of the greatest defaulters. Mr. Salomons had stated in his letter, that since he had been in the Direction no shares had been declared forfeited for non-payment of calls. He (Mr. Humphery) did not say there had, for Mr. Salomons had not been a Director for more than six months; but he would appeal to some of the older Directors whether shares had not been confiscated while Directors' calls were in arrear. Mr. Salomons had said that the calls due at the time of the meeting were inconsiderable in amount, and that none of them were on shares held by the Directors. The last call of 2*l.* 10s. per share, was declared in February, and made payable on the 2nd of March; and it might be that a good deal of arrears had been paid up on the day of the late special meeting to which Mr. Salomons referred, as no doubt the Directors apprehended that he (Mr. Humphery) might retaliate when he knew that such a resolution had been passed; but he would assert, without fear of contradiction, that on the day when he left the Board the arrears amounted to 20,000*l.* (Cries of "Name, name.") He could not name the parties. (Cries of "Oh, oh.")

The CHAIRMAN said, Mr. Humphery referred to the total arrears due by the proprietors at large. (Hear, hear.)

Mr. Alderman HUMPHERY resumed.—Mr. Salomons had insinuated that he (Mr. Humphery) had not spoken the truth—(hear, hear, from Mr. Salomons)—but let the paper which was on the table of the Board at the time referred to be now produced, and he would vouch that Mr. Salomons' name would be found there with others. With respect to the charge which he had brought against one of the Directors, of having received "out of the Company's funds 500*l.* for alleged services and expenses;" and his conduct in that matter was, he would contend, the cause of the hostility shown to him—he had very little to say. When he (Mr. Humphery) first joined the Direction, the gentleman referred to was Chairman, although he had since resigned that office. The money voted to him was alleged to be for valuable services rendered to the Company, during the passage of their Bill through Parliament. that gentleman having taken great interest in the matter. He might deserve the grant—he had never said anything to the contrary—but he had contended that it ought to have been paid out of the fees voted to the Directors, and not out of the Company's funds; and he had said further, that the Directors generally ought not to have accepted such fees until operations had actually commenced. The number of Directors was subsequently reduced from 24 to 16, and he (Mr. Humphery) was ousted. He was not certain whether the 500*l.* was paid while he continued at the Board, but the matter had been discussed, and, as he had already stated, the part which he had taken on the occasion had excited all this hostility towards him.

Mr. CRAWSHAY would appeal to the honourable gentleman's experience as a member of Parliament, whether during the progress of a Railway Bill through the two houses of legislature, costs might not be incurred and money expended wisely and judiciously, the particulars connected with which it might not be expedient to discuss in such an assembly as this.

Mr. Alderman HUMPHERY would not have presented himself there that day had he not been conscious of his own purity and integrity. There could be no doubt that in the cases alluded to, money was often expended, and it had been said among members of both Houses of Parliament—(hear, hear, —but for his own part, he had neither directly nor indirectly participated in such expenditure. (Hear, hear.)

Mr. CRAWSHAY would unhesitatingly state, that the exertions of Mr. Robertson—for he was the gentleman alluded to—had been extremely great. (Hear, hear, hear.) He was satisfied that not only had the 500*l.* voted to him been expended for the benefit of the Company, but many other hundred pounds out of his own pocket, honestly, boldly, and expediently. (Hear, hear, hear.) The grant was well deserved, and as a proprietor he would request that Mr. Robertson would take no notice whatever of such charges. (Much applause.)

Mr. Alderman HUMPHERY said, he had never insinuated that the vote was not well deserved. (Cries of "Question, question," and considerable confusion.) He had no alternative but to enter into these matters, as he had been called upon by the Chairman to do so.

The CHAIRMAN said, he had only told Mr. Humphery to say what he pleased. When Mr. Humphery had concluded, he (the Chairman) would refresh his recollection upon one or two points upon which he seemed to be somewhat forgetful. (Hear, hear.) There was one point upon which he might take that opportunity of setting the meeting right. Mr. Humphery had stated, that he had advocated the payment of the 500*l.* out of the Directors' fees—thereby insinuating that others had been opposed to such a proposition. Now he would state most distinctly, that it *was* paid out of the Directors' fees, and moreover that there never was the slightest intention of doing otherwise. (Much applause.)

Mr. Alderman HUMPHERY said, it unfortunately happened that he had not in his possession the vouchers which would confirm his statements.

The CHAIRMAN said, the whole of the Company's books had been brought there on purpose, and might be examined by any gentleman. (Hear, hear, hear.)

Mr. Alderman HUMPHERY said, the books could not be examined in that place. Let them be examined by parties unconnected with the Company, and he was convinced that what he had stated would be borne out by them. There was no doubt a feeling of disappointment on the part of the shareholders at the depression of their stock, more especially as last year the Chairman had promised them a dividend of 10 per cent., but he would repeat that such depression had not been occasioned by him, and that he had never had but one transaction in their shares. There was but one other point to which he would allude, and that was, that since his opposition to the 500*l.* vote, proper attention had not been paid to him by his late colleagues—that in fact he had been treated very ill. In proof of this he would mention that when the plan for the Extension viaduct was brought before the Board by the Engineers, he immediately saw that it could not be carried out. (Laughter.)

Mr. CRAWSHAY (interrupting) thought it was useless entering into engineering details. If there were defects in their works, the Engineers were responsible.

Mr. R. STEPHENSON (Engineer) said he was prepared to make a statement on the subject, when the honourable gentleman had concluded.

Mr. Alderman HUMPHERY resumed, and amid manifest signs of impatience on the part of the meeting, proceeded to say, that it had originally been intended to cover in the Extension viaduct with wood. He (Mr. Humphery) had informed the Engineers that by the Act of Parliament no woollen fencing could be used between the Minories and Fenchurch-street, and he had almost been knocked down for saying a word against the plans of the Engineer. The Engineer afterwards proposed to support the roofing of the viaduct upon iron columns, the interstices being filled up with brickwork. He (Mr. Humphery) had told him that by building a 9-inch brick wall in cement the cost of the pillars might be saved. (Cries of "question, question.") The Engineer had said it could not be done, and he was told not to interfere with details.

The cry of "question" here became so general that the Chairman was obliged to interfere, and to request that Mr. Humphery might not be interrupted, as time would thereby be saved.

Mr. Alderman HUMPHERY resumed.—What was the result? Why, that the iron columns had been contracted for; but with the exception of the bridges crossing streets, they had never been used. A letter had been sent by Mr. Stephenson to the Chairman, occupying, he believed, two sheets of paper, but of this letter only one paragraph had been read before the Board in the presence of him (Mr. Humphery) and without his sanction, and even without any previous intimation being given him. That paragraph was to the effect that if he (Mr. Humphery) interfered in details, the engineer must resign his situation. ("No, no," from the Directors.) The reading of the paragraph was evidently intended to excite a bad feeling against him in the minds of his brother Directors, and accordingly he had never been treated well from that time, but nevertheless the viaduct was constructed in the way he had recommended. He would say again, that he had always felt and would continue to feel a strong interest in the Blackwall railway, and he believed that by good management it might be rendered productive to the proprietors. Good management, however, was indispensable, and upon that point he *could* say much if he pleased. (A laugh.) The time would come when the proprietors would know who were their best friends.

Mr. FERRERS (Director) thought Mr. Humphery would do well to tell all he knew in reference to the management of the line, instead of insinuating what he *could* say. (Hear, hear, hear.)

Mr. Alderman HUMPHERY said, he would explain what he meant. The railway had cost about a million sterling, which was supposed to be, and ought to have been, expended for the benefit of the proprietors and the public. He found, however, that the East and West India Dock Company were the only parties likely to reap the advantage. The Dock Company owned the wharf at Blackwall, and all the buildings upon it belonged to that body, not to the Railway Company. The Dock Company could at any time render the railway useless (laughter) for although the Railway Company had a lease of the wharf, they had no lease for the shipment of passengers or goods. He would repeat that the railway had been constructed for the benefit of the Dock Company, and it behoved the shareholders to examine into the matter.

Mr. CRAWSHAY enquired whether Mr. Humphery had been in the habit of pressing these matters upon the attention of the Board.

Mr. ALDERMAN HUMPHERY said, he had always been stopped, when he broached the subject. ("No, no," from the Directors.) In conclusion he would repeat that if he had reflected, he would not have sold the 100 shares. (Hear, hear, hear.) He did not think that any harm would result from the transaction, and he did not believe even now that any harm *had* resulted from it. Who the parties were who had sold at 8 or 9 discount, let their own consciences tell—

Mr. SALOMONS and Mr. FERRERS complained that Mr. Humphery in making that remark had looked towards the Directors as if insinuating that *they* had acted in the manner represented.

Mr. Alderman HUMPHERY said, his observations were directed towards the meeting generally. It was somewhat remarkable that the present meeting had been called on a day when he was known to have business elsewere, (the opening of Parliament.) Doubtless this was unintentional on the part of the Directors. Once more he would state solemnly that it had never been his wish to depress the Company's shares, and if unwittingly he had done any wrong he should be happy to do everything in his power to repair it. (Applause.)

MR. GEORGE RENNIE, jun., M.P., said, as the disagreeable duty had devolved upon him at the previous meeting of moving the vote of censure upon the last speaker, he wished to explain that he had

Digitized by Google

no feeling of personal hostility towards Mr. Humphery. It was against the Director and not against the man that the vote was levelled, and he should be happy to find that the accused could clear himself of the charges imputed to him. Whether he had done so on the present occasion must be left for the meeting to determine. Mr. Humphery admitted that he had sold 100 shares, and he did not pretend to say that he had them in his possession at the time. He (Mr. Rennie) had certainly been led to believe that the number of shares sold was much larger than 100. Mr. Humphery said it was not, and he was bound to believe him. The principle however was the same, whatever might be the number. The explanations of Mr. Humphery were now before the meeting. He (Mr. R.) was sorry that he was unable to remain to hear the further proceedings which might transpire in reference to them. From what he knew however of the Directors, he had no doubt that their answers to the charges brought against them would be highly satisfactory. He would repeat that his only object in bringing forward the question was to vindicate the character of the Board, and when it was considered how much property was entrusted in this country to the hands of Directors, he thought they could not be too regardful of their honour. (Hear, hear, hear.)

[The honourable proprietor here left the room.]

The CHAIRMAN would not trespass upon the meeting with more than a few words. In the first place, he would assure Mr. Alderman Humphery that in fixing that day for the meeting, they knew nothing of any appointment which he might have. They had convened the meeting at the earliest possible period, being anxious that the matters in question should be investigated and settled. With respect to the statement of Mr. Humphery, that no special meeting of the Board had been called when the transaction in shares was discovered, he (the Chairman) was not aware that he had ever said that such meeting had been called. He had been informed of the transaction on Saturday, and if the Board had not had to meet on the following Tuesday in regular course, he certainly should have felt it his duty to cause a special meeting to be convened. As to the promissory note of which Mr. Humphery had spoken so much, he could only repeat that the security was most ample in the future calls and surplus property of the Company; and he might take that opportunity of informing the proprietors that, after a full and most careful investigation of such surplus property, it had been found that the undertaking could be fully carried out, without any further call for capital. (Hear, hear, hear.) He was the more anxious to make this statement, as he knew that rumours to the contrary were abroad. Mr. Alderman Humphery had said that he (the Chairman) knew that he would not be present at the late special meeting. He certainly had heard him say so on Tuesday, but that was all he knew respecting his intentions. As to the anonymous letters, he would distinctly disclaim for himself, and he believed he could do so for his colleagues, all participation in that business, or even knowledge of it, till that day. (Hear.) Every gentleman had private or political enemies, and this was sufficient to account for the annoyance to which Mr. Humphery had been subjected. He trusted that any farther vindication on that point was unnecessary. (Hear, hear.) With respect to the arrears of calls on Mr. Salomons' shares, it was proper that that gentleman's position with respect to the Company, should be explained. About eighteen months or two years ago, Mr. Salomons being of opinion that the undertaking would ultimately prove a very beneficial one, had been desirous of investing a considerable amount in it, and there being, as the proprietors were aware, 760 unallotted shares, Mr. Salomons had offered to take them at 2 premium. The Directors thinking it much more desirable that the shares should pass into the hands of an influential and wealthy individual like Mr. Salomons, than that they should be thrown upon the market, accepted the offer, with this clear and distinct understanding however, that Mr. Salomons should pay the calls at his own convenience. It was true that Mr. Salomons, at the time alluded to, had not paid his calls upon those shares, but had made arrangements for so doing. (Hear, hear, hear.) Mr. Esdaile, and other gentlemen in the room, could confirm most fully this statement. (Hear, hear, hear.) He believed that Mr. Humphery was not acquainted with this arrangement as to Mr. Salomons's shares. As regarded the 500*l.*, it had been paid, as he had already stated, out of the fees of the Directors. There was no necessity for the appointment of a Committee to examine the books, for they were open to the inspection of any proprietor, and had been so inspected by several after the last meeting. As to the propriety of the grant, he had taken some pains to examine into that point, and he was satisfied that it was a very inadequate payment for the services rendered. (Hear, hear, hear.) He might add, that on the passing of the Company's last Bill, the Directors being aware that Mr. Robertson had incurred considerable expense in the business, had requested to have a statement of the amount furnished to them in order that it might be paid, but Mr. Robertson had declined the proposal. (Hear, hear, hear.) In short, he could not speak too highly of the services which that gentleman had rendered to the Company. (Much applause.) In regard to the private letter from Mr. Stephenson, the Engineer, he believed it was to the effect, that if he were to be held responsible for the working of the Extension line, his plans of construction must not be interfered with. He believed farther, that this letter arose out of propositions made by Mr. Humphery, and probably by other members of the Board. How far the Directors were justified in following out the schemes of Mr. Stephenson, rather than of individual members of the Board, it was for the meeting to decide. (Hear, hear, hear.) Mr. Humphery said the wharfs were the property of the Dock Company. Unquestionably it was so, but as the Railway Company rented them at 600*l.* per annum on a lease for ever—

Mr. Alderman HUMPHERY (interrupting, and apparently surprised)—For ever?

The CHAIRMAN—Yes, for ever! And as this lease was ratified by an Act of Parliament, he thought it was coming as near as possible to absolute and entire possession. (Hear, hear, and much laughter.)

Mr. Alderman HUMPHERY wished to know if the Railway Company could make use of the wharf, charging wharfage.

The CHAIRMAN said, of course the wharfage of goods was not included in the annual payment of 600*l.*, but as respected the wharfage on passengers, the rate was fixed by the two Companies together, the Dock Company incurring the expenses of maintenance, and the Railway Company receiving one-third of the returns. In the interest of 7 per cent. paid on the cost of constructing the buildings, the expense of maintaining them—even to a pane of glass—was included. No doubt the construction of the railway would be an advantage to the Dock Company, but as their goods must pass along the railway, and the Company could charge their own price for such transmission, it seemed as if there would be some profit resulting from this source, and as they had not yet secured it, he was happy to see that Mr. Alderman Humphery had so good an opinion of their prospects. ("Hear, hear," and laughter.) He did not know that he had left any charge unreplied to, but one thing he would state generally, and he did so most unequivocally and distinctly, namely, that Mr. Humphery had never been treated by his colleagues with the slightest disrespect. Discussions were occasionally carried too far at Railway Boards as in other places, and it was sometimes the duty of the Chairman to interfere, and as far as possible to preserve order. That duty had devolved upon him, and he had endeavoured to perform it impartially. As far as giving preference to the opinions and plans of the practical and responsible officers of the Company over those of individual Directors, he must plead guilty to the charge. He had always given and should always continue to give such preference. (Hear, hear, hear.) There was one point in Mr. Humphery's letter to the *Times*, to which he would briefly allude. Mr. Humphery has stated that he had been voted out to make way for Captain Routh, the son of the Chairman. It certainly had been the opinion of the Board that the services of a young and active man like Captain Routh would be very valuable, and none had expressed that opinion more strongly than Mr. Humphery. (Hear, hear, from Mr. Humphery.) He (the Chairman) felt the appointment to be a compliment highly flattering to himself, and he believed that hitherto the Directors had not had cause to repent the step they had taken, nor the proprietors either. (Much applause.) It was not correct however that Mr. Humphery had been ousted to make room for Captain Routh. A ballot had been taken, and the lot had fallen on Mr. Humphery, but he hoped this was no just ground for complaint either against the Directors or Captain Routh. (Renewed applause.) Mr. Humphery had argued as if the resolution of censure had emanated from the Directors, but such was not the case. It would be in the recollection of those who attended the special meeting that the Directors had urged that meeting not to pass such vote, because they thought the party accused ought first to have an opportunity of vindicating himself if he could. Mr. Humphery had admitted that he had acted thoughtlessly in disposing of the shares, and as he had said that his transactions had been limited to 100, the Directors, although they felt that a cloud had from this unfortunate occurrence been brought upon the prospects of the line, would not feel disposed to object should it be the pleasure of the present meeting to rescind the vote of censure upon Mr. Humphery. The security for Mr. Humphery's personal liabilities was, he would again repeat, most ample, but as Mr. Humphery had, in common with other Directors, thrown himself into the gap, the proprietors were so far under an obligation to him. (Hear, hear, hear.)

Mr. STEPHENSON begged to be allowed to say one word. He would admit that the original design was to support the roofing of the Extension viaduct upon iron columns, but that intention had been abandoned, not in consequence of any remonstrance or representation on the part of Mr. Alderman Humphery, but on the statement of Mr. Tite, the Architect, that such construction would be contrary to the provisions of the Building Act. He had never heard Mr. Humphery speak of the iron pillars, and assuredly it had not been in consequence of anything said by him that the alteration of plan had been carried into effect. Mr. Tite might have received the suggestion from Mr. Humphery—(a laugh)—and he would leave the parties to settle it between them. Mr. Humphery had been uncandid enough to conceal one thing, namely, that when he (Mr. Stephenson) exhibited his plan of a double roof, Mr. Humphery had opposed it and pronounced it impracticable. The roof, however, had been so constructed, and the proprietors might inspect it for themselves. On the occasion last referred to, Mr. Humphery had treated him in a most uncere-monious, most uncourteous, most ungentlemanly way. Nevertheless, he had not threatened in his letter to the Chairman that he would retire; he had merely claimed his protection against such treatment on the part of an individual Director. (Hear, hear.) He never had submitted, and he would never calmly submit, in any Company, to be so treated. (Applause.)

Mr. WARD thought the explanations of the Directors most satisfactory. (Hear, hear, hear.) They had perfectly vindicated the confidence reposed in them, and he thought the meeting ought to mark their sense of what had transpired. (Great applause.)

The CHAIRMAN said if there had been any doubt as to the high principles of honour upon which the affairs of the Company had always been conducted, he might triumphantly have appealed to many gentlemen in the room who had formerly occupied seats at the Board. (Hear, hear, hear.) He did not deem it matter of reproach that they had incurred personal liabilities on behalf of the Company. (Hear, hear, hear.)

Mr. J. WHISHAW had heard with great satisfac-

Digitized by Google

tion the explanations given by the Chairman, more especially, as he came into the room with a somewhat different feeling. Even on the showing of Mr. Alderman Humphery himself, the charges against the Directors could not be made out. Mr. Humphery did not venture to say that the arrears of 20,000*l.* were due solely upon the shares of the Directors, for in fact, they were spread over a constituency of 500 or 600 persons. With regard to the vote of 500*l.* he thought the Directors had acted most properly and rightly. They had paid it out of their own fees, over which the proprietors had no control, but even if it had come out of the general funds of the Company it would have been well applied. (Hear, hear.) As to the insinuation that some of the Directors had sold shares at 9 or 10 discount—

The CHAIRMAN trusted that Mr. Alderman Humphery would disclaim all intention of imputing such conduct to the Directors.

Mr. Alderman HUMPHERY. I do. (Hear, hear, hear.)

Mr. SALOMONS as a Director and a very large shareholder, would state most distinctly that neither directly nor indirectly had he ever bought or sold a share since his first connection with the Company. (Hear, hear.)

Mr. WHISHAW, after a few farther remarks, moved the following resolution :—

"*That this meeting having heard the explanations of Mr. Alderman Humphery, with reference to the charges and insinuations made by him against the Directors, in a letter published in the* Times *of July 27th last, and the answer made thereto by the Directors, is of opinion that they are completely exculpated from such charges and insinuations.*"

Mr. WARD seconded the motion.

Mr. LEVY thought the Chairman's explanation very satisfactory, but he had omitted to notice the charge against Mr. Salomons, of not having signed the promissory note.

The CHAIRMAN said, Mr. Salomons had himself stated the reason, namely, that he was not at that time a Director. He begged to say, however, that since that time it had been found desirable to raise more money on the personal responsibility of the Directors, and Mr. Salomons had come forward most liberally. (Hear, hear.)

Mr. Alderman HUMPHERY said, the charge he had brought against the Directors was that some of them had not paid their calls. This was so far admitted, and yet the Directors were now passing a resolution exculpating themselves, without saying one word in respect of the forfeited shares. He would advise them to take care what they were doing, for the proceedings of that day would go forth to the public.

The CHAIRMAN said, the Directors were passing no resolution whatever. If it was the opinion of the meeting that they were exculpated from the charges and insinuations brought against them, the meeting had a right to express that opinion. (Hear, hear, hear.) He thought, however, that all farther discussion on the subject had better be avoided. (Hear, hear, hear.)

Mr. WARD said, the resolution purposely avoided entering into details. For his own part he might object to the word "exculpated," for he did not think that the Directors had ever been *in*culpated. (Hear, hear, hear.)

The resolution was then carried *nem. con.*

The CHAIRMAN said, a vacancy had occurred in the Direction, in consequence of Mr. Humphery's retirement. There were many old Directors with whom the present Board would feel great pleasure in acting, but they thought it best, considering that such charges had been brought against them, to leave the appointment entirely with the proprietors.

In answer to a question it was stated that, according to the Act, the vacancy must be filled up.

Mr. Crawshay was proposed, but that gentleman declined on the grounds that he had already been a Director of the Company; that his partner, Mr. Routh, whose zeal and talent could not be surpassed, had now a seat at the Board; and that his other avocations did not leave him leisure for the office.

Mr. LEVY, after expressing his regret that a longer notice had not been given to the Proprietors, proposed Mr. Richard Lambert Jones; but that gentleman declined the honour.

The CHAIRMAN said, if he might venture to suggest a name, it would be that of the gentleman who had brought forward the motion that had led to so much discussion that day—he meant Mr. Geo. Rennie, jun. (Hear, hear.) His only motive for doing so was, that that gentleman had on previous occasions pretty freely criticised the proceedings of the Directors, and therefore the Proprietors might safely trust their interests to his vigilance. (Hear, hear, hear.)

Mr. CRAWSHAY thereupon proposed Mr. Rennie, and the motion having been seconded by Mr. Corner, was carried unanimously.

The CHAIRMAN said, they had come at last to the consideration of the Report. This was a case in which they must look forward, not backward. The Directors had stated in their Report that they had unabated confidence in the capabilities of the line, and so it was. They had stated that they had been somewhat disappointed in the extent of steam-boat traffic which had come upon the line, but when they saw the advantages which the Company's wharf presented—when they knew what benefits had already accrued to those who were availing themselves of these facilities—and when they observed the stream of traffic which in omnibuses and steamers was daily passing their doors, they were still of opinion that the undertaking was intrinsically a good one, and that it would be found to be the interest of all parties to patronize it. (Hear.) It would be idle to enter into a detail of all the causes that had hitherto interfered with a larger influx of traffic. There was the irregularity inseparable from the opening of a new railway, and especially a railway so constructed. Then the steam-boat proprietors had all of them their fixed engagements, and there was much prejudice to overcome, and on the whole it was scarcely to be expected that the traffic should suddenly be diverted into totally new channels. (Hear, hear.) It had ever been the opinion of the Directors that until the line was opened to Fenchurch-street their prospects could not be fairly developed, and accordingly the returns had improved since the opening of the Extension, although he was bound to say that a much greater improvement must take place before the line could truly be said to answer their expectations. It was in the power of the proprietors at large materially to assist in the developement of traffic. Many of them might have an interest in steam-boat Companies, and if they could persuade them to give the wharf and railway a fair trial he had no doubt that the result would be advantageous to all parties concerned. (Hear, hear.) In proof of what had already been effected, he might state that although only 3 out of the 18 steam-boats to Gravesend used the Brunswick wharf, these three since the extension of the line to Fenchurch-street, had carried about a third part of the whole traffic. Hear, hear, hear.) That the steam-boat traffic might be greatly increased there could be no doubt. The Directors and their friends had already embarked 24,000*l.* in these three steam-boats; but although they were receiving a satisfactory return on the money invested, they did not deem it prudent to engage themselves further. He would state distinctly, that until a constant and regular communication was established with Greenwich, and with places lower down the river, the capabilities of the line would not be fairly known. It was possible that other steam-boat companies might join them, and it was possible that the railway proprietors might themselves embark further in the steam-boat speculation, although the Directors had given it their most serious consideration whether it was prudent to make enemies by embarking in the Margate trade themselves. The Directors had always been anxious to treat the existing steam-boat companies without hostility or jealous rivalry, and they believed that these companies would be consulting their own interests by availing themselves of the facilities offered by the railway. At the same time, so essential was it that the traffic of the line should be fully unfolded, that it seemed desirable the Directors should be armed with powers to extend their steam-boat operations. (Hear.) He was not aware that there were any other points in the Report to which it was necessary that he should advert, except perhaps to the expenses of working the line. The proprietors would see that the rope had been a source of very considerable expense, and that the wages of the men formed likewise a somewhat large item. The Directors had accordingly found it impossible to produce a revenue account that could be at all depended upon, because so many of the expenses during the first year ought legitimately to have been charged to capital, as was invariably the case in other Companies. At the same time they thought it would be satisfactory to the proprietors to know the probable amount of their future outgoings, and as these included principally the rope, sheaves and fuel, the Directors had instructed the engineers, Messrs. Stephenson and Bidder, to investigate these points, and from the Report of these gentlemen and the personal inquiry of the Directors, they were satisfied that for the future the expenditure would not exceed 500*l.* per week. Mr. Stephenson indeed anticipated a considerable reduction of that sum, against which would have to be placed the extra cost incurred in the transmission of goods. With regard to the extent of goods traffic that might be carried, the Directors see no difficulty in attaching to each train one or two trucks containing from 4 to 5 tons of goods each. Supposing that but one truck went with each train, and contained only 4 tons, the number of tons carried per day would amount to 400. The Directors, however, did not hold out the prospect of any such amount of traffic. There could be no question that the Dock goods and the steam boat goods would be transmitted by railway, but as for groceries, spices, silks, and other commodities, the extent to which they would come upon the line would depend upon the facilities afforded for their transmission to and from the terminal stations. This was a matter that was occupying the anxious attention of the Engineers and Directors, and he hoped that before many months, the result of their labours would be seen, and would prove satisfactory to the proprietors. There could be no question that they could carry goods at half the present cartage charges, but against that reduction was to be placed the convenience to the merchant or consumer of receiving his goods at his own door instead of having to send for them to Fenchurch-street. Under the present circumstances of the Company, the Directors did not consider it prudent to propose the declaration of any dividend. After defraying the charges incurred, there was a sum of about 7,000*l.*, which although not now proposed to be divided, would form a fund for the augmentation of future dividends—a course which the Directors thought better than if they had, on the one hand, placed the whole of the year's charges against capital, or on the other recommended the immediate division of the balance in hand. (Hear, hear.) Before he sat down he had to express his own thanks and those of his colleagues, for the kind manner in which their conduct had that day been regarded, and he begged to state that any farther information as to the state or prospects of the undertaking would be most readily supplied. (Applause.)

A PROPRIETOR enquired if any calculation had been made by the Directors, as to the rate, per ton, at which goods could be carried.

The CHAIRMAN said, no accurate calculation had yet been made. He believed the present cartage charges were about 6*s.* or 7*s.* per ton.

Mr. STEPHENSON said, the additional expense of haulage for the conveyance of goods would be so imperceptibly small, that it might be regarded as nothing. The only cost to the Company, therefore, would be that of porterage at each end of the line.

The CHAIRMAN said, under these circumstances,

Digitized by Google

the best way would be, first to ascertain the cost of porterage, and then to add as much profit as the nature and extent of the trade would justify.

The Report of the Directors was then unanimously adopted.

Mr. STOCK, in a complimentary address, moved the cordial thanks of the meeting to the Chairman and Directors, for their zealous exertions to promote the best interests of the Company.

Several Proprietors seconded the motion, which was carried unanimously.

The CHAIRMAN made an appropriate acknowledgment.

Mr. LAURENCE thought it due to the Engineers, Messrs. Stephenson and Bidder, that the best thanks of the meeting should be given to them for their successful completion in so able a manner of so remarkable a work, especially as this was the first time the proprietors had met since the line had been finished. (Hear, hear, hear.) He proposed a vote to that effect.

Mr. CRAWSHAY seconded the motion.

The CHAIRMAN said, he never had felt greater satisfaction in putting any motion. It was only necessary to go over the new works to appreciate the ability with which they had been constructed. As to the traffic, the proprietors might be disappointed or not, but there could be no doubt that the Engineers had done their part most ably.

The motion was then carried unanimously amid applause. Messrs. Stephenson and Bidder had previously left the room.

Mr. CRAWSHAY proposed that the proprietors should dine at Blackwall that day fortnight in honour of the completion of the line. Each gentleman to pay for himself, and the Directors to be invited, a special train being provided for the company.

The Directors expressed their readiness to be present on so gratifying an occasion, and several of the principal proprietors put down their names for the dinner. The meeting then separated.

LONDON GRAND JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the Proprietors of the London Grand Junction Railway Company, was held on Wednesday, at the offices of the Company, Cheapside; WILLIAM CASH, Esq., in the Chair.

The advertisement calling the meeting having been read, it was unanimously resolved that the common seal of the Company be affixed to the register of shares, which was done accordingly in presence of the meeting.

After a few introductory remarks by the Chairman,

The SECRETARY (Mr. Ayres), read the following

REPORT.

GENTLEMEN,—Nothing having arisen since the last general meeting tending to the resuscitation of this undertaking, the Directors have only to submit to the proprietors the following statement of the receipts and expenditure of the Company during the last half year:—

RECEIPTS.

To balance as per last statement	£4,144	8	0
Cash received for interest on monthly balances and deposit account to 31st December, 1840	5	6	11
Cash received on account of the second call	458	16	0
Total	£4,608	10	11

DISBURSEMENTS.

By paid for advertising	£15	6	4
Petty cash	5	0	0
Printing and newspapers	5	0	6
Rent half-year	15	0	0
Salary of Secretary	30	0	0
Interest to Brewers' Company	154	13	6
Solicitor's charges from April, 1839	400	0	0
Total	£624	0	4

The CHAIRMAN said, the proprietors were aware that the Directors had been compelled to adopt legal proceedings against a considerable number of shareholders who had not paid up the second, and even against some who had not paid the first call. This would account for the comparatively large item in the account under the head of Solicitor's charges. He begged to add, that in all the cases the Directors had been successful, with the exception of two trifling ones, of which one was still undecided, and the other it had been deemed prudent to compromise. It was right to state that the Solicitor's bill comprehended other business, and that the charges were perfectly satisfactory to the Directors. The principal actions in which the Company had been concerned were those against Messrs. Ginston, Freeman and Graham.

Mr. STANTON thought it was customary for defendants to pay all costs when the decision went against them.

The SOLICITOR (Mr. Sutton, jun.), explained that all the actions referred to were defended. In the case against Mr. Freeman the decision in the Court of Common Pleas had been against the Company, but in consequence of the summing up of the learned judge, it had been deemed advisable to apply to the twelve judges, who had accordingly issued a writ of *venire de novo*, on which Mr. Freeman paid the calls, but the costs which were necessarily heavy had to be defrayed by the respective parties. In the other cases alluded to, the costs had been less, as the parties had abided the event of the writ of error.

Mr. STANTON inquired whether Mr. Graham had paid the whole of the calls.

The SOLICITOR answered in the affirmative.

Mr. STANTON wished to know whether the interest payable to the Brewers' Company was still accruing.

The CHAIRMAN said, the amount stated in the accounts had been due at Michaelmas last, but had only been paid within the last six months, which brought it into the present balance-sheet. The Directors considered that the claim for interest ceased with the last payment.

Mr. STANTON asked if there were claims for interest from any other quarter.

The CHAIRMAN was not aware that there were.

Mr. STANTON inquired if the liabilities of the Company amounted to any large sum.

The CHAIRMAN replied that they did not. At a meeting some time ago, it had been rather a matter of complaint that the Directors had apparently done so little, and in consequence they applied to Mr. Rastrick, the engineer, who submitted to them certain plans. One of these, for the construction of a tunnel under the streets—(a laugh)—had been laid before a late meeting, who had disapproved of it, and the matter had been dropped. Mr. Rastrick had subsequently stated that an open cutting could be substituted, but the Directors had not deemed it prudent under all the circumstances to take any further steps in the matter. Mr. Rastrick's bill, which however was not a large one, was still to be paid.

Mr. STANTON thought the Directors had done quite right in not proceeding further at present, as it was now well ascertained that short lines of railway did not pay.

Mr. EDGELL inquired in what position the Company stood in respect of the land for the purchase of which they had agreed.

The CHAIRMAN said, the land reverted to the original owners if the Company could not carry out the line.

Mr. EDGELL presumed that the period after which such reversion took place was at the end of the seven years allowed for the completion of the railway?

The CHAIRMAN said, there had been special arrangements entered into with the land proprietors, which arrangements terminated in June, 1840. They had had no further negociations with these parties, so that the land might be considered as having already reverted to the prior possessors.

Mr. EDGELL inquired what sum had been forfeited in consequence of the inability of the Company to fulfil their obligations.

The CHAIRMAN said, the amount was about 15,000*l*.

Mr. EDGELL had noticed that the arches erected some time since on the premises of Mess. Cubitt of Gray's Inn lane, had recently been pulled down, and he presumed therefore that all idea of proceeding with at least that portion of the line was abandoned.

The CHAIRMAN said, they had no alternative. They had not received sufficient encouragement. The state of the times, and the discovery already referred to, that short lines did not pay, had dispirited the shareholders and rendered them unwilling to pay their calls.

Mr. EDGELL enquired whether some intimation had not been made to the Directors, of an intention on the part of others to construct a line to run into the London Grand Junction.

The CHAIRMAN said, they had had several such applications. Negociations had been commenced with the Corporation of London for the construction of the railway in connection with the new street to Clerkenwell, but these had ended in nothing. They had had applications also from the promoters of a scheme to be called the London and Manchester Direct Railway, the Engineer of which was Mr. Remington, the original Engineer of this Company, but these too had failed. It had also been suggested, that a line projected by Mr. Gibbs should join this railway at Bagnigge Wells, pass on *via* Islington and Hornsey, to the Northern and Eastern at Tottenham, and thence to Manchester. It had been found, however, that Mr. Gibbs's levels were all different from those of the London Grand Junction line, and on that account, as well as on others, nothing had resulted from the negociation.

Mr. EDGELL enquired, what the liabilities of the Company amounted to.

The CHAIRMAN said, the Brewers' Company certainly did not appear satisfied, but the Directors thought that they had already had more than enough of the Railway Company's money, and would resist any farther claim, against which they conceived they had a good defence. There were certainly no other claimants but the Brewers' Company.

Some conversation ensued upon this point, but ultimately it was deemed prudent not to enter into details, as the matter would probably go before a court of law.

The CHAIRMAN said, the proprietors might rest assured that the Directors would not incur any considerable expense without calling a meeting of the shareholders.

Mr. EDGELL said, the fact that the Directors had for the last year or two kept the expenses down in so remarkable a degree, was the best proof that could be given of their earnest desire to study economy as far as they possibly could. (Hear, hear, hear.)

Mr. PERKINS then moved that the Report and Balance Sheet be received and adopted.

Mr. STANTON seconded the motion, which was put and carried unanimously.

The CHAIRMAN announced that the Solicitor had most kindly offered, free of charge, the use of a room in his offices in Basinghall-street, for the transaction of the Company's business. (Hear, hear.) The Directors intended to avail themselves of this handsome offer, and to give up their present offices at Michaelmas next. The Secretary would attend in Basinghall-street every Saturday from 12 to 4 o'clock, to afford to proprietors any information as to the state of the Company that might be required. It was but justice to the Solicitor to state, that for the last two years he had charged nothing for his valuable services in the affairs of the Company, restricting himself entirely to the bare charges for professional work done. (Hear, hear.)

In answer to questions, it was stated that the Company could not legally become defunct till July, 1843, unless a special Act of Parliament were obtained, which would entail more expense upon the Company than the course now being pursued.

The SECRETARY (in answer to questions from Mr. Edgell,) stated that the total number of registered shares was 9,360, of which the full amount of calls had been paid on 7,605 shares. Of the remainder, 1,510 had been declared forfeited, and

Digitized by Google

upon 245 the calls were in arrear. Upon 10 of these, however, it was expected that the calls would ultimately be received. The rest were principally in the hands of one defaulter, whose previous connection with the Company was well known, and as the Directors hoped that before the expiration of the Company's powers, they would be able to render the party amenable to the law, they did not consider it prudent to forfeit his shares at present.

On the motion of Mr. Perkins, a vote of thanks was unanimously passed to the Chairman and Directors.

The CHAIRMAN, in acknowledging the compliment, expressed the determination of himself and colleagues to adhere to the same system of rigid economy which had recently been pursued.

The meeting then broke up.

YORK AND NORTH MIDLAND RAILWAY COMPANY—GENERAL MEETING.

THE Tenth Half-yearly General Meeting of this Company was held in the Board Room at the station, Tanner-row, York, on Tuesday week last; GEORGE HUDSON, Esq., in the Chair.

After Mr. Baker, the Secretary, had read the advertisement calling the meeting, he read the Report, which will be found in the *Railway Times* of last week.

The CHAIRMAN said, in moving that the Report be received and adopted it was unnecessary to make any observations to that meeting but those of congratulation on their signal success. The shareholders of the York and North Midland Railway had now received a tenth of the money which they had advanced. The total sum which they had expended out of their capital was about 539,000*l.* Gentlemen would observe that there were a few items put to the credit side which could not be considered capital—such as interest received on calls, amount of transfer fees, &c. He was justified in stating that the probable amount of their expenditure would not exceed 600,000*l.* He was equally confident that the income would materially increase. They had received this half year 1,200*l.* a week, or nearly so. He had no doubt that during the coming year the receipts would exceed 1,600*l.*, very probably 1,700*l.* per week. The receipts during the past week would be as near 1,900*l.* as possible. It was gratifying to look at the success which had attended that Company. Their expenses, however, were not so satisfactory as they were the last half year. The last year, upon a receipt of 24,000*l.* the expenses were about 7,000*l.* During the present half year, upon a receipt of 31,700*l.*, their expenses were 12,000*l.* There was one item of nearly 500*l.* which had been given as compensation for accidents, which it was hoped would not occur again; and there was also a number of bills at Christmas time, which they could not get in at the other half year. Still, it was gratifying to know that the expense of the whole year, taking the two half years together, was not more than 34 per cent. He did not think that with their present receipts it would average more than 32 per cent. Respecting the Leeds and Selby Railway, it must be gratifying to know that there was a profit in the working of that line, and he thought that by Christmas the profit would be increased. The result of the statement of the sums received since last June perfectly justified him in the opinion which he had advanced. Every circumstance would conduce to render them satisfied with the success of the undertaking; and they could only wish and hope that other similar undertakings were in an equally prosperous condition. If that were the case, he had no doubt but they would be able to carry on their line of railway to Scarborough. This was a matter of the utmost importance to the Company. The number of passengers would be then materially increased in the upper part of their line. Great facilities would be afforded to the public; and the plan was well worthy the consideration of gentlemen who had capital to embark.

After some discussion the Report was unanimously adopted.

Ald. MEEK said, everything was now arranged, and they were in possession of the Leeds and Selby line as lessees. The management of that line devolving on the Directors of the York and North Midland Railway, they had consequently an increase of duty, an increase of responsibility, and an increase of capital to manage. Every business man, while he looks to his business being transacted by another, will feel disposed to give that other party such compensation as his services justly entitle him to for the work which he does. The York and North Midland Board of Directors had now to manage the Leeds and Selby line, which would greatly increase their duties; they received 500*l.* per annum for the management of the York and North Midland line; he proposed that they should receive a similar sum for the management of the Leeds and Selby line. When they took into consideration the prosperous state of these two lines, and the great care which had been taken of their interests by the Chairman and Directors, they were fully entitled to the sum which he proposed. It was due to the Chairman to state, that he had devoted a considerable portion of his time to the interests and benefit of the Company; to an extent which perhaps no other Chairman had done. The other Directors had also discharged their duties faithfully. He therefore proposed that the sum of 500*l.* per annum be set apart for them out of the profits of the Leeds and Selby Railway, as a remuneration for the management of the undertaking.

Mr. PEASE, of Darlington, seconded the motion.

The CHAIRMAN said, he felt obliged for the kind and friendly manner in which he had been spoken of by Mr. Meek, and more particularly because no person was more competent to judge of his exertions than that gentleman. Respecting the Leeds and Selby line, he felt that he had got for the Company one of the best bargains which they ever had. He had no doubt but if they met that day twelve months, they would have a large surplus on that line, not less than 120*l.* per week.

Mr. ROWNTREE—If the resolution had been to propose that 1,000*l.* a year be given to the Directors for the management of the concerns of the Company, he should have responded to it; he could not, however, but think that it would have been better to have distributed that amount somewhat differently from what was proposed. If they passed the resolution in its present shape, it might probably be made the groundwork of another advance with reference to greater traffic.

The CHAIRMAN said, he should be satisfied for the two concerns to be amalgamated, if the Directors thought proper.

The motion was then put to the meeting and carried unanimously.

The CHAIRMAN—The next motion is that the Directors be authorised to borrow on mortgage the sum of 55,833*l.* pursuant to the provisions of the amended Act passed in April last. The next call will be to pay back this money, or part of it. We do not intend to make any other call upon the new shares.

The motion was unanimously agreed to.

Alderman MEEK said, he knew a good deal about Directors, and the duties which they had to perform. He begged to propose a vote of thanks to the Directors of the York and North Midland Railway, especially the Chairman, for their able and efficient services in managing the two lines. The shareholders he had no doubt appreciated their services, and he could speak of them as being men of business, and well calculated to discharge their duties efficiently.

Mr. ROWNTREE said, he had pleasure in seconding the motion.

The motion was put to the meeting by Alderman Meek and carried unanimously.

The CHAIRMAN said, it devolved upon him to return thanks for the kind manner in which they had acknowledged the services that the Directors and himself had rendered to the Company. To every person placed in a public position, or having the management of a public undertaking, it was satisfactory to have the confidence of those whose money was entrusted to them. They had had difficulties to contend with like all other Railway Companies: but the confidence which had been reposed in them had lightened those difficulties very much, and had enabled them to go forward boldly in the promotion of their undertaking. It was very desirable that they should extend their line further north. If any feasible scheme should be proposed, they would not hesitate to call the shareholders together and submit that scheme to them. They had derived great benefit from the opening of the north line. They had already received nine per cent. while the line had only been opened three months; and it was fair to expect a much larger dividend. If they could get the line down to Newcastle, it would be of the utmost benefit to the Company. A scheme existed whereby it was supposed they could get on to the north. If they did that, the prosperity of their undertaking would be unassailable. He had only once more to thank them for the vote which they had passed.

Mr. PEASE, of Darlington, said, it was of importance that that line of railway should be carried forward to Scotland by the east coast. The Report of the Government Commissioners was in favour of the west side of the island: but he did not know whether their measures were before Parliament for adoption or not, or what steps the Board had taken to endeavour to secure traffic coming on the east coast.

The CHAIRMAN said, he had lately attended a meeting at Newcastle, at which many persons were present connected with different railways, and a resolution was passed, but no money was raised, and that seemed to be the main point on which the success rested in a railway undertaking. He was sanguine enough to think, by the united efforts of three or four Railway Companies, that they should be able to extend the line further to the north.

Mr. PEASE, of Leeds, said, the time occupied between London and Edinburgh was now twenty-six hours and a half. If the railway was continued to Newcastle at least two hours would be gained. As to the probability of its being continued, the Act of Parliament of the Great North of England Company extended as far as within 13 miles of Newcastle. If they could carry the line throughout there would be a continuous railway from Derby to Newcastle; and by keeping to the east coast they would take in Sunderland, North and South Shields, and other towns, where there were already railways established, which would come into this line.

Mr. PEASE, of Darlington, said, the money would have to come from the legislature to make the railway on the west side of the island. He wished them to press upon the Government the necessity of letting that money come to this side of the country for making a railway to Scotland. If the money was to come out of the national purse, it had much better be expended on this side of the island, where there was a far greater probability of income than on the other, which had been recommended in the Report. It was all-important to them that the railway should be on this side of the country; and the present was the proper juncture in which to attend to it.

The CHAIRMAN said, they might rely on the Directors doing all they could to promote the object.

Mr. PEASE, of Leeds, said, they would be exceedingly glad to co-operate in extending the line.

The CHAIRMAN said, he saw no difficulty in raising the required capital if three or four large Companies combined.

The business of the meeting was then declared at an end.

LANCASTER AND PRESTON JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE annual meeting of the shareholders was held on Monday, August 9th, in Lancaster, and was numerously attended; GEORGE BURROW, Esq. in the chair.

The SECRETARY read the

Digitized by Google

REPORT

Agreeable to the Act of Parliament incorporating this Company, the annual general meeting of the proprietors was held on the 26th June last, but the period to which the half year's traffic accounts are made being then so near 6th July, the Usefulness of such general meeting was questioned to this day, in order that the statement of the receipts and expenses of the second half year's traffic might likewise be submitted to the shareholders.

It will be observed by the subjoined account that the receipts for the last half year are not so great as the preceding one, but the fact that there is always much more travelling in the autumn than in the spring of the year, together with the unusually depressed state of trade, sufficiently accounts for this circumstance.

The Directors have much pleasure in stating that the local traffic on the line between Lancaster and Preston, and places adjacent to the railway, has considerably increased during the past half year.

The amount of the carriage of goods may appear small, but it should be borne in mind that the present receipts under that head are toll, and consequently net profit to the Company.

Referring to the annexed accounts of receipts and expenses of the traffic during the last half year, the Directors recommend that a dividend of 1*l.* 6*s.* per share be paid on the whole shares, and 12*s.* 7*d.* per share on the three quarter shares, which will be equal to 5*l.* per cent per annum on the paid up capital, and also leave a surplus of 1,616*l.* 12*s.* 4*d.* in the hands of the Company as a reserve fund.

The commissioners appointed by Government having reported that the best line of railway communication between England and Scotland was from Lancaster and Carlisle to Edinburgh and Glasgow, the landowners on that line and various other parties having local interests connected with the formation of that railway, are taking active measures to promote the prosecution of such an undertaking.

The North Union Railway Company have given notice of their intention to discontinue the arrangement with this Company for the joint working of the locomotive power on the 31st December next, alleging that the amount of remuneration they derive from this Company for undertaking the management of that department is not sufficient, although that amount has from time to time been settled according to the award of a referee mutually appointed by the two Companies.

It is with continued pleasure that the Directors are able to report that not a single passenger has sustained injury on this railway from accidents, or otherwise, since the opening, although upwards of 150,000 passengers have been conveyed on the line.

The Directors have to report that they have entered into a contract for the maintenance of this railway for a term of seven years, which they expect will be found to work well, and economically for the interests of the Company.

It has been found necessary to forfeit ten whole shares, belonging to Mr Peter Hart.

According to the Act of Parliament, three Directors, Messrs. Eastwood, Fearnside, and Preston, went out of office at the annual general meeting, held in the month of June last, the same gentlemen at that time were re elected, subject to the approbation of this meeting.

Statement of Capital Account, June 23rd, 1841.

GABRIEL COULSTON.
6th August, 1841. SAMUEL PRESTON.

After the Report was adopted, the Chairman spoke to the following effect:—Gentlemen, having laid before you a Report of our proceedings during the last year, we are now able from the near approach of the works to completion, to judge pretty accurately of the final cost, and I have likewise to state, that on purpose to complete the different stations and other works upon the line, and to pay off some outstanding accounts, a further sum of 25,000*l.* will still be required; consequently it will be necessary to make another call of 5*l.* per share upon the old shares some time in the course of the autumn, and I hope that will be sufficient for all that is required to complete the undertaking. I have only to add, that should any gentleman have a question to ask we are always glad to give any information that may be deemed desirable.

Mr. KNIGHT said, Mr. Chairman, with your permission I would remark that after putting the dividend into one pocket it certainly is rather unpleasant to take 5*l.* out of the other, but I hope we may now take it for granted that another call of 5*l.* per share will finally complete the line, including everything, stations, carriages and engines.

The CHAIRMAN—It is my candid opinion, without any doubt whatever, that another call of 5*l.* will be quite sufficient to complete the whole establishment throughout, including everything.

Mr. KNIGHT—It certainly is some satisfaction to know that another call of 5*l.* will be sufficient, for it appears quite evident that the estimate of an engineer at the outset is no criterion whatever with respect to railways. I admit that the expense of the line may be considered very reasonable in comparison with others, but I believe Mr. Locke's estimate was from 250,000*l.* to 330,000*l.*; and another call of 5*l.* will increase the capital to 115,000*l.* and upwards, which will be an excess of 100,000*l.* at least above Mr. Locke's estimate. That appears a considerable sum in a short line of 20 miles. I do not mean to say that our line is an exception to others, but I am quite convinced it would give much more satisfaction to shareholders if engineers would come a little nearer the mark in their estimates, for I believe there is an impression on the minds of shareholders in general that they have been rather misled by the estimates of engineers, which has caused a considerable degree of ill-feeling in many cases.

The CHAIRMAN—There certainly appears to be a considerable excess above the original estimate but after taking into consideration the extra expense with respect to the purchase of land and other property which was not calculated upon in the estimate, the excess will not be so much as it appears to be, and I have no doubt whatever that the railway will still be completed rather under 22,000*l.* per mile, and I think the proprietors must be aware that from the first it has been the anxious wish and constant aim of the Directors to use every economy in their power to keep down the amount of expenditure.

Mr. KNIGHT—I am fully aware, Sir, that the excess has arisen from circumstances over which the Directors had no control, and from the remarks which I have been induced to make with respect to that, I would beg leave to be understood, that I have no fault whatever to find with the Board of Directors, who I am certain are intitled to the utmost confidence of the proprietors. Perhaps I may now be allowed to ask when the agreement terminates with Mr. Hargreaves for carriage.

The CHAIRMAN—In August next year, or by giving three months notice.

Mr. KNIGHT—I believe, Sir, that a considerable number of the shareholders have been much surprised and disappointed with respect to the amount of toll. I suppose a considerable increase may be expected during the winter, but since the commencement it has only averaged about 20*l.* a week. In consequence of that, if Mr. Hargreaves intends to continue on the line, I hope he will make a more liberal offer to the Company next time, for it is generally supposed that he has made the better bargain of the two. (Hear, hear.)

The CHAIRMAN—The amount of carriage certainly may appear to be small, but it must be recollected, that being altogether for toll, there is no expense to the Company whatever, except the use of the railway.

Mr. KAY said, Mr. Chairman, I would beg leave to suggest, that in future a copy of the Report should be sent to the shareholders sometime previous to the half-yearly meetings, which plan has been adopted by other Railway Companies and found to be a great advantage and a saving of expense, particularly to shareholders at a distance, as they will then be more able to judge whether it will be necessary to attend or not.

The CHAIRMAN—The honourable proprietor's suggestion shall not be lost sight of, as the Board are anxious to accommodate the shareholders as far as lies in their power.

Mr. KAY—On looking over the Report it appears to me that the Directors are now making a greater dividend than the profits of the last half year will admit of. I must confess that I cannot exactly see my way with respect to that.

The CHAIRMAN—If Mr. Kay will examine the Report a little more minutely, I think he will be fully convinced that the dividend now declared after paying all expenses, and the interest on loan accounts is taken entirely from the profits of last half-year, notwithstanding the almost unparalleled stagnation of trade since the commencement, and still leave a small addition to the reserved fund, which is considered quite sufficient for every purpose required.

Mr. KAY—I am sorry to hear that the North Union Company have given notice of their intention to discontinue the agreement for the joint working of the locomotive power, and I think it would be very desirable to effect an amicable arrangement with that Company if it can be done without sacrificing our own interests.

The CHAIRMAN—We have not the remotest wish that anything should occur to intercept the good understanding that has hitherto subsisted between the two Companies. We are fully aware that they have derived a clear profit of 1000*l.* per annum by the late agreement, and we sincerely regret that the language used in the Report of the North Union Company can only be understood as intending to convey a censure on the Lancaster Directors; but we are still disposed to enter into any arrangement on fair and liberal terms; at the same time we feel justified in declining to enter into any agreement that may not appear to be satisfactory, and a mutual advantage to both parties.

Mr. KAY, after passing a high eulogium on the Board, proposed a vote of thanks to the Chairman and Directors, which, after being seconded, was put and carried by acclamation, amid loud applause.

The meeting then broke up apparently highly satisfied with the Report.

2. Toll to London and Birmingham 174*l.* 4s. 0d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,900*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 29*l.* 0s. 4d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The amount given in the table includes the receipts from the horse coaches from Hayward's Heath to Brighton. The divisor, therefore, is 46, although only 37⅜ miles of the railway are open, including the Shoreham branch of 5½ miles. The toll to the Croydon Company is not included in the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 5,082*l.* 11s. 1d. are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 30*l.* 14s. 0d.; horses, 12*l.* 3s. 0d.; dogs, 5*l.* 11s. 0d.; parcels, 135*l.* 19s. 1d.; cattle, 16*l.* 10s. 0d.; corn, 13*l.* 12s. 6d.; heavy goods, 453*l.* 6s. 0d.; coal, 75*l.* 14s. 10d. — Total, 793*l.* 10s. 5d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

We feel much obliged to two different correspondents at Lancaster for their attention. The Report has, however, reached us in the meantime from another quarter.

A Manchester Man [illegible] *is informed that we shall believe in the reasonableness of the Extension scheme when we see it, but not before. We do not quarrel with our correspondent's estimate of the virtues of the gentlemen whom he names; but he has his opinion and we have our's.*

Tenax has our best thanks.

P. Z.—We shall at all times be glad to hear from our correspondent, but on further reflection he will admit that controversies of the kind referred to may be carried too far.

Utilitas.—We certainly have seen nothing hitherto in the summer meetings of the various Companies to justify the assumptions of our correspondent. We do not think that proprietors were ever before so much alive to the necessity of efficient and economical management.

We feel obliged by the note dated from Portman place, and shall be glad to hear again from our correspondent.

R. R. and various other correspondents have our best thanks. We how to deserve their good opinion.

A Subscriber Waterford.—We believe so.

F. M. Clifton.—The case alluded to has already been noticed in this journal. His remarks, too, on the inadequate pay of certain railway servants have been anticipated.

Sunday Travelling on Railways.—The 5th letter on this subject is unavoidably postponed till next week; as are also our Railway Law Cases, and the letters of Humanitas and other correspondents, all of which are in type.

We tell Ignotus once again that we cannot allow the matter to proceed further. Besides, another week will throw new light upon several of the points in dispute.

Brighton Railway.—Our correspondent, Consilio, should give the Directors time. We have no doubt that they are quite as anxious as others can be that the approaches to the Brighton terminus should be as convenient as possible, but these things are not done in a day, as witness the approaches to the terminus at Birmingham. We see from the Brighton Gazette of Thursday last that the local authorities are about to take some steps in this matter.

In reply to a party who writes to us from Essex, we shall not publish what he calls his "address." For the same reason we will not allude to him by name.

Manchester and Birmingham Railway. We regret that we cannot find room for An Absentee Proprietor this week, and next week would be too late. We shall be glad to hear from him after the meeting.

Fair Play Blackwall Railway.—The cases are not at all parallel. The communication against a highly honourable gentleman is malicious and cowardly in one who has not the courage to sign his name to his letter. We can, however, guess pretty accurately from what source it proceeds.

Traffic omitted last Week.

LONDON AND BRIGHTON RAILWAY.
Account of Traffic from 6th to 12th August, 1841.

MAIN LINE.

Passengers, 4,761 ..... Amount, £1,780 9 0

SHOREHAM BRANCH.

Week ending the 9th August, 1841.

Passengers, 4,734 ..... Amount,	£160	0 8
584 tons of goods	59	17 9
Total	£219	18 5

*** It is requested that in future all communications intended for the *Railway Times* be addressed, "To the *Editor*," and not to any individual by name, now or recently connected with the establishment.

THE RAILWAY TIMES.

SATURDAY, AUGUST 21, 1841.

THE interest excited by the recent disclosures in connection with Mr. Alderman HUMPHERY and the London and Blackwall Railway Company, has induced us to make room for a very full report of the proceedings at the general meeting, which took place on Thursday last.

It will be for our readers, after carefully perusing that report, to pronounce how far the respective parties have succeeded in self-vindication. For ourselves, we must say, that Mr. Alderman HUMPHERY has been placed in a very unenviable position. The fact of his having offered to purchase 100 shares, with the option of having them demanded back within a month, thus giving it the character of a jobbing transaction, is fully admitted; but the imputation of trafficking in shares for purposes of gain, or to depreciate the stock of the proprietors, is not at all borne out. We call the attention of our readers to the full and candid statement of Mr. CRAWSHAY, the possessor of a thousand shares, who says—"he could find no trace of any such transaction." A unanimous vote of confidence followed the Chairman's exposition; such a mark of the feelings of their constituents must, under all the circumstances, be peculiarly grateful to the members of the Board.

Allusion was made incidentally to the corrupt practices which are supposed occasionally to influence the members of the legislature in granting or withholding Railway Acts. Whether honourable gentlemen are open to the influences of direct, undisguised, palpable pecuniary bribes, we will not take upon ourselves to decide; but if from selfish motives of any description, they seek to throw obstacles in the way of great national improvements, they are scarcely less culpable than if they at once pleaded guilty to an "itching palm." That impediments *must* have been offered to useful railway undertakings, the accounts of too many Companies abundantly testify. Take, for example, the instance of a Company whose meeting was held last week, and in whose accounts stands an item of 72,868*l.* 18s. 10d. as a charge for "obtaining the Act of Incorporation!"

With regard to the Blackwall Railway itself, we are sorry to find that hitherto the traffic has not come up to the anticipations of its promoters. There are many reasons why the traffic of a line so peculiarly circumstanced in every respect as the Blackwall Railway is, should not speedily have its capabilities fully developed. We trust, however, that the great exertions of the Directors to secure a profitable trade, will at no distant day be crowned with complete success, and that the line may take the same high rank as a pecuniary investment, which it now holds as a work of genius and science. If it do not, we are satisfied that it will not be the fault of those to whom the management of the Company's affairs have been, and have every prospect of hereafter being, entrusted.

IT will have been seen from the report which we published last week of the proceedings at the late Eastern Counties' meeting, that considerable discussion arose relative to a grant of 100*l.* towards the promotion of the religious instruction of the labourers employed in the formation of the works. The question has been brought before other Companies, and indeed was incidentally alluded to at the meeting of the Birmingham proprietors yesterday week, when Mr. JAMES HEYWORTH, the brother, we believe, of the gentleman who opposed the grant at the Eastern Counties' meeting, took occasion to express a hope that votes of the kind referred to, would no longer be brought before railway bodies. The controversy which ensued upon the vote of the Birmingham Company towards defraying the expense of building a church at the Wolverton station, where so many of the Company's servants are congregated, must likewise be fresh in the recollection of our readers, and altogether it appears as if the opponents of such grants were determined to omit no opportunity of bringing their views fully before the public, and of making a stand for what they deem to be a point of consistency and duty. Far be it from us to despise or disregard the conscientious scruples of the parties so acting. The importance of the object aimed at is fully admitted on all hands, and we know that some of those who are most strenuous in opposing these corporate benefactions are individually the most active, both as regards person and purse, in contributing to the religious and moral improvement of a class of men whose welfare is acknowledged to be the legitimate care of the railway public. The only difference of opinion which exists is in respect of the best mode of supplying the means for carrying out so praiseworthy an object, the one party contending for the superior efficacy of the voluntary liberality of individuals, the other arguing that the Companies in their corporate capacity have a duty imposed upon them of providing in that capacity for the instruction of the multitude whom they have called together and from whose labours they expect to reap a pecuniary advantage. The amount of contribution cannot be a matter of the smallest moment, and indeed, the question was discussed at the Eastern Counties' meeting avowedly as one of abstract principle. A donation of 100*l.* by such a Company as the Eastern Counties', or of 1,000*l.* by the London and Birmingham, cannot for an instant be supposed to have excited so strong a feeling of opposition as was displayed in both cases, had it been a matter of pounds, shillings, and pence, and nothing more.

We confess that for our own parts we are always glad to find such propositions as those which the Directors of the two Companies above named have done themselves the honour to support, brought before meetings of railway proprietors, albeit we will yield to none in anxiety to confine Boards of Management, and bodies of proprietors within the limits of their legitimate powers. In truth, we cannot see how such an application of a Railway Company's funds can be deemed, as some appear to deem it, inconsistent with the spirit of the several Acts of Incorporation. A fairer exercise of the powers conferred by the legislature cannot, in our judgment, be imagined. This is more especially the case in regard to a provision for the instruction of those who may be called the permanent servants of a Company; and if proof were wanting of the beneficial results which follow and flow from such arrangements, it would be found in the very gratifying statements made at the recent Birmingham meeting, from which it appears that the care of the Directors of that splendid work, for the physical

Digitized by Google

and moral and religious benefit of the subordinates on the line, has been repaid by the good conduct of the parties thus advantaged, and by their attachment to their several situations, in spite of the attractions held out in other quarters. Even as respects the temporary servants, if we may call them so, of a Railway Company, namely, the much neglected class of "navigators" or excavators, sound policy would dictate the employment of any means having a tendency, however remote, to raise them in the scale of social conduct; for most assuredly would such elevation contribute not only to the benefit of the individuals themselves, but to the advantage of their employers. On this ground, therefore, if upon no other, ought the Companies to exert themselves in so good a cause, and so far we apprehend would they be confining themselves within the limits of their Parliamentary privileges, for they would be but adopting means to work out, directly or indirectly, the prosperity of their respective undertakings. This point was well put by Mr. DUNCAN, at the Eastern Counties' meeting, when he appealed to the opponents of the grant, whether they would not cheerfully contribute, and whether they would not be legally and morally justified in contributing, to the payment of pecuniary rewards to the workmen, so that the completion of the line could thereby be expedited. The desired object, Mr. DUNCAN argued, was accomplished by a system of religious and moral discipline, which taught the men that sobriety and industry were their own reward, and the effects of which could not fail to be sensibly felt in the prosecution of the Company's business. Pecuniary rewards might possibly, in certain cases, be more speedy or more apparent in their operation, but assuredly, their results would be neither so extensive nor so permanent as those arising from steady and settled habits of self-respect, as inculcated in the religious instructions of these "Railway Chaplains."

Looked at in another light, the expenditure of a portion of a Railway Company's funds in providing the means of religious instruction for the labourers on their works is not merely justifiable, but becomes incumbent upon them as a duty—and this view of the matter was briefly and incidentally taken at the late meeting. When large bodies of men, many of them of violent habits, are brought together into one spot, it surely is due to the permanent residents that their temporary neighbours be kept as much as possible under control, and if this can be effected by moral power rather than by mere physical force, it is the interest of all parties that the fitting means should be resorted to, as extensively as circumstances will permit. The disgraceful scenes of dissipation, and of absolute outrage in a vast variety of shapes, that are constantly to be witnessed during the progress of every extensive railway work, must be well known to all who have had the misfortune to be brought into contact with them. The legislature has thought it fit that the Companies should contribute to the maintenance of order in the locality of such assemblages, by the payment of a certain number of additional constables, and why should not the Companies themselves voluntarily assist in organising what we may call a moral police among a class of men who stand so much in need of all the restraints which can possibly be imposed upon their lawless conduct?

We fear there is not unfrequently a good deal of sectarian jealousy and bitterness at the bottom of this opposition to railway grants for religious purposes. Pity it is, that unworthy feelings like these should be suffered to intrude themselves into matters of so much moment. If we wrong the parties by these suspicions, we shall most deeply regret it; but really the language used, and the manner occasionally exhibited on such occasions, seem to favour the notion that certain individuals would rather that religious instruction should be withheld altogether than that it should be presented under the auspices of a sect holding opinions differing from their own. We make no particular allusion in this remark to the recent meeting; but certainly it *did* seem strange to us that the exertions of a body of Dissenters (who unquestionably are entitled to the best thanks of the community for their "labours of love,") should have been held up and magnified, in proof, at it were, that no grant of money was requisite for the provision of further religious teaching. Surely there was room and scope enough for the benevolent efforts of all parties; and if the strictness of Dissenting principles, and a regard to consistency, will not suffer one sect to avail themselves of pecuniary aid when such aid is spontaneously and gratefully tendered to them, why should it be ground for complaint that others are less scrupulous? The answer would probably be, that no objection was made to the course which such other parties might deem it proper to pursue, but that they had no right to tax their neighbours for the prosecution of their peculiar plans. So far this reasoning is conclusive, and we should regret to see the power of a majority converted into a means of wounding the conscience of even a solitary shareholder; but we cannot perceive how the anticipated evil could possibly arise, if the mode proposed at the Eastern Counties' meeting, and actually carried into practice in the Birmingham case above alluded to, were adopted—namely, of allowing every one who dissented from the proposed application of the money to withdraw his quota of the contribution. This is in effect rendering it as much a matter of voluntary donation, as if the proprietors were individually to put their hands into their own pockets. We take it for granted that the principal object aimed at in opposing such votes is to ease the consciences of the objectors, and this being so, the proviso referred to appears fully to answer the purpose. It will have been noticed that at the London and Birmingham meeting Mr. JAMES HEYWORTH carried his hostility to the principle of corporate grants so far as to deprecate even the building of schools, or the encouragement of benefit societies among the servants employed upon the several lines. This seems to be straining the matter overmuch, for the effect of such institutions could readily be shown to be—not indirectly and remotely, but clearly and immediately—auxiliary in no trifling degree to the successful working of a railway, considered merely as a pecuniary investment. Religious scruples may dissent from the building of a church, or (to take the extreme case imagined by Mr. LAWRENCE HEYWORTH), the appointment of "a Bishop," but surely no shareholder can object to, or withhold his assistance from, a fund for the relief of the physical wants, or the promotion of the physical comforts of those whose lives are exposed to no inconsiderable peril in the prosecution of their daily avocations, and in pursuit of his individual gain.

In the particular case of the Eastern Counties' Company the conduct of the Directors in volunteering to make good from their own private means an amount equal to the sum voted by the proprietors, has been that of men anxious to forward a good work, and at the same time to preserve the harmony and unanimity so necessary for the full development of the enterprise in which they are embarked. We have not the slightest doubt that if a poll were taken of the shareholders at large, in that or in any similar undertaking, a very large majority would be found for such a grant as that to which, by a solitary vote, the meeting of last week came. At the same time it showed good taste and a proper judgment not to press the matter, although we are glad that the poor workmen will not be the sufferers. Nor ought the very liberal offer of Mr. HAMILTON of Liverpool to pass altogether unnoticed, and yet we can add nothing to the force of the simple fact, as recorded in our report of last week. The circumstance that Mr. HAMILTON found himself compelled to oppose the grant, sanctioned if not recommended by the Directors, throws additional lustre upon his very handsome proposal. Mr. HAMILTON has shown that as far as *he* is concerned, it is really and truly a question of principle, and not the mere saving or expending of a few score pounds. We sincerely wish that such individuals were far more numerous than they are.

LAST week we published the Report of the Directors of the York and North Midland Railway Company, approved of by the proprietors at their recent half-yearly meeting, and to-day we give a brief notice of the further proceedings. The extraordinary development of traffic upon this line we have on previous occasions taken an opportunity of bringing before the public, and other interesting details on the same point will be found in the official document referred to, and in the Chairman's subsequent address. We are happy to find, too, that although the working expenses of the line are somewhat higher than during the previous half year, they are still such as may challenge comparison with those of any Railway Company in England. Taking the two half years together, it appears that the expenditure of the Company has not exceeded 34 per cent. on the gross receipts, and confident expectations are entertained that in future the cost of working will be still further reduced. There is in one item in the accounts—and a similar item we are sorry to say has this half year appeared in the accounts of other Companies—which we sincerely hope there will be no occasion hereafter to repeat. It is this—"Compensation for accidents, 488*l.* 10*s.* 6*d.*"—a sum sufficiently large of itself, but we venture to say not representing a tithe of the loss which the accidents in question have indirectly inflicted upon the revenue of the Company. The occurrence of one horrid casualty such as took place uopn the York and North Midland and other lines, leaves behind it an impression, on the minds of a considerable portion of the public, which it will take months, nay years, of the most careful management wholly to efface.

It is satisfactory to find that thus far the working of the Leeds and Selby line, which the York Company hold on lease, has not disappointed the expectations under which the arrangement was effected, and to which we adverted at some length a few weeks ago. Other arrangements of a general kind are, it seems, in the course of settlement with another Company, for mutual convenience in the conveyance of traffic, and as these become more extended the advantage to every Company partaking in them will be sensibly promoted.

The history of the York and North Midland

Company presents a very cheering lesson to the shareholders in unfinished lines, the stock of which may be at a ruinous discount in the market—always supposing that such lines are intrinsically good, and that the depression of their shares arises from some of the influences to which this species of property is peculiarly exposed, and which at times are as unaccountable as they are absurd. Previous to the opening of the line, the York and North Midland shares stood very low indeed on the Stock Exchange, but no sooner did the public actually *see* what they might previously have fully satisfied themselves of, namely, that the traffic upon the line was certain to be very large, than the Company's stock was eagerly sought after, until now it occupies a very proud position among the shares of the few lines which have reached a premium. From all that we can perceive, the public have in this instance judged wisely at last, and we trust and believe that their confidence in the capabilities of the line will be found not to be misplaced.

Some conversation took place at the meeting on the subject of a railway route to Scotland. We are glad to observe that this matter is attracting the serious notice of the existing Companies and of individuals, and we hope that no effort will be spared to press the question earnestly upon the attention of the new Parliament. It reflects but little credit on a British legislature that impediments should be thrown in the way of such works rather than encouragement and assistance held out to their enterprising promoters. In the mean time the Companies may do much to anticipate the facilities which an unbroken chain of railway communication between the capitals of the two countries would present. A very sensible letter on this subject appeared in our number of last week, urging upon the Directors of the North Midland Railway the policy of encouraging as far as possible the use of their own, and the neighbouring lines, for the accommodation of the northern traffic. Whichever route may finally be adopted, and whatever facilities the legislature may be pleased to extend, the construction of an east coast or a west coast line must, even were the necessary funds secured, be a work of time, and it is a pity that in the interim the public should not be accommodated, and the Railway Companies benefitted, as far as the existing means will admit.

THE following appears in the *Carlisle Journal* of Saturday last:—

"An important step has been taken towards securing the line of Railway from Lancaster by Carlisle to Glasgow and Edinburgh. At a meeting held in this city on Saturday last, at which the Mayor presided, a Central Committee was formed to collect and furnish information, and bring the project fairly before the public. The Committee is composed of the most wealthy and influential gentlemen in this district; and we believe the prospects of the early formation of a Company, with sufficient capital to carry the great undertaking into effect, are most flattering. The landowners alone nearly the whole of the line are understood to be favourable and ready to aid the scheme; and it cannot be doubted but Government itself will be ready to give every assistance in its power to the great national work.

"To Carlisle, and the wide district around it, the formation of this railway is of the very utmost importance. If it be not brought by this route, there is little doubt but a line will be formed by the East Coast, and thus place Carlisle in a nook or corner from which she may never be able to extricate herself. It thus becomes the bounden duty of every man connected in any way with this district, to exert every nerve in pressing forward the line now projected. In doing so, while he secures his own interest and that of his neighbours, he is also securing that line which the Government Commissioners have declared to be the best for the interests of the public at large."

A large and influential Committee of gentlemen, chiefly landowners between Lancaster and Penrith, was formed at a meeting held in Kendal on Monday last, for co-operating with the Central Committee at Carlisle, and the most unanimous and energetic spirit is displayed in that district to forward the great work. We expect to be favoured with the resolutions passed at the meeting in Kendal for publication in our next number.

WE have heard very little of late as to the proposed railway in Cornwall, but it would seem from an abstract which has recently appeared of the first and second Reports of the Select Committee on West India Mails, that the case of Falmouth is not yet quite hopeless. Now is the time for the Cornish people to exert themselves. By the first Report it appears that the Committee have resolved that, notwithstanding the port of Dartmouth has been recommended by the Admiralty Committee for the arrival and departure of the West India mail packets, they are not prepared to recommend the selection of that port. They state their opinion that no disadvantage is likely to arise to the public from the continued use of Falmouth, whether by the present packets or the larger class that are to be employed, until the merits of the other ports have been ascertained. Hence, considering it doubtful whether the public would derive any material advantage by the removal of the West India mail packets from Falmouth, they consider it would not be proper to incur the expense of providing accommodation for the establishment necessary for the performance of the service in any other port. In the second Report the Committee submit to the House a statement furnished by the Admiralty of the actual distance a steam-vessel would have to traverse from each of the principal ports to Barbadoes and back from Samana (in Hayti). The distance to Barbadoes from the Lizard is stated to be 3,425 miles, from Falmouth 3,440, from Plymouth 3,475, from Dartmouth 3,497, from Portsmouth or Southampton 3,590, from Bristol 3,570, from Milford, 3,490, from Liverpool 3,537, and from Bantry Bay 3,237. The distance from Samana to the Lizard is 3,545 miles, to Lundy Island 3,592, to Milford 3,600, to Cape Clear 3,402, and to Bantry Bay 3,420.

—o—

IT would seem that neither of the paragraphs which have been going the round of the papers in reference to the fees of the mail guards, was altogether correct. Mr. Wallace, whose exertions in the cause of Post-office reform are well known, writes to the Editor of the *Scotch Reformers' Gazette* as follows:—

"Every mail guard in the three kingdoms, receives weekly pay from the Post-office; but owing to the anomalous mode of apportioning the amount, by that most lag-a-bag of all public departments, and owing to the intermixture of full-paid servants with part-paid ones, in the very same district, and even on the same line of road sometimes, the passengers by this public national conveyance are in ignorance which guards are fully paid, and which are only partially, and thus have no security against being taxed by both.

"I moved, during the early part of last Session of Parliament, for a return of these mail guard annuitants—and one was accordingly made; but so thoroughly mystified, by the mode it was framed, as to render it perfectly unintelligible, and consequently utterly useless, after the trouble of making it out had been incurred, as well as the expense of printing it.

"I have moved for and obtained an order of the House, for an amended return, which should now be ready, and when the House meets, I will move that it be printed. When this is done, you shall receive a copy, which I hope you will print in full, and, by so doing, show the reckless manner in which the Post-office department has diminished the proceeds of penny postage."

—o—

THE following appears in the Irish papers under the signature of "An Old Traveller," in reference to a paragraph which originally appeared in this journal, and was thence copied into the Dublin papers. It was in respect of certain new arrangements for travelling between London and Dublin. The writer alluded to says:—

"The fact is, under the new regulation for the line of packets referred to from Liverpool, the travelling public have *gained* a considerable *loss*: for, instead of taking your seat, as formerly, in London, at 8 30 p.m., and arriving comfortably, in the *same seat*, at Liverpool, at 7 the following morning, in time for the packet, you now have the delight of changing your seat and your luggage four different times—very pleasant indeed of a dark winter's night. First, London and Birmingham Railway to Birmingham, Grand Junction to Crewe, Chester and Crewe to Chester, and Chester and Birkenhead, and arrive in Dublin in 21 hours at soonest. Contrast this with my last trip from London. I left town at 9 30 a.m., went all through to *Liverpool without change*, arrived at 6 30 p.m., started in the evening mail packet at 7 10, and was safely landed at 6 30 a.m. next morning, just 21 hours. Where, then, is the gain to the public by the great change so blazoned forth in all the Dublin papers?"

—o—

THE *Northern Times* states, that the voting papers placed on the church and chapel doors of Northallerton on Sunday last show, that several persons resident in various parts of the county of Durham, who are shareholders of the Great North of England Railway Company, are making claims to enable them to vote for members of Parliament for the North Riding of the county of York, the said railway passing through the township and parish of Northallerton, and also traversing upwards of forty miles in the said North Riding. This is rather a novel claim; we doubt whether it will be allowed; and yet why should it not?

—o—

THE following case is noticed in the Scotch papers, and bears not very remotely upon the duties and liabilities of Railway Companies:—

"An action was brought before the Small Debt Court, Perth, on Wednesday last, at the instance of Mr. Dallas, Mills of Avoch, near Inverness, against the proprietors of the *Princess Royal* coach, which runs between Perth and Inverness, for damages in the following circumstances:—The plaintiff was booked at the Star Hotel, coach office, as passenger to Inverness, on the 21st of July. In the bills which were posted up in the coach-offices and inns, the *Princess Royal* was announced to start from the George and Star Hotel mail-coach offices, Perth, every lawful morning, at half-past five o'clock;" and on the morning alluded to the coach left the Star Hotel at a quarter-past five, but the plaintiff was present at the Star Hotel office eight minutes before the half hour, when he found the coach had left that office. It was proved, however, that he was put on his way to reach the George Inn before the half-hour, had he been acquainted with the localities, but which he did not reach until the coach had started, which was stated by a witness to be three and a half minutes past the time advertised. Mr. Sheriff Barclay held that the bill put out bore the terms of the contract between the coach proprietors and the public, and that the coach ought not to have left either of the offices before the half-hour; and he added that the plaintiff, although it had been proved that he could have made up to the coach at the George Inn, was not bound to run, and, it may be, overheat himself, before he made up to it, so as to obtain his seat. Mr. Barclay decided for three guineas of damages, with costs of suit."

A SUGGESTION which has repeatedly been made in this journal was a few days since brought forward by a Coroner's jury, and we trust will be generally acted upon. Its importance will be best understood from the following paragraph, which we extract from the *Morning Post* of Thursday last:—

"A Coroner's inquest was held at the Sussex County Hospital on Tuesday evening, before F. H. Gell, Esq., on view of the body of Ambrose Brooker, aged 14, who was employed on the London and Brighton Railway, near Hayward's Heath. Deceased, on the previous Thursday morning, was driving some earth waggons to the tip, and whilst in the act of unhooking a chain his foot slipped, and he fell across the rails. The wheels of two waggons passed over his right leg, and nearly severed it from his body. The wound bled profusely, and an hour elapsed before a surgeon could be procured. As soon as he arrived, he placed a tourniquet round the leg, to stop the effusion of blood. The deceased was immediately placed in a cart, and conveyed to the hospital, eleven miles distant. On his arrival at the institution he was nearly dead from the loss of blood. The House Surgeon, Mr. Whitehouse, immediately resorted to a transfusion of blood into his veins, which had the effect of so completely resuscitating him that he was in a fit state in about three hours to undergo the operation of amputation of the leg below the knee, which was successfully performed, and the deceased appeared to be doing well, and conversed cheerfully with his friends. The next morning, however, a reaction, consequent upon loss of blood, took place; the patient gradually sunk under it, and on Sunday morning he died. The House Surgeon said, this was the second case which had been lately received where death had ensued from not stopping the hemorrhage, *and he suggested the propriety of Railway Directors having a supply of tourniquets at the station-houses, observing that he should be happy to instruct any person how to use them.* The jury returned a verdict of "Accidental death," and then drew up a recommendation (to be forwarded, through the Coroner to the Directors of the Railway Company), to the effect that in consequence of the above inquiry, they recommended the propriety of the Company providing tourniquets to be kept at their several stations and depots, and of causing one or more of their servants to be instructed in the use of them."

—o—

NORTH MIDLAND RAILWAY.—We have received in the course of the week several letters, which we regret we cannot publish in full, in reference to the approaching meeting of the North Midland Railway Company. One Correspondent says he understands that it is the intention of the Directors to recommend a dividend without deducting the sum of 12,500*l.* interest on debentures, merely because such interest does not become due till 15 days after the 30th June, the period to which, by Act of Parliament, the accounts are made up. Our Correspondent strongly deprecates such a course. Another correspondent wishes some brother proprietor to enquire, as he himself cannot be personally present, why the half-yearly meetings are not held in the second week in February and the second week in August, as directed by Act of Parliament: also to enquire if the London Agency Offices in Warnford Court continue to be necessary for the well working of this Company. He is of opinion that if the Directors practise economy they will dismiss half of the salaried officers, and reduce the salaries of *some* others, for at present the cost in this respect is, he says, *twice* as much as on the Grand Junction Railway.

—o—

CLARENCE RAILWAY.—A meeting of the proprietors of this Company adjourned under circumstances fully reported in a recent number of this journal, was held on Tuesday, at the George and Vulture Tavern, Cornhill, but our reporter was told, on applying for admission, that the business to be transacted was of a private nature, and that therefore his presence could not be permitted.

RAILWAY OFFENCES AND OFFENDERS.

THIS week we have to record two cases of transgression on the part of railway servants.

Richard Major, a gate-keeper in the service of the London and South-Western Railway Company, was fined 2*l.* and costs by the magistrates of Southampton, for having negligently omitted to open a gate at a spot where the railway crosses a street on a level. Fortunately no accident occurred. In default of payment, the prisoner was very properly sent to prison for a month.

A porter, named Mitchell, employed on the Glasgow and Paisley Joint line, was last week fined 1*l.* for a violation of the Company's regulations in shifting a pair of points, and pushing a waggon from a side line out upon the main line when a train was due.

On Tuesday, two cabmen were fined 10s. by the magistrates of Union Hall police court, for non-production of their badges. The prosecution was instituted by the Directors of the London and Brighton Railway. One of the men refused to pay the penalty, and was sent to prison for five days. It was stated that at the opening of the Brighton Railway, the public were exposed to constant depredations on the part of the coachmen and cabmen who brought passengers to the London terminus. Frequently luggage was left in the vehicles, which was carried away and never heard of afterwards. In consequence of the losses sustained by passengers in the manner described, the Directors issued instructions to the effect that the numbers of all public conveyances which came to the London terminus should be taken down, as well as the number of the badges worn by the drivers, so as to render it a matter of little difficulty in the event of a passenger forgetting his luggage, in a coach or cab, to find the driver afterwards. It was farther stated, that since the above plan had been adopted no losses of the kind had been sustained, and when a parcel now happened to be left by accident it was speedily recovered for the owner. The arrangements are very judicious, and cannot fail to give satisfaction to the public.

WE learn from the *Worcester Chronicle* that a few nights ago, through the negligence of John Lies, a night policeman on the Birmingham and Gloucester Railway, a cow was suffered to get on the rails, where she lay down, and the 11 o'clock mail train passing soon afterwards, she was killed on the spot, being mangled in a most dreadful manner. In consequence of the obstruction thus caused the first carriage was thrown off the line, and the whole train was detained an hour and a half. The offender will have to answer for his conduct before the Bromsgrove magistrates. So defective is the fencing upon most lines of railway, that it is surprising more accidents of this kind do not occur.

EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—Is it not surprising after an elapse of two years since the partial opening of the Eastern Counties' Railway, there should yet be as many flys and omnibuses upon the road from Stratford to London; and all as well filled, *or very nearly so*, as previous to the opening of the railway? This, I think, is unparralleled in railway history.

Surely it would be a libel to say, that it was the *stirkishness* (calves they cannot always be) of the inhabitants of this portion of the county of Essex. I have been amongst them myself for the last ten years, and have always observed them as ready and willing to introduce any improvements of the day as any other portion of her Majesty's subjects. I fear it arises from the lack of accommodation on the line. The inducements at present are very *meagre*; if you do wish to go to town by rail, you may go *once within the hour*, and not always *that*, if you should have sufficient nerve to *venture through Angel-lane*, in order to reach the station. It is true, that after the first opening of the line they ran short trains from Stratford, and found it would not do, but then the line was only open to Devonshire-street, and it was not likely that any one was going there, and then be obliged to pay for another conveyance into the city. The case is now widely different; the line is open to Shoreditch, within five minutes walk of the heart of the City; and the North Eastern Company's trains passing every hour, who, I have no doubt, from their apparent willingness to oblige the public (*vide* their recent arrangements for passengers going from Stratford to Broxbourne and *vice versa*,) would be readily induced to enter into arrangements with the Eastern Counties' Railway Company to take up and set down passengers at the junction, thus together would give *two* journeys *each way* within the hour. Establish a booking-office somewhere near the Broadway in Stratford, have an omnibus ready to run the passengers up to the junction to meet the trains, and bring away the down passengers.

This would be something like "go a-head," and if it did not add 300*l.* or 350*l.*, at the least, per week to the receipts of the Company, and drive two-thirds of the old traps from the road, then my name is

WHISTLE BINKIE.

Stratford, Essex, August 17, 1841.

SOUTH-EASTERN RAILWAY.—On Thursday, the Chairman, the Secretary, and several of the Directors of this railway, accompanied by Mr. Wright, the Resident Engineer, surveyed the line between Dover and Folkstone, and expressed themselves highly satisfied with the progress of the works. The works at the Warren, near Folkstone, are nearly completed, and the other portions of the line in this quarter are proceeding rapidly.—*Dover Chronicle.*

SOUTH-EASTERN RAILWAY.—Great activity prevails on that portion of the line to be first opened to the public. The Medway Viaducts are complete, and the earthwork carried beyond them, rendering the long embankment of the Medway Valley from Penhurst to Barden very nearly filled up, enabling the ballasting now to be going forward and the permanent road then to be laid. The bridges are just about completion, and the Bletchingly tunnel, above three quarters of a mile in length, cannot take three months to finish; the very favourable soil of it renders it easy and safe to work, and it is entirely free from water; these are features highly important on an item of expenditure—always great and often most ruinous.

ACCIDENT ON THE GREAT WESTERN RAILWAY.—An accident occurred on the evening of Sunday last to one of the clerks of the Great Western Railway Company, named Walker, at the Southall station. It appears that upon one of the up-trains leaving Southall, the unfortunate young man (who is only 20 years of age) rode on the steps of one of the second class carriages a short distance, when, jumping off at the time the train had attained considerable velocity, he was thrown down by the impetus thus given to him, and unfortunately his right foot falling upon the rail, the whole of the hind carriages passed over it, and completely cut off half of the limb, severing it between the toes and the instep.

RAILWAY TRAVELLING ARRANGEMENTS —THE METROPOLITAN RAILWAYS.

To the Editor of the Railway Times.

Sir,—Allow me to call in the valuable aid of your journal towards the promulgation of a system that would, I think, be beneficial to all Railway Companies with a London terminus, especially to the Brighton Railway, as it would draw off many from the northern watering places who, as residents of the midland counties, in the present state of things find them so much more easily approachable than our southern coast, and who, if once brought to London, would seek Brighton, *par excellence*, and greatly benefit that railway in particular, as well as assist the railways that brought them to the metropolis.

I would propose booking offices from which omnibuses should start for Brighton trains immediately after the arrival of the trains adjacent to such offices, so that in fact the passengers would almost step from one railway to the other. To wit,

From Great Western Railway, calling at office close to Euston-square station, allowing half an hour between those points, and three quarters of an hour further for London-bridge. This omnibus to enter Regent's Park at Pine-apple Gate on the western side, and go round to the north by Macclesfield Gate, leaving the Park by Park-square. The next omnibus to enter as the foregoing, but turn to the right by Hanover Gate, and leave the Park on that side of Park-square.

An omnibus from North Eastern Railway station in three quarters of an hour to London-bridge.

One from Blackwall Railway every twenty minutes before the starting of a Brighton train.

From the Southampton Railway no conveyance, as excepting from a very short distance down the line, no person would come north and east to proceed afterwards in the almost opposite direction, south.

This system would also be more convenient for passengers from London residing anywhere north of Oxford-street, than the present offices in Piccadilly and Regent's-circus; but I would still continue these for the use of the other part of the community.

Keeping thus as few links in the chain of communication broken as is possible, the traffic on these railways would be probably much increased.

I am, Sir, your obedient servant,

A CONSTANT READER.

London, August 14, 1841.

RAILWAY TRAVELLING ARRANGEMENTS — THE NORTHERN RAILWAYS.

To the Editor of the Railway Times.

Sir,—In your paper of the 7th instant, is a letter from a correspondent, in which a complaint is made that at the York station in April last, no refreshments could be had. That evil is remedied now, for there are *two* refreshment rooms. The idea of a second refreshment room is excellent, as by such an arrangement persons in circumstances to whom economy is necessary, and honourable, may be accommodated. But that which might be considered judicious and benevolent, is converted into insult towards the parties to be benefited. Suspended to an iron rod projecting from the wall, is a board with letters on both sides with this inscription—

SECOND CLASS REFRESHMENT ROOM, AND FOR SERVANTS.

The object evidently is to throw a stigma on persons travelling in the second class, as unfit to associate with gentlemen, and not worthy to eat and drink in the refreshment room. So not contented with inflicting the actual misery of carriages in which the currents of air pass through without interruption, destroy the comfort and endanger the health, the Directors of the Great North of England Railway and of the North Midland and York Railway must superadd insult on the second class travellers to drive them into the first class.

At many great inns there is attached a subordinate house, generally called the tap, and there can be no objection to such a subordinate room at a railway station, but even on behalf of servants, I protest against this gratuitous insult. If they travel with their masters they will be sent to the more economical room; and if they travel at other times, their humble means as well as taste will induce them to go to it: but why should they be thus publicly held up to contempt?

I am, &c.

A FIRST CLASS TRAVELLER.

WEST DURHAM RAILWAY.

To the Editor of the Railway Times.

Sir,—You will much oblige an old subscriber by obtaining from any of your correspondents in the north, some information as to the real state of the West Durham Railway, the London subscribers having been kept by the Directors in utter ignorance of their proceedings until very recently called upon by a most extraordinary circular to subscribe further capital (the original shares being paid up), under a vaguely implied threat that the railway, which is alleged to be nearly complete, must otherwise be abandoned to the claimants upon it.

I am, Sir, your obedient servant,

AN OLD SUBSCRIBER.

London, 13th August, 1841.

HULL AND SELBY RAILWAY—THE LATE MEETING.

To the Editor of the Railway Times.

Sir,—As a shareholder who was unable to attend the general meeting of the Hull and Selby Railway Company, I am desirous of expressing my great disappointment and regret at the confused statement of the "Traffic Account," which the Directors have presented with their Report. I believe they have done all in their power to make the result more satisfactory to the proprietors, and we must wait in patience for an improvement in the traffic to afford us better dividends. But the facts of the account ought to have been presented in a different and far clearer shape, for at present it is impossible to determine the proportionate amount of the several charges on the traffic. It appears that the actual receipts in the half-year amounted to 18,677*l.* 7s. 11d., and the expenses to 12,256*l.* 6s. 11d., or *nearly* 66 *per cent.*, but in the latter amount is included the lump sum of 2,504*l.* 4s. 4d. for "sundry bills yet to pay." Various sums are previously named under the head of "maintenance of way, government duty," &c. &c.; but these items are valueless, whilst no division is made of the large item of 2,504*l.* 4s. 4d. I hope, therefore, that the Directors will forthwith furnish the proprietors with a proper subdivision of this amount, so that the per centage charge of each item may be ascertained and compared with that upon other railways. In no other way can we see in which department the expense is so heavy as to cause the disproportionate total of 66 per cent. expenses upon the receipts.

I am, Sir, your obedient servant,

R. R.

London, August 16, 1841.

RAILWAY ADJUDICATION.

MORRIS *v.* PRESTON AND WIRE RAILWAY COMPANY.

Lancaster Summer Assizes, August 12.—This was an action to recover damages for the amount of work done by the plaintiff for the Railway Company; and also for the value of certain materials procured of him by the said Company.

Mr. KNOWLES conducted the case for the plaintiff, and Mr. Cresswell for the defendants.

The learned counsel for the plaintiff said that his client was a contractor for the making of a portion of the Preston and Wyre Railway, and some difficulties being met with in that portion, the line was altered, and the Company were bound to pay the plaintiff for this unfinished portion. A number of materials had also been prepared by the plaintiff, which had been used by the Company, and he now sued for the loss occasioned thereby, amounting altogether to the sum of 4,000*l.*

Mr. Frederick Kemp—I am a land-agent at Bispham, and a Director of the Preston and Wyre Railway. Mr. Landmann was at first principal engineer. After that Mr. G. Stephenson and Mr. R. Stephenson were principal engineers on the works. When the making of the railway had proceeded some difficulties were met with near Kirkham, where the plaintiff was contractor. [The contract was here read.] Some difficulties were met with in 1839, in Kirkam Car. Mr. George Stephenson came down to inspect the place. A deviation was then recommended. A meeting was subsequently held at Preston, and Mr. Stephenson recommended Mr. Morris to contract for the altered line. I was ordered to purchase the land for the deviation. Some work had then been performed on the original line by Mr. Morris, but this had to be undone. I understood that Mr. Morris was to be paid for the work which had to be undone. The line was opened in September last, and the Directors passed over the deviation.

Mr. Routh examined—Said that he was the Resident Engineer on the line. Was present when Mr. Stephenson and other persons met over the Kirkham case. The difficulty was occasioned by the sinkage being greater than had been anticipated. Mr. Stephenson recommended a deviation at Kirkham, which recommendation was adopted. The Company got of Mr. Morris upwards of 4,300,000 bricks, a quantity of waggons, sleepers, and other materials. It was stated at the meeting at Preston, that Mr. Morris should be paid for such deviation.

Cross-examined by Mr. CRESSWELL—On account of the great expense of completing the original line, it was for Mr. Morris's advantage that the deviation should be made.

Mr. Warton examined—Was the assistant of the plaintiff during the execution of these works. 17,000 cubic yards includes all the work done, and 13,000 cubic yards of work undone. There was also a large eight foot culvert, making which would be worth about 500*l.*

The learned JUDGE thought that this case should be heard elsewhere, as it was a case of details.

Mr. CRESSWELL said, that they wished for his lordship's opinion on a point of law, and he could not arrive at an opinion until the whole of the details were before the Court.

Mr. Warton cross-examined—13,000 cubic yards were removed from the old line, and were necessary for the making of the new deviation. A conversation here ensued between the learned Judge and the Counsel engaged in this case, which resulted in the parties deciding that all the matters of detail should be left to arbitration, with the exception of the number of sleepers supplied by the plaintiff to the Company.

Mr. KNOWLES, for the plaintiff, said that the conduct of the defendants was unworthy of the character of a great Company. They refused to pay the plaintiff on account of a legal squibble. He contended that his client was entitled to the payment for the number of sleepers mentioned in his client's bill.

The learned Judge in summing up, said that he congratulated the jury on this knotty case being at length brought to a point. The only question for the jury to consider was the number of sleepers supplied to the defendants.

Verdict for the plaintiff for the amount of goods sold—for 1,326 sleepers, and for the amounts agreed to by the defendants—632*l.*

For the other counts, the learned Judge decided in favour of the defendants.

THE BLACKWALL RAILWAY.

We gave on Sunday week an account of this extraordinary work, which the enterprising spirit of the commercial men of the country has ushered into existence. Independently of the advantages arising from the general application of the railway, the necessity of diminishing the number of steam-vessels permitted to proceed up the river, to the great danger of human life, and the great confusion of business in the Thames, strikes the corporation as matter of most important and immediate inquiry.

The Lord Mayor and Corporation are, as conservators of the river Thames and waters of the Medway, about to commence great alterations in the whole arrangement of the vessels and craft, as well as in the regulation of minor obstructions and nuisances, to which the great highway of the commerce of the metropolis is subjected. One of the principal points to which the attention of the Conservancy Courts—which are now to be constantly occupied in devising and carrying into effect river improvements with as much activity as some of the great committees have used in planning and perfecting street improvements—is to be drawn, is the prevention of the excessive crowding of the river. By a prohibition, affecting the nearer approach to London than Blackwall, the object would be completely answered in the opinion of those who have been appointed to examine the general state of the Thames within the corporation jurisdiction.

By the extension of the Blackwall Railway into Fenchurch-street, passengers are conveyed from the river Thames at Blackwall into the very heart of the city in the brief space of ten or twelve minutes. To all travellers on the river below Blackwall, the railway offers a safe and rapid conveyance, instead of the now slow, intricate, and perilous navigation; the choked-up river, particularly in these times, when so many craft and shipping are in motion, and the numerous accidents daily happening in the Pool, the result of the crowded state of the river, the enormous increase of steam vessels and the speed at which they are propelled, all combine to render any mode by which the navigation of the Thames may be relieved, an important object.

It has often been suggested that the loss of life and destruction of property caused by steam boat collisions in the port of London can only be prevented by the means of a stringent legislative enactment. The Lord Mayor and Corporation certainly are not prepared to advocate any extreme measure by which the right to travel on our great river highway shall be denied to steam vessels; but it is suggested to those who travel by steam, that they may themselves protect the lives and property of those engaged in a precarious calling on the river Thames, by embarking and disembarking at Blackwall.—*Observer.*

MIDLAND COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

(From the *Leicester Journal.*)

The General Annual Meeting of the Proprietors of the Midland Counties' Railway was held last Saturday, the 14th instant, at the Board Room at Derby, at noon. There was a numerous attendance of Directors and proprietors, many of whom came from a considerable distance.

The Chairman of the Company, T. E. Dicey, Esq. presided, and was supported by the following Directors:—Sir W. Heygate, Bart., E. B. Farnham, Esq., M.P., Messrs. Rathbone and Heyworth, of Liverpool; Horsfall, Hanny, and Youle, of Nottingham; Fox, of Derby; and Taylor, Burgess, Hackett, T. Macauley, and Shaw, of Leicester.

The Solicitors to the Company, Mr. Leeson, of Nottingham, and Mr. Colin C. Macauley, of Leicester; and the Secretary, Mr. John F. Bell, were in attendance.

The procedings commenced by the Secretary's reading the advertisement, &c. by which the meeting was convened, in conformity with the Act of Parliament, after which

Mr. C. C. Macaulay read the following Report:—

REPORT.

At the last general annual meeting, when the Directors announced the opening of the whole of the line of railway, which had then but lately taken place, they could scarcely do more than express their continued confidence in the anticipations they had formed of the extent of the traffic and the ultimate success of the undertaking. More than a year has now elapsed since the entire opening of the line, and the Directors have the satisfaction of finding that the traffic has increased during that period in a greater degree than they could have ventured to calculate upon, the average amount per week in the month of July in the present year being more by 1,255*l.* 12. 10d. than the weekly average for the same month last year. The experience of other railways has universally shown that the first year's traffic forms no criterion of what it may eventually become, and the * progressive development of sources of traffic which were not included in the original calculations, as well as the increase that has already taken place in those which were, leave no reasonable ground for doubting that a considerable improvement has yet to take place in the existing revenue of this railway; especially when it is recollected that during a greater part of the past year the trade and commerce of the country have been suffering under an extraordinary depression.

The condition of the road during the first few months after the opening required the greatest attention on the part of the Directors and the officers of the Company in the engineering department. From the number of heavy embankments, and the almost unexampled state of the weather, which was peculiarly unfavourable to that species of road in its new state, it was not to be expected that this line would be free from accidental slips of ground, and indeed it is somewhat surprising that under such circumstances cases of this nature were so few in number, and attended with so little permanent damage. The Directors however can now state with confidence, upon the authority of a highly eminent Engineer unconnected with the Company (Mr. Cubitt), who has lately made at their request a most careful examination of all the works, that the whole railway is in a perfectly satisfactory state, and in point of soundness, strength, durability, and facility in travelling, equal to any line in the kingdom.

The only accident involving any material amount of expense in its reparation, is the fall of a part of the viaduct at Crow Mill, near Leicester, and it has been referred to arbitration between the Company and the contractor, but is not yet decided, whether any and what part of this expense shall be borne by the Company.

The period stipulated in the original contracts for the maintenance of way having expired, the Directors have entered into contracts for keeping the whole of the railway in repair, at mileage rates quite amongst the lowest at which any Companies have been able to make contracts of this description, thus affording a gratifying proof of the sound and satisfactory manner in which the works on this railway have been executed.

From casualties in the passage of trains this line has not been altogether exempt, but the Directors are happy to be able to state that in no case has a life been sacrificed, or material injury been sustained, on the part of any person travelling on the railway. The Directors, however, regret to say, that on one occasion two of the Company's servants lost their lives by a collision of trains, which took place near Derby in the night of the 8th of January, by the freezing of the engine pumps from the extreme severity of the weather, and a fog so dense as to render the night signals invisible. In this case the coroner's jury imposed a deodand of 200*l.* but the Directors feeling conscious that no real blame was attributable to the Company or to their regulations, though it right to remove the inquisition into the Court of Queen's Bench, where it was set aside.

The general state of the railway does not call for any more minute observation. Such of the stations and other works as were not in a perfectly finished state at the time of the last annual meeting, have since been completed, and the Directors believe that in all the arrangements, and in the working of the line, the expectations and requirements of the public have been most satisfactorily answered. The only exception of which the Directors are aware is the Rugby station, where, notwithstanding the large sums that have been expended in providing amply for the convenience of the public, and in adopting the precise mode of communication pointed out by the London and Birmingham Company at this important place of junction, complaints are still made of the insufficiency of the arrangements. This has been a source of great disappointment to the Directors, after the unlooked for expense which has been already incurred; but alterations are in progress by which they hope to remedy every reasonable ground of dissatisfaction.

* The following is a statement of the average traffic per week during every month from July, 1840, to July, 1841, inclusive—

In July, 1840, the traffic averaged per week	£1,592	16	3
August	1819	16	8
September	1874	3	2
October	1857	4	0
November	1377	6	2
December	1300	18	4
N.B. During a considerable portion of the months of November and December the communication was interrupted by the accident to the Crow Mill viaduct.			
January, 1841	1615	18	7
February	1638	19	0
March	2001	7	3
April	2283	8	0
May	2642	10	0
June	2818	12	6
July	2904	2	4

The Act which passed in the session of 1840, for enabling the Company to raise an additional sum of money, requiring the order of a general meeting specially convened for the purpose, as the authority for the exercise of its powers, such meeting was held on the 15th of September last, when the arrangement which was approved of at the last annual meeting for the allotment of shares under that Act, was formally sanctioned. The sum of 150,000*l.* being the amount authorised to be raised by shares, was all speedily subscribed for in quarter shares, according to the above-mentioned arrangement, and has been added to the capital of the Company, and the remaining 50,000*l.* has been raised by loans.

After making up the accounts at the close of the half-year ending on the 31st of December, the Directors issued a statement of the receipts and disbursements on the revenue account for that half-year, with the reasons upon which they decided not to declare a dividend at that time. The regular payments for interests and salaries for that half-year amounting to a great proportion of the balance then in hand, became due the day after that to which the accounts were made up, and the Directors, therefore, after mature deliberation, judged it most expedient that they should be made out of that balance, so as to ensure the permanent advantage of commencing every half-year with a clear account; as they considered the delay of six months in the declaration of the first dividend to be a much less evil than to perpetuate a state of account which, though sanctioned by precedent, they could not but think in some degree fallacious. The Directors, however, have now the pleasure of declaring, out of the clear profits of the undertaking, a dividend of 2*l.* 10*s.* per share on the 100*l.* shares, and 12*s.* 6*d.* per share on the quarter shares for the past half-year.

The audited statements of account, with particulars of the receipts and disbursements to the 1st of July, are submitted to the meeting.

The Directors hoped, and had every reason to believe, that the increase of capital which the Company obtained last year would have proved sufficient to cover every expense to which capital is applicable. But though the estimates and calculations of the additional amount then required, were made and investigated with the utmost care, the Directors regret to have to state that a further deficiency still remains to be provided for, arising principally from the invariable tendency which the expenditure actually incurred in putting a railway into full operation, has to exceed the amount of previous estimates, however carefully made and apparently ample. The Directors now find that it will require a further addition of 110,000*l.* to meet these extra demands on the Company. Of this sum by far the greater part consists of items, the exact amount of which could not have been ascertained except by actual experience. For instance, the additional supply of engines, carriages, warehouses, wharfage-room, and other matters connected with the coaching and carrying departments, which the gradual developement of the traffic has shown to be necessary; and the great extra cost attending the restoration and perfect completion of the railway, (especially between Leicester and Rugby,) in consequence of the subsidence of the banks occasioned by the unprecedented state of the weather during the first winter after the opening of the line. In these two heads of expense considerably more than half the total amount is comprised, and the Rugby station alone has, by reason of the additional requirements of the London and Birmingham Company, added more than 7,000*l.* to the former estimates. Under these circumstances, it will be requisite that an application should be made to Parliament for a further increase of capital, and the Directors propose to take that opportunity of soliciting some amendments of the Company's present Acts, which they believe to be in accordance with the views of the proprietors. Amongst these, they propose to apply for clauses for granting power to diminish the number of which the Board of Directors is at present obliged to consist.

The Directors take this opportunity of stating that it is their intention in future to hold the general meetings of the Company half-yearly instead of yearly.

At the commencement of the present year this Company was engaged in a Parliamentary opposition which the Directors cannot pass unnoticed. The project for an extension of the Manchester and Birmingham Railway by the formation of a line to proceed by way of Tamworth to Rugby, which had been already twice brought before Parliament, and on both occasions defeated, was again revived; and acting on the determination so strongly expressed by the general meeting in 1839, while the last contest was in progress, the Directors did not hesitate to join the London and Birmingham Company, and other parties injuriously affected by the measure, in a strenuous renewal of the opposition. The secession of the Grand Junction Company from the ranks of the opponents, obtained, as it had been, by an arrangement glaringly adverse to the interests of the public, and establishing at once the very system of monopoly which the promoters of the scheme professed it to be one of their main objects to destroy, proved anything but a source of strength to their new allies. The saving of distance too between London and Manchester, which formed the only other argument of even a plausible nature in favour of the Bill, was, in furtherance of the same arrangement, dwindled down from 12¾ to 8½ miles in the whole journey. The conflict on this occasion in Parliament was but of short duration, and the result was decisive, for the Bill was rejected on the second reading in the House of Commons by a majority of 60, the numbers being 154 against the Bill, and 94 in favour of it! The utter inutility of the scheme for any purpose of public benefit, and indeed its unjust and injurious tendency with regard to public, independently of private interests, were so completely exposed, that the revival of it on any future occasion may, it is confidently anticipated, cease to be looked upon with any degree of apprehension. Before quitting this subject, the Directors think it right to observe, that the opposition against a measure of this nature has always been materially aided by the argument, that, if carried, it would present an insuperable bar to the formation of a line

Digitized by Google

which would confer a real benefit upon districts at present unprovided with railway communication. A line of railway in a direct course from Manchester, or rather from Macclesfield, by way of the Churnet Valley to Derby, would supply the link most wanted in the chain of communication between the eastern and north western parts of the kingdom. While the advantages of such a line, not only in a public point of view, but as an auxiliary to that of the Midland Counties', are too well known to require argument, the Directors of this Company firmly believe that it would not be productive of injury to any of the existing railway interests. They have thought it right, for the last two years, to be prepared with the requisite Parliamentary documents, and they hope that the time may not be far distant when a more favourable state of the monied and commercial affairs of the country may cause them to become available.

The Directors are happy to say that the circumstances which formed the only topic of an unpleasant nature in their Report of last year have long since ceased. The differences which then existed with the Birmingham and Derby Railway Company having been many months ago amicably adjusted, the Directors would be doing an injustice to their own feelings, and they are sure to those of the proprietors at large, if they alluded further to the subject than by saying that they hope and believe that such a state of things will never be renewed. It is necessary, however, to ask for the sanction of this meeting to a deed which has been prepared for the total cancellment of the agreement between this Company and the North Midland Railway Company, which was partly rescinded by Parliament last year, but so rescinded that the remaining parts have become useless, if not burthensome, to both Companies.

Mr. Dicey, Mr. Oakes, Sir William Heygate, Mr. Dawson, Mr. Hannay, and Mr. Heyrick, go out of office at this meeting, in conformity with the provisions of the Act, but are all re-eligible.

Statement of Capital Account, to the 30th June, 1841.

Mr. Ormerod, of Manchester, moved that the Report just read be received and adopted; and in so doing he craved leave to congratulate the shareholders on being about to receive their first dividend, the amount of which also was gratifying, being at the rate of *five per cent.* He trusted that, as the dividend for the first year since the Company's affairs had been satisfactorily tested, had been so fair, other and succeeding ones would be still fairer.

Mr. Burton, of Liverpool, seconded the motion.

Mr. Jessop said, that before voting for the adoption of the report, he should like to have some explanation relative to the circumstances connected with certain coke ovens, at Riddings. It was his opinion, backed by legal advice, which he had taken, that the Company had erected ovens where they had no legal right to do so. They had deprived him (Mr. Jessop) of a right of road or property there, and had given to one person a monopoly of the coke trade. He (Mr. Jessop) had offered to supply the Company with coke 20 per cent. cheaper than they now paid.

The Chairman stated, that as far as any question of title was concerned, the Directors must refer to the legal advisers. He for one had no doubt it was a title they could safely rest upon. With respect to the coke, the fact was, that when the line was first opened from Nottingham to Derby, they were compelled to give 50s. per ton. In January, 1839, they purchased coke at 28s. At the general opening, in July, 1840, they gave 33s.; last September, 28s; and since then something less. The Company had reason to suppose, that by coking for themselves, they could do it cheaper on their own premises, and they certainly had a right to do for themselves every thing relating to their own business, and for their own accommodation, if they deemed it expedient or profitable. In the first instance, they were forced to pay 50s. Now, Mr. Jessop did not come forward with any offer for a year afterwards, and subsequent to the period when new arrangements had been made on the subject. They certainly had no wish to favour any particular Director.—The erection of buildings for making the coke cost 4,000*l*; and for the occupancy of these Mr. Silverwood paid 150*l*. a year rent; the terms for the coke were 16s. on the spot; carriage more, at 3d.; so that now 19s. was paid for what originally cost 50s., and very recently 28s. Mr. Jessop's questions implied (and every body knew what was meant by them) that an undue profit was made by one of the Directors, in fact, the Deputy-Chairman, Mr. Oakes; but it was not so. The truth of the matter was, that Mr. Oakes supplied the coal at 5s. 1½d. per ton, while Mr. Jessop's price for the same coal was 6s.

Mr. Jessop remarked, that the Company had entered into three years' contract, for the bulk of the supply, with Mr. Oakes, and they would only take from him (Mr. Jessop) such small quantities as suited their convenience, therefore he was perfectly justified in charging the same, or a higher price.

Mr. Roberts, of Manchester, thought that these questions of detail should be arranged and determined by the Directors alone; it was their peculiar province. Mr. Jessop had no right to entertain the proprietors with a narrative of his pretended individual grievances. If such matters were brought before the general body of the proprietary, there would be no prospect of bringing the business of the day to a close.

Captain Watts remarked, that he should not like to stifle any discussion, and that Mr. Jessop had every right to bring the question before a general meeting.

The Chairman was also of opinion that every proprietor had a right to bring before the Board any matter relative to the interests of the Company.

Another Proprietor asked whether the Chairman would state what they now gave for coke? If Mr. Jessop could supply it cheaper, let him do so, and the Company reap the benefit.

The Chairman said, that at the time the contract was entered into there was no possibility of obtaining the article on more advantageous terms. If they could get it cheaper now they would be most happy and ready to do so.

Mr. Roberts remarked, that the only effect of Mr. Jessop's complaint would be, that the Directors had acted unfairly, and that they had abused the confidence of the proprietary.

A long and desultory conversation then took place, in which Captain Watts, Dr. Shaw, the Chairman, and Mr. Jessop took part; it was put an end to by the reading of the correspondence with the Butterly Company (Mr. Jessop and his partners) who, it appeared, had offered to supply the Company with coke, but only on terms higher than those for which the Company itself manufactured the article.

Captain Watts then addressed the Proprietors, congratulating them on the satisfactory nature of the Report in all points except in the one wherein there was an intimation that another pull upon their purse was contemplated. As regarded the dividend, he was quite contented with 5 per cent.; the fact was he had only expected 4 per cent., and the surprise was an agreeable one; although he was quite aware that a part of it arose from the surplus of the last half-year. The prosperity of the Company was evidently progressive; and on a comparison of the concerns of the divers railroads, there was no doubt that those of the Midland Counties' Railway would be more and more prosperous. There were merely one or two things he should remark on, and those not by way of censure, but merely of advice: he saw a charge of 1,263*l*. for engineering; which ought not, he thought, to be placed to the capital account. Then again, he saw that three quarters' salaries for clerks and officers, &c. were charged.

The Chairman here interrupted the somewhat diffusive speech of the eloquent and gallant Captain, by the information that it had appeared advisable to the Directors to pay the salaries for three quarters of the year out of the profits of the last half-year—the salaries had all been paid up to the first of July, 1841.

Captain Watts resumed, and added that there was a suggestion in the report which gave him unmixed satisfaction, and it would be participated by the vast majority of shareholders in this, and every other similar concern—he meant the prospect of a reduction in the number of the Directors. It was a vast and paramount advantage in every undertaking that satisfaction should be given to the proprietors; and in almost every railway company in the kingdom there was a feeling that the number of Directors should be diminished. Every body was laughing at their numbers, so that the sooner they were reduced the better. In applying to parliament, he would recommend that they should not ask for any definite number—let the proprietors fix that. The

Digitized by Google

gallant Captain illustrated this point by imitating Don Quixote's squire in the volubility and pertinency of the proverbs which he lugged in by the head and shoulders, beginning with "Too many cooks spoiled the broth," &c. &c. He trusted that, by and by, the Midland Counties' Railway would be got into most excellent working order. Under all the circumstances, he was quite satisfied with its present condition, and they had all reason to be gratified with the circumstances of the present, and the prospects for the future. He begged leave to second the adoption of the report, (which by the by, some one had previously done.)

Here a discussion ensued as to the form in which the accounts had been presented to the meeting, and whether they included the liabilities of the Company, in which Mr. W. Paget took the most prominent part, and as it was explained that the additional money required was to meet the liabilities, which were not included in the present accounts.

Several proprietors expressed their great satisfaction that the gross liabilities were no larger.

Dr. SHAW stated, that in the 110,000*l.*, which they proposed asking authority to raise they included every future liability they expected would be incurred till the whole work was thoroughly finished. They had sundry available property, which with that sum would be more than ample enough to cover every thing in the way of outlay or claim upon the Company. In the most liberal calculation of these demands they only amounted to 105,000*l.* but it had been thought better to extend the estimate to 110,000*l.*

Captain WATTS thought it would be better to ask leave to raise 120,000*l.* at once; he had extensive experience in all these concerns, and well knew the fallacy of all estimates of expense.

Mr. PARSONS, of Blidworth, said that the Report was anything but satisfactory to him, and it was, he thought, equally objectionable to the large majority of the proprietors present. It did not supply several items of account which it was absolutely necessary they should know in order to arrive at a correct understanding of the actual posture of their affairs; for instance, in the report and statement they had heard, and which he for one, did not pretend to understand, there was not a word mentioned of any debt; they were given to understand that the works were all completed, and that contracts had been entered into for every thing. Yet they were asked to assume that the report contained all that it was proper for the shareholders to know. The revenue account was not at all satisfactory; the last half-year's returns were less than those of the preceding term. He felt that the prospects of the Company were cheering; but unless the most careful economy was practised they would become continual borrowers instead of receivers. He thought the proprietors should be allowed an opportunity of inspecting the details of the accounts, and examining the vouchers; they were not dealing with hundreds *or* thousands, but with hundreds of thousands, and millions. The speaker commented upon several items, and said that he had within the last few days gone over to Leicester to inspect accounts, see vouchers, and examine books. But, to his great surprise, these facilities were refused to him. He was of opinion that access to the accounts ought to be allowed to proprietors. The utmost latitude of information should be afforded on this point, and the strictest distinction observed in the accounts between salaries and other charges, which in the statement before them seemed to be all jumbled together. He wanted particularly to know how the servants of the Company were distributed, and how their salaries were apportioned. No accounts would ever be satisfactory to him in which these matters were not carefully discriminated. He was content with the prospects of the Company; every one should be well paid, but there should be no waste. The engineering charge ought to have been put to the revenue account, together with certain other items which he specified. (Here the Chairman attempted to correct some mistatements.) He would not be interrupted; if any one had any reply to make to his observations, let him or them do so when he had finished. The accounts not having been made out in the form he specified, prevented a fair calculation being made of the per centage on receipts and expenditure.

The CHAIRMAN said that Mr. Parsons was arguing upon his own mistatements; if he would allow them to be corrected as he had uttered them, it would save much time and trouble.

Mr. PARSONS resumed, and added, that the application to Parliament did not appear by the statement to be either required or justified. That document showed a balance in their favour, and could they then go and ask for leave to borrow *ad libitum*. He did not think it was worth while to go to Parliament and ask leave to reduce the number of the Directors, when the proprietors already had the power of doing that in their own hands. The motion with which he intended to conclude, had been sanctioned by many Railway Companies; and the Act of Parliament gave loanholders the power of inspecting the accounts; it also enacted that any proprietor might, fourteen days before the general meeting, examine the accounts. He trusted he had said nothing that could be construed into a reflection upon any one connected with the Company. Mr. Parsons concluded by moving as an amendment (and he did not expect that any opposition would be offered to it by the Directors, as they must be desirous of convincing the Company that everything had been done for their interest)—that a Committee of five proprietors be appointed to examine the accounts.

Mr. TAILOR, of Nottingham, seconded the amendment. He stated that he had accompanied Mr. Parsons to Leicester to inspect the books and vouchers. He did not blame Mr. Bell, the Secretary, for not imparting the information required; it was Mr. Macaulay, the Solicitor, who prevented that gentleman from showing the documents; and he complained that Mr. Macaulay's conduct in so doing, was uncourteous and ungentlemanly. (Murmurs.)

Mr. BELL stated that if he had supposed at the time that the gentlemen would have been satisfied with what they now asked for, he did not think he should have refused it, but to comply with the demand they then made he must have produced for their inspection every book, voucher and document in the office. Mr. Bell was proceeding to explain further, when

Mr. MACAULAY interposed, and said, that he took upon himself the responsibility of having advised Mr. Bell to act as he had done. He (Mr. Macaulay) treated the epithets which had just been applied to him with utter contempt. He would explain what had actually occurred on the subject, and would then leave the Company to judge whether the charge of uncourteous and ungentlemanly conduct attached to him or to the person who had made it. Mr. Macaulay stated that on Thursday last, only the day but one before the meeting, Mr. Parsons and his friend came to Leicester and made their demand of Mr. Bell, who immediately came to him for advice. He found, on inquiry of Mr. Bell, that he had already shown them the account which the Act of Parliament required should be open for the inspection of shareholders fourteen days previous to the meeting. Anything beyond that Mr. Bell would not have been justified in showing them, without an order from the Directors. In the absence of the Directors, Mr. Bell, as the Secretary, and himself, as the Solicitor of the Company, had no choice in the matter. It was not for them to take upon themselves to grant what the Act did not require, and if the parties wished for anything more, they had had ample opportunity of applying to the Directors, who, it was well known, met once a fortnight; but instead of this, they apply at the last moment to an individual officer of the Company, who would have been justly amenable to censure if he had gone beyond the requirements of the Act of Parliament. This was the advice he gave to Mr. Bell, and he took upon himself to say, that if Mr. Bell had acted in such a case upon his own authority, or if he (Mr. Macaulay) had advised him to do so, they would have been both unworthy to fill any longer the offices they held under the Company. (Cheers.)

The CHAIRMAN said that, as a Director, he should be quite willing to grant the information asked for; but, as a shareholder, he thought it would be unadvisable, as it would discredit the Company by showing a distrust of the Directors. The accounts had been thoroughly investigated, and regularly audited. He then put the amendment.

Mr. COX said, he should support the original motion, as the amendment, if carried, would deprive them of a dividend for some years to come. The sum wanted must be appropriated from the profits of the Company, unless they went to Parliament for permission to raise it.

Mr. MATHER, of Liverpool, earnestly deprecated the amendment; and would recommend the Directors, if it were passed, to resign at once, and in a body. It was the most unheard of proceeding. (Assent.)

Captain WATTS considered that the mover and seconder of the amendment, after having thus ascertained the sense of the meeting, ought to withdraw it. No beneficial result could be obtained by it. He would, however, take the liberty of suggesting, that every reasonable information should be afforded to those who sought it even although it might be only to gratify individual curiosity; on the other hand, however, it should be borne in mind that to make revelations of the progress of business, was frequently indiscreet and prejudicial.

Mr. Parsons and Mr. Tailor then withdrew their amendment.

Mr. ROBERTS considered that the amendment had been altogether uncalled for, and that the space occupied in discussing it had been a shameful waste of their time. He also considered that the application of the mover and seconder of that amendment to inspect the books and vouchers was altogether unjustifiable, and a presumption on their part; and that their conduct there that day had been discreditable to them. The report was most satisfactory in every respect; more satisfactory than any report that had ever been made by any board of railway Directors. He had no local predilections to influence him; no acquaintance with any one there to bias him; he had no interest in any question of coke, or right of way or property to prejudice him. (Laughter.) He would never be a party to creating and sustaining a Board of Controul; he would never say to a Board of Directors, "we cannot trust you; we look upon you with suspicion"—he would rather recommend them, if such a system was ever likely to obtain, to resign in a body and simultaneously. For his part, he would always assert that the Directors, and the professional men who enjoyed the confidence of the former, should be cordially thanked, instead of being insulted as they had been that day. The explanation that had been given on every subject of inquiry had been highly gratifying, and it showed the minute and conscientious attention that was paid to the interests of the proprietary. There was not even a quarter's salary due to their officers; every thing had been paid out of the profits. He made a point of analyzing the accounts weekly, and regularly and carefully compared them with others; and he thought the accounts and returns of the Midland Counties' Railway were, in their proportion, superior to those of every other like concern. He congratulated the Directors on the prosperous state of their affairs, and complimented them on their skilful management, and the happy prospects of the future.

A question was asked by Mr. W. PAGET relative to an item of 447*l.* 5s. 11d. for sundries, travelling charges, &c., whether it referred to the travelling expenses of distant Directors?

Mr. BELL stated that a very small portion of it consisted of the travelling expenses of distant Directors—it was about 25*l.*

Mr. ROBERTS thought that inquiry into such small matters was paltry in so vast a concern;

Digitized by Google

in his opinion such meddling was odious and unworthy.

Mr. W. Paget remarked, that he considered the 1,200*l.* a-year, allotted to the Directors, ought to cover their travelling expenses.

Messrs. Rathbone and Heyworth of Liverpool said, that being Directors living at a considerable distance, and therefore not being able to take any active part in the management, they had declined any participation in the 1,200*l.* a year. They considered moreover that no Company was ever so fortunate as the present in its Board of acting and managing Directors.

The original motion was then put and carried unanimously, with the exception of Mr. W. Paget, of Loughborough.

Captain Watts moved that the proceedings of the Directors were highly satisfactory to, and were approved of by, the meeting.

Mr. Mather heartily seconded the motion, which was carried *nem. con.*, and with cheers.

Mr. Roberts then moved that the meeting do approve of the application to Parliament for liberty to create funds to meet contingent demands, and also for the other purposes mentioned in the Report which they had adopted. Those propositions he supported, as he was perfectly satisfied with the reasoning of the Report, and the correctness of the calculations of the Directors and the Engineer. He was not disposed to restrict the Directors to any precise sum to be raised, nor would he lay down the means by which it should be raised, whether by loan, shares or quarter shares. These were matters of detail altogether within the competence of the managing body. He would remark, that their present dividend was not exactly 2½ per cent., but rather 2¾ per cent.; their shares were at par at 92; and this ought to be known, because in the share market the tendency had not been so upward or favourable as the condition and prospects of the concern merited; this was because there were more sellers than buyers. Whatever sum might be raised, he felt assured that it would be beneficial to the Company's capital, and necessary to meet and extend the growing concerns of the railway. Mr. Roberts again stated that he had compared the progress of this railway with the largest Companies, and he was from his examination convinced that no family could invest its money with better returns, or with a surer dependence, than in purchasing the shares of the Midland Counties' Railway. Any person who could do without his capital for ten years, and in the meantime live upon his income, had now a sure and excellent opportunity of investment, with all the advantages that must eventually accrue when the concern had expanded its marvellous capabilities, enriching itself and the country arround it. (Cheers.) Even at the present time, the Company stood unrivalled in having expended so small an outlay on so vast a line, while its business was equal in proportion to the very largest concerns. If the Directors only made such Reports as the present, at every succeeding half yearly meeting, he should be more than satisfied. The actual charges were only 43 per cent., and respecting the economy of its management, comparing this with the outlay on the largest railways, he was sure it at least equalled them. He was happy to say that they had manifested the same spirit of economy even in the small coke business that had been adverted to.

Mr. Marriott of Kibworth seconded the motion.

Mr. Parsons said, he did not intend to offer any amendment, although in his opinion no statement had been produced to justify the application to Parliament, or to satisfy the proprietors of its necessity or expediency. With respect to Mr. Roberts' imputations he flung them back upon the utterer; would any one deny him the right of looking after his own interests?

Mr. Roberts, in reply, observed that Messrs. Parsons and Tailor were quite out of order in their application to the Secretary to examine his books and papers, and they might think themselves lucky in escaping a vote of censure. (Here something like symptoms of a row were manifested, Messrs. Roberts, Parsons, Tailor, and Mr. Paget all speaking together, and with much animation.) There was no ground for finding fault, and that everybody was conscious of. He had a right to censure the application for books and papers, and should continue to do so.

Mr. Rathbone said he fully concurred in all that his brother Directors had done, and urged the propriety of going to Parliament to ask for further powers. When those powers were obtained, the Directors would consult the proprietors as to whether they should make any, and what use of them. (Cheers.)

Mr. Ormerod suggested that while the Directors were applying for this power, they should ask for authority to raise as much as would cover all they could by possibility require—as future law expenses would be avoided, and the necessity of ever going to Parliament again would be obviated. No one could foresee the extent to which the traffic of the Company might be carried; besides, although such a power were granted by the Legislature, it could not be used without the direct sanction of the proprietary body. Continued applications to Parliament were costly processes; and he made the suggestion in a spirit of economy, and as reposing the fullest and most unqualified confidence in the ability and prudence of the Directors. Had this measure been resorted to before, there would have been no occasion for it now.

Mr. Heyworth entirely concurred in the suggestions of the preceding speaker.

The motion as put was unanimously carried.

Mr. Gurney moved that Mr. Dicey, Mr. Oakes, Sir Wm. Heygate, Mr. Dawson, Mr. Hannay, and Mr. Heyrick, be re-elected Directors.

Mr. Roberts seconded the motion.

Mr. Jessop asked whether Mr. Oakes were not disqualified, on account of his being concerned in a contract with the Company.

Mr. Macaulay pointed out that the disqualification only existed until a re-appointment took place. The re-election was like that of a member of Parliament taking office under the Crown. The analogy held throughout. He was only disqualified until re-elected—until the proprietors had an opportunity of pronouncing upon the contract; and not during the period such a Director held the contract.

Mr. Gossett, of Leicester, and Captain Watts concurred in Mr. Macaulay's interpretation of the spirit and letter of the clause.

The Chairman then stated, that the next business was to order that the deed with the North Midland Company be executed, which was ordered.

Captain Watts suggested that the number of the Directors, to be limited by the new Act, should not exceed twelve; there was a general feeling throughout the country on this point.

Mr. Heyworth and Mr. Rathbone thought that it would not be advisable to fetter the proprietors with any definite number. The proprietors ought to have a check upon the Directors by adding to the numbers whenever they pleased, or wherever they thought a new principle of management would be profitable.

It was suggested that half-yearly general meetings should be obligatory on the Directors, instead of as now discretionary with them; that the proprietors should pronounce the dividends, and that the accounts should be sent to each proprietor a certain number of days before each general meeting—it was ultimately agreed that all these propositions should be deferred until the next general meeting, the Directors in the interim undertaking to take them into consideration, and to report upon them at that time.

Mr. Heyworth congratulated the meeting on the unanimity which had been manifested upon every question—particularly on the latter suggestion which must necessarily be followed by every railway in the kingdom.

Mr. Cox moved, and Mr. Chrslyn seconded a vote of thanks to the Directors and to the Chairman for his conduct in the Chair.

The Chairman returned thanks, and exonerated Mr. Oakes from any the remotest shadow of a suspicion attaching to his uprightness as a Director from any inuendoes that had been flung about that day. Mr. Oakes was his Deputy-Chairman, and without his assistance and advice, he should really be at a loss to act. He was most zealous in every matter brought before them, and he had no hesitation in saying that his local knowledge, and clear and unbiassed judgment was inappreciable.

The meeting then separated.

LONDON AND BIRMINGHAM RAILWAY —THE LATE MEETING.

To the Editor of the Railway Times.

Sir,—As a shareholder who was not present at the meeting of the London and Birmingham Railway Company, held on the 13th instant, I have read with the utmost surprise, the report of what then took place, as given in your publication of Saturday, as regards the depreciation fund. I had supposed that this fund was tangible and existent, and I cannot see how I could have come to any other conclusion, when at the August meeting of 1840, a large amount was abstracted from it to make up the dividend, and most formally replaced to it again last February; and, again, if not existent, why has its total amount been so regularly kept before the shareholders at every half-yearly meeting? This matter ought not to be lost sight of, and as an absent shareholder, I must always consider myself indebted to Mr. Mozely for the clear exposition which he gave of the principles which ought to be attended to in respect to the proper mode of stating the accounts of a railway as regards, first, its capital, and secondly, its revenue and expenditure.

With respect to Mr. Heyworth's motion, that the dividend should be 4*l.* 10*s.* per share, a strange misconception appears to have prevailed at the meeting. Any such motion would have been illegal, and it would not have been competent in the Chairman to have put it to the meeting. The Act of Parliament, by which the affairs of the Company are bound to be regulated, declares that no dividend shall be made but from the ascertained profits of the Company; and if any proprietor is of opinion that a higher dividend could be obtained from the profits than the Directors proposed, his first motion must be for an inquiry into the statement of accounts, and if those are found to justify an increase of dividend, it well then, but not before, be competent for him to submit a motion that such increase be made. Any other proceeding than this, would, on application to the Lord Chancellor by any shareholder or party having lent money to the Company, at once be quashed, and the expenses of the application be made payable by the Company. It is true that in August last year, a dividend was made of more money than had been earned by the Company for the previous six months, 20,000*l.* having been taken from the surplus fund, or depreciation fund; but the shareholders were under the impression that such fund was tangible and existent, in fact, set aside to meet such a contingency, otherwise they never could have sanctioned such a proceeding. Now they are told that no such fund exists, and the sum set aside for the half-year just ended, can no more be deemed a portion of the nett earnings, than any other item of the expenditure.

I am, Sir, yours, &c.

H. H.

William Tierney Clark, Esq., Engineer, Hammersmith Bridge, and George Burge, Esq., Herne Bay, Kent, contractor, started from London on Tuesday for the suspension bridge, Peath, Austria, to inspect the coffre dams now erecting for the piers of the suspension bridge, the largest in Europe. The dams contain upwards of 200,000 cube feet of timber each, the water 40 feet deep, and the ice in the winter season 15 feet deep, the current running 9 miles per hour. It is believed to be the most hazardous undertaking ever attempted in any country. The trial dolphin driven last summer stood the test of the ice and other

Digitized by Google

pressure to the surprise of the natives. There have been near 100 English workmen and 200 natives employed for the last 18 months. The first and second dam are nearly closed, and a large quantity of stone ready for the piers. This is the first instance of an English engineer and contractor performing at so great a distance (near 1,500 miles.) The works are for Baron C. Sina, and have for their object to connect the towns of Pesth and Buda.

GREAT WESTERN RAILWAY TO BRIDGEWATER.—Messrs. WHITMARSH, ALEXANDER, SPENCER & Co., beg to inform the public, that all goods committed to their care, will in future be forwarded daily from the Castle and Falcon Inn, Aldersgate, *via* Great Western Railway, to Bridgewater, and thence by their waggons to Taunton, Exeter, Wellington, Tiverton, Southmolton, Barnstable, Bideford, also to Langport, Somerton, Castle Cary, Bruton, Wincanton, Stalbridge, Sherborne, Yeovil, Crewkerne, Ilminster, Chard, Axminster, Lyme, Charmouth, Bridport, Beaminster, South Petherton, Martock, Stoke-under-Ham, and all intermediate and adjacent towns.

Messrs. W. and Co., particularly request that all goods intended for their waggons, may be directed "by Whitmarsh and Co. from the Castle and Falcon," Aldersgate Street, to ensure immediate and direct transit, they having no connection with any other house in London.

Proprietors, { ALEXANDER & CLARK, London. / WHITMARSH and SPENCER, Taunton.

Also W. and Co.'s Vans to and from the Castle and Falcon (*via* South Western Railway, from the Andover-road Station,) through Salisbury, Wincanton, Sherborne, Yeovil, (with branches to Bridport, Beaminster, Crewkerne, Chard) Ilminster, Taunton and Barnstaple.

Dated August 16th, 1841.

GREAT WESTERN RAILWAY.—Notice is hereby given, That the next Half-Yearly General Meeting of the Proprietors of this Company will be held pursuant to the Act of Parliament, in Bristol, at the Bristol Station, on Thursday, the 26th August next, at 12 o'Clock, for the general purposes of business. The Chair will be taken at 1 o'Clock precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGHT, Deputy-Chairman.

Clause 123 provides that no person shall be entitled to vote as a proxy unless the instrument appointing him shall have been transmitted to one of the Secretaries of the Company at least five days before the meeting.

By order,

CHAS. A. SAUNDERS, THOMAS OSLER, } Secretaries.

Railway Offices, 2, Prince's-street, Bank, London.
Railway Station, Bristol.

YORK AND NORTH MIDLAND RAILWAY.—Call of Second Instalment of £5 per Share.—The Directors of the York and North Midland Railway Company having in pursuance of the provisions of the Act, resolved to make a call of £5 per Share, payable on or before Wednesday, the 1st day of September next. Proprietors of £25 Shares in this Company are hereby required to pay on or before that day to any of the undermentioned bankers, the sum of £5, on each of their respective shares, viz.:—

London—Messrs. Barnett's, Hoare, and Co.; Sir R. C. Glyn and Co.
York—City and County and Union Bank.

The Bankers have been instructed to charge interest after the rate of 5 per cent. per annum, on all sums paid after the 1st day of September next.

GEORGE HUDSON,
Chairman of the Board of Directors
GEORGE BAKER,
Clerk of the Company.

Railway Office, York, 4th August, 1841.

EDINBURGH AND GLASGOW RAILWAY.—Notice is hereby given, That the Seventh Half-Yearly General Meeting of the Shareholders in the Company will be held, pursuant to the Act of Incorporation, in the Company's office here, on Tuesday, the 24th instant, at One o'Clock.

Certain shares, in consequence of the non-payment of several Calls due thereon, having been declared forfeited, under Minute of the Board of Directors, of 1st Feb. and 8th and 22nd June, 1841, the Declarations of Forfeiture will be submitted to the meeting for confirmation, in terms of the Act.

The Transfer Books will be closed on and after the 17th instant, till after the meeting.

Proxies must be transmitted to, and received by, the Secretary, two days at least before the holding of the meeting (Section 134), otherwise they will not give a right to vote at the meeting. Blank forms of proxy may be had on application at this office.

In terms of section 137, the proprietor of any share, on which any call shall be due, will not be entitled to vote in respect of such share.

By order of the Directors,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Office,
7, North Queen-street, Glasgow,
9th August, 1841.

BRITISH COLONIAL BANK AND LOAN COMPANY.—Office, 13, St. Swithin's-lane, City.
Capital, £1,000,000: 25,000 shares of £40 each.

DIRECTORS.

Sir HERBERT COMPTON, Chairman.

George Fife Angas, Esq.
Robert John Bunyon, Esq.
Col. Sir Wm. Gossett.
M. A. Goldsmid, Esq.
Sir Joseph de Courcy Laffan, Bart.
Sir Francis Shuckburgh, Bart.
William Sloane, Esq.
James Stewart, Esq.
John Shewell, Esq.
Thomas Teed, Esq.

Bankers.—Commercial Bank of London, 3 Moorgate-street, Bank.
Solicitors.—Messrs. Adlington, Gregory, Faulkner, and Follett.

This Company was formed for the purpose of affording to capitalists a safe opportunity of availing themselves of the high rates of interest produced by the investment of money on landed securities in the Australasian Colonies; and though other plans were embraced in the original prospectus, this formed the leading, and has become the principal and almost the sole, object of the Company.

A capital of 100,000*l.* having been subscribed in this country, the Directors commenced the business of the undertaking by sending a Manager to Sydney, where he arrived last Christmas, and the Reports which the Directors have received since his arrival have satisfied them that the undertaking was founded upon a right principle, and that the advantages which they originally ventured to hold out to the shareholders may be more than realised, for the Manager has been enabled to the time of his last dispatches to advance, on mortgage of real estates, the whole of the funds which were put at his disposal, together with a considerable sum raised from shareholders in the colonies. In the selection of such securities he has secured the assistance of the Crown Surveyor and the Crown Solicitor, whose certificates of value and title upon each transaction have been transmitted to the Board.

The rate of interest obtained on these securities varies from 10 to 15 per cent., the average rate being 11 per cent.

The information transmitted to the Directors having satisfied them that much larger investments may be made with equal advantage, they propose to increase the capital of the Company by a further issue of 2,500 shares of 40*l.* each, at a premium of 2*l.* per share.

Two calls of 5*l.* each have been paid upon the present shares of £40, and another call of £5 has been made payable on the 12th of October next.

Persons taking the new shares will therefore pay £12 per share on subscribing, £5 on the 12th of October next, and the remainder in calls of £5 per share, which, by the deed of settlement can be made only at intervals of three months.

It is to be observed that the premiums which, in justice to the present shareholders, the Directors feel bound to charge on the new shares, will not be applied to the benefit of any individual, but will be added to the funds of the Company, and thereby increase the value of the shares.

Application for shares may be addressed to the Secretary, at the office of the Company, 13, St. Swithin's-lane.

By order of the Board,
HERBERT COMPTON, Chairman.

13, St. Swithin's-lane, August 4, 1841.

N.B. The half-yearly dividend of 6 per cent. on the colonial shares paid up in full may be received at the office of the Company on Thursday, in every week, provided the particulars of such shares be left with the Secretary on the preceding Tuesday.

TO RAILWAY CONTRACTORS, BUILDERS, BLACKSMITHS, AGRICULTURISTS AND OTHERS.—To be Sold by Auction by Mr. C. Gillard on Friday and Saturday, the 27th and 28th days of August, 1841, on the Birmingham and Derby Railway at Kettlebrook near Tamworth, the following valuable railway materials—comprising 40 earth waggons with 24in. wheels, about 45 tons of temporary iron rails, principally flat bottomed 32lbs. to the yard, 50 wheelbarrows, stone drays, timber carriages, cranes, quarry utensils, oak, ash and other planking, blacksmiths tools, new and old iron, about 60 sets of horses gearing, 5 new gates and posts, and numerous other effects.

The waggons, rails, wheelbarrows, cranes, quarry utensils, &c., will be sold on the first day.

Sale to commence each morning at 11 o'Clock.

The above materials are lying on the banks of the Coventry canal.

Handbills descriptive may be had at the Castle Inn, Tamworth; Herald Office, Birmingham; Staffordshire Advertiser Office, Stafford; and at the office of the auctioneer, Bird Street, Lichfield.

TO RAILWAY COMPANIES AND IRON MANUFACTURERS.—LOSH, WILSON, and BELL beg to recommend to parties employing or manufacturing Rails their improved Machine for straightening them, in which by a simple and powerful application of the screw they are rendered perfectly even without being disfigured by hammer-marks.

For terms and description apply to the makers, Walker Iron Works, Newcastle.

26th July, 1841.

LONDON AND BRIGHTON RAILWAY.—Open from London to Hayward's-heath, from thence per coach to Brighton.

Daily Trains Down to Brighton.—Morning, half past 9, half past 11. Afternoon, half-past 1, and 5 o'clock.

Daily Trains Up to London.—Morning, 7 and 9. Afternoon, half-past 12 and half-past 4.

Sunday Trains, Down to Brighton.—Morning, 8. Afternoon, half-past 5.

Sunday Trains, up to London.—Morning, 7. Afternoon, quarter past 5.

Fares.—First Class, 15s.; Second Class, 11s.; Children under ten years, half-price.

The Trains stop at all the intermediate Stations, if required, to set down or take up passengers.

As only a limited number of passengers can be conveyed throughout, from London to Brighton, places must be secured by booking them the day previous at the principal booking-offices. On the day of departure places can be secured only at the London-bridge Station, in the event of the limited number not being full. A Daily Down Train, at 9 p.m. for Croydon only, and on Sundays a Down Train, for Croydon only, at 8, and half-past 9, p.m. Fares to Croydon—First Class, 2s.; Second Class, 1s. 6d.

By Order,
THOMAS WOOD, Sec.

August 18, 1841.

WEST LONDON RAILWAY COMPANY.—Notice is hereby given, that the next Half-Yearly General Meeting of the Proprietors of the West London Railway Company will be held pursuant to the provisions of the Act of Incorporation at the Office of the Company, No. 11, Abchurch Lane, in the city of London, on Wednesday, the 8th of September next, at One o'Clock precisely, for general purposes.

And Notice is also hereby given, that the said meeting will be made special to determine upon rescinding, altering, or varying the first and second resolutions passed at the Adjourned Special General Meeting of the said Company on the 5th of April last, for raising the further sum of £40,000, by the creation and issue of 20,000 new shares of £20 each, at the price of £2 per share; and also to determine upon raising the monies authorised by the amended Act to be raised or any part thereof by the creation and issuing of such, and so many new shares of £20 each bearing such a annual interest for such time, and with such priority over the present shares in the undertaking, as the Proprietors at such meeting shall think proper; and also to fix the price at which such shares shall be issued, the amount of calls upon such shares shall be issued, the amount of calls, and the time or times when the same shall be paid, and to give certain orders and authorities to the Directors of the Company in their respect, and for other purposes.

WILLIAM MORGAN, Chairman.

Office, 11, Abchurch lane, August 17, 1841.

SIR WILLIAM BURNETT'S PATENT for the Preservation of Timber, Canvas, Cordage, Cotton, Woollen, &c. from Dry Rot, Mildew, Moth, and premature Decay.—The value of this discovery has been amply proved in Her Majesty's Dock Yards and elsewhere. Official reports and specimens of wood, canvas, and other articles, may be seen at the office. The process is simple, inexpensive, and perfectly innoxious in its use; as applied to ship building it purifies bilge water, and retards oxydation of metals. By the process green wood may be rapidly seasoned.

The Patent Material may be purchased or licenses for tanks granted to noblemen, gentlemen, builders, upholsterers, pianoforte makers, sail makers, and others. When for the purposes of trade on very advantageous terms to the licensee. Timber of all dimensions, planking, canvas, cordage, ships' sails, awnings, rick cloths, tents, and all other articles of linen and woollen manufacture, are received for preparation at the Proprietors' waterside premises, Copenhagen Wharf, Britannia Bridge, Limehouse.

Particulars and terms may be obtained on application at the Office, or by letters, post paid, addressed to the Secretary, 4, Castle court, Birchin-lane, Cornhill.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn.....Newcastle-upon-Tyne
Joseph Bothway.....Plymouth.
John Thompson and Co.....Wigan.
J. T. Tregellas.....Truro.
Thomas Mooney and Son.....Dublin.
Coates and Young.....Belfast.
James Kibble and Co.....Glasgow.
James Gunn.....Leith.
John M. Beatts, 14, Clement's-lane, High-street, Dundee.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of ten months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

AT A MEETING OF LANDOWNERS on the Proposed Line of Railway by the West Coast to Scotland, held at Liverpool, on Wednesday, the 21st July, and which Meeting was attended by Deputations from the Liverpool and Manchester, the Grand Junction, the North Union, and the Lancaster and Preston Railways;

JOHN MOSS, Esq., Chairman of the Grand Junction Railway, was unanimously called to the Chair.—

It was Resolved—

1. That it is desirable to continue a Line of Railway by Lancaster to Edinburgh and Glasgow, *via* Carlisle and Beatock, so as to have one continuous Railway between the Capitals of England and Scotland.

2. That the present Meeting will use their best exertion to promote the formation of the said Railway.

3. That these Resolutions, having been signed by COL. GRAHAM, of Mosskrow, on behalf of the Landowners, and by the Chairman of the respective Railways here represented, be forthwith submitted to the Landowners interested in the Line, for their approval and signatures, and that Committees in the different Districts be organised, with the view of forwarding the protect.

The Chairman having left the Chair, the thanks of the Meeting were voted to him.

CHAS. LAWRENCE, Chairman Liver. and Manches.
JOHN MOSS, Chairman Grand Junction.
THEODORE RATHBONE, Chairman North Union.
JOHN BURROWS, Chairman Lancaster and Preston.
W. GRAHAM.

At a MEETING OF GENTLEMEN in favour of the Projected Railroad from Lancaster to Edinburgh and Glasgow, *via* Carlisle and Beatock, held in the Town Hall, Carlisle.

JOHN DIXON, Esq., Mayor, was unanimously called to the Chair.

Resolved—

1. That this Meeting approve of, and Sign the Resolutions passed at Liverpool on the 21st of July last.

2. That a Committee be now formed for the purpose of bringing before the Public the merits of the said Projected Railroad, of collecting and furnishing information thereon, and of obtaining the Assent and Signature of Landowners and others interested in the undertaking, to the Resolutions passed at Liverpool, on the 21st of July last.

3. That the Committee shall consist of a Chairman, Three Vice-Chairmen, and the following Members with leave to add to their number, and any Three a Quorum:—

Atkinson, Joseph, Esq., Carlisle.
Barnes, Thomas, Esq., M.D., Carlisle.
Brown, John, Esq., Carlisle.
Dobinson, William, Esq., Carlisle.
Dixon, John, Esq., of Knells, Mayor of Carlisle.
Dixon, Peter, Esq., Warwick Bridge.
Dixon, Thomas, Esq., Calthwaite.
Featherstonhaugh, T., Esq. Kirklewath.
Ferguson, Richard, Esq., Harker Lodge.
Ferguson, Joseph, Esq., Lowther street, Carlisle.
Graham, Right Hon. Sir James, Bart., M.P. Netherby.
Graham, Fergus, Esq., Carlisle.
Goodenough, Rev. S., Prebendary of Carlisle.
Grant, Sir James, K.H. & K., St. A., the Hill.
Guibanks, Joseph, Esq., Whitefield House.
Howard, Hon., Charles, M.P., Naworth Castle.
Howard, Philip H., Esq., M.P., Corby Castle.
Howard, Henry, Esq., Greystoke.
Hasell, E. W., Esq., Chairman of Quarter Sessions.
Hodgson, T. H., Esq., Clerk of the Peace, Carlisle.
Hodgson, W. N., Esq., Carlisle.
Hewit, George H., Esq., Bargh.
Huntley, Rev. James, Thursby
Johnstone, Hope, Esq., M.P., Moffat House.
Jardine, Sir William, Bart.
Irwin, Thomas, Esq., Cader Abbey.
Larmer, George, Esq., Carlisle.
Musgrave, Sir George, Bart., Eden Hall
Marshall, William, Esq., M.P., Patterdale Hall.
Maclean, Major, Carlisle.
Mounsey, Robert, Esq., Castletown.
Mounsey, G. G., Esq., Carlisle.
Mounsey, Thomas, Esq., Carlisle.
Nanson, William, Esq., Carlisle.
Salkeld, Thomas, Esq., Holme Hill.
Stubholme, John, Esq., Morton Head.
Steel, George, Esq., Brunstock.
Scott, Thomas, Esq., Brent House.
Thomlinson, Joseph, Esq., Cardew.
Wilde, Major, Carlisle.
Wilson, Major, Evening Hill.
Wilson, Thomas, Esq., Nent Hall.

4. That Lord Lowther be requested to accept of the appointment of Chairman of the Committee.

5. That Colonel Graham be requested to act as Vice-Chairman, and that the other Two be hereafter elected by the Committee.

6. That this Committee be named "The Central Committee," and do now elect James Robert Grant, Esq., their Interim Secretary.

7. That the Committee shall hold its Meetings in the Town Hall, Carlisle, every Saturday, at 1 p.m., and at such other time and place as shall be fixed by the Committee.

8. That in order to obtain Signatures to the Liverpool Resolutions, the Committee do urge Gentlemen in the different Towns and Districts, interested in the project, to form Local Committees, the Chairman of which shall be virtually Members of this "The Central Committee.

9. That the Secretary be requested to make those Resolutions public, and upon his receiving intelligence of any Local Committee being formed, he shall transmit forthwith to their Chairman, copies of all papers containing information on the subject.

The Chairman having left the Chair, the thanks of the Meeting were unanimously voted to him.

JAMES R. GRANT,
INTERIM SECRETARY.

Railway Committee Room, Carlisle,
August 7th, 1841.

☞ The doors will be closed Five Minutes before the time of Starting.

Seven Coaches run daily between Carlisle and Lancaster, passing through Penrith which is the direct route for the Lakes, for Preston, Liverpool, Manchester, Birmingham, and London. Steam Boats ply regularly between Carlisle and Liverpool; also between Carlisle and Belfast. Coaches depart for Maryport and Whitehaven, and for Annan, Dumfries, Ayr, Portpatrick, &c. Four Coaches run daily between Carlisle and Edinburgh, and also Four Coaches between Carlisle and Glasgow. Passengers leaving Newcastle by the half-past Eleven o'clock Train, will reach Carlisle in time for the Edinburgh, Glasgow, Dumfries, and Portpatrick Mails and Coaches, arriving at Edinburgh or Glasgow the same night. Passengers leaving Edinburgh or Glasgow by the Mail at night for Carlisle will arrive there in time for the Ten o'clock Train, and reach Newcastle at One o'clock in the day. Places may be secured at the Railway Station, Newcastle, by the Morning and Evening Mails and Post Coaches, for Lancaster, Edinburgh, Glasgow, and Places on these Lines of Road; also by the Mail and Post Coach for Annan, Dumfries, Portpatrick, &c.

By Order,
JOHN ADAMSON,
Clerk to the Company.

Newcastle-upon Tyne, 4th August, 1841.

SOUTH-EASTERN RAILWAY COMPANY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant mortgages of the rates and tolls of their undertaking, as security for the same, bearing Interest at the rate of 5 per cent. per annum, payable, half yearly, at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and the term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Cornhill-street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

NORTH KENT RAILWAY, FROM GRAVESEND TO ROCHESTER.—CAPITAL, £300,000 in 15,000 Shares of £20 each; deposit, £2 10s. per Share.

Prospectuses may be obtained and applications for Shares made at the Company's Office, 42, Lombard-street.

GEORGE WALTER, Chief Superintendent.

THE CANTERBURY AND WHITSTABLE RAILWAY AND WHITSTABLE HARBOUR.

TO BE LET, for a Term of Seven Years, by Tender.—This undertaking has been finished upwards of Ten Years, and it is now in full work, and in a state of thorough repair and efficiency.

Whitstable is the port of the city of Canterbury; and the importance and value of the undertaking may be, in some measure, estimated by the fact that previously to the opening of the Harbour the shipping interest at Whitstable had been long in a dull state, but that from so late a date as the year 1835, the tonnage of vessels belonging to Whitstable has increased very nearly double. The quantities both of merchandize and passengers conveyed upon the railway connecting the harbour with Canterbury, is also notoriously upon the increase. But, in addition to the Harbour and Railway dues, there is a wide field for further profits, by means of the command and facilities which the possession of the Harbour and Railway affords for carrying on other trades and operations. It gives, for instance, the command of the coal trade of Canterbury and its vicinity; and it offers an opportunity of establishing an extensive timber trade. The want of a sawing machine has been long very much felt by builders and others in Canterbury and the neighbourhood, and machinery for that or other purposes might be connected with the stationary engines upon the railway line at a moderate expense, and the surplus steam power thus turned to a profitable account. Any erections for such purposes the lessee would be authorized to remove at the end of the term, subject to the option of the Company to take them at a valuation. There is also an early prospect of an immense increase in the importation of coals to Whitstable for conveyance upon the railway, in consequence of the junction of the South Eastern Railway with this, by means of a branch line from Ashford, which (according to the statement made on the part of that Company at a public meeting, lately held in Canterbury) will be completed before the expiration of the year 1843, and will open the shortest and most expeditious line of communication with the coal districts in the North, for the supply of the wide extent of South Kent.

Upon the whole, in addition to a steady and improving business in the ordinary routine of railway traffic, there is full scope for a person of spirit and enterprise, of active habits and with sufficient capital, to open an extraordinary source of profit, by the establishment of a commanding and extensive mercantile concern.

The terms of letting may be had upon application to Mr. CURTIS, the Secretary to the Company, No. 10, Burgate-street, Canterbury, on or after the 24th of August instant, to whom tenders must be sent on or before the 17th of September next, sealed up and endorsed "Tender for the Canterbury and Whitstable Railway and Whitstable Harbour."

HARTLEPOOL DOCKS AND RAILWAY.—To be sold by auction, on Thursday, the 26th day of August inst., precisely at four o'clock in the afternoon, at the house of Mr. Sotheran, King's Head Inn, Hartlepool, Messrs. SOTHERAN, Auctioneers, ten Shares of £100 each; and ten shares of £25 each, in the Hartlepool Docks and Railway Company.

The above undertaking is allowed to be one of the best in the Kingdom, and a dividend of £8 per cent. has just been declared.

The Shares will be offered in one or more lots as may be determined upon at the time of Sale

Further information may be obtained, on application to Mr. George Wilkinson, Solicitor, Durham.

Durham, August 14th, 1841.

To Railway Contractors, Builders, and others.—Railway Plant.

By J. B. LOCKE, on Wednesday, Thursday, and Friday, the 1st, 2nd, and 3rd September next, by direction of Messrs. Samuel Patteson and Co. in consequence of the completion of their railway contracts.

THE Whole of their RAILWAY PLANT, consisting of about 200 tons flange-bottom rails, from 25lb. to 35lb. per yard; a large quantity of sleepers; 80 earth waggons, 2½ yards each, 4ft. 8in. gauge, 2ft 6in. wheels, 3in. axles, eight carts, an excellent four wheel stone lurry, 20 sets horse geers, three capital piling engines, complete, a large quantity of centerings, timber, smith's tools, &c., &c.. The above are on view at the works, on the Manchester and Birmingham Railway, at Edgeley, near Stockport.—Also an excellent crane, suitable for the erection of bridges, viaducts, &c. with transverse motion, single, double, and treble geering, blocks, and chain complete, capable of lifting 10 to 15 tons, now standing near the station in Fairfield-street, Manchester. The above properties will be found well worth the attention of railway contractors, or persons undertaking any works of magnitude.

For particulars, application to be made to Messrs. Samuel Patteson and Co., Manchester; Mr. John Worsley, on the premises, at Edgeley; or to Mr. J. B. Locke, the auctioneer, 84, King-street, Manchester, by whom, as also by the printers of this paper, catalogues will be furnished one week previous to the sale.

Manchester, 14th August, 1841.

ON SALE.—TWO NEWLY-FINISHED SIX WHEELED LOCOMOTIVE ENGINES, with 12 inch cylinders, copper fire boxes, 5 feet driving wheels, and of the usual gauge.

The engines embody all the latest improvements in their valve gearing and motions.

Canal-street Works, Manchester.

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, that the next Half-Yearly General Meeting of the Proprietors of this Company will be held, in pursuance of the Act of Parliament, at the White Lion Hotel, in the city of Bristol, on Thursday, the 2nd of September, at Eleven o'clock.

The chair will be taken at Twelve o'clock precisely.

FREDERICK RICKETTS, Chairman.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Monday, the 23rd of August, and not be re-opened until after the said General Meeting on the 2nd of September.

By order of the Board of Directors.

J. B. BADHAM, Secretary.

Office, 30, Broad street, Bristol, August 13, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

HULL AND SELBY RAILWAY.—At a General Meeting of the Proprietors of the Hull and Selby Railway, held pursuant to notice, in the Court of Requests Room, Mansion House, Hull, on Saturday, August 14th, 1841,

HENRY BROADLEY, Esq., M.P., in the Chair,

The following resolutions were unanimously passed,

Moved by Mr. Herbert Seaton; seconded by Mr. William Bean,—

That the Report now read be received and adopted.

Moved by Mr. Edward Sidebottom; seconded by Mr. John Foster,—

That in conformity with the recommendation of the Directors, contained in their Report a dividend of Ten Shillings upon each share in the capital stock of the Company be now declared, and that the same be payable (subject to the directions of the Act of Incorporation) on or at any time after the 15th day of September next, and that the Transfer Books be closed on the 1st September for fourteen days.

HENRY BROADLEY, Chairman.

Moved by Mr. Henwood; seconded by Mr. W. H. Dikes—

That the thanks of the meeting be presented to Henry Broadley, Esq., M.P., for presiding on the present occasion, and for his conduct in the chair.

TO RAILWAY CONTRACTORS, BUILDERS, SMITHS, and Others.—SALE of Railway Materials, &c. at Long Bridge, near Northfield, six miles from Birmingham, near the Worcester Turnpike Road.—JOHN SODEN has received instructions from Mr. W. Ridler, Railway Contractor, to submit to Public Competition, the whole of his valuable Stock of Railway Materials and other Effects, on Tuesday and Wednesday, the 14th and 15th of September next, consisting of about 150 tons of flat-bottom wrought iron rails, weighing from 40 lbs. to 48 lbs. per yard; 50 very excellent and extra strong railway waggons, capable of carrying 2½ yards of earth, 4 feet 8½ inch gauge, equal to new, and fit for immediate use; about 150 railway wheelbarrows, in capital repair; several hundred feet of planking, from 12 to 20 feet long; quantity of deal baulk and other timber, in lots; 2 capital timber carriages; 5 excellent 6 inch carts; 1 covered spring ditto; from 30 to 40 sets of good trace horse tackle and thiller ditto; 20 or 30 sets of wheels and axles, in good working condition, and a quantity of wrought iron axles; 2 sets of smiths' tools, comprising bellows, anvils, vices, screw tackle, &c. &c.; complete sets of blowing tackle, levers, bars, hammers, drills, &c.; timber tow chains; 2 capital two-knife chaff machines and chaff box; lot of cast iron pedestals; several tons of cast and wrought iron, 2 superior useful cart mares, 6 years old; 1 ditto, 4 years old; very excellent well-built modern gig, and very handsome double-bodied phaeton, nearly new, and other effects.

The proprietor would be willing to treat with parties for the sale of the Iron Rails and Waggons by Private Contract, any day not later than the 1st of September, of which if effected due notice will be given. A liberal credit will be allowed if required, to purchasers of above £20, upon good and approved security.

Catalogues of particulars will appear in due course, and may be had on application at the Angel Inn, Coleshill street, Birmingham; of the Auctioneer, Coventry; or of the proprietor, upon the premises.

Sale to commence each morning at Eleven o'Clock.

TO PARENTS AND GUARDIANS.—Wanted as an Apprentice, a respectable Youth, age from 14 or 15 upwards, in an Engine Manufactory Establishment, who would make himself generally useful in the practical part. Drawing and moderate premium required.

Apply A. B., at Mr. Rastale's Newspaper Office, Ebury-street, Pimlico.

By order,

H. PATTESON, Secretary.

MIDLAND COUNTIES RAILWAY.—At the Fifth General Annual Meeting of the Proprietors of the Midland Counties Railway, held in pursuance of the provisions of the Act of Incorporation, at the Station, in the town of Derby, on the 14th day of August, 1841,

THOMAS EDWARD DICEY, Esq., Chairman of the Board of Directors, in the Chair,

The following resolutions were agreed to:—

Resolved,—That the Common Seal of the Company be affixed to the Register of Proprietors.

(The Seal was affixed accordingly, in the presence of the Meeting.)

Resolved,—That the Report of the Board of Directors now read, with the statements of Account annexed, be received and adopted.

The Report communicated the declaration by the Directors of a dividend of £2 10s. on each £100 Share, and of 12s. 6d. on each £25 Share, payable on the 30th instant.

Resolved,—That the proceedings of the Directors during the past year, upon the several matters alluded to in the Report, are highly satisfactory to, and approved by this Meeting.

Resolved,—That this Meeting approves of the course which the Directors propose to pursue, in applying for an Act of Parliament for a further increase of Capital to meet the extra demands on the Company.

Resolved,—That Mr. Dicey, Mr. Oakes, Sir William Heygate, Bart., Mr. Dawson, Mr. Hannay, and Mr. Heyrick, be re-elected Directors of this Company.

Ordered,—That the Deed which has been prepared between this Company and the North Midland Railway Company, for determining and making void the Covenants contained in the agreement between the two Companies, dated the 20th day of March, 1838, be executed by this Company.

(Signed) T. E. DICEY, Chairman.

Mr. Dicey having left the Chair, it was Resolved,

That the best thanks of this Meeting be given to Mr. Dicey, for his very able and efficient services as Chairman.

TUESDAY'S SALE OF VALUABLE YOUNG, SEASONED CART HORSES.

To Brewers, Distillers, Factors, Corn and Coal Merchants, Contractors, and Wharfingers, also the Nobility and Gentry.

TO BE SOLD BY AUCTION, by MR. DIXON at his Repository, Barbican, on Tuesday, August 31st 1841, commencing at Twelve o'Clock, precisely.—About Twenty-three fine-shaped, active, powerful, seasoned Cart Horses, the genuine property of Mr. G. Holding, that have been employed on the Red Hill contract on the Brighton Railway, and sold in consequence of the contract being nearly completed.

They are about 15 hands 3 inches high, remarkable for their power and activity,—mostly young, and really as fine a lot of Cart Horses as ever were submitted to public sale.

Colours.—Bays, Greys, Roans, and Chesnuts, comprising some very handsome Match Teams.

On view, and catalogues had two days before the sale.

A great variety of New and Second-hand Carriages of every description always on private sale at this establishment, remarkably cheap.

WEST OF ENGLAND DRAUGHT HORSES.

TO BE SOLD BY AUCTION, by MR. DIXON, at his Repository, Barbican, on Friday, September 3, 1841, at Twelve o'clock, precisely, Thirty five fine shaped, active, powerful, seasoned Cart Horses, and Thirty-five Sets of Harness, the property of an extensive Carrying Establishment, sold in consequence of the extension of the Great Western and branch Railways.

Colours, Blacks, Browns, Greys, Roans, and Chesnuts.

The above valuable well-selected Stock of fine seasoned Cart Horses are worthy the immediate attention of Brewers, Distillers, Corn and Coal Merchants, Wharfingers, Innkeepers, Contractors, &c. being in excellent condition, mostly young and sound, just from constant work, and positively without exchange or addition.

On view and catalogues had two days before the Sale.

A great variety of new and secondhand Carriages, of every description, always on Private Sale at this Establishment, remarkably cheap.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 191. Vol. IV.—No. 35.] SATURDAY, AUGUST 28, 1841. [Price 6d.

BIRMINGHAM AND DERBY JUNCTION RAILWAY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £ each, and for a term of not less than Three Years, and to grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing Interest at the rate of 5 per cent. per annum.

The above Loans are in substitution of others heretofore advanced to the Company for a term of years, the Debentures granted for which are now expiring.

Interest Warrants, for the whole term for which the Loan is made, payable half yearly, on the 1st January and 1st July, at the Company's Bankers in London and Birmingham, will be delivered to the Lender with the Mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent, and are to be addressed to the Secretary, at the Company's Office in Waterloo street, Birmingham, to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford court, Throgmorton-street, London, or to Messrs. Laurence, Cazenove and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 21st day of July, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY—NEW SHARES—THIRD CALL—£5 PER SHARE.—The Directors of the Birmingham and Derby Junction Railway Company having resolved that an Instalment of £5 on each of the New Third Shares in this undertaking, created under the provisions of the Act relating thereto, passed in the session of Parliament 5 Vict. cap. 51, payable on or before the 3rd day of September next, should be called for. Proprietors of such New Shares in this Company are hereby required to pay, on or before that day, to any of the undermentioned Bankers, the sum of Five Pounds on each of their respective New Shares.

BANKERS.

London—Messrs. Glyn, Hallifax, Mills, & Co., Lombard-street.
Birmingham—The Birmingham Banking Company.
Manchester—The Manchester and Salford Bank.
Derby—Messrs. W. & S. Evans.
Burton-upon-Trent—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield—Messrs. Parker, Shore, and Co.

The Bankers have been severally instructed to charge interest at the rate of £5 per cent. per annum, according to the provisions of the Act above referred to, from the 3rd day of September next, on all sums which shall be tendered after that day.

(Signed) HENRY SMITH,
Chairman of the Board of Directors.
(Signed) THOMAS KELL, Secretary.

Waterloo-street, Birmingham,
August 11, 1841.

SOUTH-EASTERN RAILWAY COMPANY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years at the option of the Lender, and to grant mortgages of the rates and tolls of their undertaking, as security for the same, bearing Interest at the rate of 5 per cent. per annum, payable, half yearly, at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and the term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Cowman street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

NORTH KENT RAILWAY, FROM GRAVESEND TO ROCHESTER.—CAPITAL, £ in 15,000 Shares of £ each, deposit, £2 10s. per Share.

Prospectuses may be obtained and applications for Shares made at the Company's Office, 42, Lombard street.

GEORGE WALKER, Chief Superintendent.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. AILSOP, 28, Cornhill, and 2, Bedford Row, Russell street. T. Ailsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Ailsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s 6d., in paper covers, 1s.; mounted on canvass, in cloth case, 2s 6d., on rollers, 4s. 6d.

Published at the *Railway Times* Office, 122, Fleet street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster row, Hyde & Co. and G. Bell, Fleet-street, Mann, Cornhill, and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY FOR 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S

RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Railway Times Office, and Hyde and Co., Fleet street.

Just published.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by all booksellers.

YORK AND NORTH MIDLAND RAILWAY—Call of Second Instalment of £5 per Share.—The Directors of the York and North Midland Railway Company having in pursuance of the provisions of the Act, resolved to make a call of £5 per Share, payable on or before Wednesday, the 1st day of September next. Proprietors of £25 Shares in this Company are hereby required to pay on or before that day to any of the undermentioned bankers, the sum of £5, on each of their respective shares, viz —

London—Messrs. Barnett's, Hoare, and Co.; Sir R. C. Glyn and Co.

York—City and County and Union Bank.

The Bankers have been instructed to charge interest after the rate of 5 per cent. per annum, on all sums paid after the 1st day of September next.

GEORGE HUDSON,
Chairman of the Board of Directors
GEORGE BAKER,
Clerk of the Company.

Railway Office, York, 4th August, 1841.

THE CANTERBURY AND WHITSTABLE RAILWAY AND WHITSTABLE HARBOUR.

TO BE LET, for a Term of Seven Years, by Tender.—This undertaking has been finished upwards of Ten Years, and it is now in full work, and in a state of thorough repair and efficiency.

Whitstable is the port of the city of Canterbury; and the importance and value of the undertaking may be, in some measure, estimated by the fact that previously to the opening of the Harbour the shipping interest at Whitstable had been long in a dull state, but that from so late a date as the year 1836, the tonnage of vessels belonging to Whitstable has increased very nearly double. The quantities both of merchandize and passengers conveyed upon the railway connecting the harbour with Canterbury, is also notoriously upon the increase. But, in addition to the Harbour and Railway dues, there is a wide field for further profits, by means of the command and facilities which the possession of the Harbour and Railway affords for carrying on other trades and operations. It gives, for instance, the command of the coal trade of Canterbury and its vicinity; and it offers an opportunity of establishing an extensive timber trade. The want of a sawing machine has been long very much felt by builders and others in Canterbury and the neighbourhood, and machinery for that or other purposes might be connected with the stationary engines upon the railway line at a moderate expense, and the surplus steam power thus turned to a profitable account. Any erections for such purposes the lessee would be authorized to remove at the end of the term, subject to the option of the Company to take them at a valuation. There is also an early prospect of an immense increase in the importation of coals to Whitstable for conveyance upon the railway, in consequence of the junction of the South Eastern Railway with this, by means of a branch line from Ashford, which according to the statement made on the part of that Company at a public meeting, lately held in Canterbury, will be completed before the expiration of the year 1843, and will open the shortest and most expeditious line of communication with the coal districts in the North, for the supply of the wide extent of South Kent.

Upon the whole, in addition to a steady and improving business in the ordinary routine of railway traffic, there is full scope for a person of spirit and enterprise, of active habits and with sufficient capital, to open an extraordinary source of profit, by the establishment of a commanding and extensive mercantile concern.

The terms of letting may be had upon application to Mr. Curtis, the Secretary to the Company, No. 10, Burgate-street, Canterbury, on or after the 24th of August instant, to whom tenders must be sent on or before the 17th of September next, sealed up and endorsed "Tender for the Canterbury and Whitstable Railway and Whitstable Harbour."

ON SALE.—TWO NEWLY-FINISHED SIX WHEELED LOCOMOTIVE ENGINES, with 12 inch cylinders, copper fire boxes, 5 feet driving wheels, and of the usual gauge.

The engines embody all the latest improvements in their valve gearing and motions.

Canal-street Works, Manchester.

BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly General Meeting of the proprietors of this Company was held at the Waterloo Rooms, Waterloo-street, Birmingham, on Friday the 20th instant, to receive the Report of the Directors, and for the transaction of other business.

There was a very numerous attendance of proprietors.

Captain C. R. MOORSOM, R.N., Chairman of the Board of Directors, having taken the chair,

Mr. KING (the Secretary) read the notice convening the meeting, as also the Reports and minutes of the last half-yearly meeting of proprietors, held on the 23rd of February.

The minutes having been confirmed, and the common seal of the Company affixed to the register of proprietors,

The CHAIRMAN read the Report of the Directors, as follows:—

REPORT OF THE DIRECTORS.

By the statement of accounts which accompanies this Report, the proprietors will perceive that there is a profit on the half-year's traffic to the 30th of June, of 5,085*l.* 16s. 2d. independent of the amount due by the Postmaster-General for the conveyance of the mails, which cannot at present be stated with certainty, in consequence of the award not having been made until the twenty-ninth day after reference, instead of within twenty-eight days, as required by the Act for the conveyance of the mails on railways; and, in accordance with the provisions of which Act, it has become necessary to appoint a new umpire. But taking the amount which had been awarded, (and which it is fair to presume will not be reduced), 4,268*l.* 8s. 9d. will be added to the receipts; and as the charges upon that part of the traffic are already included, the profits will also be increased by the above amount, making a total sum of 9,354*l.* 4s. 11d.

Upon a revision of the revenue accounts which were laid before the meeting on the 23rd of February last, it appears that a sum of 1,897*l.* 4s. 8d., which was expended in the purchase of copper fire boxes (to replace those of iron, which had altogether failed,) and also of new brass tubes, was placed to the account of revenue. There is also a further sum of 449*l.* 10s., which has arisen under precisely the same circumstances, standing to the charge of locomotive power in this half-year's account (in the sum of 1,450*l.* 11s. 7d.). Both these charges the Committee consider ought more properly to have been placed to the charge of the capital stock of the Company. Should the proprietors agree with them in this opinion, the accounts for the half-year ended the 31st of December will show (instead of 611*l.* 13s. 11d. against the traffic) a balance in its favour of 1,285*l.* 10s. 9d.; and which, added to the profits of the half year ended the 30th of June, (together with the 449*l.* 10s. just mentioned, and presuming the amount for the conveyance of mails to be correct, will give a total amount of profit of 11,089*l.* 5s. 8d.—subject, however, to a deduction for the depreciation in the value of the stock consequent on its working.

It is the practice with some Railway Companies to set apart each half year a portion of their income, for the purpose of renewing the stock, as it may from time to time become necessary. This plan the Committee recommend to be followed, as correct in principle, and rendering the charges from this cause in each half year more equal. The Committee, however, have not considered it necessary, upon this occasion, to have an estimate made of the depreciation that has accrued to the 30th of June last; but they purpose, at the end of the current half year, that a complete valuation shall be taken of the carrying stock.

Having given the subject their most careful consideration, the Committee are not prepared to recommend a division of the profits at this time.

The Committee are proceeding with such arrangements as they believe will add considerably to the traffic in goods; and are prepared to act as carriers, should such a course be found desirable.

The connection of the tramway with the station at Gloucester will be completed by the 23rd instant.

The junction with the London and Birmingham Railway is formed, and the Birmingham and Gloucester trains commenced running to and from the Company's station on Tuesday last, the 17th inst., an arrangement for that purpose having been entered into for one year, by which the London and Birmingham Directors have agreed to provide such accommodation as is required by this Company, upon fair and reasonable terms.

The Committee, after a full consideration of the subject, have added two trains throughout, and discontinued the four between Cheltenham and Gloucester.

The condition of the way and works has received the earnest attention of the Committee, the cost of the maintenance of way has been considerably reduced, and the Committee trust that they shall be able, at no very distant period, to enter into satisfactory arrangements for the performance of this work, at a fixed rate per mile.

The locomotive department is also undergoing a thorough revision. The expenses, compared with the work performed, have been diminished. At the same time the Committee cannot hold out the expectation of any considerable further reduction under this head during the current half-year.

The Committee have found it necessary to separate the offices of Superintendent and Secretary, and have appointed to the latter office Mr. George King. That of Superintendent is not yet filled up.

The system of auditing the accounts, which was the subject of discussion at the general meeting in February, and also at the special general meeting in May, has been undertaken by two of the Directors not on the Committee, who will make their own report to the proprietors.

The principal laid down for the audit requires that the following facts should be ascertained:—

"First—That the sums expended have been applied to the purposes for which they were intended.

Second—That where more money has been spent than the estimates contemplated, an explanation shall be called for.

Third—That the amount accounted for, together with the balance, corresponds with the receipts.

Fourth—That the system of the office secures the observance of the following checks, viz.:—

1.—That the items under each head of expenditure were duly authorised by the Directors or other competent authority.

2.—That the payments made were due, and duly authorised,

3.—That the payments were made to the parties entitled, and were duly receipted.

The Committee suggest that the proprietors should name the auditors at each general meeting; and they are of opinion, that it will be found most convenient in practice that this duty be undertaken by members of the Board not on the executive Committee.

The following Directors go out by rotation at the present meeting, and are re-eligible:—Mr. Samuel Bowly, Mr. William Fox, Mr. D. Ledsam, and Captain C. R. Moorsom, R. N.

C. R. MOORSOM, Chairman.

DANIEL LEDSAM, Esq., one of the Auditors appointed at the last general meeting, read the following Report, as the result of their examinations:—

REPORT OF AUDITORS.

In conformity with the request of the Committee, as stated in their special Report of 20th of April last, we undertook the examination and audit of accounts, on the principle stated in the Report of the Committee now before the meeting; and have verified the statement of general capital account, and amount of current receipts and disbursements.

We have received from the Superintendent and from the Engineer-in-Chief their respective statements, in elucidation of the excess of expenditure over the estimates of 1839, to which our attention has been directed; and after a careful examination of the same with the books of the office, we beg to present the statements herewith, marked A and B, shewing the various items of excess have arisen, the principal of which have been in the works department, and expenses incurred that could not have been foreseen.

It is satisfactory to us to have it in our power to report that the books of the Company enable us to trace every transaction connected with the above expenditure.

DANIEL LEDSAM, JOHN FRANCIS, } Auditors.

Birmingham, August 18, 1841.

[A.]

General Summary, and Comparative Statement of Estimate of February, 1839, and Expenditure to 31st March, 1841.

Excess on estimate	401,523 9 8			
	1,455,037 14 6			
Less	10,834 1 4			
	£1,459,203 13 2			

Estimated Cost of Worcester Branch	£40,000 0 0
Estimate of February, 1839	1,053,514 4 10
Total	£1,105,514 4 10

In reference to the first item in the account which he had read, Mr. Ledsam stated that there were certain portions of land, houses, &c. included in this amount, which would reduce the excess of 18,987*l.* 15*s.* 2*d.* to about one-half. The excess on the estimates for the line between Cheltenham and Gloucester arose from a variety of causes, and from the necessity of constructing works not contemplated. The total excess was 401,523*l.* 9*s.* 8*d.*, and in their investigations as to how it had arisen, they had classed it under the following heads:—

[B.]

Sundry expenses incurred which were not contemplated in the early stage of the Company.

Land tax redeemed	£3,670 0 0
Excess of cost on the line between Cheltenham and Gloucester, in consequence of the Company having to construct it to make the whole line	82,980 0 2
The insufficiency of the tramway	17,000 0 0
Interest on bonds and debenture stamps	13,809 11 8
Parliamentary expenses before the opening of the line	1,151 1 10
Permanent way rails	8,009 0 0
Sundries, viz.—Advertising, incidental expenses (printing, &c., and rates and taxes	2,601 4 4
Sums stated by the Engineer to have been paid for expediting the works earlier than the contracts had provided for	52,724 0 0
Compensation to parties along the line for injuries, commutation of bridges, side cuttings, &c.	14,240 0 0
Total	£199,984 17 7

Mr. LEDSAM added, that it would be satisfactory to the meeting to know that the books were in that state that any individual could at once verify any particular item in the accounts.

The CHAIRMAN said, that he had now to direct the attention of the proprietors to the general statement of the accounts of the Company. They would there find that the capital account showed a balance of 5,085*l.* 16*s.* 2*d.*, and how that balance, added to other items, produced a certain sum of 11,089*l.* 5*s.* 8*d.* already explained in the Report. Perhaps the meeting would permit him to make one or two observations connected with the Reports just read, before he called upon them to adopt the Report of the Auditors or Committee, or to take such other course as they might think proper to adopt. And, first of all, he would direct their attention to the subject of maintenance of way. It was the practice of all Railway Companies, for the first 18 months after their opening, to charge the maintenance of way to the capital account—a practice which had therefore been followed; but the Directors thought that the revenue account might be fairly charged with the permanent staff, which was shown in the small item of 300*l.* odd. They had been told in the Report that the cost of maintenance of way had been reduced—and that reduction was shown in the paper which he held in his hand, to have been from 320*l.* in the quarter ending the 31st of March, to 280*l.* per mile per annum for the quarter ending the 30th of June—the average being 300*l.* for the half year. The highest amount under this head appeared to be 920*l.*, and the lowest 123*l.*, per mile per annum. They had found it necessary, as was also stated in the Report, to revise the system of management of the locomotive department, and the result was, that a considerable expense would have to be incurred to put it in a fit state to work at the speed of other lines. The main feature was, that the 4-feet wheels of their locomotive engines had not been found sufficient to carry the passenger trains at the required speed. They therefore proposed to substitute 5-feet wheels for those of 4-feet diameter which were now in use, but they would retain the 4-feet wheels for the engines on the Lickey incline, and also, perhaps, for the conveyance of goods when the traffic in this department justified them in putting on a separate train. This was an important point, connected as it was with the question of depreciation, and that again connecting itself with a matter not less important which they would be called upon to decide that day—he meant the question of dividend. Arrangements with respect to the carrying of goods were in negociation with the Grand Junction and Birmingham and Derby Companies; but some difficulty, which he hoped they would be able to get over, having been experienced in working the goods through the London and Birmingham station, they were still obliged to send them from the Camp Hill station. The Directors had not made up their minds that they ought to place themselves in direct competition with the carriers; and when they considered the investigation that the subject had undergone before a Committee of the House of Commons, and the diversity of opinion which existed in the public mind respecting it, the proprietors would agree that the greatest caution should be used before they departed from the system which they had hitherto acted upon by becoming absolute carriers in direct competition with others. They did not, however, refuse such traffic as was presented to them. With respect to the question of a depreciation fund, which was one of great importance, he was not aware that at any of the railway meetings hitherto held the subject had been thoroughly elucidated; yet as the proprietors must all be aware that the component parts of the carrying stock of the Company would wear out in varying portions of time—some perhaps in five, and some in twenty, years—it became a question in what manner it should be replaced. It was customary with some to place the cost of wear and tear against the revenue of the half year in which it took place, but that mode was in his opinion inconvenient, as there might be but little occasion for the fund in some years, while in others heavy expenditures would burst upon them, when their dividends could not be sustained. He thought, therefore, that the most prudent course to adopt—and one which every man adopted in managing his own affairs—was, to assign for the formation of the fund a portion of the profits of each half year, to be applied, so far as it went, to meet any contingencies that might occur. This plan he strongly recommended the proprietors to act upon. On the subject of audit, it would not, perhaps, be necessary for him to say much, but he would direct attention to the distinction to be made between the investigation which had been gone into by Mr. Ledsam and Mr. Francis with respect to past transactions, and that system of audit by which the future accounts of the Company were to be brought under purview, and reported to each meeting specifically; more particularly in connection with the recommendation that the Auditors should for the future be nominated from gentlemen in the Direction, but not in the responsible executive Committee. In the Report read at the last half-yearly general meeting, it was stated that an experiment was proposed to be made in the system of management, to which the concurrence or approval of the proprietors was not then asked, by which five gentlemen were appointed a Committee, each taking a separate department and individual responsibility, such an arrangement being in strict conformity with the Act. That experiment had gone on to the present period; and, for himself, he could state most unequivocally, that the results had answered his fullest expectations. He held in his hand a few particulars connected with the working of the railway, which, although he could not vouch for their accuracy with that certainty which he could have liked, would, nevertheless, be found to approximate sufficiently to the actual state of things, and would probably prove interesting to the meeting. Although he believed no material error pervaded the details of the statement, he hoped in future to be able to submit it in a more comprehensive and accurate form. The Chairman then read the following—

Statistical Particulars, to 30th June, 1841.

Miles run by engines	134,747
Ditto Ditto, Lickey incline	5,000
General average cost per mile	1s. 11¼d.
General average coke	48¼ lbs.
Miles run by trains with passengers	97,704
Average time of journey	2h. 45m.
Rate per hour including stoppages	19 miles.
Ditto ditto, excluding stoppages	23¼ ditto.
Number of passengers conveyed	158,830
Number conveyed of first class	37,780
Ditto second class	89,059

Digitized by Google

Ditto.....third class	32,011
Average fare of all classes per mile.....	2¼d. a-head.
Average earnings of short trains between Cheltenham and Gloucester, per mile....	4s. 8¾d.
Ditto long trains between Birmingham and Gloucester, per mile	7s. 0¼d.
Average number of passengers by mail trains on Sundays	96
Average number on week days by mail trains	116
Average cost per mile of maintenance of way (per annum).....	£300
Lowest average rate ditto	£123
Highest average rate ditto.....	£920
Average cost of first quarter of 1841.....	£320
Ditto of second quarter.....	£280
Number of persons employed for fortnight ending 31st March, 1841	886
Ditto for fortnight ending 24th June, 1841 ..	719

The Chairman, in continuation, observed, that he believed the trains on the average had been about nine minutes behind the time assigned to them in the time tables. Whether that delay was the result of the engines not being well worked, or how much it resulted from mismanagement at the stations in not getting the trains off at the appointed time, he was not prepared to say. The proprietors would, however, see from this that the Directors were endeavouring to carry out the system which had been suggested at the last general meeting, by which he hoped to be able to put his finger without trouble on every or any point of mismanagement. (Hear, hear.) The Chairman concluded by saying that he would be happy to answer any questions which proprietors might wish to put to him.

Mr. K. Baker, of Cheltenham, begged to know what was the amount of the contemplated alterations in the wheels.

The Chairman could not tell, for this reason, that they knew not how many they would require to have altered. They were about to put the wheels to one engine, in order to ascertain how it worked.

Mr. Baker—Could you afford any approximate idea as to the amount.

The Chairman—Probably the improved wheels would first be applied to nine engines.

Mr. C. Sturge (Director)—And the wheels will cost not less than 100*l.* each engine.

The Chairman—These, I feel persuaded, are not the only alterations which the locomotive engines will have to undergo, though I cannot state particulars.

The Rev. Riland Bedford inquired the amount of the sum intended to be placed to the depreciation account.

The Chairman said, he was unprepared to make any estimate of the amount in the present state of the Company's affairs. The London and Birmingham Railway, which was perhaps a good guide in such matters, had determined to set aside 10 per cent.; they had hitherto taken it from the cost of the carrying stock, but he thought it best for them to have the stock valued at the end of the half-year, and then place the depreciation as a per centage on that valuation, from which they might fairly start. What that per centage should be, was a question which could only be answered by experience. Hitherto the experience of no railway afforded the means of saying what per centage should be set apart for depreciation of stock, and railways would be found to differ much in this respect.

Mr. Bolton Peel begged to know whether there was any probability of an improvement in the working of the Lickey incline. There were great complaints respecting it, and many individuals had told him that they were altogether unable to get up that part of the line. He made the inquiry in order that the impression which had gone abroad might, if erroneous, be corrected.

The Chairman said, that Mr. Peel might probably have heard of some isolated cases of delay in getting up the incline; but he believed the Lickey had been fairly worked on the whole. On Monday, however, they proposed trying a different engine on the Lickey, to ascertain how it worked compared with those at present in use. He could assure the honourable proprietors that no attention would be wanting on the part of the Directors to have this important part of the railway worked in the best possible manner.

Mr. G. Whateley had heard a great many persons express their satisfaction at the manner in which the incline was worked.

Mr. Homer added, that he frequently attended at the station to see the trains come in, and he rarely found them more than nine or ten minutes, the time stated, behind.

The Rev. Mr. Bedford—Do I understand that the maintenance of way costs 17,000*l.* a year?

The Chairman replied, that according to the amount stated, it would certainly be at that rate, but he had no idea that that rate was to continue. The actual maintenance of way, distinct from the finishing of new works, would be something like 7,000*l.* for the half year.

Mr. Daniel remarked, that there had been a gradual reduction under this head every week, and there was every reason to believe that as the embankments acquired solidity a considerable reduction would still be made.

Mr. Baker saw no reference to the subject in the Report, but wished to know what were the intentions of the Directors with respect to the Worcester branch.

The Chairman need not remind Mr. Baker that the question to which he referred was a complicated and difficult one. The probability was, that by-and-bye they should get into a better position with the influential parties in Worcester, and he could only say for the Directors of the Company that they were most anxious to have the whole question fairly considered, with a view of getting a branch made best calculated to promote the interests of the Birmingham and Gloucester Company, and, as they believed, equally calculated to forward the interests of the inhabitants of Worcester.

Mr. W. R. Lloyd, of Birmingham, here observed, that one of the most important considerations was the deficiency in the revenue from carriage of goods from what might reasonably be expected, the late returns showing only about 200*l.* per week. He had made particular inquiry, and ascertained that a large proportion of this traffic arose from goods which formerly had not come by this route, but had gone by way of Stourport and in other directions, such as Manchester goods for South Wales and the West of England, and wool from Gloucestershire, and southward, for the Yorkshire and Leicester markets. The actual amount of traffic between Birmingham and Gloucester, on the canal and river Severn, amounted to nearly 1,400 tons weekly; and if the facilities which the railway afforded were properly carried out, there was reason to expect that the whole would come along the line and yield a revenue of 700*l.* In this calculation he did not take into account a large proportion of goods going to and from Worcester, and Bristol and the West of England. With these remarks, he would respectfully urge upon the Directors to give their earnest consideration to the best means of affording additional facilities for receiving and delivering goods at each terminus of the railway. They could not expect that the carriers would assist them, and it was necessary that the greatest publicity should be given of the facilities which the line afforded in order to induce the public to avail themselves of it.

The Chairman was glad that Mr. Lloyd had given him an opportunity of repeating what he had already stated—namely, that the Committee were proceeding with such arrangements as they believed would add considerably to the traffic in goods; and he had explained that this subject was connected with arrangements between the Grand Junction and the Birmingham and Derby Companies and their own. Mr. Lloyd, was, however, in error in stating that the average amount for the conveyance of goods reached 200*l.* per week. He would wish for some explanation from that gentleman in reference to the 1,400 tons which he stated passed between Gloucester and Birmingham by canal.

Mr. Lloyd said it was the total quantity of goods and merchandise carried by canal independently of iron.

Mr. Chance—Does it include coal and corn?

Mr. Lloyd—Not coal.

Mr. Chance—Nor corn?

Mr. Lloyd—Corn, certainly.

The Chairman—I am glad to find that there is such an abundant mine for us to draw from.

A Proprietor—If we can draw from it with profi.

Mr. Geach had one question to ask, and being but a small shareholder, he would have wished that some person more important than himself had put it. In doing so, he had first to offer his thanks to the Directors for the very clear manner in which the accounts had been made out. They were given in such a way that any one could perfectly understand them. It showed that the Directors were anxious to give the proprietors full information, without caring whether it told against themselves, or against the engineer, or any one else. The accounts, however, led him to ask a question. It appeared by the estimate accounting for excess of expenditure, that the sum stated by the engineer to have been paid for expediting the works earlier than the contracts had provided for was 54,724*l.* Here was a large sum expended to get the railway opened somewhat sooner than it otherwise would have been, and although it had now been in operation twelve months, it appeared that the total sum received amounted to only 33,946*l.* 0*s.* 9*d.* He wished therefore to know whether it was on the deliberation of the Directors themselves that the sum had been paid, or whether the engineer took upon himself to do it, or to recommend the Directors to do it?

The Chairman replied that the question related to transactions which had occurred before his connection with the railway, and which he was not therefore competent to answer. There were, however, Directors present who would doubtless be able to give the information required.

Mr. C. Sturge explained that the Directors had been furnished with the estimates of the engineer as well as of the engineer-in-chief, and they would not have incurred the expense for expediting the works had not the expense appeared to them to be less than the interest of the capital already invested.

Mr. Daniel also explained that the Directors acted at the time on the best calculation that could be made between the disadvantages arising from a late opening of the line and expediting the works, and they adopted the alternative of paying an additional sum.

Mr. Geach—It appears that 54,000*l.* has been paid for this purpose on the recommendation of the engineer, and it appears that up to the 30th of June a profit of 14,900*l.* has been made; and allowing the revenue account after the opening of the railway to have been charged say 10,000*l.* for interest on loans instead of charging that amount to capital, and supposing the opening to have been deferred till the 30th of June, there would have been a saving of about 30,000*l.*

The Chairman was about to put the question for the approval of the Directors' Report, when

Mr. Baker said, said he believed the present was the proper time to move an amendment. Before making the remarks which he was about to submit, he wished it to be understood that he had the highest possible confidence in the present acting Directors of the Company, and more especially in their respected Chairman, who, in the short time he had been with them, had done so much for the interest of the undertaking. He was sorry that his friend, Mr. Tartt, whom he represented, was not present; but if they would permit him to read an extract from a letter addressed by that gentleman to their Chairman, it would explain the views he entertained as to the propriety of the amendment which he intended to move. Mr. Baker here read the extract referred to, in which Mr. Tartt proposed that a Board of three proprietors should be appointed as auditors, to be chosen in the same manner as the Directors, and enjoying the same consideration, but not receiving equal emoluments, as their attendance would not be so frequent. The minutes of the Directors, as well as the accounts, were to be open to them, and any alteration in the management or expenditure, or any projected outlay, should be made the subject of a communication or a conference with the Committee of Directors. The latter, however, were to be left free to pursue their own course; but in case of any ultimate difference of opinion, the proposed Board to have the power of bringing the subject before a general or special meeting of proprietors. To show (added Mr. Baker) that Mr. Tartt was not singular in the view he took of the question, he begged to read an extract from the *Railway Times*, of the 6th of June last, in which a correspondent suggested the appointment of Boards of Auditors, with powers similar to those to which he had already adverted. The writer added, that "if shareholders would not take the trouble to look into their affairs; if they continued to give way to the demand for 'confidence' so frequently made, and which it was wonderful how any set of gentlemen could ever deign to make, they must expect to have thousands lent, and thousands lost, and they would deserve it." Another correspondent in the same paper, for July 3, concluded a long argument to the same effect in the following pithy words:—"No man had a right to ask for such confidence; no man who properly valued himself would ask for it." Everything indeed tended tended to show the necessity, on the part of the proprietors to look after their interests; parties who were totally unconnected with them, and who would report fearlessly as to the real state of the case. Mr. Baker concluded by moving, as an amendment, the appointment of a Board of Audit and Control, constituted upon the principle which he had explained.

The Chairman said, with respect to the observations made regarding himself, he could not help saying that he felt in some degree annoyed by them, inasmuch as he had enjoyed the cordial co-operation of every Director since his appointment as Chairman; therefore he could not consent to be singled out and separated from the gentlemen with whom he had so cordially, amicably, and pleasantly acted, and with whom he hoped to continue long to act in the same way. He had great pleasure in the correspondence which he had had with Mr. Tartt, whose letter had been quoted, and the whole of whose letters were those of a gentleman and a man of ability. He regretted

Digitized by Google

his absence very much on the present occasion, not because his opinions had not been well and ably explained by the gentleman who had taken his place, but because they should have known his own sentiments on the important questions which arose out of a discussion. In order, however, that the meeting might understand the bearing of the motion before them, he would ask the mover a question or two:—"The Board you propose to appoint is called a Board of audit or controul!"

Mr. BAKER—That is the objectionable word.

The CHAIRMAN—Of course the gentleman who put on paper so vast an alteration in the very principle of the Act of Parliament must have carefully discussed the matter with others before he arrived at his conclusion. In the progress which his mind must have undergone he must have worked out his principle in all its details. Therefore he regretted that Mr. Tartt was not present to answer for himself. He (the Chairman) would suppose that a Board of Controul was appointed. He would suppose that they found, from the transactions recorded in the minutes of the Committee, that an impending expenditure of a vast amount was about to burst upon the proprietors, as was the case last May,—what, he asked, was to prevent any one of the Board of Controul from buying and selling shares? and as such they would not have the responsibility in doing so which attached to Directors. The only guard which they had against such transactions was the individual honour of the men whom they selected to transact their affairs. It therefore behoved them to be cautious when they selected to fill so important and responsible a trust. The Chairman afterwards referred to the differences of opinion which would be found constantly to arise between the executive Committee which now managed the affairs of the Company, and the proposed Board, leading to interminable disagreements, and constant appeals to general and special meetings. The Chairman concluded by reading the motion proposed by Mr. Baker.

After some conversation, it was resolved to put the resolution for the adoption of the Report in the first instance, Mr Baker's proposition to come afterwards, as a substantive resolution.

Mr. SHAW then moved the adoption of the Auditors' Report, but before the Chairman had an opportunity of putting it to the meeting, another discussion arose in reference to one or two items of excess over the estimated expenditure, as appeared in the statements furnished to the meeting by the Auditors. Satisfactory explanations having been given on the points in dispute, the motion was carried unanimously.

The CHAIRMAN next submitted the resolution for the reception of the Directors' Report, with the statement of accounts annexed.

Mr. GEACH wished to make a remark on the resolution before the meeting, although he did not intend to found a motion upon it. He believed it was stated at a former meeting by the Engineer, now present, that he had not exceeded the estimates for the performance of the works, when, according to the accounts now laid before them, there appeared an excess over estimate of 401,000*l.*; and an excess for things which could not be contemplated of 169,000*l.* independently of this, however, there remained a balance of 200,000*l.* over the estimates, besides 54,000*l.*, which they were all agreed had been expended rather injudiciously. He wished to know how this was to be accounted for.

Captain WILLIAM MOORSOM, the Engineer, in replying to Mr. Geach's observations, said, that one great difficulty which he had in explaining was, that he had not seen the figures in the Auditors' Report till half an hour before he entered the meeting; and although he had refrained from any observations on the principle of audit, in reference to Mr Baker's remarks, in consequence of feeling that his position of engineer was one that rather precluded him from expressing his opinions abstractedly, as a proprietor, still as the audit statement, as it then appeared, was not intelligible to him, he should take the opportunity of stating that he fully concurred in Mr. Baker's principle of audit. As respected the question put by the honourable proprietor, he would observe, that the estimates of 1839, comprised for works a total sum of 760,000*l.*; the auditors' statement showed an excess of 229,000*l.* The most reasonable explanation which he could give of this excess, under the shape and as it there appeared, was, that various items were included in it which were not included in the estimates. For example, the sum of 27,000*l.* was included in the excess which had been paid for stock and materials now either in permanent use on the line or which would be available for the permanent purposes of the Company; that a further sum of 54,000*l.* had been found on examination of the contracts (which numbered somewhere about 1,600) to be necessary, and was apportioned, to the best of his judgment, after examining the different prices, in expediting the works, as compared with the prices of similar works before any greater expedition was desired. It was in vain for any Director to say that estimates to a less amount than 54,000*l.* had been given of what would be the probable amount of incurred expense in consequence of increased expenditure, because his (Captain Moorsom's) letter of the 25th of November, 1839, had distinctly pointed out that he could not foresee the result of the entire changes of contract which must ensue; and hence his recommendation was given against the increased expenditure, owing mainly to this circumstance, and to the belief that the result would not be to expedite the works to the extent contemplated. There was also an item of about 7,000*l.* for ships, which was wholly unforeseen in the estimates of 1839; and out of the sum of 142,000*l.*, which had been paid for the line between Gloucester and Cheltenham, the sum of 44,000*l.* was included in the above excess of 200,000*l.*, but was also not contemplated in the estimate made in 1839. The statement which he gave to the auditors accounted for a total excess in the engineering department altogether of 270,000*l.* over the estimates of 760,000*l.*; but when his statement came into the general account of the Auditors, the figures were almost necessarily changed, in order to comprise various other items expended either in other departments or under other controul than his. For example, the sum of 106,000*l.* which formed part of the above stated excess in the Auditors' roll, had been expended in the engineering department, but without any certificate—and indeed without any knowledge of his, although no doubt properly expended under the direction of the Directors. At the last meeting he had stated that the excess on the various items would not exceed 10 per cent., but from further investigation it appeared that the real excess was about 7 per cent.

Mr. SHAW said, it appeared from all he could collect from Captain Moorsom, that no satisfactory explanation could be given for the large amount of excess. And what was more, he believed there was no possibility of getting at such an explanation as would bring satisfaction to their minds, so long as they were without a dividend. All he hoped was, that in future in the expenditure of money, they would enter into no contracts but what could be completed for the amount agreed upon. It was unfair to call upon the Engineer to give explanations about money that had been expended without his knowledge. If they had anything like the traffic of other railways, they would not ask for these explanations, which he believed could do them no good; and if they employed a dozen of the cleverest of their proprietors for twelve months to examine the accounts, he believed they would be totally unable to give any explanations that would prove satisfactory to their minds, unless their shares got up to par. The proposition before the meeting for the appointment of a Board of Audit and Controul, was in his opinion one calculated to lead to entire confusion.

The CHAIRMAN—The motion before the meeting is for the reception of the Directors' Report.

Mr. CHANCE—I beg at once to propose its adoption.

Mr. Haines seconded the motion, which was carried.

The CHAIRMAN—We understand that this approval of the Report involves the transference of certain sums from revenue to capital. The next question therefore for the meeting, in order, is that relating to the election of the retiring Directors, or any other course in reference to them that you may think proper. The Chairman read the names of the Directors who retired, viz.: Mr. S. Bowly, Mr. William Fox, Mr. D. Ledsam, and himself (Capt C. R. Moorsom.)

It being suggested that the names should be put separately, Mr. Bowly was then proposed and re-elected.

On Mr. Fox's name being put to the meeting, it was explained that he resided at Plymouth, but that his mercantile establishment was at Gloucester.

Mr. GREEN said that they had Directors at Birmingham, Worcester, and Gloucester, and it appeared to him that Cheltenham was a proper place to have a Director also; and as the Act provided that there should be twelve, he begged to propose Mr. Baker in lieu of Mr. Fox.

The motion was put and carried.

DANIEL LEDSAM, Esq., and the Chairman, were afterwards proposed separately, and re-elected unanimously.

The CHAIRMAN called attention to the next business in order—the election of auditors.

Mr. BAKER said, that the mere fact of Mr Green having proposed him as a Director had not altered his opinion as to the propriety of choosing Auditors out of the general body. It must be thought be a greater satisfaction to the Directors themselves, to have parties totally unconnected with the office to undertake the duty.

The CHAIRMAN replied, that he considered the plan proposed as altogether theoretical, and one that could not be carried out practically.

After some further discussion upon the subject, the Chairman put the motion to the meeting.

Mr. WEEDON of Gloucester moved as an amendment, that Messrs. Ledsam and Francis, together with Mr. Baker, be appointed Auditors, on the principle laid down in the Directors' Report.

The motion was seconded by Mr. Shaw.

Mr. MOORE—You omit of course all power of a Board of Control.

Mr. WEEDON—Certainly.

Mr. MOORE—I am glad to hear it; I never heard anything more absurd in my life.

Mr. J. W. WHATELEY—A Board of Control would sound something like controlling the Directors themselves, and without the responsibility which attached to the latter. The system would lead to eternal quarrelling, and constant appeals to successive meetings.

Mr. BAKER, seeing that the feeling of the meeting was decidedly against him, here intimated his willingness to withdraw the resolution; but several proprietors objected to this course, the amendment was put from the Chair, and unanimously adopted. The original resolution was afterwards put and negatived.

Mr. HAINES moved that the best thanks of the meeting be given to Messrs. Ledsam and Francis, for their valuable services as Auditors.

The resolution was seconded, and carried with acclamation.

Mr. CARRINGTON here introduced the question of Sunday travelling, with the view of having two additional trains put on the line on that day, for the accommodation of the public, and moved a resolution to that effect, which was seconded by Mr. Aston.

The proposition was met by an amendment moved by Mr. Chance, and seconded by Mr. Haines, that it was not expedient to discuss the subject of Sunday travelling at the present meeting.

The amendment was carried by a large majority, and Mr. CARRINGTON gave notice that he would introduce the subject at the next general meeting.

Mr. Shaw having been called to the chair,

Mr. HAINES proposed that the best thanks of the meeting be given to the Chairman, for the valuable services which he had rendered to the Company.

Mr. CHANCE, in cordially seconding the resolution, said he felt satisfied under their Chairman's superintendance the proprietors would derive all the advantages of which the railway was susceptible—more they could not expect.

The resolution having been carried with acclamation,

The CHAIRMAN expressed his acknowledgements for this expression of confidence, which he would endeavour to deserve; but they would allow him to say, while he felt grateful for the vote just passed, he could only receive it as coupled with a similar expression towards his four colleagues; for, since he had acted with them, no gentlemen could have devoted themselves more zealously to the interests of the Company than they had done, and it was only by their co-operation that he could have deserved the compliment which he had just received.

The meeting then separated. The resolutions appears in our advertising columns.

[ADVERTISEMENT.]

BLACKWALL RAILWAY.

To the Editor of the Railway Times.

SIR,—Observing in your last publication a report of a meeting of the shareholders of the Blackwall Railway Company wherein it stated the wire rope had not broke. I feel bound in justice to myself as a ropemaker to correct that statement. The facts are as follow. On the 27th of March last I agreed with the Directors to put on two coils of Warm Registered Rope, and if they did not break all the rest of the hempen ropes that are to be supplied, at the same time, I would not make any charge for them. The result has been that most, if not all the others have broken, wire included, on the 17th and 20th of this month (and mine not once, although about one inch smaller in circumference, *consequently much cheaper.*) They have been running about five months. Such are facts that cannot be denied, and I hope you will make known to the public through your next valuable publication.

I remain, dear Sir, your most obedient servant,

JAMES J. FROST.

Ropery, Sun-Tavern-fields, August 25, 1841.

NORTH MIDLAND RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly General Meeting of the proprietors of the North Midland Railway Company was held on Thursday at the Derby station; GEORGE CARR GLYN, Esq. in the Chair.

The attendance was very large.

The proceedings having been opened with the usual formalities, the minutes of the last meeting were read and confirmed.

It was then unanimously resolved, that the common seal of the Company be affixed to the register of proprietors, which was done accordingly in presence of the meeting.

The CHAIRMAN then spoke to the following effect:—Before, gentlemen, I call upon the Secretary to read the Report prepared by the Directors, I am anxious to say a very few words for the purpose of relieving the Directors and the officers of the Company from one of the foulest imputations ever cast, or which it is possible to cast, upon public men—imputations which, if they could for one moment be sustained, would render my colleagues and myself totally unworthy of the confidence which it has hitherto been our pleasure to enjoy. I allude, gentlemen, to certain charges contained in an anonymous letter, and if the writer of that letter is now present, I trust he will come forward boldly as a man, and substantiate, if he can, his accusations. The letter, gentlemen, to which I refer, was addressed to an original holder of a considerable number of shares residing in Liverpool, and was calculated, and I have no doubt intended, to defame and damage not only the executive officers of the Company, but also the Directors. It charged us with nothing less than having entered into a conspiracy to defraud you, the shareholders in this undertaking. I have long moved in commercial life, and know how essential it is that those who are placed in the responsible position which my colleagues and myself have the honour to fill, should stand forth to the world entirely unsuspected; and I trust, gentlemen, that in this instance you will do us the justice to clear us from these unfounded and scandalous allegations. (Applause). If I speak warmly upon this subject, it is because I feel warmly, and because if I did not think that I could satisfy you of the groundlessness of the imputations which it is sought to fix upon us, I would not for one moment continue to occupy my present position in this Company. We are charged with having shown an undue degree of favour to the owner of a particular colliery upon our line—with having attended to his interests to the disregard of yours—with having lent ourselves to a system of deception—in short, with having promoted the pecuniary advantage of that individual at the expense of your pockets, and our own character. In adverting to this charge, it is necessary, gentlemen, that I should briefly explain the mode of conducting the mineral traffic upon this line. I need not tell you that that traffic is still in its infancy, notwithstanding that you will see from the statement of accounts now in your hands, that the receipts from this source during the last half-year have been very considerable. As yet, this species of traffic has scarcely been developed, our revenue arising from a few individuals,—I may say, principally, and almost solely, from one individual; and it is in reference to that individual that we have been attacked. It has been alleged, that we have fixed our rates of carriage so as unduly to favour him, and that we have not even seen that these rates were exacted. With regard to the second part of the charge I might, if it were necessary, appeal to the officers of the Company; but, gentlemen, the Company's books speak for themselves, and they are at all times open for your inspection and scrutiny. (Applause.) I may add, that even had any inaccuracy occurred—which however, I am far from admitting—such inaccuracy would form no just ground for charges of deception and fraud, as against the Directors, for their orders have, as you will readily believe, been most peremptory; and these orders, I assert most unequivocally, have at all times been rigidly and without prejudice or partiality, carried out. (Hear, hear, hear.) With regard to the amount of charge, the rate for the conveyance of minerals has been fixed at 1½d. per ton per mile, including the locomotive power—a rate infinitely higher than is imposed upon the neighbouring lines. But, gentlemen, we do not stop there; we have also a station dues' rate, which, confessedly as an experiment, has been fixed at 3d. per ton. I do not think that the traffic can be worked at so high a rate either of tonnage or station dues, but having been so fixed, is it right, is it fair, is it manly, that without any inquiry having been made as to the real facts of the case, we and those who are acting under us, should have been so calumniously, so wantonly assailed? (Applause.) The rates, gentlemen, are the same to all—the same to Mr. Stephenson—for he is the party pointed at—as to Lord Fitzwilliam, Mr. Hunlock, or any other coal proprietor on our line of road. (Hear, hear, hear.) I trust we may now leave the matter in your hands. I should not have alluded to the subject at all, for such underhand imputations usually carry with them their own refutation, (hear, hear, hear,) but knowing that the charges were made to a gentleman of the highest respectability, connected with a town where so deep an interest is taken in the prosperity and proper management of this and similar undertakings, I thought it right to make these few remarks. I believe that the competition which some of the new lines have called into action—of the results of which I can give you no better proof than the fact, that the price of coke has thereby been reduced from 40s. to 25s.—believing that such circumstances may, in the minds of some, have engendered feelings which might lead to a repetition of the charge, I have thought it best thus publicly and distinctly, and I hope for ever, to set the matter at rest. (Hear, hear, hear.) I trust the meeting will pardon me for touching upon a subject, which, to a certain extent is personal to the Directors themselves, and I have no doubt we shall receive at your hands that acquital from even the suspicion of malpractices, which as men acting honourably and conscientiously we feel that we deserve.

The hon. gentleman sat down amid much applause.

The SECRETARY (Henry Patteson, Esq.) then read the Report of the Directors as follows, printed copies having previously been placed in the hands of the Proprietors:—

REPORT.

IN laying before the Proprietors their present Report, the Directors will briefly allude to the more material circumstances which have occurred since the last Half-yearly General Meeting.

The accounts of income and expenditure for this period, leave a sufficient surplus, including that of the last half-year, to warrant the Directors in recommending a dividend of 2*l.* per share upon the one hundred pound shares, and of 1*l.* upon those of fifty.

In this account is comprised every item of current expense, including interest upon loans and such repairs of the permanent way as have become chargeable during the past year.

The contractors for works having now left the line, the cost of keeping the whole permanent way in repair will henceforth become a regular charge upon the revenue of the Company. And the Directors have satisfaction in stating, that owing to the substantial manner in which the line has been constructed, they have been enabled to contract with responsible parties for these repairs on very favourable terms.

The traffic of this line is steadily improving in all its branches (although hitherto checked chiefly by the distressed state of the manufacturing districts), and is now placed so far beyond doubt, that the Directors feel no hesitation in recommending the Proprietors to divide so nearly the whole amount of the profit already realized. They are the more induced to adopt this course by a comparison of the weekly receipts between the 30th June and the present time, with those of the same period last year, by which it appears that an increase of about 6½ per cent. upon the traffic has taken place; and although this may be considered as the natural effect of the second year's traffic, it is reasonable to presume that the same relative proportion will be maintained during the remainder of the year.

The Directors wish to draw the attention of the proprietors particularly to one important fact attending this comparison, viz:—that this increase in the receipts does not involve any additional outlay or expense to the Company, which proves that although the North Midland Line with its various combinations, cannot with the smallest traffic, be effectually worked without a certain establishment, an increase will not entail the necessity of additional expense, even if that increase, as may be fairly anticipated, should greatly exceed the present amount.

The increase in goods and mineral traffic is gradual and certain, and arrangements are now in progress to develope to the fullest extent these important sources of revenue.

The cost of locomotive power is 14½d. per mile.

All the works on the line, including the tunnels, are in the most efficient state, and when the station at Normanton (now erecting at the joint expense of this and the Manchester and Leeds and York and North Midland Companies,) is completed, little more will remain to be done.

In conformity with the intimation given by the Chairman at the last meeting of proprietors, the Directors have instituted the most rigorous scrutiny into the expenditure and management of every department of the establishment, for which purpose a Committee of three of their most active members was appointed, with instructions to report to the Board. The result of the investigation will lead to some reductions perfectly consistent with the efficient working of the line, and as the duties of the Engineering staff are now nearly completed, the saving on the whole will be considerable. The Directors being fully sensible of the importance of strict economy and the due application of the resources of the Company have adopted the Report of their Committee, and are preparing to carry it out as speedily and efficaciously as possible.

In conformity likewise with the recommendation of the Secretary in his Report to the Sub-committee, the Board have determined forthwith to close the offices in London, and to concentrate the whole establishment at Derby.

The opening of the Great North of England line has undoubtedly proved very advantageous to the North Midland, but as the railway communication northward terminates at Darlington, the Directors have been extremely anxious that the accommodation by coaches should be improved, and they are happy to state that satisfactory arrangements are now made by which the public are conveyed the whole distance from London to Edinbro' in 27 hours. This, however, is not sufficient, the completion of the line from Darlington to Newcastle is of the utmost importance, and measures have been taken to promote this object in conjunction with the other railway companies interested in the extension, which the Directors trust will be seconded by the earnest and zealous co-operation of the proprietors of the North Midland Railway.

The Report was most favourably received.

The CHAIRMAN, in moving that the Report be adopted, expressed his readiness to give any further information that might be required.

A PROPRIETOR wished to know if the charge for locomotive power comprised coke and wages.

The CHAIRMAN said it comprehended every thing connected with that head, including repairs of engines.

A PROPRIETOR enquired the cost of maintaining the permanent way.

The CHAIRMAN said the line had been contracted for in two portions, the one at 201*l.* 15s., the other at 224*l.* per mile. This would amount in the whole to about 16,600*l.* per annum.

Mr. ALSTON said there was only one word in the Report to which he objected. It was stated that the Secretary would "forthwith" fix his permanent residence at Derby. He could have wished that some date had been specified, and he should by and by bring forward a motion that the removal be not deferred beyond the 1st of October next. (Hear, hear.) It had been promised at the February meeting that the Secretary should, during the ensuing six months, be much at Derby. He wished to know how many days he had passed there during the interval.

The SECRETARY said he really could not tell, as he had kept no record of them.

Mr. ALSTON said, the principle had been recognised that a railway could not be duly managed at a distance of 136 miles, and with all deference, he must say, that, in his opinion, the proprietors had tolerated the practice too long. (Hear, hear, hear.) With respect to the anonymous letter to which the worthy Chairman had alluded, it had his most entire contempt, and, he doubted not, the contempt of the meeting, and he thought the best way to treat such productions was to despise them. (Applause.) As, however, honour and character were the dearest possessions of a gentleman, he could sympathise with the Chairman's indignant repudiation of so gross a calumny. (Applause.) But while he was ready to defend the integrity of the Directors, and to commend their praiseworthy zeal, it was but right that the proprietors should enquire whether any practical improvement could be introduced into the operations of the Company. When he looked at

Digitized by Google

the great cost which had been incurred in the construction of and the line, at the small amount of their present traffic—small, comparatively with what they had anticipated, and what they might ultimately realise—when he looked too at the protracted non-residence of some of the officers of the Company, whose presence on the spot was so essential to the proper conduct of the business of the line, he thought that the appointment of a Committee emanating from the Directors—a Committee for example of six Directors and six proprietors—to examine and consider if any and what saving could be effected in the current expenditure of the Company, would be attended with the best effects. The past expenditure they could not recall, but they might perhaps be able to devise some means of keeping down the future. Such a Committee might revise the rates and charges on the line, so as to suit them to the wants of the district, and see that the whole machinery of management was without loss of time removed to Derby. (Hear, hear, hear.) Without daily personal attention on the spot to details, talent and genius were of little avail. He had stated his views to the Chairman, but as that gentleman deemed the appointment of a committee under present circumstances undesirable, he would not press the matter. (Hear, hear.) The Directors might have committed some errors of judgement (and who did not?), but he had the fullest confidence in their zeal, ability, and integrity, and although he would fearlessly point out what he thought defective in detai's, they should have his most decided support. (Applause.) One of the principles which should guide Directors in their character of legislating for the public was the consideration that the new mode of conveyance had superseded all others, and it was their duty to see that it was not rendered too expensive to a large class of the population. Economy in conducting the business of a railway was also of the highest importance, for even where error had been originally committed, a great deal might be done by vigilance to repair it. He thought much good would result if the accounts were periodically audited, not by Directors, but by two Proprietors. The principle of auditors was a sound one. If, moreover, as in the Grand Junction Company, a list of the shareholders were sent round with the Directors' Reports it would be very satisfactory, taking care that their designations were added, which was not the case in the Company referred to. Such an arrangement would enable the Proprietors to communicate with each other. He was of opinion, too, that it would be well if the accounts went more into detail as to the per centage of the various items of charges, as was done in the London and Birmingham and Grand Junction Companies.

The CHAIRMAN said, it was too early for them to compare the per centage of one-half year with that of another, as the line had not been opened much more than a year.

Mr. F. MARTINEAU said, there was nothing in the Report or Balance-sheet respecting a fund to meet the depreciation of stock, and the Company had not as yet been called upon to bear the full cost of maintenance of way. If his calculations were correct, the sum now proposed to be applied to the purpose of a dividend would be cut down by about 10,000*l.* if the full and necessary allowance under the two heads to which he had alluded, were made. According to the information which they had just received, the cost of maintaining the road for six months would be 8,000*l.*, whereas the sum actually expended for that purpose during the last half-year was only 2,000*l.* A further payment of 6,000*l.* would therefore accrue during every future half-year. Then as to depreciation of stock—he was not aware upon what principle this item was determined, but if it were taken at 5 per cent. upon the original cost, it would amount for the half-year to 4,735*l.*, which added to the 6,000*l.* already noticed, reduced their profits by upwards of 10,000*l.* (Hear, hear.) If he were correct in his conclusions, he begged to inquire of the Directors if they had fully considered the subject—if they had considered that it was easier to declare a dividend than to make a call—if they had considered the present state of the money market, and that they were declaring a dividend not out of the profits of the past half-year, but by anticipating the produce of the future, and apparently on no better grounds than a supposition that the traffic during the next six months would increase. The apologetic tone of the Report, in reference to this point, seemed to indicate that the Directors themselves were not quite satisfied with the course recommended. He was sure that it was a course which, as prudent commercial men, they would not follow in their own business, namely, to declare a dividend to their partners on the mere expectation that such business would increase. He quite agreed with the last speaker, that the Directors ought to be supported, but he thought the scheme of declaring a dividend to the extent mentioned in the Report was not wise, and he trusted that it was not too late even now for the Directors to reconsider the subject.

The CHAIRMAN would not trespass on the meeting further than briefly to notice the principal suggestions which had been thrown out by the last two speakers. With respect to the Secretary, it would be satisfactory to the proprietors to know that since the last meeting that gentleman had spent more than half his time at Derby. (Hear, hear.) As regarded his permanent residence, there could be little difficulty in fixing it by the period specified by his friend Mr. Alston. He would confess he felt glad that the appointment of a Committee had not been pressed; for although he was not one of those who thought Directors should be too fastidious in such matters, and although he fully admitted that circumstances might arise which might render the interference of the shareholders in the manner suggested, not only expedient, but essential, yet he put it to the meeting, whether immediately after the whole subject had been investigated by a Committee of the Directors and the whole establishment revised, and while they had scarcely yet had time to carry the recommendations of such Committee into effect, it was desirable that a further investigation should be set on foot. (Hear, hear.) He said nothing as to the construction which the public might put upon such an appointment, as implying want of confidence in the Directors, for *that* point concerned the proprietors alone. The Directors had made great research, and incurred considerable odium through the late investigation, and he trusted the meeting would not impose a repetition of it. (Hear, hear.) As regarded Auditors, the meeting was aware that there was no reference to them in the Act, but if the proprietors desired it, the Directors could have no objection to the appointment. He fully valued the principle of a depreciation fund, and was of opinion that no Company could proceed safely without making some such provision; and from his own experience in another Company he thought 5 per cent. a pretty fair apportionment—certainly not too large. But having made that admission—and he was the more anxious to make it because a time must speedily arrive in this Company, when any calculations as to dividend must be modified by such a charge—having granted this, he must be permitted to doubt how far it was desirable to deviate from the invariable practice of other companies, in not commencing a depreciation fund during the first year of working. The half-year had been carefully and minutely charged with every expenditure incurred for repairs, and their stock was at present almost as good as new. He thought therefore any deduction on this score from the profits was premature. (Hear, hear.) He would assure the meeting that the subject had received the most anxious consideration of the Directors, and the statement made in the Report was purposely guarded. With respect to the anticipated increase of traffic, the Directors did not build their hopes on suppositions but on figures that were before them; and the experience of the last few months fully warranted them in looking forward to a very large increase. (Hear.) If they could not in some measure fairly speculate on an increase sufficient and more than sufficient to meet the full charge of maintaining the road, they would be the very reverse of sanguine in regard to the undertaking—they would in fact be saying that they were hereafter to work the line with next to no profit at all. There had been a gradual and steady increase of traffic, and he doubted not that this very gratifying progress would continue. (Hear.) Mr. Alston had suggested the revision of the rates by such a Committee as had been recommended, so as to adapt them to the requirements of the district. It was not for him (the Chairman) to say whether they already had on the Direction sufficient local knowledge to adjust these charges satisfactorily and with the greatest benefit to the Company, but as a notice of motion on this subject had been given at the last meeting, they would probably have it discussed that day; and if any facts justifying an alteration were adduced, he was sure that the Directors were not so wedded to any particular scale that they would hesitate to change it for a better. Did Mr. Martineau intend to move any amendment in regard to the amount of dividend?

Mr. MARTINEAU said he did not. He had full confidence in the Directors and would support them. He had only been anxious that the meeting should know distinctly what they were doing, namely dividing an amount which they had not fairly earned. (Cries of "No, no.)

Mr. NEWTON (a Director) said, the additional sum for maintenance of way would be more than met by the savings arising from carrying the recommendations of the Committee of Directors into effect. He was a member of that Committee, and after a most searching inquiry, the conclusion to which they came was, that a saving of about 14,000*l.* per annum might be effected. It was right to state that the whole of that amount would not be a constant and permanent annual saving, because part of it was an expense on capital which would soon have died of itself, but at all events, the saving next year would be 14,000*l.* (Hear, hear.) This would meet the additional expenditure for maintenance of way, not merely for the half year, but the whole year, so that the Company could not be considered as likely to be in a worse position then than now.

The CHAIRMAN was extremely anxious that no misconception should exist upon this point, and that there might be no room for future disappointment. A moiety of the proposed saving of 14,000*l.* accrued on capital, and Mr. Martineau's remarks applied wholly to revenue, so that the expected reduction in expenditure could not fairly be set against the certain increase. Nor had the recommendations of the Committee yet been carried out in all respects; but that a very considerable and permanent saving was effected was beyond a doubt. He thought it might amount to about 5,000*l.* or 6,000*l.* per annum.

Mr. BOWER enquired, how much of the balance in hand would be required to pay the dividend recommended in the Report.

The SECRETARY said, about 45,000*l.* out of 47,845*l.* in hand.

Mr. BOWER wished to know how the balance of 2,000*l.* was invested.

The CHAIRMAN said, the whole had been most profitably employed. The revenue received had been applied to capital, so as to obviate the necessity of more rapid calls on the instalments still due on the shares. The Directors would have been guilty of a dereliction of duty, if they had put out the receipts at a low rate of interest, and then pressed for further calls. (Hear, hear, hear.)

Mr. MARTINEAU enquired, if the item in the accounts of "contingent receipts due from other Companies, and interest accruing according to existing agreements," was a yearly receipt, and to be considered as a permanent source of income.

The CHAIRMAN said, it would appear in the balance sheet every half-year, but would vary in amount accordingly to the quantity of work done by this Company for the Birmingham and Derby and other Companies.

A PROPRIETOR thought the Report stated that the recommendations of the Committee had already been carried into effect, whereas a recent explanation of the Chairman seemed to suggest a different conclusion.

The CHAIRMAN said, the Report stated that the

Digitized by Google

Directors were "*preparing* to carry out the recommendations of the Committee as speedily and efficaciously as possible." A saving of about 7,000*l.* on the engineering or capital account would soon have taken place of itself. There would be a saving of about 6,000*l.* on the permanent establishment, if the Committee's Report were fully carried out. They had already done so to some extent, but in cases where reduction of salaries or dismissal of officers was concerned, some time must necessarily elapse. He wished the meeting not to be too sanguine as to the amount of saving, and therefore he should say it would be about 4,000*l.*

A PROPRIETOR said, he had seen a letter in the *Railway Times* stating positively that the saving would be 14,000*l.*

The CHAIRMAN said, the facts were precisely as he had stated them. He did not know who was the writer of the letter referred to, but unquestionably he was in error as to a permanent saving to such an amount.

A PROPRIETOR inquired if the capital of the Company would be fully sufficient to meet all the liabilities.

The CHAIRMAN—Decidedly; it would be ample. The Directors had seen no reason to change the calculations laid before the last meeting.

The PROPRIETOR presumed, therefore, that the whole of the 22,000 new shares had been taken up?

The CHAIRMAN said, they had—with a very trifling exception.

Mr. JACKSON inquired if the calls had been paid on the shares of Mr. Parker, lately a Director.

The CHAIRMAN said, there were shares standing in Mr. Parker's name on which arrears had accrued. The value of the shares was, however, quite sufficient to guarantee the Company against loss.

Mr. JACKSON had understood that the shares were in the hands of the Sheffield and Rotherham Banking Company.

The CHAIRMAN, after deprecating discussions of this kind, said, the legal title to the shares was in the Company, and whoever might hold them, the calls must be paid. (Hear, hear, hear.)

Mr. BRANCKER (of Liverpool) inquired if there would be any objection to publish a list of the names of all the Company's officers from the highest to the lowest, at every station on the line, commencing with Derby, and specifying the amount of salary received by each. There seemed to be duplicate officers, as for example, one Secretary at Derby and another at Leeds, and the same with regard to storekeepers. (Hear, hear.) He thought the publication of such a list would afford proprietors the best means of judging whether economy was observed.

The CHAIRMAN said, there were duplicate offices, and one part of the Committee's recommendations had reference to that point. Would it not excite feelings of a disagreeable character—would it not, in fact, be unkind to print such a list? Even now any proprietor might receive the information in writing, but if once printed, it would, most likely, find its way into the public newspapers. (Hear, hear, hear.)

A PROPRIETOR said, it was difficult to obtain such information when it was asked for at the office.

The CHAIRMAN said, that if, on any occasion, a proprietor had the smallest difficulty in obtaining information, and would address a note to him, or to his friend Mr. Huddard, the Deputy Chairman, such information should speedily be supplied.

Mr. STOKES inquired what was the cost of coke per ton.

The CHAIRMAN said, the Company dealt with several parties. That supplied by Stanfield and Briggs cost 15*s.* 6*d.*, that by Earl Fitzwilliam 15*s.*, reduced within the last few days to 12*s.*, and that by George Stephenson and Co., 14*s.*

In answer to questions, it was stated, that the places whence these supplies were derived are on or near the line, and that the article is delivered on the line at the point nearest the particular manufactory.

A PROPRIETOR said he saw nothing in the Report relative to the Leeds and Selby line.

The CHAIRMAN said it would be recollected that authority had been given to the Directors to lease the Leeds and Selby line in conjunction with the York and North Midland Company, if it should appear desirable. By a subsequent arrangement, it had been agreed that the York and North Midland Company should lease the line alone, a sub-arrangement having been entered into with that Company relative to the traffic. The terms were highly beneficial, and the Directors had thought it better to pursue this course, as more simple, and incurring less risk.

Mr. BRANCKER inquired where the coals carried on the line were weighed.

Mr. R. STEPHENSON (Engineer) said they were invariably weighed in the Company's yard and by the Company's servants.

Mr. BARTON inquired up to what period the interest on debentures had been calculated.

The CHAIRMAN said the proportionate amount of interest was calculated for every half-year.

After some further conversation the Report was adopted unanimously.

Mr. VICKERS then brought forward the motion alluded to by the Chairman. He commenced by stating that the expense of working the line having amounted to three millions, and the earnings of the past half-year, excluding the balance previously in hand, and allowing for the increased expenditure which would hereafter be chargeable, being not much more than 1,600*l.* it was of great importance that some means should be devised for increasing the traffic, and he thought no better plan could be proposed than a reduction of fares. His own opinion as to the policy of low fares was very decided, and the little experience which they had yet had on the matter he thought bore out his views. He held it as an incontrovertible maxim, that in fixing the rate of charge to the public, the cost of constructing the line should be totally left out of consideration, the only object being to settle the fares at such a rate as would render the railway most productive. It was argued in Lancashire that because a line had cost 50,000*l.* per mile, its charges ought therefore to be higher than those of a line which had originally cost less, but this was altogether a fallacy. The case of the Liverpool and Manchester line might at first sight seem to militate against the policy of low fares, although he begged to state that the charges upon that line were still as low as any in England. At first the fare upon the railway in question had been 5*s.* from Liverpool to Manchester, and that arrangement worked well for about two years, when the proprietors becoming impatient for an increase of dividend added a shilling to the fare. There followed a slight increase in the amount of the Company's receipts, but it was impossible to say what the increase would have been as the traffic of the district developed itself, had the original fares been retained. The experience of America, and the continent also, was, he thought, very conclusive, as to low fares. The steam-boats which formerly plied between New York and Albany at a fare of 5 dollars could not exist, but now the fare had been reduced to 1½ or 2 dollars, they paid a handsome dividend. The case of railways in this country was equally in point. On the Edinburgh and Dalkeith line, the number of persons daily carried at 2*s.* or 1*s.* 6*d.*, was only 40; when the fare was reduced to 6*d.*, the number of passengers rose to 800. The largest railway receipts per mile were those of the Dublin and Kingstown Company,* and yet the fares of that Company were the very lowest. These were short lines, but there was a long line—the Newcastle and Carlisle—where the same results had followed a reduction of fare. At first, it was thought that that line would return no dividend, but the fares having been considerably reduced, it was now, he believed, paying well. The experience of the Belgian railways was very remarkable; the receipts from the first class fares formed but 5 per cent. of the gross income; of the second class 9 per cent.; of the third 32; and of the fourth 54. On the Manchester and Bolton line the fares for the first class had at one time been for the first 2*s.* 6*d.* for the second 2*s.* and the third 1*s.* These charges were reduced respectively to 2*s.*, 1*s.* 6*d.*, and 1*s.*; and in six weeks the number of passengers increased from 26,000 to 35,000, and the receipts from 1901*l.* to 21,000*l.*

Captain PORTER enquired at what period of the year the change took place.

Mr. VICKERS said it was in July, so that any advantage from that cause would have been in favour of the higher fares. When the fares were raised to their former level, the passengers and receipts fell back to their old proportions. On the Leeds and Selby—a line in the vicinity of their own, almost in the same county—repeated alterations of fare had taken place. In 1837, when the fares were 5*s.* and 3*s.* the number of passengers carried was 70,625; in 1838, when the fares were lowered to 4*s.* and 3*s.* the number was 90,607. This, he thought, was strong presumptive evidence that a reduction of fares on the North Midland line would be beneficial. The result of their own working further confirmed this opinion. They had reduced the fares from Chesterfield to Sheffield, for the line at that point presented a very circuitous route. The fares on that district were now about ¼*d.* a mile—the lowest in England—and the consequence had been that the aggregate receipts had risen in six months from 58*l.* to 285*l.* They ought to look practically at the character and requirements of the district. It might possibly be for the interest of the Lancashire proprietors, that the fares upon the North Midland Railway should not be reduced, for it might be to their advantage to keep up high fares upon the Grand Junction line—and yet the Chairman of that Company had at the late general meeting given his voice in favour of low fares from the intermediate stations. The number of passengers on the North Midland Railway, in May last, was, first class, 603; second class, 1,264; third class, 1,230. The third class fares were then raised, and the numbers in June stood thus; —first class, 745; second class, 1728; third class, 3,659. They had thus, it appeared, succeeded in driving some of these third class passengers into the second class, but he doubted if the ultimate result would be advantageous. The fares upon the railways in connection with the North Midland, were too high; and it would be greatly to the benefit of all parties, he thought, if they were reduced. However, to begin with themselves, he would move that after the 1st of October next, the fares on the North Midland Railway be reduced to 2½*d.* per mile for the first class, and 1½*d.* for the second. The charges were at present 3*d.* and 2*d.* respectively. He would not interfere with the third class fares, as those had recently been raised, avowedly by way of experiment, otherwise he should have liked to propose that the fares be 2*d.* 1½*d.* and 1*d.* for the several classes.

The motion having been seconded,

Mr. BARTON inquired if it were not the case, that the raising of the third class fares had increased the receipts from that class from 50*l.* to 150*l.* per week.

The CHAIRMAN replied in the affirmative. He hoped that the proprietors would give this subject their most serious attention, before they decided upon it, as nothing could be more difficult or was more to be deprecated than a return to old fares, after a reduction had once taken place. He quite agreed with the honourable proprietor that in most cases it was wholly untenable to regulate the amount of fare by the original cost of construction, although in peculiar localities such an element might fairly be taken into account. The principal circumstance, however, which regulated the amount of charge, was the extent of competition, and this was precisely the reason why the Chesterfield fares had been reduced, the route by the railway being so circuitous as compared with the road, that low fares only could attract passengers to the line. They had raised the third class fares, and although they still saw in that class many parties who ought to go by the second—(a laugh)—the result had been, as referred to by Mr. Barton, highly satisfactory. (Hear, hear.)

* This is a mistake.—ED. R. T.

Digitized by Google

They had carried fewer passengers, but they had received more money. It was somewhat remarkable that the experiment had succeeded best from Mr. Vickers's own town, Sheffield. There had been a falling off at particular stations, but *that* was readily traceable to local and temporary arrangements. He would admit that the character of the population and the nature of the traffic must be taken into account in fixing the rate of charge upon particular lines. It would be preposterous to argue that because the London and Birmingham Company for example, succeeded with a fare of 3¼d. per mile that scale would be the most advantageous for the North Midland Company, but in looking at the charges of the various Companies he found that the North Midland fares were by no means the highest. They were lower than the London and Birmingham, lower than the Great Western, and lower than the South-Western. They were the same as the Grand Junction, within a fraction of the same as the Birmingham and Derby, lower than those of the Birmingham and Gloucester—a district very similar to their own—the same as the Manchester and Leeds—a Company who, it would be allowed, did not take up questions loosely—and considerably lower than the Great North of England. He thought, therefore, that for the present, and while the third class experiment was proceeding, there was no necessity for any general alteration. (Hear, hear, hear.)

Mr. VICKERS said his only object was to obtain the largest amount of revenue. (Hear, hear, hear.) He should be glad if the experiment now going on should lead to that result.

Mr. R. STEPHENSON said his sentiments had at one time been in favour of very low fares, but he had seen occasion to modify them very considerably. (Hear, hear.) He found that the most profitable scale of charge depended so much upon the local peculiarities of each individual line, that it was impossible to lay down with safety rules that should be generally applicable. The North Midland line had several peculiarities, one of which was that though it passed through a large population, that population was widely scattered, and if by means of low fares such population could be attracted to the line it would be highly advantageous. The through traffic, however, was regulated on a different principle, and here he might observe, in passing, that the Newcastle and Carlisle—the only long line, the example of which Mr. Vickers had adduced in support of his views—had scarcely any through traffic. If they could retain the through fares and reduce the intermediate, he had no doubt the experiment would answer, but they had not power to do so. With respect to Belgium, the income of the railways there depended very much on local traffic. He had within a month returned from that country, where he had had an opportunity of inspecting all the railway accounts, and he must say that all that he had seen only tended to confirm his previous impressions. (Hear, hear.) When a change of ministry took place in Belgium about eighteen months ago, the fares on the railways were reduced contrary to the opinion of those practically conversant with the details, and what was the result? Why, that they were now about to raise them again, for they found that in no one month had the low fares realised so much as those which, although still low, were high comparatively. (Hear, hear, hear.) This proved, he thought, that it was unwise to lower the charges beyond a certain point. He thought the North Midland third class fares were at first too low. They had since been raised, and although the number of passengers had certainly been diminished, it should be remembered that the Government tax was saved—a clear proof that the present mode of levying that tax was highly injudicious, and detrimental to the public revenue. (Hear, hear, hear.)

Mr. BRADLEY thought the intermediate fares ought to be reduced, even if the through charges were preserved as before. Coaches still contrived to exist from Leeds to Barnesley, Sheffield, and other places. The example of Belgium was not one in point, because in that country they had no other means of conveyance.

The CHAIRMAN begged to set the honourable proprietor right; they had in abundance the cheapest of all conveyances—water conveyance.

Mr. BRADLEY said, it might be so, but still there did not exist in that country the same spirit of enterprise which distinguished the coach proprietors of England, and which led to so much beneficial competition. It was true, as had been remarked, that many gentlemen now present in the room had that day used the third class, when they could well have afforded to pay for a superior class. (Laughter.) He was not one of them, but perhaps it was the fineness of the morning that induced them to do so. (Renewed laughter.) He was of opinion, that on occasions of this kind every shareholder ought to pass along the line free. (Cries of "No, no.") This would lead to a large attendance at the periodical meetings. He was glad to see so many gentlemen present that day, but he thought it absurd, that they should have to take from one pocket in the shape of fare, and put it into the other in the shape of dividend. He had a motion to make on that subject.

Mr. HUDSON (Chairman of the York and North Midland Board), hoped that after the very convincing remarks of the Chairman and Mr. Stephenson, Mr. Vickers would consent to withdraw his motion. (Hear, hear.) The object of that gentleman was avowedly to increase the revenue of the Company, and as the plan pursued by the Directors had so increased it, they ought to await the further effects of the experiment. (Hear, hear, hear.) He had long been of opinion, that the original third class fares on the North Midland line were too low, and he had made his views known to the Directors. At 1d. per mile they did not pay; at 1½d. they were now receiving a larger amount of profit. As to the Leeds and Selby line, it was not the fares only but other circumstances of a local character that had caused the fluctuations referred to. He thought the matter might safely be left in the hands of the Directors who were anxious—as all Directors of course were (a laugh)—to increase the revenue of their Company, more especially when its condition was not very flourishing. In March last, the third class fares on the York and North Midland line had been raised, and the result had been so satisfactory, that some of the Directors who at first had deemed the step inexpedient and hazardous, were now fully convinced of its propriety. (Hear, hear.) They could not alter their scale of charges to meet the views of every little town. They must look at the question in a general light, and as they were bound to serve all parties alike, he thought it highly imprudent that any change should be made for the present. (Hear, hear.) He thought the Directors had acted most judiciously in raising the third class fares, and that they were fully entitled to the thanks of the proprietors for their conduct in that particular. (Hear, hear).

Mr. BOWER said, the Company of which the last speaker was Chairman had driven all the coaches from the road, and having done so, were now treating the public in such a manner, that the working population breathed forth curses against them. [The honourable proprietor here entered into certain personalities for which he was called to order by the Chairman and the meeting. His manner and provincial pronunciation, while they rendered it difficult to understand him, seemed to afford amusement to the meeting at large.]

Mr. HUDSON, with some warmth, and contrary to the expressed wish of several proprietors who thought such vindication needless, defended the Directors of the York and North Midland line. The first class fares were 2¾d., the second 2d., and the third 1½d., so that there could be little ground for any imputation of ill-usage or exaction from the public in reference to charges. (Hear, hear, hear.)

Captain PORTER hoped the question would be left with the Directors, in whom the proprietors had the greatest confidence. Unless they were acting in this matter in conjunction with the other railways with which they were connected, a reduction of fares would do little good. These statistical details could not be allowed to weigh against the plain fact that every railway was at this moment increasing its fares. As to the increase which had taken place on the Liverpool and Manchester, he thought it was attributable to the extension of the line into the town of Liverpool. The opinions expressed at this meeting would as usual have due influence with the Directors, and *there* perhaps it would be as well to leave it. (Hear, hear.)

Mr. VICKERS intimated, that if the show of hands were against his motion, he would not for the present press it further.

The CHAIRMAN did not anticipate that even the show of hands would be in favour of the honourable proprietor's proposition; but even if it were so, he (the Chairman), as holding a large number of proxies, should feel himself bound to demand a ballot.

Mr. VICKERS would for the present withdraw his motion, (applause), reserving to himself the right of bringing it forward on a future occasion, should circumstances seem to require it.

Mr. BRADLEY then introduced his motion relative to the free passage of proprietors along the line, for the purpose of being present at the half-nearly meetings of the Company. [This gave rise to a long discussion, but want of space compels us to content ourselves with a very brief summary.]

The CHAIRMAN said the Directors had received a memorial on the subject, their answer to which was that the proprietors must decide for themselves. There was no precedent for the course recommended, and moreover it was virtually enabling those who lived on or near the line to put something into their pockets at the expense of their more distant co-proprietors. (Hear, hear, hear.) They had no right to favour a peculiar section of proprietors. It was certainly most desirable that these periodical meetings should be as fully attended as possible, but he hoped and believed that the proprietors felt, apart from the amount of fare, a sufficient interest in the undertaking to lead them to attend, and it was a remarkable fact that the North Midland meetings had always been best attended by parties residing at a distance. (Hear, hear, hear.)

Capt. PORTER thought there would be an actual out-going, were these free passage tickets granted, since the government duty had to be paid.

Mr. VICKERS said no duty would be payable under such circumstances.

The CHAIRMAN said if tickets were issued, the duty must be paid, and if there was any Board who acted differently, he would advise them to keep themselves out of the way of the Commissioners of Stamps.

Mr. VICKERS inquired if duty were payable on the free tickets made use of by the Directors.

The CHAIRMAN said, it was not. Pass tickets were used and not the ordinary tickets.

It was farther argued by several gentlemen, that the plan proposed would, if adopted, lead to interminable confusion, as it would be difficult, if not impossible, to identify at the several stations the *bona fide* shareholders—that with equal reason might a London proprietor, coming to a meeting at Derby, ask the Company to pay his guinea fare over the London and Birmingham line, as a Leeds proprietor seek to be excused from the payment of the eighteen shilling fare on the North Midland—and that it was unjust to distant shareholders who did not wish to come to the meetings at all that the receipts of the Company should be deprived of this source of income. Several proprietors wished Mr. Bradley to withdraw his proposition, but that gentleman persisted, remarking that if he stood alone he would have it put to the vote, not as a matter of personal or individual saving but as one of principle, and as likely to effect the end which he had in view—of rendering the half-yearly meetings fully attended—as fully as the meeting that day—for he was satisfied that the more this was the case the better would the affairs of the Company be attended to. The motion was then put when there appeared 17 for it, and a very large number (at least 100) against it. It was therefore declared to be lost.

Mr. ALSTON said the promise made by the Chairman, and tacitly acquiesced in by the Secretary, that

Digitized by Google

the latter gentleman should remove permanently to Derby by the 1st of October, relieved him from the necessity of bringing forward any motion on the subject. He would therefore pass on to another matter respecting which he had a proposition to submit, but before doing so, he wished most clearly to express his conviction that the supposition apparently entertained by one of the previous speakers that the Lancashire shareholders might have views in reference to the fares on this line inconsistent with the welfare of the North Midland Company was totally unfounded. A more honourable and high-minded body of men than the Liverpool proprietors did not exist, and railway interests were deeply indebted to them for their enlightened and enterprising support. (Hear, hear, hear.) The honourable proprietor then went into the subject of appointing auditors, observing that he would not have brought forward the question if it could fairly be construed into the slightest suspicion of the integrity of the Directors. It was, however, a business-like mode of proceeding, and he had no doubt would have a favourable influence on the public. He then adverted to the publication of a list of the proprietor's names, and concluded by proposing a joint motion to the effect that two auditors be periodically appointed, and that a printed list of the names and addresses of the shareholders be annexed to the half yearly Reports, as forwarded to the several proprietors.

Mr. BRANCKER was about to second the motion when,

The CHAIRMAN said he himself should have much pleasure in doing so. The appointment of auditors was a novel question, but as none of his colleagues appeared to object to it, and as from a document just shown to him it appeared to be done on the Grand Junction line, he, personally, could have no reason to oppose it. As to printing the list of proprietors, he thought it would be a very great convenience. (Hear, hear.) Even now any proprietor had a right to demand such a list, on offering to pay for the expense of writing it out. The proposed addition of the designation would be an improvement on such lists as usually sent round in London Companies.

A PROPRIETOR inquired if the number of shares held by each proprietor was proposed to be specified.

Mr. ALSTON, and the meeting generally, at once protested against any such course.

Mr. BARLOW thought as the number of Directors had been reduced, and as many of the proprietors might not know who really were at present Directors, it would be desirable that their names should be prefixed to the Report, as was done in the Midland Counties Company.

The CHAIRMAN said, there could be no difficulty in that respect. While on this matter he begged to state, that although the number of Directors had been reduced, the amount shown in the present balance-sheet as having been paid to them, was the same as before. This arose from the circumstance that this payment was always half a-year in arrear, so that the sum now shown was for the last six months of last year. One of the recommendations of the Committee had reference to the reduction of the number of Directors, and that part of it had been carried into effect. (Hear, hear.)

A lengthened conversation followed as to the parties who should nominate the auditors. Mr. Alston and others thought it should be entrusted to the Directors to choose any two of the proprietors. It was contended, on the other hand, that the proprietors in public meeting assembled should have the privilege of appointing them, and the names of Mr. Alston and Mr. Brancker were proposed for the ensuing six months. Mr. Alston expressed his readiness to serve, but perhaps he might not be present at the next meeting. It was further argued that, in the event of one or both of the auditors dying or becoming insolvent in the interval between two meetings, the auditorship might be rendered virtually null, unless the Directors had the power of filling up the vacancies. Ultimately it was agreed that the right of nomination should be vested in the Directors, and the motion having been amended to that effect, was carried unanimously. It was understood that the Directors would communicate on the subject with the gentlemen above named.

Mr. BARTON enquired if there was any thing further to pay for land.

The CHAIRMAN said all the purchases had been made, and with one or two exceptions hardly worth mentioning, had been paid for. There might be some few cases of compensation, but not to any extent.

Captain PORTER referred to a suggestion which he had thrown out at the last London meeting, to the effect that Mr. Glyn, the Chairman of this Company, Mr. Houldsworth of the Manchester and Leeds, and Mr. Hudson of the York and North Midland should meet and arrange regulations for the conduct of the traffic on the three lines. This had been done, and he had been told by Captain Lawes, than whom no man could, from his practical knowledge and daily engagements on one of the lines be better able to judge, that nothing more satisfactory than these regulations could have been devised. The gallant proprietor then proposed in very complimentary terms, that the best thanks of the proprietors be given to the gentlemen above named for their arduous and successful exertions in this matter.

The motion having been seconded by Captain RAMSAY, R.N., was carried by acclamation.

The CHAIRMAN, in returning thanks, said, the Directors were always anxious to preserve a good understanding with the Companies with whom they were so closely connected, and he was happy to say that almost every point had now been arranged to the satisfaction of all parties. (Hear, hear.) There was one peculiar point of union among them, and which was alluded to in the last paragraph of the Report, namely, the great advantage which would result from the completion of a line of railway from Darlington to Newcastle. There were only 6¼ miles for which Parliamentary sanction had not been received, and although the question was a very delicate one, measures were under the consideration of the Companies, which would probably tend to effect the object in view.

Mr. HUDSON, in acknowledging the vote of thanks, paid a high compliment to the straightforward conduct and zeal and talent of Mr. Glyn. He then adverted to the extension of the line to Newcastle, which he described as of great importance to the North Midland, the York and North Midland, and the Manchester and Leeds Companies. Some might have a predilection for a West coast line to Scotland, but if this little bit of 6¼ miles were made the route would be virtually determined. He had little doubt that, by co-operation, the three Companies could raise the money, and probably a scheme with that object would at no distant day be submitted to them. It would bring a great increase of traffic to the lines, and render it permanent. If the Great North of England Company should be unable to complete the whole of the line for which they had received Parliamentary powers, there would be 19¼ miles to construct, which could be done for about 500,000*l.*, but if the whole of the Great North of England line were made, there would remain, as stated by the Chairman, only 6¼ miles to complete the chain of railway communication from London to Newcastle, and these 6¼ miles might be made for 200,000*l.*

A vote of thanks to the Chairman and Directors was then carried by acclamation, and suitably acknowledged, and the meeting separated, many of the proprietors proceeding to inspect more minutely the commodious and magnificent station where the meeting was held.

RAILWAY ADJUDICATION.

SHILLIBEER *v.* THE GREENWICH RAILWAY COMPANY.

Home Circuit, Croydon, August 23.—The plaintiff in this action sought to recover compensation for having been compelled, under the circumstances stated, to walk along the railway, there not being sufficient light and protection to prevent the accident, that he had fallen upon the iron rails, and had thereby injured himself severely.

The defendants pleaded firstly, not guilty, and secondly, that the plaintiff had been warned that it was dangerous to walk along the railway, but that he had persisted in doing it, and had brought the accident upon himself.

Mr. PLATT and Mr. PETERSDORFF were for the plaintiff, and Mr. THESIGER and Mr. WALLINGER for the defendants.

The case on the part of the plaintiff was, that on the 15th of March he started by the half-past nine o'clock night train from Greenwich, and when they arrived at about half the distance, near the Blue Anchor road, a signal of accident was given, and the train was stopped, and it was found that the preceding train had broken down, that the engine was lying across the rails, and that it was impossible to proceed. The whole of the passengers alighted from the train, and some of them attempted to get down into the Blue Anchor-road by means of a flight of steps made for the purposes of the railway, but they found the door at the bottom fastened, and they were then compelled to walk along the line, and at one portion of it over Bermondsey-street, where there is a descent in the gravel-way of a foot, the plaintiff and eight or ten others fell down, and he received a very severe injury upon the leg. From the evidence of the medical person who was called, it appeared that at one time the plaintiff's life was endangered from the very serious character of the wound. The plaintiff had applied to the Company for some recompense for the injury, but they took no further notice of the application than to refer him to their solicitor. On behalf of the defendants, the conductors of the trains and some other persons connected with the Company were called, and they attempted to make out that when the obstruction was discovered the passengers were were requested to sit quietly, but that they refused to do so, and were very violent, and began to kick the doors of the carriages. They were at length compelled to let them out, and they were then told that they might go down the steps into the Blue Anchor-road, and that the fares would be returned on the morrow; but that, instead of consenting to this, the whole of the passengers insisted upon walking along the line to the London station, and when the conductors attempted to prevent them they threatened to knock their heads off; and one elderly gentleman, who was represented to be an M.P., declared he would bring the matter before "the House." The defendant's evidence, however, was not very conclusive, and although the witnesses swore positively that an offer was made to the passengers to get into the Blue Anchor-road by means of the staircase from the railway, there was no attempt to show that the door at the bottom had been unlocked, and it appeared pretty clear that if the passengers had been ever so minded to do so, they could not have got away from the railroad by this means. It was also proved in the course of the case that when the plaintiff arrived at the station in London, in great pain and suffering from the injury, and requested to be allowed to sit down for a short time, it was refused, and he was compelled to depart immediately, and it did not appear that the fare he had paid was ever returned to him.

Mr. THESIGER, in his address to the jury, said that in this case he could not see how the Company could be made liable for what had occurred. Every one must be aware of the advantages of this mode of conveyance, and it was the interest of the Directors of undertakings of this description to protect the public, and in the present case it was clear that the detention of the train arose from unavoidable accident, and if the plaintiff and other passengers had attended to the directions that were given them no accident would have occurred.

Lord Chief Justice TINDAL having addressed the jury, they returned a verdict for the plaintiff—Damages, 25*l.*—*Morning Post.*

RAILWAY SHARE-LISTS.

The London Prices are taken from Mr. Wetenhall's List; those at Liverpool are furnished by Mr. C. J. Townley, Sharebroker, and are the closing prices on Thursday. The quotations marked * are the latest Edinburgh prices; those marked † the latest Glasgow prices. The former are supplied by Mr. Robert Allan, of St. Andrew-square; the latter by Mr. J. Watson, of Frederick-street.

2. Toll to London and Birmingham 158*l.* 9s. 10d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 33*l.* 0s. 11d. from goods, &c. is for toll only.

15. Ten pe cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The amount given in the table includes the receipts from the horse coaches from Hayward's Heath to Brighton. The divisor, therefore, is 46, although only 37½ miles of the railway are open, including the Shoreham branch of 5½ miles. The toll to the Croydon Company is not included in the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 5,667*l.* 1s. 6d. are the receipts after deducting omnibus charges, and payments to other Companies.

25. The receipts for goods, &c. include, carriages, 46*l.* 12s. 0d.; horses, 36*l.* 0s. 0d.; dogs, 8*l.* 4s. 0d.; parcels, 219*l.* 4s. 11d.; cattle, 46*l.* 11s. 0d.; corn, 8*l.* 6s. 5d; heavy goods, 445*l.* 7s. 11d.; coal, 75*l.* 9s. 1d.—Total, 885*l.* 15s. 4d.

27. The divedend includes a sum of 31,786*l.* earned previous to the last half-year.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Manchester and Leeds Railway.—*In the notes to our Traffic Table of last week there was an error in reference to the receipts of this railway, which we have much pleasure in correcting. The note should have stood thus:—"5,500. This and all the net receipts after deducting working charges and provision for the interest and including receipts from coal for six weeks."*

A Railway Engineer. *(With a slight curtailment, next week.*

Edinburgh, Leith, and Newhaven Railway.—*The "Statement of the affairs" has been received by a few Parliamentary members, in type, but must stand over till next week.*

The circular from Birmingham has (as requested) been withdrawn.

A Subscriber, Northwich.—*We have not had time this week to make the requisite inquiries, but will do it before next publication, and correct the error, if error it be.*

A Constant Reader (Hunstanton).—*Many thanks.*

Cornish Railway.—*We feel much indebted to Captain W. S. Moorsom, the able Engineer of the Birmingham and Oxford Water Railway, and trust he will grant us permission to publish his letter.*

We are compelled to defer notices of the Birmingham and Derby, Edinburgh and Glasgow, Hull and Yarmouth, Shrewsbury, and Chester Railway meetings. Our correspondent's report, a most quaintly written one, which is in type, must be deferred till next week. Then we shall publish a Supplement, in order to clear off arrears.

Traffic omitted last Week.

NORTH UNION RAILWAY.

Traffic for the week ending August 14, 1841.

Passengers, 5,859	Amount,	£1,231 1 5
Goods and Coal		198 5 1
Total		£1,429 6 6

*** It is requested that in future all communications intended for the *Railway Times* be addressed, "To the *Editor*," and not to any individual by name, now or recently connected with the establishment.

THE RAILWAY TIMES.

SATURDAY, AUGUST 28, 1841.

THE importance of the various topics discussed at the half-yearly meeting of the North Midland Railway Company, held at Derby on Thursday last, would justify us, if justification were required, in devoting so large a portion of our space to a full report of the proceedings. We earnestly call the attention of our readers to that report, and to the official documents which accompany it, as the most gratifying proofs which could be given of the gradual and steady progress of a highly important undertaking, and of the increased interest which railway proprietors are beginning to take in the discussion of questions bearing so closely on their prosperity. The traffic of the North Midland Railway has hitherto fallen very materially below the expectations which were originally entertained, but we see no cause whatever to despair. The line possesses in its local position, and in connection with neighbouring lines, almost every element of success; and we have no doubt that its resources will rapidly be developed.

We are almost sorry that the able Chairman of the Company condescended to notice the venomous effusion of a nameless slanderer of the Board. As was remarked at the meeting, we think it is the better way to treat such exhibitions of malice with the silent contempt they deserve. All who know any thing of the private or public character of Mr. GLYN, must be well assured that he would not for one moment countenance or connive at any act unworthy of a high-minded and honourable man.

A CASE was tried at Croydon on Monday last, in which compensation was sought, and recovered, from the Greenwich Railway Company, for an injury received by one of the passengers on their line. We give elsewhere a notice of the proceedings, from which it appears that on a certain occasion, in consequence of a preceding train having got off the rails, one of the evening trains was unable to proceed more than half way, and the passengers having alighted, and walked along the railway towards the London terminus, several of them stumbled and fell by reason of an unexpected irregularity of surface, when one of them, named SHILLIBEER, was seriously injured. For this injury he now appeared to claim compensation, and, after a good deal of somewhat conflicting evidence, the jury awarded him damages amounting to 20*l*.

This decision involves considerations of some importance, not only to the Greenwich Company but to other Companies, and likewise to the public. Nothing will contribute more to general confidence in this mode of conveyance than a knowledge that redress is to be obtained through the legal tribunals of the country for any abuse of the large powers with which Railway Companies have of necessity and for the benefit of the community been entrusted; while on the other hand such abuse will not unfrequently be prevented when those who might be tempted to outstep the bounds of propriety and justice perceive that they will be held responsible for their acts, and that, aided by the strong arm of the law, the humblest individual may resist with success the oppression of the most powerful corporation. In the consciousness of having "a giant's strength," the tyranny of "using it like a giant' is too generally overlooked, and hence the necessity and excellent effect of occasional appeals to a power which not even the most gigantic can withstand.

We would not be understood as making particular reference in these general remarks to the case of the Greenwich Company. On the contrary, we are not quite satisfied that they have not in this instance been somewhat harshly dealt with. Were it not for some collateral circumstances of seemingly trifling importance, to which we shall presently allude, we should say at once that the decision of the jury was matter of regret. It is not pretended that the breaking down of the train, which was the primary cause of the accident to the plaintiff, arose from any misconduct on the part of the Company's servants; nor can it reasonably be expected that on the occurrence of an unforeseen impediment like that referred to, and in the confusion which must thence arise, the convenience or comfort of the passengers can be so carefully studied as it ought to be, and would be, under ordinary circumstances. Neither is it to be supposed that the officers of the Greenwich Company could contemplate the necessity of a large number of persons walking along the line on foot, so that particular attention might have been paid to the "portion of it over Bermondsey-street, where there is a descent in the gravel-way of a foot," and where, in consequence, "the plaintiff and eight or ten others fell down." If there be "sufficient light" for the passage of the night trains along the railway, it seems scarcely to be a reasonable ground for complaint that, as set forth in the plaintiff's declaration, there was not "sufficient light" to enable him and his companions to perceive the inequality of the permanent way. It is true that the officers of the Company, if they found that the plaintiff and the other passengers *must* pass along the railway on foot, might have sent some person who was acquainted with the line to guide their steps—and indeed the neglect of such a precaution might have been attended with consequences which we shudder to think of. Only imagine the breaking down of a train on this side of the Corbett's-lane junction, early some dark night during the approaching winter when the Croydon and Brighton trains are in full operation, and then fancy the circumstance of a score or two of persons being pent within the narrow retaining walls of the Greenwich viaduct, while a train is seen approaching in either direction, and these persons being unable, in the agitation of the moment, to tell upon which track of rails it is proceeding. The sacrifice of life would without doubt be awful, and we very much question whether under such circumstances the officers of the Company would not be considered as implicated in the affair much beyond a mere reprimand for neglect of duty. The fact is, that on no pretence whatever ought the passengers to have been allowed to walk along nearly two miles of the line. There appears to be some doubt as to whether they could or could not have readily got off the line near the very spot where the stoppage took place. A flight of steps, it appears, leads from the viaduct into a public road, but the witnesses for the plaintiff stated that they "found the door at the bottom fastened," and that in consequence they were *compelled* to walk along the line. The officers of the Company, on the other hand, while they did not (according to the report of the case in the columns of our contemporaries) "attempt to show that the door at the bottom had been unlocked," swore that the passengers *insisted* upon walking along the railway, and threatened personal violence if any attempt were made to prevent them. We readily admit that it would have been folly in a few of the Company's servants (for there could only have been a few present at the spot) to have attempted to *force* off the line so large a number of persons as seem to have been in the train, and that if they *would* persist in exposing themselves to danger, none but themselves ought to be blamed for what might have happened to them; but we cannot bring ourselves to believe that if the means of egress from the railway had been supplied by the opening of the door "at the bottom" of the flight of steps referred to, and if the probable consequences of walking along the line had been pointed out to them, any number of persons would have been so foolish as to have "insisted" upon exposing themselves to hazard. The inference which we draw from these considerations is, that the door was *not* opened, and herein the servants of the Company were to blame. If the usual means of unfastening it were not at hand, there would have been little difficulty in effecting the object in another way.

But the most serious charge against one at least of the officers of the Company is a charge of gross inhumanity, and we regret extremely that we should have occasion to notice any such

Digitized by Google

in connection with a Railway Company. "It was also proved [says the report] in the course of the case, that "*when the plaintiff arrived at the* STATION IN LONDON, *in great pain and suffering from the injury, and requested to be allowed to sit down for a short time, it was refused, and he was compelled to depart immediately!*" Here is a most grave charge proved on oath in a court of justice, and if the Directors of the Company have not by this time taken steps to punish the person who could have so far forgotten what was due to a fellow-creature in distress, we have no hesitation in saying that they have rendered themselves parties to the scandalous misconduct of their subordinate. There can be no difficulty in bringing the matter home to the offender, for the scene of the transaction is very distinctly set forth. We have very little doubt that this fact had great influence with the jury in the decision to which they came. Unfortunately the innocent suffer for the guilty, and the shareholders of the Company generally are made answerable for what we would fain believe was but the act of an individual—an exhibition of that "insolence of office" against which the most vigilant Directors cannot at all times guard, although they may at all times mark their sense of it, when, as in this case, the circumstances are laid fully and indubitably before them.

Are, however, the Directors themselves quite free from blame in this business? We think not. "The plaintiff [says the report] had applied to the Company for some recompense for the injury, *but they took no further notice of the application than to refer him to their Solicitor.*" This surely was not the course which under the circumstances ought to have been adopted. Highly respectable as is the legal adviser of the Greenwich Company, we all know that lawyers look upon these matters in a different light from other people—nay, that they have a direct interest in doing so. In cases of this kind a much more extended and generous view of circumstances ought to be taken than mere professional duty can be supposed to dictate. The Directors might at least have shown the plaintiff that they sympathised with him for the pain to which he had been put, and that though it might have been impossible for them or their servants to prevent the occurrence, they were willing and anxious as far as lay in their power to repair its effects. But no; they apparently satisfy themselves with a cold and formal reference to their Solicitor! The plaintiff's life, his medical attendant swore on the trial, had been "endangered from the very serious character of the wound," but the Directors do not appear even to have offered to pay the doctor's bill. The plaintiff may possibly be a poor man (for we know nothing of the case beyond what appears on the face of the newspaper report), yet the Directors seem indisposed to allow him "*some* recompense" for his loss of time. They refer him to their legal adviser, and the chances were ten to one that the plaintiff would not have had the courage to pursue the matter further. We trust that it was not any hope of *such* a termination to the case which led to the mode in which the plaintiff's application was treated. If the *amount* of recompense were the subject of dispute, we think a better arbiter than *any* merely professional man, might have been found among the Directors themselves. We cannot see what benefit the Directors could expect from resisting the claim. Even had the plaintiff lost his case, the expense of trouble of an action must surely go for something; as things *now* stand, how much more will the Company have to pay than if they had given the man "*some* recompense" in the first instance, and how much odium have they incurred? We have heard of cases of a similar kind in which claims of ten pounds have been resisted, and after all, the parties have been glad to compromise the matter by paying hundreds! Far be it from us to wish the Companies to submit tamely to extortionate demands—and we know that they are daily exposed to such demands—but in cases like this of personal injury to the public, we are strongly of opinion that a *liberal* consideration of the circumstances is on all accounts greatly to be desired; and we are happy to know that in almost every instance Railway Managements have acted upon these views. As a matter of policy, were there no other inducements, it is to the interest of the Companies to pursue such a course. Juries entertain a very natural and, under certain limitations, a very commendable feeling in favour of the weak against the strong, and (what they generally consider as synonimous) in favour of individuals against public Companies, and when appeals like these are made to them for redress it very rarely happens that they err on the side of inadequate compensation.

THE Half-yearly General Meeting of the Proprietors of the Edinburgh and Glasgow Railway was held at Glasgow on Tuesday. We have received a full account of the proceedings, but in the present crowded state of our columns, it is quite impossible that we could give more than a very brief abstract. We prefer, therefore to postpone its publication till next week. A great part of the proceedings and Report has reference to the late unfortunate disputes, in connection with the two Committees.

OUR space will not allow us to do more than to call the notice of our readers to the reports of the meetings of the Great Western and Birmingham and Gloucester Railway Companies, which will be found in another part of this day's paper. They are both exceedingly interesting. We shall probably have occasion to revert to them hereafter.

THE adjourned General Meeting of the Proprietors of the Birmingham and Derby Junction Railway Company was held on Thursday, at Birmingham, when the Report of the Committee of Investigation, appointed at the previous meeting on the 10th instant was read, and was, we are informed, of a very satisfactory nature. We shall give a more detailed notice of the proceedings in our next.

THAMES HAVEN DOCK AND RAILWAY.—The half-yearly meeting of the proprietors of the Thames Haven Dock and Railway Company was called for yesterday, but after the lapse of an hour and a half beyond the hour advertised, only five or six proprietors were present, and these not being sufficient to constitute a legal meeting, the proceedings were adjourned for seven days.

—o—

MR. WALLACE has placed on the books of the House of Commons, a notice of motion for Tuesday next, "to call the attention of the House to a return now upon the table, respecting the appointment and employment of mail coach and railway guards by the Postmaster-General; and to move that an humble Address be presented to her Majesty, praying her Majesty will be graciously pleased to withhold her Royal Assent to the appointment of a successor to the present Postmaster-General, and thereby facilitate the placing of that important branch of the public service under the management of Commissioners, in accordance with the recommendations of several Parliamentary Committees and Royal Commissions, as well as the declared opinion of a large majority of a late House of Commons, which sanctioned the above recommendations by passing a Bill for the purpose of placing the said office under the management of a body of Commissioners, in like manner as all other revenue departments are placed."

—o—

IN the House of Commons on Thursday night the following members were appointed "to consider whether any and what improvement can be adopted in the mode of conducting private business:"—Sir George Grey, Mr. Labouchere, Sir Robert Peel, Lord Stanley, Mr. Loch, Lord Granville Somerset, Mr. Aglionby, Mr. Greene, Sir John Yarde Buller, Sir James Graham, Mr. Ellice, Mr. Estcourt, Sir Edward Knatchbull, Sir Thomas Fremantle, Mr. Ewart, Mr. Pendarves, Mr. Wilson Patten, Mr. William Miles, Sir William Heathcote, Sir George Clerk, and Sir Robert Ferguson:—Power to send for persons, papers, and records: five to be the quorum:—Power to report observations and opinion from time to time.

—o—

THE last portion of the Birmingham and Gloucester Railway, from Camp Hill to the London station, was opened on the 17th instant, thus closing the last link of the chain from Gloucester to Darlington and also to Lancaster.

We understand that on Monday last, Captain W. S. Moorsom, the Engineer-in-Chief of the line, made an interesting comparative trial on the Lickey incline, with one of Mr. Bury's heavy goods' engines, and the American locomotive *Philadelphia*. We hope to be favoured with the details.

—o—

MR. ALDERMAN HUMPHERY has addressed the following letter to the Editor of the *Sun* evening newspaper:—

"SIR,—As the words I used at the Blackwall Railway Meeting seem to be viewed erroneously, I desire it to be expressly understood, that I did not mean to convey an impression, or to insinuate that money was expended among Members of Parliament, for I know of no such circumstance; but that I had no doubt a great deal of money was laid out for expenses incurred in soliciting Members to support or oppose the passing of Railway Bills, as was suggested by the question proposed to me at the meeting.—I am, Sir, your obedient Servant,

"JOHN HUMPHERY."

"Southwark, Aug. 21."

—o—

IN our report of the recent meeting of the London and Birmingham Railway Company some particulars appeared of a "Friendly Society" established among the Company's servants. We have since been favoured with a copy of the last Report of the Committee, submitted to and approved of by the members, and we have much pleasure in laying it before our readers, and in recommending its objects to the attention of Railway Managements and railway proprietors generally. It is as follows:—

"The Committee feel much satisfaction in being able to congratulate the members of the Railway Friendly Society, at their first annual meeting, on the prosperous condition of the Society's affairs. Although established not more than nine months, *the accounts show a balance of* 504*l.* 11*s.* 7*d.* *at*

Digitized by Google

the Society's great, other power the expenses of management, the medical certificates, and distributing 213l. 10s. 2d. in allowances to sick members, and in payments at death. Deducting from this balance the London and Birmingham Railway Company's liberal donation of 200*l.*, the fines received from the coaching and placed partners, and the subscriptions of honorary members, there will remain about 200*l.*, as the net accumulation of premiums or profits, on the Society's transactions.

"This favourable result warrants the Committee in recommending that the pledge given to the members to reduce the monthly contributions, as soon as experience justified such a measure, should now be redeemed.

"The trustees and treasurer concur with the Committee in opinion, that the adoption of a uniform rate of contribution, entitling all members to equal benefits, without reference to age, is the mode of reduction by which the greatest boon will be conferred. It is therefore proposed that in future each member pay a monthly contribution of two shillings and sixpence, and be entitled to an allowance in sickness of eighteen shillings per week, for the first six months, and nine shillings per week for the second six months, and to ten pounds at death.

"In recommending the substitution of a uniform rate of contribution for the graduated scale now in use, the Committee desire to guard against the improvidence of those who might be disposed to contribute for an inadequate allowance in sickness, and to place within reach of the older members, the highest allowances guaranteed by the Society, without taxing their limited means beyond what may be easily spared.

"Convinced that no other modification of the existing rules could be so beneficial as that now proposed, the Committee earnestly hope that the members generally may view the subject in the light in which it has appeared to them.

"In pursuance of a resolution passed at a Special General Meeting of the Society, the Committee have engaged the services of medical men at all the stations on the line, on very favourable terms. It is pleasing to know, that the benefits conferred by the Society's arrangements in this respect, as well as in others, have removed the groundless suspicion, with which it was at first regarded, and convinced all that the sole object of its promoters, was the good of those whom it was professed to serve."

—o—

THE *Northampton Mercury* states, that not many years ago it was sometimes necessary for the inhabitants of that town to order fish the day before it was wanted, that the fishmonger might have an opportunity of sending to London for it. Such, however, is the facility that the railway has afforded of importing fish into the town, that they have it supplied fresh twice a day, Sundays excepted. "We never saw (adds our contemporary,) such immense quantities of salmon exhibited for sale as during the present summer. One fishmonger sold on Saturday last 1,160 lbs. of large and small salmon, the former at 10d. per lb., and the latter at 8d. Many others sold large quantities."

—o—

WE alluded last week to the generally defective state of railway fencing, and we now give from a Derbyshire paper another illustration of the fact. It appears that one day last week the London mail train, which ought to have reached Chesterfield at twelve minutes past four, did not arrive until near seven o'clock. The delay was occasioned by two horses having strayed on the Birmingham line; and the engine coming in contact with them was, together with several of the carriages, thrown off the line. The animals were killed, but we are glad to learn that none of the passengers or officials sustained any very serious injury.

RAILWAY OFFENCES AND OFFENDERS.

LAST week, as we learn from the *Stirling Journal*, a girl of the name of Johnstone was brought before the Sheriff at Falkirk, charged by one of the Slamanan Railway Company's policemen with having placed two stones on the top of the rails, with the intention of throwing the engine and passenger train off the line. It appeared on examination that the girl had wished to try whether the engine would "ding off the stones, or the stones the engine and train." Fortunately, however, the engine crushed the stones, and passed over them without doing any harm; but the girl is likely to stand her trial before the Circuit Court at Stirling, as an example to others who may be inclined to make experiments which endanger the lives of travellers. It is difficult to account for these exhibitions of wanton mischief, but girl as she is, we trust that the offender in this instance will be dealt with as she deserves.

—

On Tuesday week, a porter named Blackmore, employed on the Birmingham and Gloucester Railway at the Cheltenham station, was taken before the local magistrates at the instance of the Directors, for being "drunk and disorderly." He was fined 20s, with 5s. costs.

GREAT WESTERN RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly General Meeting of the proprietors in this undertaking, was held at their station at the Bristol terminus on Thursday last. The large room was crowded by shareholders, including many from a great distance.

At one o'clock the Chair was taken by

CHARLES RUSSELL, Esq. M.P. for Reading, who in addressing the meeting said, that since the Directors had the pleasure of meeting the proprietors in February last, their most anxious attention had been directed to the completion of the line. Many difficulties had arisen; still the hopes of the proprietors had been realised, and the entire line between Bristol and London was opened in the month of June last. (Cheers). He congratulated the proprietors in that Company, he congratulated the inhabitants of Bristol, on this their most important occasion. The undertaking had its origin in their enterprise, spirit, and foresight, and the result, he trusted, would afford them ample compensation in the improvement of their town, and in the placing it in that position which it ought to occupy amongst the first commercial cities of the kingdom. The difficulties which the Company had to contend with were very great, particularly in an engineering point of view. There was scarcely any line which presented such engineering difficulties as were to be overcome in the first 15 miles from Bristol to London. Who that had travelled through that part of the country, could ever have conceived it possible to carry a railway through the hills and valleys, through which, nevertheless, Mr. Brunel had been able to conduct one of the most perfect and level railways? (Hear.) He knew the cost had been very great, and it was impossible it should not be so, but they knew they had got something for their money; they had got a railway universally admitted to be the most perfect in the kingdom. They had obtained a railway combining the objects of increased speed, greatest comfort, perfect security and durability. (Cheers.) The consequence was they were enabled to work their line much more cheaply, and escaped a risk incurred by almost every other line, namely, that of competition. The Directors regretted to be obliged to apply to the proprietors for power to raise an additional sum of money; that necessity had arisen not from any reluctance on the part of the Directors to afford the proprietors full information at former meetings, or from their not having taken care in forming the estimates, but in expenses and difficulties in forming the line, which no human foresight could foretel, and which the experience of other railways proved had existed also in their cases. He was desirous of adverting to this, because it had been stated that he, at the last meeting of the proprietors, gave a pledge that the money the Directors were then empowered to raise, would be sufficient to complete the undertaking, and gentlemen had been thrown out, of the impropriety of making such pledges. He gave no such pledge or such assurance; on the contrary, he used at the meetings, on being pressed on the subject, what he was in the habit of using on such occasions, and had said no man in his senses could pledge himself to estimates on such a subject. All that he said was, that the money would be sufficient to open the line. He limited himself by that expression, because he knew there were outstanding accounts, the final adjustment of which with the contractors had to be made. But if the amount of the expenditure had exceeded their estimates, the amount of their traffic had been also larger than they expected. The dividend declared at the last meeting was, on the profits of the whole year 1838, the dividend now to be declared would be out of the profits of the last six months—profits realised from a broken and incomplete line, and after every shilling of interest had been paid. He would ask, what railway in the kingdom could show such a result? The receipts for the last week were 15,000*l.*, and for the week preceding exceeding that, and the average for the last month nearly amounted to that sum. He would ask what other railway could show such a result as that, and it should be recollected that the whole traffic in goods and passengers had not yet nearly come. (Cheers.) If the traffic continued to increase, as it has hitherto done, the most sanguine expectations would be realised, and could not fail to give the supporters of the undertaking unmingled satisfaction. A wish had been expressed that the number of the Directors should be reduced, and the Board had determined to reduce the number to 18. The subject had received much deliberation from the Board, and they had come to the conclusion that they could not exercise a proper control over a line of, at present 170, and soon to be, 200 miles, with less number than 18, and that it would not be safe to make a greater reduction at present. He hoped the proprietors would in this see that the Directors were anxious to promote the interests of the undertaking, and desirous of acceeding to the wishes of the shareholders. (Hear, and cheers.)

The SECRETARY (T. Osler, Esq) then read the following

REPORT.

The Directors have now the satisfaction to record the completion of the Great Western Railway for traffic—an event which naturally renders the present meeting by far the most interesting to all who have embarked their property in aid of the undertaking.

In consequence of the strong desire expressed by the proprietors that the benefits of the summer trade on the whole line should be secured to the Company, every effort was made by the Directors to hasten the works, amidst many and serious difficulties; and the proprietors will not fail to recognise the success of those exertions, when they recollect that 12 months were stated, at the August meeting of last year, to be the probable period for the completion of the railway for traffic, whereas it has since been accomplished within 10 months—the line between Hay Lane and Chippenham having been opened on the 31st of May, and the whole line from London to Bristol on the 30th June.

The statements of revenue, in the past half year, continue to shew a gratifying result, the receipts being 187,78*l.* 16*s.* 2*d.* to the 30th June last. 650,537 passengers were conveyed for an aggregate number of 15,587,798 miles.

It must be borne in mind that the place to which the trains were running during that period, was perhaps, in every respect, the least favourable for any accession of traffic to the line.

Although nearer in distance to Cheltenham, the country roads from Hay Lane to Cirencester were in such bad repair as to be almost impassable, and consequently the whole of that branch of traffic continued to join or leave the railway at Farringdon Road until the line became finished to the town of Cirencester on the 31st May.

The same cause very greatly affected even the direct

Digitized by Google

Bristol and Bath traffic, and prevented any material increase of income from the more remote or collateral trade. Indeed, if the Directors had not decided to take the Bath and Bristol coaches into their own hands, under an agreement with the coach proprietors, at the time they did, it would probably have been impossible to secure their running to Hay Lane, while the roads, for some miles from that station, were permitted to remain in the condition so much and so justly complained of by every passenger.

The expenses, in proportion to the revenue, have again diminished.

The amount for the half year, to 84,380*l.* 0*s.* 7*d.*, being 44.935 per cent. on the receipts. It is proper to state, that this comprises a considerable sum expended in wages, &c., on the new establishment which was training for the whole extension of line to Bridgewater and to Cirencester, and also embraces several items which relate more directly to the traffic realised since the 30th of June.

The four terminal stations instead of two—the high price of coke—and the heavy charge of maintenance of way on wew line, opened last winter, have also unavoidably contributed to keep up the charges under their respective heads in the expenditure, especially as contrasted with other Companies, where the whole line has been long opened, their operations consequently more matured, and their supply of fuel obtained at a more reasonable cost than it has been hitherto on this railway.

The result of the half year shows a net income of 103,400*l.* 15*s.* 7*d.* as profit on the working of the line, which is to be added to a sum of 1,177*l.* 14*s.* 8*d.*, realised from the agreement already referred to with the stage coach proprietors. The Accounts show that those profits, with the undivided balance of last half-year, will provide a total sum of 110,330*l.* 14*s.* 6*d.* to be applied first to the liquidation of all interest paid to the 30th June, viz. 63,950*l.* 16*s.* 8*d.*, and next to the dividend on capital stock.

In February last the first dividend at the rate of 3 per cent. per annum was made from the accumulated profits of portions of the line during two years and a half.

The Directors now recommend the same dividend to be declared from the profits realised almost exclusively in the last half year, and still only from a portion of the whole line, worked under many disadvantages.

A dividend of 19*s.* 6*d.* on the original share, 15*s.* on the half share, and 1*s.* 2½*d.* on the fifth share for the half-year to the 30th June last, declared payable on the 25th September, amounting to 45,375*l.*, will leave an undivided balance of 1,004*l.* 17*s.* 10*d.*

The receipts of the line since the opening from London throughout, both to Cirencester and to Bridgewater, afford the best guarantee of the future prospects of the Company. The increase which has been going on almost from week to week, cannot fail to be most satisfactory, especially when it is considered that an average of 14,844*l.* 11*s.* per week has been received in four successive weeks within the short space of two months from the opening of the line, although a great portion of traffic still remains to be diverted from the direct line of road between Exeter and London, which will come to Bridgewater.

The continuation of the railway from Bridgewater to Taunton, is proceeding with expedition, and the Directors understand that preparations are made for immediately commencing the works for the extension of the line beyond that town towards Exeter.

The Directors feel convinced that the great augmentation of traffic which has been experienced on every line after the first few months of completion, will be realised on this railway. The sources of income also in the conveyance of parcels, merchandise, and cattle, are, from many circumstances, scarcely yet developed.

With respect to the works of the line, the Directors think that they shall best convey information on that subject to the proprietors, by reading to them Mr. Brunel's Report addressed to the Board.

The Directors having now made a very close investigation into the expenditure of the Company, since the line has been opened, and having required from the Engineer the fullest details of all outstanding debts, which could only be ascertained with accuracy after the works were so far completed, desire to communicate to the proprietors, upon this occasion, the result of that examination.

The statements which have from time to time been required for the information of the proprietors during the progress of the works, have for the most part, and of necessity, been estimates of probable cost—in some cases before the work was commenced, and in others, where little or no advance had been made at the time. The Directors had always felt that they must encounter one of two evils, either to decline giving the information required, which nothing could justify, or to furnish it in the best state they could obtain it, with a knowledge that nothing but the actual completion of the works could finally test and prove its accuracy. In the mean time, new works have been found necessary to carry on the traffic which had not been contemplated in the former estimates; increased expenditure has been unavoidable for slips and other contingencies; and money has been paid for the expediting of works to anticipate the summer traffic of the line.

In the last Report it was stated that the Directors would require to provide the locomotive stock and plant of waggons, engines, &c., for the Bristol and Exeter, and for the Cheltenham and Great Western Union Railways, as well as to build a large engine establishment and workshops at Swindon, and coke ovens at Bristol. They find also an increase of space and building necessary for the merchandise business at Paddington as well as at Bristol.

Taking into account every expense incurred, or which may now be considered as necessary for the completion of the works, including locomotive engines, carriages, &c., for the Great Western line, after bringing to credit the surplus land and stock and premises, and the materials used in constructing the works, the Directors find that the sum of 6,150,000*l.* will be required independently of 150,000*l.* for the plant to work the two lines under lease to this Company.

The Directors regret that the expenditure should have exceeded their former estimates, but they feel assured that it has been quite unavoidable, and that the character of the works has fully justified the outlay, although the amount of cost was not, and for the reasons assigned could not be accurately foreseen.

To meet these additional wants the Directors would strongly recommend the issue of loan notes, in preference to creating at present any new stock in shares, as the value of the undertaking will be better appreciated, when the public are satisfied of the ultimate cost, and perceive that the traffic is adequate to pay a dividend proportionate to the expenditure of the Company.

In the mean time it may be stated, that although these accounts show an increase of 550,000*l.* to the permanent capital of the Company, that amount will not be altogether required for some months, inasmuch as it embraces a provision not only for the final settlement with all the contractors, but for payments for some works not yet commenced, as well as for engines, &c., which will not be delivered to the Company for some time.

The vote also which was passed at the last meeting for a temporary loan on the stock and land of the Company, will contribute to postpone the necessity of raising the whole sum, until after the repayment at all events of a portion of it shall have taken place, from the re-sale of that property.

In compliance with the instructions conveyed to the Directors by a resolution of the last half-yearly meeting, they considered it their duty to seek the necessary powers from Parliament for altering the constitution of the Board of Management, with a view to a reduction in the number of your Directors. They were fortunate enough to obtain that power, by means of a clause in the Bristol and Exeter Amendment Act of last session, without incurring the expense of applying for a separate Act.

The Board having given to the subject their best attention, are of opinion that the number of Directors may now be reduced to eighteen, with a proportionate reduction of the sum appropriated to its remuneration, the number annually retiring by rotation being four and five alternately.

If that course shall be sanctioned by a resolution of the proprietors at this meeting, the Directors are prepared to give effect to it.

The usual Accounts are furnished with this Report for the information of the proprietors.

CHARLES RUSSELL, Chairman.

ENGINEER'S REPORT.

GENTLEMEN,—As anticipated at a former meeting, I have no longer, on this occasion, the duty to perform of reporting to you upon the state or rate and progress of unfinished portions of the line, the whole extent between London and Bristol having now for some short time past been open to the public.

Every exertion had been made during the whole of the past twelvemonth to meet the wishes of the proprietors, and to insure the completion of the entire line in the month of June last, so as to secure the benefit of the summer season upon the commencement of our traffic. I am happy to say that, notwithstanding several serious difficulties which occurred towards the completion of the works, and which threatened to cause very considerable delay, this object has been attained, and nearly to the fullest extent which I think could have been anticipated by the most sanguine amongst you.

If the whole line has not been opened to the public early in June, as hoped for by some—one-half of the portion then remaining between Wootton Bassett-road and Bath was opened to the public on the last day of May—and the most inconvenient part of the coach travelling thereby avoided, while the remaining length was completed by the end of June; during the same periods also the Cheltenham and Great Western Union Railway and the Exeter Railway, leased by this Company, have been opened to the public.

The several principal works occurring on these portions of the line, thus recently completed, have been constantly referred to in the successive half-yearly Reports, and are therefore well known to you; they constitute, with the portion of the line between Bath and Bristol, by far the heaviest and most difficult part of the whole.

The heavy clay embankments in the neighbourhood of Wootton Bassett, the long and very lofty embankments and the rock cutting between Chippenham and the Box Tunnel, the Box Tunnel itself, the cuttings and other works in the Box Valley, and the diversion of the canal and the retaining wall at the eastern entrance into Bath, have all been works of considerable difficulty, and have, at various times, given rise to numerous exaggerated reports as to the impossibility of completing the line within the period anticipated. The first mentioned of these, namely, the clay embankments in the neighbourhood of Wootton Bassett, did certainly at one time, during the last half-year, threaten to offer a serious and tedious impediment, and nothing but the most vigorous measures has enabled me to overcome these difficulties. The deepest part of one of these embankments which had been partly formed during the wet season, and before the precaution had been fully acted upon of forming such earthwork only during dry weather, continued to slip to such an extent, and so rapidly, that it became evident that all ordinary means of making up these continued settlements were quite inefficient, and would not enable us to complete this portion of the line, or to render it secure, within any reasonable or even any certain or definite time; under these circumstances I recommended, and with the sanction of the Board adopted, the plan of securing it with piles, an expensive and laborious operation, but which, I am happy to say, enabled us to complete it most substantially, and sufficiently early to open this part in the month of May. At other points some fresh difficulties also occurred, but the whole have been overcome. These operations have unavoidably entailed much heavier expenses, both in the purchase of land and additional works, than were contemplated when it was first determined to adopt more than ordinary means for expediting the works, and the amount to which it is now found necessary to raise the permanent capital of the Company is, from this as well as many other causes, much greater than had till very lately been expected; it is to be remembered, however, that this amount is now intended to include, not merely the increased outlay above referred to, but also the capital requisite for the establishment of the engine-house, machinery, and other works at Swindon; the first cost of the coking establishment at Bristol, although this last may be redeemed should the Company enter into a contract, such as has always been proposed, by which the contractor for the coke should take the establishment on his own hands, reimbursing the Company the original outlay. It includes, also, many additions which have already been made, or which are now found necessary to the accommodation, for carrying on the increasing trade of the Company, as well as the whole of the stock required for working the lines, about fifty miles in length, leased by the Company, all which items were not included in the former calculations, and which, taken together, form an aggregate amount not much short of 400,000*l.*, but to give a clear and satisfactory Report upon all these causes of difficulty and sources of expense would have required more time and a more detailed and methodised arrangement, and history of the progress of the various portions of the works, than I have been able, or than could be conveniently be prepared so shortly after their completion, and while still engaged in winding up and settling with the various contractors; but if it meets with your approval, I should wish to avail myself of an early opportunity of submitting to you a general, full, and detailed Report of the progress of all the works, and of the circumstances connected with them from the commencement of the undertaking; a statement which is the more called for, for the satisfaction of yourselves and of the proprietary, as well as for my own, from the

Digitized by Google

circumstance that (until lately) more incorrect Reports have been constantly circulated, and more erroneous impressions generally adopted concerning this undertaking, than such works have been generally subject to.

The actual position and prospects of the Company, as promising as those of any Railway Company in England, must, I think, be highly satisfactory to the proprietors. And, as regards the works and construction of the line, I shall for the present merely observe that I trust the circumstance of our having been enabled to open each successive portion, and particularly the last portions, immediately after their completion—and to accommodate the public with a great number of trains, and travelling at much higher speed than has been usual at the opening of other great lines, without any accident, or even delays, beyond those unavoidably incidental to new arrangements over such a very extensive line—I trust this circumstance will be considered by you and the proprietary as fair presumptive evidence in favour of the stability of the works, and the principle upon which they have been constructed, while, in point of expedition, or economy of construction, so far as was consistent with their stability I have no fear of the results of a full and fair comparison with other similar undertakings; and I firmly believe that a full review of the circumstances attending the progress of the works, and an impartial consideration of a statement of the nature and extent of the works which have been actually necessary, and the mode and cost of their execution, will afford satisfaction to the proprietary, and will convince them that their interests have not suffered so far as they have been entrusted to my hands.

I am, Gentlemen, your obedient servant,

I. K. BRUNEL.

August 23, 1841.

Mr. HOVENDEN, rose to move the adoption of the Report, and in so doing felt it to be his duty to make a few remarks. He by no means rose as the thorough-going supporter of the Directors, but having read the Report, he felt justified in moving its adoption. There were one or two points which he thought ought to have been mentioned in the Report, and on which the Directors ought to afford some information. There was one point in particular, that relating to the expenditure. He was not finding fault with the total expenditure, or saying that it was not justified. The Directors had the same interest with the proprietors; they were men of business, and from their situation must possess a knowledge of the necessary expenses which the proprietors could not possess. He did not say there had been any extravagance or want of consideration, but he could not give the Directors the same unqualified approbation as to the estimates. The Chairman had very properly said that no man in his senses could state the expenditure with confidence, yet the Directors had once or twice expressed much confidence on that head. (Hear.) All that they had done up to December last had met with the confidence of the proprietors, and they could therefore hardly inquire into more than had been done since. However, the Directors had said on former occasions that the line would be completed for five millions. They now asked for half a million more. He blamed the Directors for having on former occasions given their estimates too readily, but he thought in their present Report that they had fallen into the opposite extreme of caution. They told the proprietors, now that they wanted an additional sum of 500,000*l.*, but they did not pledge themselves that that would be sufficient. He thought that now the line was open that the time was come for the Directors to be able to form a correct estimate of the total expenditure, and that they should be able to inform the proprietors if the 500,000*l.* now asked would be sufficient or if they should require 50,000*l.* or 100,000*l.* more. That was the question he wished to put; were the Directors prepared to state that what they now asked would be sufficient, or if not, would they state what sum in addition would be?

The CHAIRMAN said, the Directors had given the Proprietors their deliberate opinion in the Report, but they could give no pledge. As the best test of his own opinion, he might state that he had not sold a single share, but had increased them. And he contemplated still further doing so, but he did not think it right to go into the market and purchase, whilst he was in possession of information not communicated to other shareholders. (Cheers.) Beyond that he could give no pledge. Mr. Brunel was about to give a full and distinct account and that should be laid before the proprietors as soon as possible.

Mr. HOVENDEN—This is hardly an answer to my question.

Digitized by Google

The CHAIRMAN—I can go no further.

Mr. HOVENDEN—The time is come when the Directors ought to be prepared to pledge themselves to some amount. I blame the Directors for not using sufficient caution on former occasions, but now when they do rise there is no reason for it. I do not understand the Directors not being able to tell us if they shall want 500,000*l.* or 100,000*l.* more. It must be in their power, and they ought to say so.

The CHAIRMAN—We have given the information as far as can be founded upon facts; the rest must be but matter of opinion.

Mr. HOVENDEN—There is an observation in Mr. Brunel's report, as if he himself were not confident that the sum asked for would cover the whole expenditure.

The CHAIRMAN—Our information is chiefly derived from Mr. Brunel; he is present, if you will put your questions to him, he will answer them.

Mr. HOVENDEN—I wish to ask if he has got an account which enables the Directors to give the Proprietors a pledge which may be depended on.

The CHAIRMAN—I can only express my own conviction, that the sum asked for will be sufficient.

Mr. HOVENDEN—If Mr. BRUNEL will say so also as a man of business, I am satisfied.

Mr. BRUNEL—I do not know exactly what is meant by the word pledge; I will give my opinion on what it is founded. Every account with the contractors which is closed has been examined and compared by my assistants and myself, and those contracts in which the accounts are not closed, I gave notice to have delivered in by a certain time. I have had nearly all of them, I believe all, with one exception, and I have made out my own and my assistants. In those contracts in which the accounts are not closed, the estimates are made from the balances, and they are not large, so that no large excess can now arise upon the expenditure of the line.

Mr. HOVENDEN—That is the very gist of the question; what will be the excess?

Mr. BRUNEL—I have no idea of any.

Mr. HOVENDEN—Should you consider 50 or 60,000*l.* a large excess?

Mr. BRUNEL—I should.

Mr. HOVENDEN—Have you taken into account all the remaining works?

Mr. BRUNEL—All that the Directors have in contemplation for the next year; I have not taken into account another station at Paddington, if the traffic should require it.

Mr. HOVENDEN—Mr. Brunel's answer, as I understand, is this, that the contractors accounts which areclosed, are all paid up; with regard to those not closed, the estimates are not considerable; and on asking him if he thinks 50 or 60,000*l.* would be so, he says it would be.

Mr. BRUNEL said such was his meaning, and he would just add, that he had no wish to use any reserve, or to avoid giving an answer to every question.

Mr. HOVENDEN, then expressed himself satisfied on that point, and then proceeded to ask another question, namely, what proportion the receipts of the branch lines bore to the main lines.

After a lengthened discussion, in which the Chairman expressed a doubt of the prudence of answering the question, and several gentlemen had been heard, some asking for the information, and some adopting the view of the Chairman,

The CHAIRMAN said, the Directors had no wish to conceal the statement from the proprietors. The average receipts on the branch lines for the first two months were 1,601*l.* per week, and for the last four weeks 1,839*l.* (Cheers.)

Mr HOVENDEN said, he had now great pleasure in moving that the Report be received and adopted.

Mr. ENGLAND called the attention of the shareholders to the large amount of capital already raised, namely, 6,250,000*l.*, in addition to which, the Directors now asked for 550,000*l.* more.

Mr SAUNDERS, the Secretary said, Mr. England was mistaken in his figures. The only way to get a correct statement was from the printed documents, which made the total amount of paid up capital hitherto received from all sources, shares, loans, &c. 5,980,000*l.*

Mr ENGLAND said, he had no faith in those documents.

The CHAIRMAN—They are taken from the account books.

Captain DAY then seconded the resolution that the report be received.

On this, another long debate ensued, but chiefly on topics before discussed, in the course of which Mr. Saunders, the Secretary, stated that the locomotive power was supplied on the Great Western lower than on the Grand Junction, or any other line. The resolution was ultimately carried, with one dissentient, Mr. Crosthwaite, who formally protested against it and the subsequent resolution, empowering the Directors to raise the additional sum named in the Report. The resolutions for reducing the number of the Directors to eighteen, and the usual votes of thanks were passed unanimously, and the meeting broke up.

SHEFFIELD AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

THE usual half-yearly meeting of the shareholders in this undertaking was held on Monday, in the Cutler's Hall, Sheffield, when the attendance was tolerably numerous. JOHN PARKER, Esq., M.P., Chairman of the Board of Directors, took the chair, supported by most of the Directors.

In opening the business,

The CHAIRMAN briefly adverted to the difficulties the Directors had had to contend with from the want of money, the depressed state of trade having rendered it impossible for many shareholders to pay the calls. As he understood there was likely to be some discussion on the Report, he would say that it was the wish of the Directors that everything should be brought fully and fairly before the public, and if any gentleman could suggest measures that would tend to expedite and benefit the undertaking, no one would rejoice more sincerely than himself.

Mr. STEVENSON, one of the Solicitors of the Company, then proceeded to read the Report.

Mr. HARDER asked whether a resolution had not been passed this day twelve months, that each proprietor should be supplied with a copy of the accounts eight days before the meeting.

A SHAREHOLDER said, a promise had been made that the accounts should be furnished, but the period of eight days was not specified. It was promised that they should be laid on the table at the place of meeting, in good time in the morning. It was impossible to make any substantial objection from merely hearing the Report read.

The CHAIRMAN said, he must set himself right on this subject. He made a pledge that the wishes of the proprietors should be complied with. He had but come down from London to attend this meeting, and his first inquiry was, whether what he had promised had been done—and he was sorry it had not.

It was explained that some of the Directors had understood the promise to be—that copies of the accounts should be prepared to hand about in the meeting. This had been done, and a number of written copies of the accounts were now handed out to the shareholders.

Mr. WADDINGTON said, that at the last meeting the apology was that the Directors had been prevented from meeting, by the Sheffield Directors being stopped in a snow-drift, and that had been accepted as a sufficient apology.

The CHAIRMAN said, he agreed with the gentleman who made the objection that what he had promised ought to have been done, and when he came down from London he was very sorry to find it had not.

Mr. BRADLEY said, he should be glad to second a resolution that the accounts should be placed in the hands of the shareholders a week before the meeting.

The accounts were then read by the Secretary.

Mr. STEVENSON stated, that some of the landowners had said, they would take shares for the value of their land, and some shares had been allotted to such parties. But there were some of them on whose lands the Company had not yet commenced operations, with whom some difficulty might be found, and who were now not willing to take shares, as they had at first offered.

Mr. ELLISON said, there had been 120 shares held for such persons, but they were now 100.

Mr. S. BUTCHER then moved, and Mr. T. ELLIN, jun., seconded the adoption of the Report.

Mr. DIXON adverted to the falling off in the produce of the earlier calls.

The CHAIRMAN said, the explanation of that was, that persons had at first paid up their calls pretty well, but as the undertaking proceeded, they became worse and worse. If Mr. Dixon's remark was necessary as to the earlier calls, it was more necessary now.

A SHAREHOLDER asked how many shares had been already forfeited.

Mr. STEVENSON replied 219 had been forfeited at the last meeting, but of these 50 had been re-issued at par.

Mr. DIXON—So that there remain 169 of such forfeited shares on hand!

Mr. STEVENSON—Yes; but there are 466 more which the Directors have declared forfeited, awaiting the decision of this meeting.

A SHAREHOLDER—What sum has been paid on them?

Mr. STEVENSON said, no calculation had been made of the sum paid; but on the worst, 5*l.* or 7*l.* 10*s.* per share had been paid.

Mr. T. SMITH said, he believed the average was about 10*l.* per share.

The CHAIRMAN said, the average paid on the 219 declared forfeited at the last meeting was 9*l.* 14*s.* 1½*d.*

Mr. HARDER—As there were so many forfeitures that the Company had 635 forfeited shares on hand, he thought those who wished to pay should not be called upon so rapidly.

Mr. DIXON wished to know how many shares o the original 7000 issued were considered good.

The CHAIRMAN said, Mr. Sykes was prepared to state on how many shares the calls had been paid.

Mr. DIXON—But how many good shares are standing on the books?

The CHAIRMAN took it for granted that all on which the calls were paid were to be considered good, and some no doubt were good on which the calls had been only partially paid.

Mr. DIXON said there seemed to be a great falling off. Calls had been made amounting to 72*l.* 10*s.* per share, yet had produced a comparatively trifling sum.

Mr. SYKES was ready to give such information as he possessed. It would then be for the shareholders to draw their own conclusion.

Mr. ELLISON said the Directors would not recommend the forfeiture of any shares while there was any probability of the calls being paid.

Mr. WADDINGTON asked the Directors, having gone through the share list, were they not capable of giving the meeting an idea as to the number of shareholders who were likely to pay on the shares they held!

Mr. SYKES said 3700 of the shares might be fully and fairly calculated on. Of the remainder, some might be good, but he was not competent to say how many.

Mr. PERRY said, their great difficulty was the depressed situation of the concern in the estimation of the public. If steps could be taken to place it in its proper light, they would find less difficulty.

Mr. WADDINGTON said, the accounts presented were to the 30th June. He asked when they were signed by the Auditor!

Mr. PLATFORD—On the 10th August.

Mr. WADDINGTON—Did any of the Directors examine the abstract before it was signed?

Mr. PLATFORD—The Manchester Directors did.

Mr. WADDINGTON—When were the checques drawn and paid to the parties whose receipts were forged by Mr. Thomson? The reason of this question is, that it is stated in the Report that Thomson has been discharged, and prosecuted for forgery. When were the cheques, the receipts for which he forged, drawn, and paid to the parties; that, for instance, of Green's, for chairs? He urged that question now, because if the accounts were not correct, they could not be adopted, but must be sent back to be amended.

Mr. PLATFORD—Green's was paid on the 30th July.

Mr. WADDINGTON—Then why should the accounts state Green's to have been paid before the 30th of June! Mr. Waddington also referred to several other items.

Digitized by Google

Mr. PLATFORD—Those were the defalcations of Mr. Thomson.

Mr. BLAKE—The Directors signed the cheques, and gave them to Thomson to pay to the parties. In the books, therefore, the amounts are stated to have been paid at that time, though it subsequently appeared the money was not paid.

Mr. WADDINGTON said he wished to have the information from the Secretary.

A DIRECTOR said it was useless to put questions to the Secretary relative to a period for which he was not responsible.

Mr. WADDINGTON—Then who is responsible?

Mr. BLAKE—Mr. Waddington is as much responsible as any one else.

The CHAIRMAN interposed, and said, that as Mr. Waddington had been one of the Directors, he need not be so warm.

Mr. WADDINGTON put several other questions as to several other cases where the Directors had issued cheques for payment, but the money not having been paid by Thomson, they had had to pay them over again.

Mr. PERRY remarked, it was clear all this arose from the books being written up as they would be, on the supposition that Thomson had regularly paid the money, and the Directors had not thought it necessary since to alter the books. It must appear in the books next half-year as a loss, unless made good by Thomson's sureties.

A DIRECTOR remarked, that the Directors could not do otherwise than as they had done. They could not assume Thomson's guilt till it had been proved before a jury, which had taken place only a few days before.

Another DIRECTOR remarked that one of the parties, whose signature Thomson had forged, would not swear it was not his, the resemblance was so great.

Mr. WADDINGTON said, his object was to ascertain whether the accounts produced were real accounts of the disbursements of the Directors, or whether they included sums not actually paid. As to his share in the accounts, he would remark that they were made up to the 30th June, and he ceased to be a Director on the 23rd of June. The accounts were made up on the 9th of August, and on the 10th they were signed, when it appeared that 4*l*. and odd, not paid till the 30th of July, for rails and chairs, were included. If the accounts had been made out in a proper manner these sums would have been put down to Thomson's defalcations, and not to payments for rails and chairs. Referring to the Act of Parliament, he found that when the accounts were not properly made out to the satisfaction of the shareholders, it was their duty to send them back to be revised. That was now his object, and according to the Act, he should move for the appointment of a Committee of five inspectors, each holding not less than twenty shares, to examine the accounts. If they permitted the accounts to pass in their present shape, they recognised the principle, that if an officer forged receipts to any amount, the money was still to be entered in the accounts as duly paid. There appeared to be some misconception as to the cause of his retirement. His reason was, that there was not a sufficient supervision over the officers and servants of the Company. He had repeatedly called the attention of the Directors to the situation in which they were placed, the Secretary having it in his power to cause serious loss to the Company, by misappropriating its funds, if he thought proper. He was placed in a painful position, but he thought it his duty to move for this Committee. He would never shrink from performing his duty, whatever odium or misconception it might bring upon him. He was incapable of appearing there with any other object than to put the railway in the position it ought to occupy in public opinion—as possessing merits which, if the works were carried on economically, would make it a most important line of communication between two great hives of industry, and that would ultimately remunerate handsomely those who had embarked in it. After the statement of Mr. Sykes that there were only 3,000 of the shares that he could pronounce good, it was plainly impossible to carry out the undertaking, unless its other shares passed into the hands of persons who could pay the calls, and this could only be done by rendering the shares marketable. The only way to gain the confidence of the public, and to obtain support, was to show that the line would remunerate the shareholders for their outlay. He moved, therefore, that a Committee be appointed to investigate the accounts, of which an abstract had been exhibited, to investigate the state of the works, and the prospects of the railway, and to report to an adjourned meeting their opinion of the best mode of carrying the undertaking to its completion.

Mr. PLATFORD said, he found in the books, annexed to two of the entries which Mr. Waddington had objected to, amounting to 450*l*., the initials "D. W.," showing that Mr. Waddington had inspected the vouchers, and passed them as correct.

Mr. WADDINGTON said, the gentlemen who had instructed the Secretary to volunteer this explanation, might have been more candid. When the vouchers and the book were compared, one gentleman inspected the vouchers, and put his initials to them, intimating that they were correct, while another inspected the book, and put his initials to the entries, there showing not that he had inspected the vouchers, but that his colleague had done so.

Mr. PERRY lamented that their time should be lost in discussing a point really of very small importance. They must avoid divisions among themselves, for they would have enough to do in completing the undertaking. It would need a long pull, and a strong pull, and a pull altogether; and if Mr. Waddington would allow the Report and the Accounts to pass, he should then be glad to second his motion for a Committee, and would state his reason for doing so. Though the Accounts might not be strictly correct, the circumstances out of which it had arisen had been sufficiently explained.

Mr. ELLISON said, they could not put down the amount of defalcation until it was found how farther loss might be made up.

In the course of some further conversation on this point, the Chairman remarked, that the motion of Mr. Waddington was not seconded.

Mr. BLAKE said, when a gentleman gave his clerk a cheque to pay an account, he entered it as paid, but if it appeared some time after that it was not paid, still the original entry must remain, and the account be rectified by other entries. Mr. Waddington now spoke as if all the cause of his displeasure with the Directors had arisen from the accounts made up on the 9th of the August; but when he retired from the meeting of Directors on the 23rd of June, he said, with all the warmth and action which he had to-day shown but felt so capable of exhibiting—"Gentlemen, I will meet you at the half-yearly meeting." Therefore it was plain Mr. Waddington's objections did not arise from the 9th of August, but from the 23rd of June.

Mr. WADDINGTON said, there were other matters which he had not wished to go into, but he was now compelled. He wished to spare the feelings of gentlemen, and not to enter upon matters which he should be sorry to do. That was the reason of his saying that he should be with them on the 23rd of August.

The CHAIRMAN wished to remind the meeting of the position in which it stood. Mr. Waddington had moved an amendment, and had stated his grounds for it. An irregular conversation had since taken place, and if he had called gentlemen to order earlier, he should, perhaps, better have performed his duty. He now asked if any gentleman seconded Mr. Waddington's motion?

Mr. WADDINGTON merely wished to refer to one line in the letter he wrote to the Chairman, on the 14th of June. In that, he said it was his opinion that, by retiring from the Direction previous to the meeting, he should be better able to explain everything.

Mr. PERRY again urged the withdrawal of Mr. Waddington's amendment; to be again proposed, omitting that part relating to the accounts, as a substantive motion.

Mr. WADDINGTON therefore withdrew it.

Mr. COLLIER referred to the item in the accounts of 4000*l*. paid on account of calls. He understood from this, that if the call on him was for 100*l*. and it was not convenient for him to pay more than 50*l*. the Directors would take 50*l*. on account. He thought this was establishing a bad precedent, and he had not been aware that such a system was acted on. He wished to know what the Directors meant to do in future, for the report was silent as to their view of the mode of carrying out the undertaking. Several contracts were approaching their completion, but nothing was said about taking measures to let others. It was evident that funds were wanted, and he apprehended, the shares at the disposal of the Directors would have to be issued at great disadvantage, probably as much as 40 per cent. As they had accommodated persons unable to pay the whole of their calls, he wished to know if they had gone further and accepted bills in payment of calls?

Mr. T. J. PARKER said, bills had been taken in some few cases, but they had been exceptions, and always accompanied by an undertaking signed by the shareholder, that the bills were not to be considered as payment, and reserving the right of the Company to forfeit or to sue for the full amount of the shares, and declaring that the bills were taken solely for the accommodation of the shareholders.

Mr. BLAKE: A person having paid bills could not sell his shares, and the bills lay in the Bank till they became due.

Mr T. J. PARKER added, that in the case of persons who could not pay the whole, but had paid part of their calls, the Directors had thought it more prudent to secure part of the money than to run the risk of losing all. It went to improve the value of shares if they should be forfeited, and those who paid part got no receipt for the money till they had paid the whole.

Mr. BOULTBEE said, when the 219 shares were declared forfeited, the average amount paid on them was stated in the report. He thought the same thing should now be done.

Mr. ELLISON said, the gross amount was 4,450*l*., or 9*l*. 10*s*. 6*d*. each.

In answer to the question, what the expenses of the Direction consisted of, it was explained that the working Committee met every week, and the Board of Directors once a month. Their meetings were held at Ashopton or Glossop, to which the Directors had to travel from Sheffield or Manchester; and their allowance for chaise-hire was 1*s*. per mile.

A SHAREHOLDER remarked that the sum, in addition to the allowance to the Directors, was very large; and considering the state of the Company, the utmost economy should be exercised.

Mr. BRADLEY asked for a list, showing how much each call ought to have produced, how much it had produced, and the deficiency. [Such a statement was shown him, but it was not read aloud. It was remarked that the abstract of accounts supplied the means of arriving at this information.]

Mr. W. JACKSON said no doubt they would have to go to Parliament again for an Act to raise more money—and then he hoped they would also reduce the sixteen Directors to nine. This had been done by the Sheffield and Rotherham Railway Company, with the best effect. He begged to ask of what kind were the third class carriages which they had ordered? Had they seats?—(No.) Then he most decidedly disapproved of them. They must pay some deference to the working classes if they wished to succeed in things of this kind. There was no truth more clear than this. They would find that the third class carriages of the North Midland took most money. He was sorry they thought of imitating the third class carriages of the Leeds and Manchester, which conveyed the people as they carried pigs. He thought the third class carriages of the North Midland answered well. Respectable persons would not resort to them, and yet they made the people somewhat comfortable. They must pay respect to the lower orders. It was a point on which much depended.

Mr. E. Unwin moved, and Mr. Sidebottom seconded, the next resolution, as to the printing of the accounts.

The Engineer's Report, which had been omitted before, was now read by the Resident Engineer, (Mr. Gee.)

A SHAREHOLDER inquired when the additional power was supplied to the engines.

Mr. GEE—About three months ago.

Mr. COLLIER—Was it intended to work east and west from shaft No. 5.

Mr. GEE—Yes.

In answer to other questions it was stated that the Etherow viaduct, in consequence of the delay that had prevented its commencement, could not be completed in less than about twelve months. Nearly 50,000*l*. had already been spent upon the tunnel.

Mr. PERRY requested that it might be explained how the money had been spent upon the tunnel. He believed that not more than about 7,000*l*. was spent upon the driftway of the tunnel.

The CHAIRMAN said, nearly the whole had been spent upon the necessary surface works, engines, waggons, cottages, stables, sheds, &c.

Mr. GEE remarked that, in addition to what had been executed of the drift way, about half a mile of the line at the east end had been formed. He read the items of the expenditure as follows:—Engines, sheds, and fixtures, 10,025*l*.; observatories and station sheds, 600*l*.; cottages, &c., 3,700*l*.; surface road, 1,517*l*.; walls, 55*l*.; materials, timber, &c., 8,180*l*.; labour done in excavation, 22,047*l*., of which about 3,300*l*. was for the eastern, and 3,875*l*. for the western drift.

Mr. PERRY said he was one of those who became a proprietor unintentionally, but when he found that he was a proprietor, and must remain one, he set about making the best of the thing. He went over the works several months since, and again about one

Digitized by Google

month ago, and if many other proprietors would do the same, he thought they would hear fewer gloomy anticipations The great matter was, this tunnel; and some intelligent persons had told him that it could not be executed in less than seven or ten years, and that, instead of 50,000*l.*, it would cost 300,000*l.* Yet they had one-fifth of the drift-way now done for 7000*l.* The shafts were three-fourths sunk, so that that they had but one-fourth more of the shafts to sink, and then the drift would proceed rapidly. He was convinced the tunnel would be completed at a sum near it, if not within the estimate. It was necessary that this work should be pushed on. At present, many persons who had paid 25*l.* or 35*l.* per share, thought it would be better to abandon that than lose more by going forward. When they saw that it was to their interest that the undertaking should go forward, they would pay more readily. He moved that the Report of the Resident Engineer be printed and circulated.

The motion was seconded by Mr. BRADSHAW, and carried.

Mr. WADDINGTON, in moving for the appointment of the Committee, said, there were several matters which he wished to leave for their consideration. He would not state them, for he did not wish to say anything to prejudice the railway. As one of the Directors, he had not shrunk from liabilities, and to expedite its business he had undertaken burdens in the way of guarantees, which perhaps he ought not to have done. He was therefore particularly anxious that it should be conducted in a way that he thought would rescue it from the low condition in which it stood. He would not enter upon any statement of figures, unless the motion were opposed, in which case he must enter into a statement which he thought would induce the meeting to grant the Committee. He moved that a Committee be appointed to investigate the state and prospects of the works and the finances of the Company, and to report to an adjourned meeting. It appeared that on a large proportion of their shares, the calls could not be recovered, and therefore, before carrying forwards the work, they should know the position in which they stood, and what would be required for its completion.

Mr. PERRY seconded the motion. He was sure that if such a Committee were appointed of the respectable and intelligent men he saw around him, its effect would be to disabuse the public mind relative to the undertaking. One great subject of distrust was the tunnel. They had made calls to the extent of 72*l.* 10*s.* on each share, yet they had only been able to complete six miles; and it was asked if, upon one-seventh of the work they spent two-thirds of the money, how could the undertaking ever be completed! In answer to this, it would be for the Committee to show that the works executed were within the estimated amount, and that the rest would also be completed within the estimate. About the share list, there seemed to be a good deal of uncertainty, and it was desirable that it should be fully revised in order that the shares of those who could not pay up might be forfeited, and the shares re-issued to other parties, thus making them available for the prosecution of the work at as small a sacrifice as possible. There were many reasons why they should, if possible, avoid going to Parliament for another act. Since their act was obtained, a number of standing clauses had been resolved upon, which every railway, applying for a new act, was compelled to receive, and which might cause them some considerable embarrassment. He urged, therefore, that they should endeavour to execute the line under the present act, and he did not concur in the desponding view of their prospects which many were inclined to take. He was satisfied that a close investigation would enable them to produce such a report as would materially alter the public feeling with regard to the undertaking, and would enable them to re-issue the forfeited shares at a sacrifice not greater than the sums received on them. It was desirable, too, that they should have an opinion as to the funds that would be required during the next two years. He thought that about 100,000*l.* a year for two years, would put the line in such a position that they would be able to complete it in the third year; and this sum he thought there would be no difficulty in obtaining it if they revised the share list. If they could once see day-light through the tunnel, and the large viaduct in a forward state, he thought they would have no difficulty in filling up the list. He hoped that by that time the embarrassment of trade would be in some degree removed, and that there would be no material difficulty in making the shares available at a sacrifice not much exceeding the amount received. For these purposes, in order to set the undertaking right with the shareholders and public, he was anxious that a committee should be appointed. Suggestions had been made that they should stop at Glossop, and that that would be as much as they were able to do; but he thought that they ought at once to show that that was not for a moment contemplated. (Cheers.) He should be glad to find the ground broken beyond Glossop. A reference to the estimates would show that that portion would be of little comparative expense, and that the work from Glossop to the tunnel would cost only 32,000*l.*, or little more than 4,500*l.* a mile, while other parts would average 35,000*l.* He wished to put an extinguisher upon the idea that they were going to stop short, and for this purpose, he wished to see the ground broken between Glossop and the tunnel. He hoped the Directors, as the additional amount required would be so small, would consider it advisable to take the course he suggested. He looked forward at some future day to an extension of this line to Leeds, by Penistone, Barnsley, and Normantown, which might be done at litle expense. He was anxious that the work between Glossop and the tunnel should be undertaken, in order that the people in that part of the country might see that they meant to complete the work, and then they would be assisted. The Leeds and Manchester line, a length of 60 miles, cost two millions and a half, while the additional line which he suggested, would diminish the distance to Leeds by 10 miles, and might be made at half the expense. Thus, he thought they might secure a considerable share of traffic; and for this purpose, it was desirable that they should show their determination to complete the line according to the Act. (Cheers.) He hoped that Committee would appoint the Committee, which he had more pleasure in proposing, because he was sure the management of the Directors could not suffer from the closest investigation. (Cheers.)

Mr. ELLISON, as one of the Directors, though he had not taken a very active part, thought it right to express his concurrence in the motion which had been made. (Cheers.) He was sure there was nothing the Directors had done which they need hesitate to expose to the closest scrutiny, and he was satisfied that the best results would arise from this resolution. He hoped it would pass unanimously.

Mr. SYKES, as a Director, felt bound to express his opinion in favour of the resolution.

Mr. W. JACKSON disapproved of the motion. He was convinced that the Directors had consulted the best interest of the shareholders, and had exercised the utmost economy throughout. He regretted that the Manchester end had not been commenced long ago, and the tunnel lost sight of until the completion of the line to Glossop. He did not think the Committee could be productive of any advantage, for there could be no doubt at all they would have to raise more money, and that no doubt might be done when the line was completed to Glossop.

Mr. COLLIER thought the appointment of the Committee would seem to imply that something was wrong—and would intimate a want of confidence in the Directors. They were well aware of the embarrassments of the undertaking, which arose from want of funds, but those funds would be forthcoming when they made an opening to Glossop. If they then realised, as was expected—he would not say 6½—but 5 per cent., it would bring their shares into the market, and put them in possession of capital. The Directors had now acquired much experience, and were in fact railway men, and it would be very injudicious to appoint a Committee of inexperienced persons to supervise their proceedings. He thought the worst news they had heard was, that the delay of the viaduct would postpone the opening of the line for twelve months.

Mr. W. FISHER, after apologising for making any remark, on account of the small share he had in the undertaking, objected to the motion, as casting a reflection on the Directors. He could not divest himself of the idea that the objections made to the report partook rather of a factious character. The Directors could not anticipate a man's committing forgery, but the misfortune having arisen, they made the best of it, and, in his opinion, the accounts were made up in a business-like manner. He thought that there was something factious in the exceptions taken to the accounts, and that to appoint a Committee to prepare the report desired, would be to intimate that the Directors were not competent to do it.

Mr. BRADSHAW supported the motion, but disclaimed all idea to throw discredit on the Directors. He thought that the Committee would elicit valuable information.

Mr. HOYLAND objected, that to appoint this Committee would be like setting aside the Directors, and he knew not why it should be done, if they had done nothing amiss.

Mr. BRADSHAW asked, if the present state of the railway was not a reason for enquiry, without imputing blame to any?

The CHAIRMAN said, as they were now engaged in a regular debate on a specific motion, it was necessary that gentlemen should confine themselves to the rule of speaking only once each.

Mr. BELL objected to the Committee, but would be glad to know how the Directors meant to complete the railway. Calculating the good shares at 3700, and the sums received on forfeited shares, they could not count on more than half a million.

Mr. BUTCHER said, they had power to borrow 133.000*l.*

Mr. BELL apprehended the line could not be completed under a million.

Mr. PERRY disclaimed all idea of casting any reflection on the Directors; his object was merely to elicit information, which he was convinced would benefit the undertaking in the opinion of the public.

Mr. WADDINGTON disclaimed all factious motives, and in proof that he was incapable of being actuated by them, said, that when he could no longer act with the Directors he retired. Nor need it be a raw committee, for though he could not act on it himself, he hoped the shareholders would secure the services of Mr. Perry, a Director of the Dublin and Kingston Railway, and of other intelligent and respectable gentlemen among the shareholders. He anticipated, as the result of the enquiry, a report that would satisfy the public that this line was one of the most tangible and healthy in the kingdom, if it were only developed.

In answer to the question, if any revised estimate had been made, the CHAIRMAN said, the original estimates were by Mr. Vignolles, and they had been confirmed by those of Mr. Locke, his successor. So far as the works had been effected, the estimates had been verified by experience; and he asked of what other railway could the same be said? Having had the estimates thus made by two of the best engineers, and confirmed by experience, he did not see what would be the use of calling in another engineer to prepare a further estimate. Such a course would only be to throw away a considerable sum of money.

Mr. JACKSON asked if each member of this Committee was to have 100*l.* a year. (Laughter.)

The CHAIRMAN said, before he put the question, he must remark that, in point of law, this Committee must be inoperative, for it was not a proceeding authorized by the Act of Parliament, and, therefore, could be merely a conventional thing. If the proprietors chose to support it, let them do so. He should not say a word for or against it. To him it was perfectly indifferent. If gentlemen thought it would do good, let them appoint it. If they thought it would do no good, it would be useless to appoint it. The Act would give its recommendations no validity until they should be adopted by the proprietors. The Directors would in no degree be bound to follow its advice, further than they would be disposed to attend to any suggestions from whatever quarter, that might appear likely to be beneficial to the undertaking. The proprietary was the last resort, and before the recommendations of the Committee could be operative in point of law, they must receive the sanction of the body.

The question was then put to the vote, and the motion lost by a majority of 32 to 14.

Mr. BRADSHAW then moved that the Report and the abstract of accounts should be furnished seven days before each half-yearly meeting.

Mr. GAINSFORD apprehended there would be no difficulty in complying with this as to the accounts, but the Report must remain in the knowledge of the Directors, subject to their discretion up to the time of the meeting.

The motion was altered, so as to include only the accounts, which are to be obtained by any shareholder at the offices of the Company a week before the meeting.

Mr. HARDER seconded the motion, which was carried.

The CHAIRMAN then read over the numbers of the shares which were declared forfeited; and Mr. Bradley moved that the forfeiture be confirmed.

The motion was seconded by Mr. PERRY.

Mr. COLLIER said, unless the names were given the shareholders could not judge of the propriety of this course, and must vote, depending entirely on the Directors.

The CHAIRMAN said, at the last meeting the names were given; but it was intimated that this was an undesirable and unnecessary exposure of the affairs of individuals. Of course, it was entirely a question of confidence, and must still be so, even if the names were given, as the shareholders could not investigate each case as the Directors had done.

Digitized by Google

A SHAREHOLDER said, if they heard the names, some individuals might be known to whom they should object.

The names were then read over, but without the residences.

Mr. WADDINGTON said, he had alluded to his personal responsibilities on behalf of the Company. He was happy now to say that Mr. Tromeley, his successor, had come forward to relieve him of those liabilities.

The declaration of the forfeitures was then confirmed.

Mr. W. JACKSON moved, and Mr. E UMWIN seconded the motion, that the Directors should be authorised to dispose of the forfeited shares at such price as they should think fit

In answer to a question whether they could be issued in half shares, the Chairman said not without a new act.

It was next asked, whether the parties taking shares could be assured of a dividend of five per cent. before the old shareholders, as had been done by other companies?

The CHAIRMAN intimated that this might be done by way of loan.

In answer to Mr. Bell, Mr. JEE said that the weekly expenditure had been about 200*l.*, but would now be less, as they were now supplied with all the material they should want.

Mr. BELL thought they should not separate without some definitive resolution, and he moved that, as it appeared from the statement of the Directors, that half a million was all the capital they could depend upon, it was not desirable at present to proceed with the works east of Glossop.

Mr. ELLISON said, that would be to put a stop to all they had done.

Mr. PERRY said, this was a disposition which he apprehended, and which would be most prejudicial to the undertaking. It would be to throw away the 50,000*l.* spent upon the tunnel, and would ruin the concern. The apprehension of this had induced him to come from his home to attend the meeting, and it gave him great concern to hear such a motion from so respectable and intelligent a gentleman. He urged the importance of the Directors taking some decisive measures to set that idea at rest for ever. Let them at once break ground beyond Glossop, for the expense between that place and the tunnel would be very trifling. If they could only get beyond the tunnel, they would take the Sheffield traffic from the tunnel to Manchester. The seven miles from Glossop to the tunnel would cost only 32,000*l.* and including everything would not exceed 70,000*l.*. To all short of that, would betray a want of confidence in themselves most prejudicial to the undertaking. He had been endeavouring to prepare a short resolution, as the meeting had not assented to the appointment of the Committee, that Mr. Locke should be requested to make a report of the work executed, and its cost, compared with the estimate; and also of the work to be done with its estimated cost, and the time necessary for its completion.

Mr. BELL said, if that Report were to be made to a general meeting, he would withdraw his motion.

Mr. BRADLEY seconded the motion of Mr. Perry, and regretted to find that Mr. Jackson was disposed to stop at Glossop.

Mr. JACKSON said that Mr. Bradley had misunderstood him. His idea was that they should have completed the line to Glossop, before they spent money on any other part. He expressed a hope that the portion of the line in operation might be completed by next midsummer, in order that it might obtain a part of the summer traffic to the western coast.

Mr. PERRY asked if the completion of the line to the tunnel would not facilitate the viaduct at Dinting, and

Mr. GEE replied that it would.

Mr. Perry's motion was then put to the vote, and carried.

Mr. SYKES said, that on the 29th August, 1838, at the general meeting, the shareholders voted 1,000*l.* a-year to the Directors. He was sure that was done with the best intention, but it had not been realised—for instead of its being a matter agreeable to the Directors, it had been nothing but matter of discord. He was of opinion that the work would be better done without than with it. He therefore proposed, that the resolution to which he had referred be rescinded.

Mr. S BUTCHER seconded the motion, but under the impression that the proprietors would negative it at once. He thought that the Directors were amply worthy of what they received.

Mr. COLLIER said, this was a very generous proposition, but though the Company needed economy, they ought not to be niggardly. He did not know why sixteen Directors should quarrel about 1,000*l.*, if they gave 1,000*l.* to them; and it was for the shareholders to consider whether the work was likely to be well attended to if the grant was discontinued.

Mr. ELLISON said, as the subject had been brought before the shareholders, he must say, that 1,000*l.* appeared to be a very large sum, and he thought it ought to include travelling and other expenses of the Direction. Since this money was granted he had attended badly—not half so well as before—and he should have as much pleasure in rendering his services without receiving sixpence, as if paid for them It would meet his views if it were understood that the 1,000*l.* should include the travelling expenses of the Directors.

Mr. HOYLAND asked, was there no intention, on the part of one or two of the body, to put themselves forward as managing Directors. He should object to such a thing, and hoped it would not be submitted to; but he believed some such measure was in contemplation.

Mr. ELLISON did not know whether Mr. Hoyland supposed that he had any such ambition. He would not undertake it for the whole 1,000*l.*

Mr. TURNER said, as Mr. Sykes had alluded to a difference of opinion among the Directors, he might explain that the question was whether each was to have one hundred, whether he worked or not, or whether it was to be applied at the discretion of the Directors, and divided among them in proportion as they attended to the work. The opinion of the solicitors was taken, and they decided that each Director must have his 100*l.*, whether he attended a meeting or not. Whatever sum the proprietary might grant to the Directors, he thought it ought to be divided according to the decision of the majority.

Mr. T. J. PARKER said, that at present the money was to be divided as the Directors thought fit, but required that they should all concur, and for some it had been so, but one or two Directors dissenting, the majority had no power to enforce their decision against them.

Mr. PERRY thought, to divide it equally without regard to the attendance of Directors, would be a bonus on neglect. He had been a member of several boards, where the rule was to divide the sum granted by the number of attendances £1,000 a year was more than he knew of being granted to any other direction. It appeared the expenses of the direction had amounted to 8,000*l.* He should think 1,000*l.* a year sufficient.

Mr. TURNER said the money had been divided according to the attendance, till a proposition was made to have Managing Directors, and that being rejected, a Director said he should claim his proportion, and sent in a bill for his 100*l.* The solicitors of the Company gave it as their opinion that it must be so.

Mr. WADDINGTON—It was not me, gentlemen. (Laughter.)

In reply to Mr Bradshaw, Mr. ELLISON said that the expenses of the Direction were about half the amount of the allowance.

Mr. SYKES said, in moving the present resolution, he had been actuated by a desire to save the money of the proprietors, and to do away with a bone of contention among the Directors. If the allowance were taken away, he could answer for himself that he should act for the benefit of the undertaking to the best of his ability, and he trusted that others were prepared to say the same.

Mr. W. BUTCHER said many of the observations which had been made were new to him. He had been a member of the Direction from the first, and when he had not attended he had never received the money.

Mr. ROWBOTHAM wished to ask whether it was proposed to appoint Mr. Waddington and Mr. Sykes, Managing Directors, the one with 600*l.* and the other with 800*l.* a year? If that were the case, they would save nothing.

The CHAIRMAN said, it was for the proprietors to decide whether they would make any allowance to the Direction or not. He would not condescend to say a word on the subject. He hoped it was not a matter of importance either to the proprietors or to the Directors what precise amount might be fixed. As to the particular question which had been asked, gentlemen could hardly expect the Directors to answer questions as to every motion that might be made at the meetings of the board.

Mr. COLLIER inquired whether Mr Perry would make a motion that the allowance to the Direction should be 1000*l.* a year, to be distributed according to the attendance of each member? But if the allowance were to be 1,000*l.* he thought it should include expenses.

Mr. PERRY proposed, as an amendment, that the 1,000*l.* should include the expenses of the Direction, and that the surplus should be divided among the Directors in such manner as the majority might determine.

Mr. SYKES agreed to adopt the motion as thus altered.

The CHAIRMAN thought that propositions of this sort came better from the other side of the table than from Directors.

Mr. APPLEBY said, if there was any blame in the matter, it belonged to the Solicitors, for the Directors had divided the money according to their construction of the resolution, until the Solicitors had given a contrary opinion.

In answer to the question as to what had been done with the money, Mr. Turner said that none had been divided since that opinion had been given.

Mr. T. J. PARKER said, the opinion of the solicitors was not asked till the Directors had failed to agree. There had been mooted among them another manner of dividing it, and then the Solicitors were called upon for their opinion whether, under the resolution and against the wish of one Director, they could divide it as they thought fit. The difficulty might be obviated by the proprietors giving the power to a majority of the Directors to decide upon the division.

Mr. PERRY said this rendered his motion necessary, and on being put to the vote it was carried.

Mr. PERRY being informed that the salary of the chief engineer was 750*l.* a-year, suggested to the Directors whether, as they had an able resident engineer, its expenditure might not be diminished.

In answer to Mr. Bradshaw, it was stated that the charge for auditing the accounts was 10*l.*

The CHAIRMAN again referred to the question put by Mr. Rowbotham, whether it had not been proposed to appoint Mr. Waddington and Mr. Sykes managing Directors. He might now state, that there had been a proposition as to the appointment of managing Directors, but without reference to the names of any particular persons.

Mr. T. A. WARD moved a vote of thanks to the Chairman.

Mr. WADDINGTON seconded the motion expressing his sense of the deep interest which the Chirman had in the undertaking, on account of the immense benefit it would confer upon his constituents.

The motion having been carried by acclamation,

The CHAIRMAN begged to acknowledge the kind forbearance of the proprietary; for it must be obvious to every gentleman knowing his occupations, that he could not be fully acquainted with the details of the business, or prepared to answer every question put to him. He had stated this last summer to the gentlemen who had invited him to accept the chair, on account of the position that he occupied as the representative of this borough. He accepted in provisionally, under a feeling that events might render attention to it incompatible with his other duties; and he had since found that had there been a probability of his occupations in London continuing to confine him there, the holding of this situation would have been incompatible with the performing of those duties, for it was impossible that any man who was Secretary of the Admiralty, could be anything but Secretary of the Admiralty. It had been his intention, therefore, if events had made it probable that he should continue in that office, to request that this might have been confided to the hands of some other person. Since he had the honour of presiding at their meeting at Easter, he had not been able to attend a single meeting, and he had intimated to several of his friends, that it would be necessary for him to resign; but at present it did not seem that that necessity would arise, for in all probability, said Mr. Parker, smiling, I shall be able to apply more time to the performance of my duties as your Chairman. (Laughter.) You all understand what I mean. (Laughter and cheers.) I need do no more than again express my obligation for your forbearance towards me; for since I came down on Saturday, it has been quite impossible for me to make myself acquainted with the details of the business, since Easter, and to be prepared to answer the questions which, as your Chairman, I am bound to do.

The meeting separated about four o'clock.

FOR SALE.—A newly finished six-wheeled Locomotive Engine, 4 feet 8½ inch gauge, 12 inch cylinders, 18 inch stroke, 5 feet driving wheels, copper fire-box, brass tubes, with a new arrangement for regulating the fire, whereby the consumption of coke is very materially lessened. The working gear of this engine embraces all the most recent improvements, and is finished in the best style of workmanship.

For particulars apply to Isaac Dodds, Esq., Resident Engineer, Sheffield and Rotherham Railway, Sheffield.

BIRMINGHAM AND GLOUCESTER RAILWAY.—At a late hour of the General Meeting on the 24th August, the following resolution was passed:—"That Mr. Gibbins, not having any longer the confidence of the proprietors be requested to withdraw his name from the list of Directors."

Not the slightest intimation was made to me before the meeting of the intention to bring forward any such motion; and from the very vague statement by which it was preceded, and the refusal of the party from whom it emanated to make a specific charge, I was precluded from doing more than state that I had never taken any advantage of my position as a Director in the purchase or sale of shares. This I again assert; and further, that I have always used my best endeavours to promote the welfare of the undertaking; and I had, therefore, every reason to expect that such a motion would not have been entertained. Of the number of proprietors present very little more than one-fourth expressed any opinion either way, and of those who did I am led to believe that some did not clearly understand the bearings of the case.

I have ascertained since the meeting, that the transaction alluded to, and upon which the resolution was founded, was a contract I made at the solicitation of the party, bearing date the 24th December, 1840, to deliver twenty shares at 2/ discount on or before the end of March this year. Into the transaction I court the strictest inquiry.

The number of my shares in the Birmingham and Gloucester Railway is 199, the same as at the beginning of the year. I have taken my proportion of quarter shares, and have purchased at a premium upwards of 200 more, so that at the present time I hold 199 shares and upwards of 400 quarter shares, a sufficient stake to secure my best services.

JOSEPH GIBBINS.

Birmingham, August 23, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.—TENTH HALF-YEARLY GENERAL MEETING OF THE COURT OF PROPRIETORS.—At a General Meeting of the Birmingham and Gloucester Railway Company, held in pursuance of the provisions of the Acts of Incorporation, at the Waterloo Rooms, Waterloo street, Birmingham, on Friday, the 20th day of August, 1841; Captain C. R. MOORSOM, R. N., in the Chair,

It was resolved—

1.—That the common seal of the Company be affixed to the register of proprietors.—[The seal was affixed accordingly.]

2.—That the Report of the Auditors now read, be received and adopted, and entered upon the minutes.

3.—That the Report of the Committe now read, and the accompanying accounts, be received and adopted, and entered upon the minutes.

4.—That of the following Directors, viz., Samuel Bowly, Esq., William Fox, Esq., Daniel Ledsam, Esq., and Captain Constantine Richard Moorsom, R. N., who go out of office (by rotation) at the present General Meeting, Samuel Bowly, Esq., Daniel Ledsam, Esq., and Captain Constantine Richard Moorsom, R. N., be re-elected; and that Anthony Kington Baker, Esq., be re-elected in the place of William Fox, Esq.

5.—That Messrs. Ledsam, Francis, and Baker, be appointed Auditors of the accounts of the Company for the next twelve months, upon the principle laid down by the Committee in their Report.

6.—That the best thanks of this meeting be given to Mr. Daniel Ledsam and Mr. John Francis, for their Report as Auditors.

7.—That Mr. Gibbins, not having any longer the confidence of the proprietors, be requested to withdraw his name from the list of Directors.

8.—That the sum of 600*l.* be placed at the disposal of the Directors for the ensuing twelve months.

9.—That the thanks of the proprietors be given to the Directors, for their zealous and valuable services.

The Chairman having quitted the chair,

Resolved unanimously—

That the thanks of the meeting be given to the Chairman, for his able, courteous, and impartial conduct in the chair.

Mr. Ellins gave notice, that at the next Half yearly General Meeting he intends to bring the question of additional trains on Sundays again under discussion.

CHESTER AND BIRKENHEAD RAILWAY.—Wanted an active and intelligent person to fill the office of Station Inspector at Birkenhead, his principal duties will be to attend the departure and arrival of trains, to Superintend the Porters, Omnibuses, and Parcel Department, and to make himself generally useful in the office. Salary £100 per annum.

Testimonials as to ability and character to be addressed to Mr. Jones, the Treasurer, at the Company's Office, Birkenhead, previous to the 11th September.

SHEFFIELD AND ROTHERHAM RAILWAY.—ADJOURNED ANNUAL GENERAL MEETING, 1841.—NOTICE is hereby given, That the Adjourned Annual General Meeting of the Sheffield and Rotherham Railway Company, will be held at the Sheffield Station, on Thursday, the 9th day of September next, at 2 o'clock at noon, (by adjournment from the 11th day of August instant), for the transaction of business, pursuant to the Company's Acts of Parliament.

The Books for the Registry of Transfers of Shares will be closed from the 4th to the 14th of September, both inclusive.

Dated this 27th day of August, 1841.

THOS. BADGER, Rotherham,
HENRY VICKERS, Sheffield, } Law Clerks.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, an Extensive and Valuable MANUFACTORY for the construction of Steam-Engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly Four Acres of Freehold Ground, at a very moderate feu-duty or ground-rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

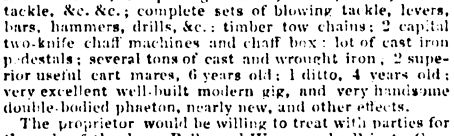
The Engines, Boilers, and Machinery of several of the large class of Steam-ships have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The Foreign and Coasting Trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the Steam Trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-Works, and belonging to the same Proprietors, is an extensive ROPE, SAIL, and FELT WORK, which will also be disposed of, either with or without the Iron-Work, as may be agreed upon.

To a party desirous of engaging in the Building and Equipping of Steam or Sailing Vessels, the construction and repairing of Steam-engines, Sugar-mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the Buildings are substantial, commodious, and suitable for the respective trades carried on within them. The Machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the mean time, the work will continue to be carried on in all its branches, and orders executed as usual.



A Plan and Specification of the Premises have been printed, which may, with all particulars and futher information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W.S., Edinburgh; or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the Title Deeds of the Property are.

TO RAILWAY CONTRACTORS, BUILDERS, SMITHS, and Others.—SALE of Railway Materials, &c. at Long Bridge, near Northfield, six miles from Birmingham, near the Worcester Turnpike Road.—JOHN SODEN has received instructions from Mr. W. Ridler, Railway Contractor, to submit to Public Competition, the whole of his valuable Stock of Railway Materials and other Effects, on Tuesday and Wednesday, the 14th and 15th of September next, consisting of about 150 tons of flat-bottom wrought iron rails, weighing from 40 lbs. to 48 lbs. per yard; 50 very excellent and extra strong railway waggons, capable of carrying 2½ yards of earth, 4 feet 8½ inch gauge, equal to new, and fit for immediate use; about 150 railway wheelbarrows, in capital repair; several hundred feet of planking, from 12 to 20 feet long; quantity of deal baulk and other timber, in lots; 2 capital timber carriages; 5 excellent 6 inch carts; 1 covered spring ditto; from 30 to 40 sets of good trace horse tackle and thiller ditto; 20 or 30 sets of wheels and axles, in good working condition, and a quantity of wrought iron axles; 2 sets of smiths' tools, comprising bellows, anvils, vices, screw tackle, &c. &c.; complete sets of blowing tackle, levers, bars, hammers, drills, &c.; timber tow chains; 2 capital two-knife chaff machines and chaff box; lot of cast iron pedestals; several tons of cast and wrought iron, 2 superior useful cart mares, 6 years old; 1 ditto, 4 years old; very excellent well-built modern gig, and very handsome double-bodied phaeton, nearly new, and other effects.

The proprietor would be willing to treat with parties for the sale of the Iron Rails and Waggons by Private Contract, any day not later than the 1st of September, of which if effected due notice will be given. A liberal credit will be allowed if required, to purchasers of above £20, upon good and approved security.

Catalogues of particulars will appear in due course, and may be had on application at the Angel Inn, Coleshill street, Birmingham; of the Auctioneer, Coventry; or of the proprietor, upon the premises.

Sale to commence each morning at Eleven o'Clock.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin: and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

Planing machine; works by hand, will plane 5 feet by 18 inches.

GLASGOW, PAISLEY, KILMARNOCK AND AYR RAILWAY.—TENTH CALL OF £5, MAKING £50 PER SHARE.—NOTICE is hereby given, that the Directors of this Company, at their Monthly Meeting held 4th August, 1841; Resolved, in virtue of the powers vested in them by the 112th section of the Act of Incorporation, to make a Tenth Call of £5 per Share, payable to their account, at one of the under-mentioned Banks, on Wednesday, the 15th day of September next. Shareholders are consequently required to cause the amount due on the number of Shares registered in their name, to be paid accordingly.

Interest at the rate of 5 per cent. will be paid on all sums deposited in advance, and the same rate of interest will be chrrged on all arrears after that date.

JAMES M'CALL, Chairman.

Railway Office, Glasgow, 16th Aug. 1841.

BANKS APPOINTED TO RECEIVE PAYMENT.

Glasgow—The Glasgow Union Bank.
Ayr—Ditto, ditto, Branch.
Edinburgh—Sir Wm. Forbes and Co. for ditto.
London—Messrs. Jones, Loyd and Co. for ditto.
Leeds—The Leeds Banking Company for ditto.
Liverpool—Messrs. Moss and Co.
Manchester—Messrs. Wm. Jones, Loyd and Co.

ULSTER RAILWAY COMPANY.—In compliance with a Resolution of the Directors, this day entered into, I hereby give NOTICE, That they have made a Tenth Call for the Sum of Two Pounds Ten Shillings sterling, on each and every Share of the Company's stock: payment to be made on or before the 1st day of September next, to the Northern Banking Company, Belfast, or any of their Branches: to Messrs. Boyle, Low, Pim, and Co., their Agents in Dublin; or to Messrs. Brown, Shipley, and Co., of Liverpool,

Dated at the Railway Office, Belfast, this 1st day of July, 1841.

JAMES GODDARD, Chairman of the Directors.

In tendering the money as above, it will be necessary to state the number of each Share on which the instalment is paid.

Interest, at the rate of 5 per cent. per annum, will be allowed to the 1st of September on all Sums paid of this Call in advance.

TAFF VALE RAILWAY.—The appointment of Secretary to this Company being about to become vacant by the resignation of their present Secretary, the Directors are ready to receive the applications of gentlemen desirous of becoming candidates for the situation.

Applications, stating full particulars of the age, qualifications, and former employment of the applicants, accompanied by the necessary testimonials, to be addressed to the Directors before the next Board Meeting at Cardiff, on the 8th day of September.

By order of the Board,

JOSEPH BALL, Secretary.

Railway Office, Cardiff, August 26, 1841.

TO RAILWAY DIRECTORS, ENGINEERS, CONTRACTORS, &c.—THOMAS HARGREAVES, Timber Merchant, &c., Tunstall, Staffordshire Potteries, begs to intimate to parties purchasing English Oak, Tree-nails, and Wedges, used in the construction of Railways, and so highly recommended by the Institution of Civil Engineers, that from the extensive and well seasoned stock of Oak planking of all dimensions he possesses, together with the aid of steam power and experienced workmen in their conversion, he is enabled to furnish supplies to any extent at the shortest notice, and on the most reasonable terms, to any part of the kingdom.

Orders, with dimensions and quantity required, will be promptly attended to by addressing a line as above.

TO ADVERTISERS.—A Prospectus, Specimen, and Terms of Advertising in that popular and widely circulated annual, the Hull, Yorkshire, Lincolnshire, Midland, and Northern Counties ALMANACK AND DIARY for 1842, may be had gratis, on application to the publisher, Joseph Noble, 23, Market-place, Hull; Mr. F. D. Lewis, newspaper and advertisement agent, 2, Birchin-lane, Cornhill, London; Mr. Sutherland, 12, Calton-street, Edinburgh; or Mr. Cumming, bookseller, Dublin.

N.B. Sent postage paid to any part of the United Kingdom.

BRITISH IRON COMPANY.—Full Reports of the proceedings at the Two Meetings of Proprietors of this unfortunate concern, held during the past week, are published in the Mining Journal, Railway and Commercial Gazette, of this day, Saturday, August 28.

The MINING JOURNAL is published at two o'Clock every Saturday afternoon, at the Office, No. 37 New Broad-street, City, price Sixpence, and may be had of all Booksellers and Newsvenders in Town and Country; containing original papers on Geology, Mineralogy, and Metallurgy; combining therewith reports of the proceedings of public Companies, Correspondence from the English and Foreign Mining Districts, sales and purchases of ores, prices of metals and materials, prices of English and foreign funds, shares in mines, railways, joint stock banks, canals, &c., London Gazette, and much original and interesting scientific intelligence, &c.—forming an invaluable record of very occurrence relating to

MINES, RAILWAYS, JOINT-STOCK BANKS, &c.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.

Report of the Directors to the Shareholders in the above Undertaking, submitted to a General Meeting of Proprietors at the Cutlers' Hall in Sheffield, on the 23rd day of August, 1841;

JOHN PARKER, Esq., M.P., in the Chair.

The Directors have to congratulate the shareholders that, during the last half year, the works along the line of railway between Manchester and Gossop have been proceeding with great vigour, and they are now arrived at a very advanced state, a detail of them will be given by the Engineer.

It being the intention of the Directors, as stated by them in their last Report, to open, in the first instance, that portion of the line extending from Manchester to the Mottram and Hyde Turnpike Road, they have directed the Engineer to drive on the works on that part of the line with all the expedition the nature of them will admit of, but, as the two most difficult parts, the Arnwick and Tame Valley embankments, consist of long embankments, the material to compose which had to be brought at a long distance, the works of these parts have occupied a considerable time, as only a limited number of men could be employed at once, but the difficulties have been greatly obviated by employing relays of men night and day.

The time originally fixed for opening the above portion of the line was to September next, and the Directors are happy to say that that period will not be much exceeded, although nearly a month in the latter end of June and the beginning of July was lost, in consequence of serious quarrels between the English and Irish labourers, the elections which attracted the attention of the workmen, and the continued bad weather about that period.

Considerable delay having arisen in obtaining possession of the land, on which to place the piers of the Tame Valley Viaduct, the Directors have been under the necessity of suspending operations until the matters requiring adjustment were finally settled, but this difficulty, they are now happy to say, has been overcome.

The Directors, at the recommendation of the Engineer, have ordered engines of a powerful description, which are contracted to be ready for delivery on the line on the 1st of September, they have also ordered first class carriages, similar to those on the Grand Junction Railway, second class, similar to those on the Grand Junction and Greenock line; and third class, much of the same kind as those used on the Manchester and Birmingham Railway, and the whole of the carriages are contracted to be finished and delivered at the same period as the engines.

The Directors have to report, that they have had great difficulty in obtaining the payment of calls, and have, consequently, in several instances, though with great reluctance, been compelled to resort to legal measures in order to obtain payment.

During the past half year, the Directors have found it requisite to make a call of £10 per share, payable in May last, and another of £7 10s. per share, payable on the 1st of September next.

After a careful revision of the share list, the Directors have concluded to recommend 20s. shares for forfeiture, and, having taken the preliminary steps required by the Act, now submit the same to the proprietors for confirmation. The amount paid up on these shares average £9 19s. 6¾d. per share.

In the present depressed state of trade, the Directors have been anxious to relieve the shareholders as much as possible, and have concluded to open the railway, in the first instance, with a single line only, though the railway will be, in all other respects, finished for a double one, and have made such arrangements for the passing stations as will be sufficient for the accommodation of the public during the half being laid to economy, consistent with the interests of the undertaking. They have also made arrangements for renting from the Manchester and Birmingham Company a portion of the station, offices, and warehouses now in the course of erection at the Manchester terminus, near Bank Top, which arrangements will be to the interests of both Companies, and a great accommodation to the public.

The rates fixed upon for stations are as follows:—Fairfield station, at the head of Gorton Reservoir; Ashton station, at Cotton Brook; Dukinfield station, at Dukinfield Hall; Newton and Hyde station, at Newton Green; Godley Bar station, at the terminus on the Mottram and Hyde Road.

On the 28th June last, the total amount expended on the undertaking amounted to £ 231,526 19s. 8d., as contained in the abstract of accounts now produced.

The Directors have to report, that, since the last meeting Mr. D. Wadkington has resigned his seat in the Directory, and, according to the powers vested in them by the Act of Parliament, they have elected Mr. A. W. Thorneley, of Godley, in his place.

The Directors regret, that, in consequence of the misconduct of their late Secretary, Charles Dixon, they have been compelled to dismiss him from their service, and to institute against him a prosecution for forgery.

(Signed)

THOMAS PEET, Accountant.—Aug. 14, 1841.

J. PARKER, Chairman.

To the Directors of the Sheffield, Ashton-under-Lyne, and Manchester Railway Company.

Gentlemen,—It again becomes my duty, for the information of the shareholders, to lay before you a Report of the progress of the works since the last general meeting of the proprietary:—

No. 1, or ARDWICK CONTRACT.—The principal work here is the embankment. 118,000 cubic yards of earth have been put in during the last six months, and it requires now about 50,000 cubic yards to complete it. The permanent road is laid from 20 chains east of the junction with the Manchester and Birmingham Railway, for a distance of two miles and 50 chains. The masonry on this contract is nearly finished, the two last bridges being in hand, and the remainder completed with the exception of a few parapets. The spoil cutting at "Tram Dogs" will be finished in a short time—only a few thousand cubic yards are in it remaining, which will easily be put out by the large force at present employed there. The favourable nature of the strata in this cutting has proved highly advantageous in the working a bed of sand and gravel, suitable for ballast, running nearly the whole depth in the bottom, so that the permanent road will be laid upon it as soon as the superstratum of marl shall have been removed.

No. 2, or NEWTON CONTRACT.—A considerable length of the permanent road has been laid on this contract, amounting altogether to nearly two miles, so that only one and a quarter miles remain to be completed. The whole of the masonry, including the viaduct over the river Tame, is completed, a few of the parapets only excepted, which will soon be placed out of hand. About 10,000 cubic yards of earth is required to complete the Tame Valley embankment, which quantity will bring it home to the viaduct. The material is being supplied from the Newton Wood cutting.

No. 3, or HATTERSLEY CONTRACT.—The whole of the masonry, with the exception of the tunnel at Hattersley, and the Harewood viaduct, is finished, and the earthwork in a very forward state. Owing to a quantity of water being met with at Hattersley, the tunnel there has not progressed very rapidly. The contractor, however, has proposed to extend the open cutting, and thus to shorten the tunnel, a proposal to which there seems no reason to object. The retaining walls opposite to Harewood Lodge are finished, and the viaduct there has been commenced.

No. 4, or ETHERSTOW VIADUCT.—The difficulties thrown in our way by the lessee of the land are now surmounted, and the matter settled. The viaduct, consisting of nine piers and abutments—the centre one being 60 feet span, has been set to Messrs. Smith and Hattersley, who will lose no time in carrying the work actively into execution.

No. 5, or GAMESLEY CONTRACT.—The two shaft sinkers at each end are steadily progressing, and there now remain about 1000 cubic yards in the cutting. The bridge for carrying the railway over the Botany road is finished, and that for carrying the Gamesley Turnpike-road over the railway is in hand, the piers being all up to the springing level, and the arches in the course of erection.

SUMMIT TUNNEL.—The driftways at the western face are now 661 yards from the entrance, and those at the eastern face, about 80 yards. The total depth of all the shafts was 866 yards, of which 626 have been completed, leaving 240 still to sink. The quantity of water, at one period of the year, rendered it advisable to increase the size of the boilers at three of the shafts. A sufficient amount of additional power has thus been obtained, which will enable the shafts to be carried down to the bottom without delay.

In conclusion, I have to observe, that, as it is your wish to open the line from Manchester to the Mottram and Hyde road as soon as possible, I think it may be accomplished in October next, should favourable weather prevail. We have certainly been delayed more than a month with this portion of the works, by the late wet season, and the unfortunate disagreements between the different classes of men employed on the line, which, at one time, brought the works to a stand; but I am happy to state that we are now steadily progressing.

Arrangements are making to prepare accommodation at the different passenger stations, for the amount of traffic that may be expected upon the line.—I am, gentlemen, your obedient servant,

ALFRED S. JEE.

Dinting Vale, August 21st, 1841.

Moved by Samuel Butcher, Esq.; seconded by Thomas Ellin, Esq., master cutler—

That the Report of the Directors now read be received, and printed for distribution amongst the shareholders.

Moved by Edwin Unwin, Esq.; seconded by John Sidebottom, Esq.—

That the abstract of accounts now produced be also printed for circulation amongst the shareholders.

Moved by James Perry, Esq.; seconded by W. P. Bradshaw, Esq.—

That the Report of the Resident Engineer, now read, be printed and circulated with the Report of the Directors.

Moved by David Waddington, Esq.; seconded by James Perry, Esq.—

That the declaration of forfeiture made by the Directors of the following shares in the Company, being 467 in number, be now confirmed, viz.—

45 shares numbered from 1204 to 1242 inclusive, and		
	6234 — 6243	,,
52 shares numbered from 1488 — 1527		,,
	6214 — 6253	,,
	1248 — 1269	,,
10 shares numbered from 1848 — 1857		,,
45 shares numbered from 2008 — 2052		,,
	6194 — 6238	,,
10 shares, numbered from 4787 — 4796		,,
10 shares, numbered from 1 — 10		,,
40 shares, numbered from 6520 — 6559		,,
20 shares, numbered from 2137 — 2156		,,
50 shares, numbered from 1557 — 1606		,,
	2078 — 2087	,,
	6664 — 6673	,,
25 shares, numbered	5966	
from 5967 — 5990		,,
	4979 — 4992	,,
50 shares, numbered from 1773 — 1822		,,

	5461 — 5560	,,
	5668 — 5672	,,
	6540 — 6639	,,
	6642 — 6641	,,
466 shares	4827 — 4836	,,

Moved by W. P. Bradshaw, Esq.; seconded by M. Ellison, Esq.—

That at all future half-yearly meetings, the abstract statement of the accounts of the Company be furnished, at least seven days before such meetings, respectively to all shareholders who may apply at the offices either in Manchester or Sheffield.

Moved by William Jackson, Esq.; seconded by Edwin Unwin, Esq.—

That the Directors of the Company be authorised and directed to dispose of the shares, of which the forfeiture has this day been confirmed, by sale, as provided in the Act, and for such price as they may think fit.

Moved by James Perry, Esq.; seconded by William Bailey, Esq.—

That Mr. Locke be requested to make a Report of the portion of the works executed, and the cost thereof, as compared with his original estimates; also the extent of works remaining to be done, the estimated cost, and the probable time requisite for their completion.

Moved by John Sykes, Esq.; seconded by James Perry, Esq.—

That the resolution of the 28th of August, 1838, which gives £1,000 per annum as remuneration to the Directors, be rescinded, and that in lieu thereof, the sum of £1,600 be now voted to the said Directors; out of which sum all travelling and other expenses shall first be paid, and the remainder distributed amongst the twelve, in such manner as a majority of them shall determine.

Moved by T. A. Ward, Esq.; seconded by D. Waddington, Esq.—

That the best thanks of this meeting be tendered to John Parker, Esq., M.P., for his able and impartial conduct in the Chair, and for his constant and zealous regard to the general interests of the Company.

TO RAILWAY COMPANIES AND IRON MANUFACTURERS.—JOSH. WILSON, and BELL beg to recommend to parties employing or manufacturing Rods their improved Machine for straightening them, in which by a simple and powerful application of the screw they are rendered perfectly even without being disfigured by hammer-marks.

For terms and description apply to the makers, Walker Iron Works, Newcastle.

26th July, 1841.

LONDON AND BRIGHTON RAILWAY.—Open from London to Hayward's-heath, from thence per coach to Brighton.

Daily Trains Down to Brighton.—Morning, half past 9, half past 11. Afternoon, half-past 1, and 5 o'clock.

Daily Trains Up to London.—Morning, 7 and 9. Afternoon, half-past 12 and half-past 4.

Sunday Trains, Down to Brighton.—Morning, 8. Afternoon, half-past 5.

Sunday Trains up to London.—Morning, 7. Afternoon, quarter past 5.

Fares.—First Class, 15s.; Second Class, 11s.; Children under ten years, half-price.

The Trains stop at all the intermediate Stations, if required, to set down or take up passengers.

As only a limited number of passengers can be conveyed throughout, from London to Brighton, places must be secured by booking them the day previous at the principal booking-offices. On the day of departure places can be secured only at the London-bridge Station, in the event of the limited number not being full. A Daily Down Train, at 9 p.m. for Croydon only, and on Sundays a Down Train, for Croydon only, at 8, and half-past 9, p.m. Fares to Croydon—First Class, 2s.; Second Class, 1s. 6d.

By Order,
THOMAS WOOD, Sec.

August 18, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND EXETER RAILWAY.—NOTICE is hereby given, that the next Half Yearly General Meeting of the Proprietors of this Company will be held, in pursuance of the Act of Parliament, at the White Lion Hotel, in the city of Bristol, on Thursday, the 2nd of September, at Eleven o'clock.

The chair will be taken at Twelve o'clock precisely.

FREDERICK RICKETTS, Chairman.

Shares in arrear do not entitle the holders to vote.

The Transfer Books will be closed on Monday, the 23rd of August, and not be re-opened until after the said General Meeting on the 2nd of September.

By order of the Board of Directors.
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, August 13, 1841.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad street, City; 69, Princes-street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas	Liverpool,
Mathias Dunn	Newcastle-upon-Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.
John M. Beatts, 14, Clement's-lane, High-street,	Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom; but reference is particularly made to the London and Blackwall Railway, where it has been in use upwards of twelve months.—"It gives entire satisfaction, and has never broken."—*Vide extract of the Tenth Report, Thursday, 19th instant.*

CIVIL ENGINEERING TAUGHT FOR HALF-A-GUINEA PER LESSON.—In addition to the principles of Civil Engineering, which has now become so important and profitable a profession, the advertiser, an Engineer of many years standing, will for Fifty Pounds teach the mode of Designing and Manufacturing Machinery, so that the pupil will acquire a knowledge of turning wood and metal, and be enabled to draw and construct complete Steam Engines and other Machines. For this purpose they will be provided with tools, and beautiful models of Steam Engines and other Machinery; and persons desirous of being connected with Railways will find this a desirable opportunity.

Address, A. B., Queen's Library, Portman-place, Edgeware-road.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

The *Chevy Chase* leaves Edinburgh at Half-past Five in the Evening, arriving in Darlington next morning, where an hour is allowed for breakfast, after which passengers may go on by railway to London, arriving there at Eleven o'Clock, p.m.

By order,
H. PATTESON, Secretary.

TO WOOD MERCHANTS.—Wanted to purchase a few thousands of Larch Railway Sleepers, delivered at Elsmere Port, near Liverpool, before November next, for which cash will be paid on delivery. The size of Sleepers are nine feet long, 10 × 5 at small end, thus exclusive of bark. Applications to be addressed to 100, at the Office of the *Railway Times*.

WEST OF ENGLAND DRAUGHT HORSES.

TO BE SOLD BY AUCTION, by MR. DIXON, at his Repository, Barbican, on Friday, September 3, 1841, at Twelve o'clock, precisely, Thirty five fine shaped, active, powerful, seasoned Cart Horses, and Thirty-five Sets of Harness, the property of an extensive Carrying Establishment, sold in consequence of the extension of the Great Western and Branch Railways.

Colours, Blacks, Browns, Greys, Roans, and Chesnuts.

The above valuable well-selected Stock of fine seasoned Cart Horses are worthy the immediate attention of Brewers, Distillers, Corn and Coal Merchants, Wharfingers, Innkeepers, Contractors, &c. being in excellent condition, mostly young and sound, just from constant work, and positively without exchange or addition.

On view and catalogues had two days before the Sale.

A great variety of new and secondhand Carriages, of every description, always on Private Sale at this Establishment, remarkably cheap.

TUESDAY'S SALE OF VALUABLE YOUNG, SEASONED CART HORSES.

To Brewers, Distillers, Factors, Corn and Coal Merchants, Contractors, and Wharfingers, also the Nobility and Gentry.

TO BE SOLD BY AUCTION, by MR. DIXON at his Repository, Barbican, on Tuesday, August 31st 1841, commencing at Twelve o'Clock, precisely.—About Twenty-three fine-shaped, active, powerful, seasoned Cart Horses, the genuine property of Mr. G. Holding, that have been employed on the Red Hill contract on the Brighton Railway, and sold in consequence of the contract being nearly completed.

Twenty fresh, young, powerful Cart Horses; a brown Gig or Saddle Horse; and a brown long-tailed Pony, being a portion of the well-known valuable stock of Messrs. C. and J. Tanner, the old established Bath and Bristol Coach Carriers. Sold in consequence of part of their business being conducted on the railway.

They are about 15 hands 3 inches high, remarkable for their power and activity,—mostly young, and really as fine a lot of Cart Horses as ever were submitted to public sale.

Colours.—Blacks, Browns, Bays, Greys, Roans, and Chesnuts, comprising some very handsome Match Teams.

On view, and catalogues had two days before the sale.

A great variety of New and Second-hand Carriages of every description always on private sale at this establishment, remarkably cheap.

To Railway Contractors, Builders, and others.—Railway Plant.

By J. B. LOCKE, on Wednesday, Thursday, and Friday, the 1st, 2nd, and 3rd September next, by direction of Messrs. Samuel Patteson and Co. in consequence of the completion of their railway contracts.

THE Whole of their RAILWAY PLANT, consisting of about 200 tons flange-bottom rails, from 25lb. to 35lb. per yard; a large quantity of sleepers; 80 earth waggons, 2½ yards each, 4ft. 8in. guage, 2ft. 6in. wheels, 3in. axles, eight carts, an excellent four wheel stone lurry, 20 sets horse geers, three capital piling engines, complete, a large quantity of centerings, timber, smith's tools, &c., &c.. The above are on view at the works, on the Manchester and Birmingham Railway, at Edgeley, near Stockport.—Also an excellent crane, suitable for the erection of bridges, viaducts, &c. with transverse motion, single, double, and treble geering, blocks, and chain complete, capable of lifting 10 to 15 tons, now standing near the station in Fairfield-street, Manchester. The above properties will be found well worth the attention of railway contractors, or persons undertaking any works of magnitude.

The first day's sale (Wednesday, 1st September) will consist of timber, &c. The second day's (Thursday, 2nd September) will consist of the earth waggons, sleepers, iron rails, piling engines, centres, iron work, chains, smiths' tools, and other materials immediately connected with the construction of railways. On the third day (Friday, 3rd September) will be sold the remaining miscellaneous property, including horses, geers, carts, &c.—The sale will commence on each day at eleven o'clock.

The crane will be sold at Fairfield-street Station, in Manchester, on Thursday morning, 2nd September, at ten o'clock precisely, previous to the sale at Edgeley.

Parties leaving Manchester by the trains at half-past ten o'clock will be conveyed by railway from the Stockport Station to the place of sale.

For particulars, application to be made to Messrs. Samuel Patteson and Co., Manchester; Mr. John Worsley, on the premises, at Edgeley; or to Mr. J. B. Locke, the auctioneer, 84, King-street, Manchester, by whom, as also by the printers of this paper, catalogues will be furnished one week previous to the sale.

Manchester, 14th August, 1841.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street (facing Saint Bride's Church), in the Parish of Saint Brides' Fleet street, Middlesex.—Saturday, August 28, 1841.

SOUTH-EASTERN RAILWAY COMPANY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant mortgages of the rates and tolls of their undertaking, as security for the same, bearing Interest at the rate of 5 per cent. per annum, payable, half yearly, at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and the term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Coleman-street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

TAFF VALE RAILWAY.—The appointment of Secretary to this Company being about to become vacant by the resignation of their present Secretary, the Directors are ready to receive the applications of gentlemen desirous of becoming candidates for the situation.

Applications, stating full particulars of the age, qualifications, and former employment of the applicants, accompanied by the necessary testimonials, to be addressed to the Directors before the next Board Meeting at Cardiff, on the 8th day of September.

By order of the Board,
JOSEPH HALL, Secretary.

Railway Office, Cardiff, August 26, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENTH HALF-YEARLY MEETING.—At the Half-Yearly General Meeting of this Company, held at the White Lion Hotel, in the city of Bristol, on Thursday, the 2nd of September, 1841,

FREDERICK RICKETTS, Esq., in the Chair.

It was resolved—

Moved by Thomas Fussell, Esq., and seconded by T. W. Hill, Esq.—

1st. That the Report of the Directors now read be received and adopted, and that they be requested to send a copy thereof to every proprietor.

Moved by C. A. Saunders, Esq., and seconded by V. F. Horenden, Esq —

2nd. That Mr. Brunel enjoys the undiminished confidence of the proprietors of this Company, and is entitled to their warmest thanks for his professional skill, integrity and zeal in their service.

Moved by Edward Divett, Esq., M.P., and seconded by C. B. Fripp, Esq —

3rd. That the notices of forfeiture issued by order of the Directors, as to 209 shares in this Company, specified in the list of numbers now read, be confirmed; and the same are accordingly forfeited to this Company.

Moved by A. K. Baker, Esq., and seconded by Henry Bush, Esq.—

4th That the best thanks of the proprietors be given to the Directors, for their able and zealous management of the affairs of this Company.

FREDERICK RICKETTS, Chairman.

The Chairman having quitted the chair, it was

Resolved by acclamation—

5th. That the cordial thanks of this meeting be given to Frederick Ricketts, Esq., for his able and judicious conduct in the Chair.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200 for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half yearly at the Bank of Messrs Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors.
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

LONDON AND BRIGHTON RAILWAY.—Open from London to Hayward's-heath, from thence per coach to Brighton.

Daily Trains Down to Brighton.—Morning, half past 9, half past 11. Afternoon, half-past 1, and 5 o'clock.

Daily Trains Up to London.—Morning, 7 and 9. Afternoon, half-past 12 and half-past 4.

Sunday Trains, Down to Brighton.—Morning, 8. Afternoon, half-past 5.

Sunday Trains up to London.—Morning, 7. Afternoon, quarter past 5.

Fares.—First Class, 15s.; Second Class, 11s.; Children under ten years, half-price.

The Trains stop at all the Intermediate Stations, if required, to set down or take up passengers.

As only a limited number of passengers can be conveyed throughout, from London to Brighton, places must be secured by booking them the day previous at the principal booking-offices. On the day of departure places can be secured only at the London-bridge Station, in the event of the limited number not being full. A Daily Down Train, at 9 p.m. for Croydon only, and an up train from Croydon at ¼ past 8 a.m. and on Sundays a Down Train, for Croydon only, at 8, and half past 9, p.m.; ditto ditto, 7 a.m. Fares to Croydon—First Class, 2s.; Second Class, 1s. 6d.

By Order,
THOMAS WOOD, Sec.

August 18, 1841.

LONDON AND ERIGHTON RAILWAY.—NOTICE.—SUNDAY TRAINS.—The Train from London to Horley, and intermediate stations, at 2 p.m., and from Horley to London, and intermediate stations, at 6½ p.m., will be DISCONTINUED on and after the 5th instant. By Order,

THOMAS WOOD, Secretary.

10, Angel-court, September 1st, 1841.

LONDON AND BRIGHTON RAILWAY.—The entire Line of this Railway will be OPENED to the Public for the Conveyance of Passengers, Horses, and Carriages, on Tuesday, 21st inst.

Due notice will be given of the Times for running the Trains, and of the Fares to be charged.

By Order,
THOMAS WOOD, Secretary.

10, Angel court, Throgmorton-street,
September 3, 1841.

TO BE SOLD BY PRIVATE TREATY, A QUANTITY OF RAILWAY MATERIALS, consisting of about 120 Tons of Wrought Iron Flange Rails, weighing 43lbs. per yard; Four Portable Cranes, on carriages, with wheels two feet six inches in diameter; Two Lifting Cranes; 100 Earth Waggons, with wheels two feet six inches in diameter, and about 30 Sets of Wheels, two feet six inches, with three inch axles.

The above are now lying close to the Barnsley Canal.

For Particulars and Price apply to Mr. Wm. Shaw, Porto Bello House, near Wakefield.

MANCHESTER AND BIRMINGHAM RAILWAY.—The Half-yearly General Meeting of Proprietors was held, pursuant to advertisement, at the York Hotel, in Manchester, on Thursday the 26th day of August, 1841, at twelve o'clock at noon:

THOMAS ASHTON, Esq., Chairman of the Board of Directors, in the Chair;

When it was moved by Mr. H. Newberry; seconded by Mr. J. Bradshaw, and resolved—

That the seal of the Company be affixed to the register of proprietors now produced.

The seal was affixed accordingly, in the presence of the meeting.

The Directors' and Engineer's Reports were then read, after which—

It was moved by Mr Richard Birley; seconded by Dr. Lyon, and resolved—

That the Report of the Directors be adopted; and that the same, with the Report from the Engineer, and the statements of account now produced, be printed for circulation among the proprietors.

It was moved by Mr. M. S. Meyer; seconded by Mr. George Holt, and resolved—

That the half-yearly accounts, up to the 31st of July last, having been produced as required by the Acts of Parliament, and being deemed satisfactory, be and the same are hereby allowed and passed,

It was moved by Mr. Joseph Hornby; seconded by Mr. David Price, and resolved—

That Messrs. Robert Ogden, H. T. Worley, Leo Schuster, Bulkeley Price, and J. P. Westhead, who this day retire from the Board of Directors by rotation, be and they are hereby re-elected Directors of the Company.

THOMAS ASHTON, Chairman.

The business of the meeting having terminated, John Bradshaw, Esq. was called to the chair, when it was

Moved by Mr. Joseph Hornby; seconded by Mr. D Price, and unanimously resolved—

That the best thanks of the meeting be given to Mr. Ashton, for his very satisfactory conduct in the chair.

JOHN BRADSHAW.

AYLESBURY RAILWAY COMPANY.—NOTICE is hereby given, That the HALF-YEARLY GENERAL MEETING of the said Company will be held at the Euston Hotel, Euston Grove, London, on Thursday, the 9th day of September next at Twelve o'Clock at noon, pursuant to the Act of Incorporation of the said Company. The Chair will be taken at One o'Clock precisely.

Given under my hand, this 27th day of August, 1841.

THOS. TINDAL,
Deputy-Chairman of the Directors.

TO RAILWAY DIRECTORS, ENGINEERS, CONTRACTORS, &c.—THOMAS HARGREAVES, Timber Merchant, &c., Tunstall, Staffordshire Potteries, begs to intimate to parties purchasing English Oak, Treenails, and Wedges, used in the construction of Railways, and so highly recommended by the Institution of Civil Engineers, that from the extensive and well seasoned stock of Oak planking of all dimensions he possesses, together with the aid of steam power and experienced workmen in their conversion, he is enabled to furnish supplies to any extent at the shortest notice, and on the most reasonable terms, to any part of the kingdom.

Orders, with dimensions and quantity required, will be promptly attended to by addressing a line as above.

STONES FOR SALE.—Any quantity of excellent "Whin Stones" (specimens of which, dressed and undressed, may be seen at the Office of John Dingwall, Esq., 8, Token House Yard, London) for building, paving, and other purposes, will be supplied on application to Messrs. Scott, Brothers, Exchange Buildings, Belfast.

TO ENGINEERS AND OTHERS.—TO BE SOLD, Several highly finished LATHES, 9, 6, and 4 feet in the bed, with Self-acting Slide Rests, screw cutting, gearing, &c., complete.

For Particulars apply to, or address, prepaid, J. Wood, and D. Fisher, Engineers, &c. 2, High-street, Lambeth.

LONDON AND SOUTH-WESTERN RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly General Meeting of the proprietors of the London and South-Western Railway Company was held on Saturday last at the terminal station, Nine Elms, Vauxhall, and was well attended. WILLIAM CHAPLIN, Esq., Deputy-Chairman of the Board, presided, and in opening the proceedings explained that the Chairman (Mr. Garnett) was temporarily absent on the Continent with his family, and craved the indulgence of the meeting for himself in this his first essay at Chairmanship.

The advertisement calling the meeting was then read, after which the minutes of the previous meeting were read and confirmed.

The SECRETARY (ALFRED MORGAN, Esq.) next read the Report of the Directors, as follows:—

REPORT.

THE Directors of this undertaking, at the Fourteenth Half-yearly General Meeting of its proprietors, report the following statement of the finances of the Company to the 30th June, 1841:—

Capital Account, 30th June, 1841.

RECEIPTS.

On calls	£1,449,761	5	0
Ditto Gosport branch	265,470	0	0
Loan on debenture bonds	630,100	0	0
Profit on shares	21,807	10	3
Interest	3,295	8	4
Balance	49,638	16	4
Total	£2,420,172	19	11

PAYMENTS.

Expenditure on raising the capital, procuring Acts of Parliament, &c.		£ 41,917	12	0	
Land and compensation, law charge for conveyancing, valuing, &c.		298,567	17	4	
Works comprising cuttings and embankments, bridges, culverts, stations, temporary buildings, fencing, draining, &c.		1,164,472	6	6	
Iron rails, chairs, and sleepers		343,521	14	5	
Waggons, implements, tools, and stores		65,727	18	2½	
Engines and carriages		149,724	10	11	
Surveying and engineering		32,973	6	3½	
Salaries and wages, rent and taxes, printing and stationery, postage, travelling, Directors, and other incidental expenses		29,723	19	2	
Debenture bonds, stamps, and brokerage		3,765	13	5	
GOSPORT BRANCH.					
Parliamentary and law expenses	9,397 15 7				
Land and compensation, surveying and valuing	51,677 7 6				
Surveying and engineering	6,301 6 6				
Interest	9,594 2 7				
Works in progress, and materials	225,802 19 6				
		302,773	11	8	
Total		£2,420,172	19	11	

Revenue Account from 1st January to 30th June, 1841.

CREDITOR.

Balance of last account	8,422	7	6		
Traffic from 1st January to 30th June	122,766	9	7		
Pier dues	250	5	11		
				131,439	3	0
DEBTOR.					
Maintenance of way and works	10,305	13	0		
Locomotive power, viz.—coke, oil, cotton, waste, repairs of engines and tenders, men's wages, repairing, engine-drivers and coke fillers; also salaries of Superintendents	21,009	13			
Carriage and general traffic expenses:—Repairs of carriages, trucks, and horse boxes, cleaning and oiling carriages, clerks' salaries, guards and porters' wages, printing, stationery, advertisements, insurance, and other incidental expenses	20,742	12	9		
Police	1,731	9	7		
	53,849	9	3		
Mileage duty	3,710	9	9		
Rates and taxes	2,612	10	7		
	6,323	0	4		
				60,172	9	7
				71,266	13	5
Deduct interest on debenture bonds				15,638	5	0
Balance for dividend				£55,628	8	5

The Monthly Traffic during the Half-year ending 30th June, 1841.

Passengers.		Amount. £	s.	d.
30,785½	January	12,119	12	3½
28,910	February	11,214	18	10½
41,441½	March	14,459	3	2
50,443½	April	18,574	6	7
65,921½	May	26,537	11	8
63,958	June	28,556	11	10
281,460	Total receipts	111,462	4	5
	Due for goods	9,827	0	6
	„ mails	1,477	4	8
		£122,766	9	7
	Pier Dues	250	5	11
	Gross Total	£123,016	15	6

By the statement, which is now placed before the proprietors, it will be seen that the traffic for the half-year ending 30th June, amounted to 122,766*l.* 9*s.* 7*d.*; of this sum 19,727*l.* 10*s.* 11*d.* accrued from the carriage of goods and live stock; and the remaining 103,038*l.* 18*s.* 8*d.* from passenger and general traffic.

The entire line from London to Southampton having only been opened in May, 1840, it is impossible to present the proprietors with a comparative statement of the receipts of the corresponding half-year at any previous period. The half-year ending the 31st December last, produced a receipt of 144,166*l.* 2*s.*, and as the autumnal half-year is always the most productive on those lines of railway whose revenue chiefly arises from passengers, there would probably be found in this general fact alone sufficient to account for the difference. Other causes, however, have operated to lessen the receipts of the last half-year,—one of which is the opening of the Great Western line to Bridgewater. Those proprietors who anticipated a reduction in the receipts of this line from that opening, have now the opportunity of judging how far those receipts are likely to be permanently affected. The Directors believe that, in their own estimates of traffic, they have not calculated upon more of the western trade, than from the geographical position of the respective lines they are legitimately entitled to. There can be doubt that, during the construction of the Great Western Railway, this line enjoyed more than its share of that traffic, but the Directors are satisfied that the wide stretch of country lying between the Great Western Railway and the southern sea coast, as well as that coast itself will supply to this line all the traffic which has been calculated upon in the statements they have heretofore made to the proprietors, and they will deem it their duty to cultivate that traffic by every means in their power.

The general depression which has existed in every branch of trade, combined with an unfavourable season, furnishes another ground for the reduction in the receipts during the past half-year. The Directors, however, do not allude to these circumstances with a view to account for the less receipts of this half-year as compared with the last; that is sufficiently accounted for by the general experience on all railways, of the comparative value of the two half-years.

The Directors have to regret the non-completion of the Gosport branch. They were in expectation that this portion of the line would have been opened to the public at the end of the past month, and preparations for it were made accordingly. Owing however to one of those casualties to which all great works are liable, the final completion of that part of the line has been deferred.

The following Report of Mr. Locke will best explain the cause of the delay.

To the Directors of the London and South Western Railway Company.

GENTLEMEN,—Although you are already aware of the failure which took place a short time since in a portion of the Fareham Tunnel, and of the delay in the opening which it produced, I beg to lay before you the following short explanation, which may enable the proprietors to judge more correctly of the extent of the failure, and of the probable time required for its reparation.

The tunnel is upwards of 600 yards in length. It passes on the north side of the hill through beds of yellow and red clay, such as are usually found between the chalk and tertiary formation, and then enters the blue clay (similar to the London clay) through which it continues to the southern side of the hill.

The failure occurred on the north side, where the coloured beds of clay exist, just at a period when the last or junction length of earth was being removed for the brickwork, and such was the weight of the slip and so immediate its effect, that notwithstanding every effort of the miners, the ground fell from the surface and carried with it a portion of the brickwork that had already been built. The thickness of the work was three feet.

From subsequent examination, it appeared that the inverted arch and part of the side walls remained good—the arch requiring to be re built for a distance of nearly forty yards. The most vigorous measures for repairing the work night and day, and will be continued until the work is completed, which I expect will be accomplished in three weeks.

It is not easy at present to state the exact cause of the failure, but in reinstating the work it is very probable that some discovery will be made by which to ascertain it. There can be no doubt that the soil of the worst possible description, and the brick work more than ordinarily thick; and it is easy to imagine that during the actual progress of such a work, any slip in the ground acting on two unconnected faces of brick-work, might so displace the arch as to render it incapable of sustaining much weight; whilst on the other hand, had the brick-work been united, there would not, in all probability, have been space enough to allow the earth to get into motion so as to produce a slip. This view leads to the conclusion that if the last length of brick work had been completed before the earth gave way, it is more than probable that the slip and consequent failure would not have occurred.

The delay is to me a subject of great regret. It is the first time during the several openings we have had on the main line, in which we have exceeded the period fixed for completion; and although this circumstance may not form a justification for the present delay, it may, I trust, be pleaded in palliation.

I am, Gentlemen, your obedient servant,
(Signed) JOSEPH LOCKE.

London, 27th August, 1841.

From the accounts it will appear, that after paying the interest on the debenture bonds of the Company, there will remain the sum of 46,955*l.* 16*s.*, which, added to 8,422*l.* 7*s.* 6*d.* remaining from the former account, and 250*l.* 5*s.* 11*d.* received for pier dues, make together 55,628*l.* 8*s.* 5*d.*, out of which the Directors recommend a dividend at the rate of 30*s.* per share.

On previous occasions, the growing importance of Southampton as a packet port has been pointed out; it continues to increase in that importance, and while it becomes a much more frequented place, as a point for the departure and arrival of travellers, its resident population is also greatly augmented, the late census showing an increase of 40 per cent. on that of 1831.

The docks are rapidly progressing towards completion.

The construction of a line of railroad from Paris to Havre, the port of France opposite to Southampton, has always been a much desired object with the Directors of this Company. It is known to most of the proprietors that the capital for that line, as far as Rouen, is subscribed, and that the works are in full operation, having been for the most part contracted for by English contractors, and the whole being under the engineering guidance of Mr. Locke. In addition to this, the surveys of a line from Rouen to Havre are now being made, by order of the French Government, who are determined to effect the prolongation of the railway to that highly important place, which is, in fact, the port of the French metropolis. The completion of this chain of communication between England and Paris cannot fail to bring with it great advantages to this undertaking.

As regards the working and management of the line, the Directors have great reason to be satisfied. The increased efficiency of the locomotive power, and the consequent regularity of the trains, cannot have escaped the observations of those who have travelled by the railway. This improvement, effected as it has been under great disadvantages, (the workshops, owing to the late fire, being under reconstruction) affords to the Directors the strongest assurance that under the same active management, the recent improvements will be permanently maintained.

The Directors entertain the same confidence in the gradual and steady improvement in the receipts of the line, and they will continue to use every means in their power to secure the permanent prosperity of this railway.

By order of the Court of Directors,
ALFRED MORGAN, Secretary.

The CHAIRMAN said such was the Report, and he trusted it would meet with the approbation of the meeting. No doubt some of the proprietors would wish to ask a few questions in elucidation of the details and figures in the Report, and his colleagues and himself would feel much pleasure in answering them; but previously he would beg to be allowed to make a very few remarks. They all knew, and had all participated in, the anxiety which had been felt during the formation of the South-Western Railway, but such anxiety might now, he thought, fairly be considered as at an end. The parent line had been opened throughout its entire length for upwards of a year, and they had just heard from the Report of their Engineer-in-Chief,

Digitized by Google

that the branch line to Gosport would be ready for traffic in about three weeks. The traffic, too, upon the main line might be deemed tested, and the experience of the past furnished them, he thought, with every ground of hope and confidence for the future. (Hear, hear.) To descend, however, somewhat to details:—and first, as to the locomotive department. They were all aware that the opening of the line to Woking was amongst the first essays at railway working in the south, and from the small number of houses that were at that time engaged in the manufacturing of locomotives it was extremely difficult to obtain a supply of efficient engines. Of those which had been furnished to this Company, the least that could be said was, that they were not fortunate in their working—indeed, some gentlemen present might recollect that on the occasion of the very first public trip to Woking, one of them became disabled. This had been one great cause of the defects which had existed in this department; and another cause was, that until the line was opened throughout to Southampton they had experienced a want of proper workshops during their partial openings. It would be admitted, however, that since that time very considerable improvement had taken place. (Hear, hear.) Mr. Locke had lent the Directors his powerful aid; and surrounded as that gentleman, in common with every other individual eminent in his profession, was with men of talent and activity, he had been fortunate enough to secure the services of a most efficient officer in Mr. Gooch, who had been appointed to superintend the locomotive department, and was ably qualified for the duties that devolved upon him. Mr. Martin, also, their Resident Engineer and Superintendant; Mr. Stovin, their Superintendant of traffic; and the other officers of the Company, enjoyed the entire confidence of the Directors, and he felt proud to say that the returns of the arrivals of trains during the last few months did great credit to the energy and zeal of all their servants, and showed the now efficient state of the Company's arrangements. (Hear, hear, hear.) It would be satisfactory to the proprietors to know that although there had been a decrease in the receipts during the last six months, there had been no increase in the ratio of cost of working and managing the line, but on the contrary a decrease, that being only 43 per cent. and a fraction upon the gross earnings. (Hear, hear, hear.) The regularity of the trains had, moreover, been greatly improved. In the months of January, February, and March of the present year, there had been in the whole 1080 arrivals at the termini. Of these 949 had been within time; 81 ten minutes late; 23 twenty minutes; and 27 thirty minutes. In April, May, June, July, and part of August the arrivals were 2374, of which no fewer than 2221 were within time. (Hear, hear, hear.) In short, regularity was now the rule, irregularity the exception. The strictest discipline was kept up in every department, and he trusted and believed that the excellence of the present arrangements would soon bring the line into higher repute. (Applause.) As to the state of the line, it was notorious that the South-Western Railway passed through a difficult country, and, notwithstanding that the cost of construction was on the whole not so large as that of some lines traversing a comparatively level route, yet with so many embankments, and embankments of such a character, time was evidently required for the subsidence and perfection of the works. Some little odium had been cast upon them in the public journals, but he had the satisfaction of stating, which he did with much confidence, that the South-Western line was at the present moment as smooth and safe as any railway in the kingdom. (Applause.) They had been told that with such gradients as theirs, a high rate of speed could not be attained. The speed he was happy to say was already 27½ miles an hour, and Mr. Locke was in hopes that it might be still further increased. (Hear, hear, hear.) He wished to say a few words as to the terms of the contract for maintenance of way. It had been said that these terms were too high, but it should be recollected that they involved an outlay of 28,000*l.* for additions and improvements, which experience had shown to be necessary and desirable, such as flattening slopes, and widening embankments at particular points. If that sum were deducted from the total amount of the contract, the cost of maintenance would be found not to exceed 275*l.* per mile, and moreover, it should be remembered, that instead of having to pay at once the 28,000*l.* referred to, it was spread over a period of ten years. (Hear, hear.) So much for the road, with the condition of which he hoped the proprietors felt satisfied. With respect to the financial position of the Company, he was sorry their old acquaintance Mr. Nathan was not present today, as that gentleman, in common with others, appeared to hold some erroneous notions in reference to the dividends that had from time to time been paid. It had been said that the last dividend was paid out of capital arising from calls; and as a call had been recently made, the same might be said of the dividend now to be declared. A few days subsequent to the last meeting his friend Mr. Nathan called upon him in the city to obtain explanations upon some points connected with the Company's affairs, and having received them, he said, "Now, Mr. Chaplin, as to the dividend. I know that it was paid out of the call, although I said nothing about it at the meeting." (Hear, hear, and laughter.) Now, as many other gentlemen of intelligence entertained the same impression, it was right that the real circumstances should be explained. The fact was, that the Directors had to receive a sum of 173,695*l.* upon the Gosport shares, and upon the new tenths, but in order that the produce of the daily traffic might not be idle, it was applied to the purposes of capital, so that they might keep off to the latest possible period the calls which otherwise must have been made much earlier. (Hear, hear, hear). The money applicable to the purposes of a dividend, namely, the net earnings of the line, had been applied to the purposes of the call, and now they would have the call wherewith to pay the dividend. When the affairs of Messrs. Wright, the late bankers of the Company, became embarrassed, the Directors had been written to by some of the Lancashire proprietors to know if 90,000*l.* received from the working of the line had not been placed in the hands of Messrs. Wright, and had become involved in the ruin of their establishment. The answer of the Directors was, that but for the application of the income in the way which he had pointed out, such an occurrence might have taken place. (Hear, hear, hear). In short, what the accounts professed to do, they fulfilled honestly and unequivocally. (Applause).—Much had been said on the subject of the traffic. Every one knew that the trade of this railway was a season trade, and that it was exposed to peculiar fluctuations. In their first year's experience, it was impossible to ascertain the requirements of the several stations, and this would account for what some parties had complained of, namely, that too much time was spent on the journey by stopping at so many points. The case of the South-Western Railway was very different from that of the London and Birmingham, which formed the route to Liverpool, Manchester, Leeds, York, and other manufacturing and commercial towns, as well as to Scotland and America; and yet, comparing the number of departures on the Birmingham line from May, 1840, to May, 1841, with the number on the South-Western, it appeared that there had been 7,000 more departures from Nine Elms than from Euston-square. (Hear, hear.) If therefore they looked at the pressure on particular trains, they would not feel surprised that a good deal of time was occasionally consumed on the road. The parties who frequented the South Western Railway were not principally commercial men with their watches in their hand, and punctual to a minute, but ladies with children and bonnet-boxes, who require and I hope receive every attention—(a laugh)—so that it was really wonderful that, under such circumstances, so little delay occurred. (Hear, hear.) Particular stations were thronged on particular days, and at first some inconvenience had been experienced, but the Directors hoped that such arrangements had now been made as would give the residents on and near the line increased accommodation, at the same time that the long trains would not be impeded. Already the mixed trains performed the journey to Southampton in 3 hours and 20 minutes, and the fast trains in 2 hours and 50 minutes, and he was of opinion that those Companies which went faster than *that*, really deserved a good name. (Hear, hear, hear.) The intermediate traffic, although it had proved for some time an incumbrance showed the resources of the locality, and being our own legitimate trade, is not liable to innovation by competing lines. They had heard much respecting the point of starting of the West India mails. A great deal had been done in favour of Southampton, but the exertions of the proprietors were still wanted to counteract the exertions of others. The meeting were aware that a Board of four or five gentlemen had been investigating this subject. That Board, he had reason to know, was now at Bristol, and he trusted that every gentleman present to day, and that the proprietors at large, would use all the power and influence they possessed in favour of Southampton. (Hear, hear.) The evidence taken before the House of Commons, strongly bore out the merits of Southampton; and in conjunction with the facilities which would be presented by the docks—which he was happy to say were making rapid progress—he hoped its attractions would be irresistible. (Hear, hear.) He trusted that their friends at Bristol and Liverpool, some of whom might be present to-day, would bear with him if he dwelt somewhat on the merits of Southampton. These gentlemen expatiated on the extent of their commercial transactions, and on the correspondence to which such transactions necessarily led, but as London was the main-spring of the commerce of the whole kingdom, it was but reasonable that its convenience should be first looked to. A friend had kindly furnished him with data, from which it appeared that in three years the trade of London in sugar and coffee was three times more than that of Liverpool, five times more than that of Glasgow, and six times more than that of Bristol—thus show-

Digitized by Google

ing where the trade and consequent correspondence were principally fixed. Then as to passengers—he had already made a comparison between Nine Elms and Euston Square; but even Liverpool, the great centre of business in the provinces, could not equal Southampton—for whereas the number of passengers from Liverpool to London, in the year 1840, was 92,494, and from Manchester 53,000, the number from Southampton was 100,083. (Hear, hear.) He trusted the meeting would agree with him that there was sufficient merit in the port of Southampton to ensure the preference of the Government—a port notorious for an increase of Custom-house duties; for in three months of the present year, as compared with a corresponding period of last year, there had been an increase of 124,000*l.* (Hear, hear.) In fact, it only required that the flood-gates of trade should be thrown open, to enable Southampton to take its proper position among English ports. At present French silks, for example, were not admitted into the port—that privilege being confined, he believed, to London, Dover, and Dublin. He trusted that the meeting would use their influence with the Parliamentary represen tatives of Southampton, and in other quarters, to obtain for it the justice it deserved. The great desideratum was to have the mail-packets filled with passengers, and whence could these be obtained in so large numbers as from London? He had had experience in the transmission of her Majesty's mails, and he could assure the meeting that had it not been that the conveyances were popular, very little beyond empty honour would have been the result. If the mail packets were not well patronised by the public, more money would be required for the carriage of the mails. One of the reasons adduced for the selection of Dartmouth as the port of arrival and departure was, that it could not be used as a port of refuge, as it was not applicable to sailing vessels, and that therefore the steam packets would not be incommoded, but have an opportunity of performing their evolutions undisturbed. The importance of railway communication was well understood, and it was said that a railway would be made from Dartmouth to Exeter, a distance of 30 miles, through a very difficult country. It happened, however, that the railway was not yet completed even to Exeter, and if it were, could capitalists be found insane enough to make a railway through 30 miles of such a country merely to unload a mail packet once a fortnight, when they were told by the advocates of Dartmouth themselves that no other species of trade could find its way thither? (Hear, hear.) He sincerely hoped that the Southampton Docks would receive from the shareholders in the railway the support they deserved. As he had already said, great progress was making in their construction. He was at Southampton a few nights ago, and saw no fewer than one hundred coal fires to supply light to the workmen, and he understood that day and night, as many as 1,800 men were busily engaged. (Hear, hear.) To show the facilities which the South-Western Railway presented, he might mention that on Saturday, the 14th of August, the *Tagus* Oriental steam-packet, arrived at Southampton at 9 o'clock in the morning, and by 2 o'clock the same day, the private letters were received in London at Lloyd's, whereas the public letters which had been taken to Falmouth, were coolly delivered on Monday morning. (Hear, hear.) He would again express a hope that the meeting would use their best endeavours to promote the interests of the Dock Company, as thereby they would be but consulting their own. With respect to the fares on the railway, they had been the cause of much anxiety, and had led to a good deal of discussion among the Directors. He had already said that the trade was a season trade, and exposed to fluctuations, and such a trade was evidently more expensive to manage than when the supply was steady and uniform. The Directors had arranged the trains so as to give every advantage to the districts near London, and they trusted that their through charges were, everything considered, within reasonable limits. (Hear, hear.) The "minimum of price" and the "maximum of numbers" were fine-sounding phrases, but they were little else. The reductions in postage had been appealed to. Now the notable projectors of that scheme had never calculated on the increased expense which would be incurred, and he had no hesitation in expressing his belief that had the experiment been undertaken by an individual it would long since been abandoned. There was however the public purse to fall back upon, and the consequence had accordingly been that an additional 10 per cent. of assessed taxes had been imposed. The Directors of the South-Western Railway had no public purse to support them, for he took it for granted that what the proprietors wanted was not new shares but a dividend. (Hear, hear.) If the Directors had erred they had erred on the safe side. Time would determine what rate of charge was the most beneficial both to the Company and the public; and although he had seen Algebraical solutions of what ought to be the rate (laughter), it was time and experience alone that could be relied upon. The worthy Chairman, who had previously apologized for trespassing on the time of the meeting and had been unanimously requested to proceed, then thanked them for the patience with which they had listened to one who was unused to public speaking, and sat down amid much applause.

Mr. SAINTSBURY (Secretary of the Southampton Dock Company,) congratulated the meeting that having met there as men of business, they had received from a man of business, so business-like an address; and here he might be permitted to say, that the success of the railway could have disappointed the expectations of none, while it had surpassed the hopes of many. He was connected with the Dock Company, and should have greatly regretted the absence from that meeting of a gentleman who was much better able than himself to do justice to the merits of that great undertaking; but the Chairman had so ably performed the task, that it would be superfluous to enter at any length into the subject. As a proprietor in the South-Western Railway he was glad to find that the prospects of the two undertakings were now seen through the same medium. Far be it from him to say that this had not always been the case, but now it seemed to be more clearly discovered that their prosperity would be mutual, and he had no doubt that united they could not fail to succeed. As he had already remarked, the past success of the railway had come up to the reasonable expectations of all. It had not been like another railway which he was acquainted with, which though a great work of art, had proved —he should be sorry to say, a magnificent delusion, but—certainly a great disappointment. As regarded the future prospects of the South-Western Railway, they must depend very greatly on the docks, and he did not despair of seeing a time when, as was at one time prophesied by the gentleman now presiding over that meeting, a dividend of 13 or 14 per cent. would be realised. It had been said that this was a summer line, and so it was, but the opening of the docks would render it independent of mere pleasure-seekers. Look what docks had done to the Blackwall Railway. The summer traffic on that line, which at that season was undoubtedly a pleasure line, averaged about 63,000 passengers per week, and yet in winter, when it could not be supposed that there was much pleasure in a trip to Blackwall, the number did not fall below 30,000, thus proving that it was the docks which caused the Blackwall Railway to swarm with passengers; and so it would be with the Southampton. It was quite true that a roving Commission had given the preference to Dartmouth, but a sitting Commission of the House of Commons had decided that Dartmouth would not do. Dartmouth, as alluded to by the Chairman, was a port that none but steam-vessels could reach, and he should be glad to know what the consequence would be if one of the mail packets before reaching the port should become disabled in her machinery? (Hear, hear.) As to Bristol there was no cause for alarm. Government had entered into a contract with the West India Packet Company for the conveyance of the mails for 10 years, leaving to the Company the right of fixing upon any port for their arrival and departure, but with this proviso, that such port be in the English Channel, and Bristol might therefore, as regarded this matter, be in Barbadoes. If Southampton could obtain the traffic for ten years, there was no good reason why it should not retain it for ten centuries. (Hear, hear.) The Chairman had alluded to the Custom-House duties at Southampton. The sum of 124,000*l.* might have struck some as being a large increase in three months, but how much more so did it appear when the total amounts of these two periods was considered? Such an increase might be insignificant to London or even Liverpool—it would probably make about as much difference as it would to the revenue of this Company if he were to come from Southampton to London in a second-class carriage instead of a first—but that it was an extraordinary increase for Southampton would be clear, when he informed the meeting that the whole duties for the three months of last year were only 34,000*l.*, while for the three months of the present year they amounted to 158,000*l.*, being an augmentation of about 370 per cent. (Hear, hear, hear.) He felt deeply indebted for the kind manner in which the Docks had been spoken of. He was happy to be able to announce that the water would be let into the docks in November next, and that they would be opened for shipping in December; and the Mail Packet Company had already made arrangements for starting from Southampton. (Hear, hear, hear.) They had all heard that a good man struggling with difficulties was a spectacle worthy of the gods. He supposed the same might be said of a good undertaking, but he had the gratification of knowing, that as regarded the Southampton Docks the struggle was now past. (Hear, hear.) The success of the Docks was so essential to the increased success of the railway that in promoting the success of the former the proprietors of the railway were promoting their own interests. (Hear, hear, hear.)

Mr. SNOW said, the statement, as it regarded the Dock Company, was most satisfactory. He had great pleasure in moving the adoption of the Report as read by the Secretary.

Captain RAMSAY, R.N., said, it had been stated in the last Report, that the cost of maintaining the permanent way would be 12,000*l.* every half-year, whereas in the accounts now submitted the item was only 10,305*l.*

Mr. LOCKE (Engineer-in-Chief) explained that the whole expense of maintenance did not devolve upon the Company till May last—the contractors for a portion of it having, as usual, to keep it in repair for a certain period after the opening.

Captain RAMSAY saw nothing put down for Direction. Was this charge included in the "Incidental Expenses"?

The CHAIRMAN answered in the affirmative.

Captain RAMSAY inquired how much of the balance in hand would be required to pay the dividend recommended in the Report.

The SECRETARY said, about 55,500*l.*

Captain RAMSAY said no allowance had been made for depreciation of stock.

Digitized by Google

The CHAIRMAN said, they were still daily adding to the stock, and until it was completed it was useless to set apart any sum for depreciation.

Mr. KEET inquired what expense would be involved by the failure of the Farcham tunnel.

Mr. LOCKE said, the extra cost would be from 10,000*l.* to 15,000*l.*; but whether that would ultimately fall upon the Company or the contractor was yet to be determined. He was of opinion, that by the terms of the contract, the loss would fall upon the contractor; but he had no hesitation in saying, that this was a case which ought to be *liberally* dealt with.

Mr. KEET hoped that it would not happen in this Company as in some others, where the work was pronounced satisfactory by some subordinate, and then the risk and loss fell upon the Company.

Mr. LOCKE said, it had not been, and would not be, so in this Company.

The CHAIRMAN said, the nature of the contract would, he thought, throw the onus on the contractor; but as the soil was extremely bad, it must be a matter for future consideration how he was to be dealt with.

Mr. LYNN could not account for the extraordinary difference between the amounts of mileage duty paid during the last two half-years respectively. Last half-year it was 7,309*l.*, while this half-year it was only 3,710*l.*—a difference for which the decrease of traffic would not account.

The CHAIRMAN apologised for not having, as he intended, noticed this matter. The duty was paid according to calender months, and the Company were allowed about a fortnight to adjust it, so that the duties for June, for example, might perhaps not be paid till August, so that the June month which was most productive of passengers would in that case not appear to bear the proper set-off in duties. There were six payments in summer and six in winter, so that it sometimes happened that one half-year was charged too much, and the following half-year too little. For a similar reason, the rates and taxes were charged in the present balance sheet more than they ought to be, as the Directors had considered it best to state the sum actually paid during the six months than to put forward any suppositious figures or calculations of proportion. (Hear, hear, hear.)

Mr. SNOW enquired if any arrangements had been made for the settlement of the amounts of parish assessments.

Mr. BIRCHAM (Solicitor to the Company) replied that until recently the Directors had deemed the parish charges satisfactory. It happened, however, that the parish of Mitcheldever in Hants, had imposed an enormous rate, against which the Directors had no alternative but to appeal. It was felt that no decision at the Quarter Sessions at Winchester was likely to satisfy either party—not the Directors, certainly, if the rate were not greatly reduced, and probably not the parish if it were. A case had therefore been agreed upon, and now stood for argument in the Court of Queen's Bench. Appeals had been lodged against ten other parishes, an arrangement having been entered into on both sides that the result of the Mitcheldever case should determine all the rest, without further litigation or expense.

Mr. KEET asked if any progress had been made in the redemption of the land tax.

The CHAIRMAN said, the arrangements had all been completed, and the necessary agreements signed, sealed, and delivered. (Hear, hear.)

Mr. BLOUNT, in seconding the adoption of the Report, described it as of a very satisfactory character. The honourable proprietor then spoke of the inconvenience of being obliged to state the numbers of the shares held, before the bankers would receive the amount of calls. He also complained that although (from absence in the country,) he was only three hours behind time in paying a particular call, he had been charged with interest.

Mr. KEET also complained that upon calling at the Company's offices for certain certificates on the very day after, which according to a circular sent to each proprietor, they could not be obtained he was informed that they were not ready.

The CHAIRMAN said, there was a pressure of particular business at the period referred to. They had lately added to the strength of this department, having probably hitherto carried economy somewhat too far.

In answer to questions, it was stated that there were on hand about 180 shares, or 1,800 tenths, and that from 600 to 700 scrip tenths were not registered.

A PROPRIETOR inquired if there were any objection that a list of the proprietors names should be published as had been done for some time in the Grand Junction Company, and adopted a few days ago by the North Midland.

The CHAIRMAN said, it was not a usual practice. (General cries of "No, no.")

Mr. PARSONS inquired whether the next meeting would be held prior to the termination of the option which the holders of Gosport shares had to receive 5 per cent. interest, or participate in the general dividend.

Mr. BIRCHAM said, the option remained until six months after the opening of the line to Gosport, and as by the Act, the winter meeting must be held in February, the option would not have expired before the next meeting.

Mr. SAINTSBURY begged to say one word on that sentence of the Report which stated that the increased efficiency of the locomotive power, and the consequent regularity of the trains, could not have escaped the observation of those who had travelled by the railway. He was a traveller about once a fortnight, and could bear testimony to the great regularity which now prevailed, although it had not been so at first. He frequently held his watch in his hand, and it was perfectly astonishing to witness how exactly to a minute the trains arrived at the several stations at the hours specified in the time-tables. Within the last three months he had seen but one instance of irregularity, and that was an arrival too early at Woking, where they remained until the proper time for starting. It was important that it should go forth to the public that punctuality was now strictly observed; and coming not from the Executive of the Company, but from that side of the table, he trusted the statement would have due weight. (Hear, hear, hear.)

The motion for the adoption of the Report was then carried unanimously.

Mr. LYNN then proposed a motion for the payment of the dividend mentioned in the Report.

Mr. KEET seconded the motion, which was put and carried unanimously.

It was stated that the dividend would be paid on the 29th September.

The CHAIRMAN begged to call the attention of the meeting to a matter very closely connected with their interests. They were all agreed that the traffic of the railway was in a progressive state, and they knew also that originally they had not had too much space at the London station. A wharf and extensive buildings in front of the London terminus had lately been for sale, and the Directors, looking at the probable increase of traffic from the Jamaica mails, and knowing that the limits of the present wharf were far from ample—feeling, also, a strong interest for their children who should succeed them in the property, and consulting the true and permanent interests of the Company, and not a time-serving policy, were very desirous of purchasing the property already referred to. They were anxious, however, first to consult the proprietors; and a gentleman had accordingly purchased the property for 7,000*l.*, giving the Company the option of taking it at that price. The rent would pay a fair interest during the present lease, and form a handsome reversion. The Directors would be glad to hear the sentiments of the proprietors on this point.

In answer to questions, it was stated that the property referred to was the wharf and buildings in in front of the railway adjoining their own property—that it extended to 450 feet—and was freehold. The present lease to Mr. Francis had about forty years unexpired.

It was further stated, that the gentleman who had purchased the wharf was Mr. Ambrose Humphrys, one of the Directors, who was willing either to retain it, or to resign it to the Company at the cost price.

This liberal offer elicited from the meeting strong marks of applause.

Mr. KEET hoped the Directors would consider the propriety of having a few steam boats of their own.

The CHAIRMAN said, they thought it desirable to have their own business on the best possible footing, before they meddled with any other. (Hear, hear.) He might state, however, that they had adopted sound and efficient measures to cultivate the steam boat trade from Plymouth, Torquay, and other parts of Devonshire and Cornwall.

Mr. SNOW thought the purchase of the wharf property very desirable. The present river frontage was much too small, and there was little doubt that water-side property at Vauxhall would become more valuable when the Southampton Docks were completed, now that the communication between the two waters was so easy. He concluded by moving a resolution authorising the Directors to purchase the property.

Mr. LYNN seconded the motion, which was carried unanimously.

Mr. LANCASHIRE briefly moved, that the cordial thanks of the meeting be given to the Chairman of the meeting for his able conduct that day, and to the Board of Directors generally.

The motion was seconded from several parts of the room, and having been put by the proposer, was carried by acclamation amid great applause.

The CHAIRMAN expressed the pleasure which this vote afforded to his colleagues and himself. He trusted that if their past conduct had been approved of, so would their future; for nothing could reward or delight them more than the good opinion of their constituents.

The meeting then broke up.

BIRMINGHAM AND DERBY JUNCTION RAILWAY COMPANY—ADJOURNED GENERAL MEETING.

ON Thursday last the adjourned general meeting of the proprietors of this Company was held at the Waterloo rooms, Waterloo Street, Birmingham, for the purpose of transacting the usual business of the half-yearly meeting, and of receiving the Report of the Committee appointed on the 10th instant, to investigate and report on the several matters then referred to them. Many of the principal proprietors were present, and the meeting was numerously attended,

HENRY SMITH Esq., Chairman of the Board of Directors, having taken the Chair, stated, that the meeting was an adjournment of the annual meeting which had been held on the 10th of August. In addition to the usual business, the proprietors would have to elect three Directors in the room of those gentlemen who retired by rotation from the Board. At the meeting held on the 10th instant, the proprietors were aware that a Report by the Directors was read, and that in consequence of the result of the half year's working of the line, and of other circumstances the Directors requested that a Committee of Investigation might be appointed by the proprietors themselves, to investigate generally the state of the concern and its management, and to report on these and the other matters specified in the minute drawn up at that meeting. After that business had been transacted, the meeting adjourned to this day. He had now to inform them that the gentlemen who were then appointed a Committee, had given great attention to the investigation of the matters which they were requested to inquire into, and he hoped that they would be able to state that they had received from the Directors, and more especially from the different servants of the Company, all the assistance which could be given to facilitate their investigations. He had then expressed, and had

Digitized by Google

since endeavoured to carry out what he knew to be the wish of the Board of Directors, that that investigation should be full and complete; whether the result had proved satisfactory or not, it was not for him to anticipate. The Directors had however given instructions to the different servants of the Company to facilitate, in every possible manner, the investigations of the Committee, not only into the manner of keeping the books and accounts of the Company, but to expose in the plainest manner the existence of official working. This information he hoped the Committee had in every instance received; and it now only remained for him to observe, that he had been requested by the Committee to say that they had given the greatest attention in their power to the investigations of the various matters referred to them, and that they had completed it so far as to enable them to lay before the proprietors a Report, which he trusted would prove a satisfactory one; but he was instructed at the same time to say, that in consequence of being unable to derive from Mr. Robert Stephenson all the information which they hoped to obtain from him, owing to his numerous and important occupations there were some inquiries which they were desirous to continue still further, and they therefore hoped to be permitted to carry on the investigation, and with the view, should they think it necessary, of reporting again to a future meeting. So far as the Directors were concerned, he, (the Chairman), had the satisfaction of saying, that the suggestion fully met with their wishes. They courted the most rigid investigation, and he believed they would be able to show the propriety of all the expenditure which had been incurred in carrying on the affairs of the Company. They likewise hoped, that whilst completing the undertaking, as some financial difficulties might possibly arise, the Committee would afford them the advantage of their advice and assistance. If the proprietors concurred in the request of the Committee, he could only say, that it would be most satisfactory to the Directors. He would now request the Committee to allow their Report to be read to the meeting.

The common seal of the Company having been first affixed to the register of proprietors,

Mr. CARTER, the Company's Solicitor, by request of the Committee, read their Report, which will be found in our advertising columns.

The CHAIRMAN said it was not for him to express any opinion which he might have formed on hearing the Report read. Of course so far as it reflected (and he could not doubt that it did so justly) on the conduct of certain officers of the Company, he could not help expressing his regret at the circumstances out of which that reflection arose—a regret which he was sure was deeply felt by the parties themselves. It would, however, now be for the proprietors to say what proceedings should be founded on that Report.

The Rev. RYLAND BEDFORD inquired whether the item of 2,220*l.* for the mails was paid for conveying them from Birmingham to Derby, or only from Hampton to Derby?

The CHAIRMAN—The amount is for the whole distance.

The Rev. Mr. BEDFORD wished for some explanation in reference to the much larger sum which it appeared the Birmingham and Gloucester Company received for the conveyance of the mails.

The CHAIRMAN replied that the amount had been settled by arbitration, a mode of adjustment which was resorted to whenever a difference of opinion occurred, and that the Gloucester Company conveyed two mails, whereas this Company conveyed but one.

Mr. BAKER would be glad to know whether the sum of 2,220*l.* contained any arrears of the past half-year.

The CHAIRMAN said that no portion of the 2,220*l.* belonged to arrears of the former half-year.

It having been moved and seconded that the valuable and satisfactory Report of the Committee of Investigation be entered on the minutes and circulated amongst the proprietors, and that the Committee be requested to continue their investigations, and report, if necessary, to a future meeting, the Chairman inquired whether any gentleman had any remarks to make before he should put the resolution to the vote.

A conversation at some length, between the Rev. Ryland Bedford, and the members of the Committee took place, explanatory of the present estimate of traffic as compared with former Reports.

Mr. BEDFORD observed—They must all feel greatly obliged to the Committee for the trouble they had taken; but there was one great point which he would wish to bring to their minds, and it was this—that as the traffic had not yet turned out as they anticipated, the only way to meet it was to reduce the expenses. He would take the London and Birmingham Railway, on which he found the expenses to average from 32 to 40 per cent., while on the York and North Midland and the North Union Railways, both of them shorter lines than their own, the expenses of the former averaged only 32 per cent., and the latter 36 per cent.

Mr. CRAWSHAY said, that the Committee had entered into a communication with the Chairman of the York and North Midland Company as to all expenses, and it was very true that those expenses were much less than their own. Only yesterday he had a communication with Mr. Hudson, with whom he went through every item of expense, and he had found that in many particulars, salaries especially, larger sums were paid on the Derby line, and no one could doubt the efficiency with which the affairs of the York and North Midland Railway were conducted. He expected to receive two or three other comparative estimates of the expenses of other Companies, when he would be in a better position for forming an opinion upon the subject; but in the meantime he had the satisfaction of saying, that the locomotive expenses on their own line were very moderate.

Mr. LEWIS (of Derby) said, there was another point in which the Derby Company stood higher in apparent expenses than the York and North Midland Railway, but which could be explained in this way, that the maintenance of way did not extend over a period of six months, the Contractors being under engagements to keep the line in repair for a certain period after its construction.

Mr. BEDFORD thought it was satisfactory to the proprietors to know the amount that would be required for completing all the works, as they would not be called upon unexpectedly to advance the sum named by the Committee.

After some further inquiries by Mr. Bedford in respect to certain forfeited shares, and the mode in which the works had been contracted for, upon which points satisfactory explanations were given, the resolution for the adoption of the Committee's Report was put to the meeting and carried unanimously.

The CHAIRMAN said, that the next part of the business would carry them back to what would be the regular course of proceeding at the first meeting. At that meeting a report from the Directors of the proceedings, with a statement of the accounts for the last half-year, was laid before the proprietors, and it was now for them to state whether they approved and confirmed that Report. The Chairman concluded by submitting a motion upon the subject for the approval of the meeting, which was unanimously adopted.

The adoption of this Report and statement of accounts was followed by a resolution, stating, that under present circumstances it was not desirable to make a dividend, but that the balance of 6361*l.* 2s. 5d. be carried on to the credit of the revenue account.

On the proposition being put for the re-election of the three Directors who retired from the Board, the Chairman took the opportunity of explaining that it was the wish of Mr. William Beale to retire from the Direction. Mr. Beale had been with them since the commencement of the undertaking, he had rendered most efficient and valuable services to the Proprietors from his experience, and general knowledge of the trade of the district, but unhappily his state of health was such as to put it out of his power to perform those duties which attached to him as a Director, and which it would be painful to him to feel that he did not discharge. The Chairman begged to suggest on the part of the Directors, in the room of Mr. Beale the name of Mr. Josiah Lewis, of Derby, who was then present, and whose accession to the Board would he was satisfied, be received by the proprietors and Directors with great satisfaction, the residence of that gentleman at Derby affording him an opportunity of promoting the interests of the railway. The election of Mr. Lewis, and the re-election of the Chairman and Mr. Walker having been carried unanimously.

Mr. LEWIS, in expressing his acknowledgments for the honour conferred upon him, said that while he did not underrate the importance of having a Director living at Derby, the end of the line at which the greatest competition arose, yet he could not undertake the duties, unless it was clearly understood by the Shareholders that he should not be expected o attend all the weekly meetings of the Board. He would attend as frequently as his own concerns permitted him, but such services as he could render by looking to the interests of the Company at Derby, he would freely give to the proprietors.

Mr. ROUTH seeing Mr. George Stephenson present, said he was very anxious to know what his opinions were with regard to the mineral traffic of the line.

Mr. STEPHENSON stated his conviction, founded now on experience, that the trade in coal, coke and lime must be most extensive. He certainly had expected it would have earlier become more extensive, but the absence of sufficient stations, and the high tolls of the Oxford Canal Company had much retarded it. His best exertions were being used to promote the trade on this railway in minerals, and would be continued.

A resolution, authorising the Directors to raise the said additional capital required to complete the railway having been passed,

Mr. BEDFORD said, he had one more question to ask, and he promised that it should be the last. He asked Mr. Stephenson whether it would not be a great benefit to the Derby Company to carry on their line to Warwick, and thence to Stratford, to get into the Stratford and Morton Railway.

Mr. STEPHENSON replied that it certainly would.

Mr. CRAWSHAY—What would it take to do it?

Mr. STEPHENSON—From ten to twelve thousand pounds a mile. If that line was carried out, it would be sure to be carried on to Oxford.

The business of the meeting being declared at an end,

Mr. BAKER proposed a vote of thanks to the gentlemen composing the Committee of investigation, for their very valuable attention to the interests of the Company.

The resolution having been seconded, was carried with acclamation.

Mr. ROUTH, in acknowledging the vote of thanks, said, that he knew he was only speaking the sentiments of the gentlemen who acted with him, when he assured the meeting that they went into the inquiry with an anxious wish to conduct it for the interests of the Company, and he felt bound to say that in prosecuting those inquiries they had received the zealous and cordial assistance not only of the Directors, but of every officer of the Company. There were many other points upon which it was the anxious wish of the Directors that they should prosecute their inquiries, and for himself he could say that he would have no objection to do so, believing as he did that good would result; every thing they had seen in the course of their investigations having confirmed the Committee in the opinion, that the Directors were in every respect worthy of the confidence of the proprietors, he considered those gentlemen equally entitled to their thanks, and begged to be permitted to propose that the best thanks of the meeting be given to the Chairman and other Directors for their zealous attention to the interest of the proprietors.

The resolution having been carried with acclamation, was acknowledged by the Chairman, after which the meeting separated.

The resolutions will be found advertised in another column.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—I am instructed by the Directors of the Edinburgh, Leith, and Newhaven Railway Company, to send you the enclosed statement issued to the shareholders, which the Directors consider will be a very sufficient answer to the extraordinary, and certainly unfounded statements made in your paper of the 14th instant.

I am, Sir, your most obedient servant,

ALLEN GEORGE FIELD.

Statement by the Directors of the Edinburgh, Leith, and Newhaven Railway Company, in regard to the present position of the affairs of the Company.

In calling upon the Shareholders to relieve them from their present difficulties, by adopting the proposals submitted in their last Report, of taking up the forfeited shares of the Company's stock at 10*l.* discount, the Directors feel themselves bound to show to their constituents, the effect which the doing so, or the not doing so, will have upon the undertaking.

The Directors have all along been exceeding embarrassed in their operations by the want of the necessary funds, and to this cause must, in a great measure, be imputed the delay in the completion of the works, which might all along have been pushed on at a much more rapid rate, had they been assured of the supplies necessary to meet the consequent demands. During the last half-year the sum expended on the works has amounted to 11,049*l.* 3s. 7d., while the amount received from calls has been only 9,538*l.* 13s. 9d., and the Directors are now placed in such a position that unless immediately assisted, and that to a very considerable extent, they have no alternative, but to put a complete stop to the progress of the contractors. Their engineer reports that the amount of work remaining to be done under the current contracts, and to finish the line to the foot of Scotland-street, will require about 24,000*l.*, while at present the Directors have barely the means at their command of meeting the pay Bills for the current month; and the whole available funds, from arrears of calls, and from the call which has still to be made, cannot be estimated at more than 10,453*l.*

In this situation of matters, it appears to the Directors that the only chance of inducing the shareholders to come forward with assistance, is, in the first place, to show them that the adoption of the proposed plan will produce such an amount as will really enable them to complete that portion of the line in progress; and next, that, when completed, such a return may be reckoned upon as will be a fair inducement to make the required effort; and they are happy to say that they consider themselves able to give a satisfactory answer on both points.

In regard to the first, it may be sufficient to refer to the abstract of the Report, which has just been circulated among the shareholders. The completion of the line, as there and above stated, will require 24,000*l.*, an amount which is taken from a Report made by Mr. Grainger, at their request, to which they beg to refer for further particulars.

And to meet this expense, there is the amount of the arrears of calls, and other available funds, as before	£10,453
And the amount which the sale of 1,615 forfeited shares, at 10*l.* discount, will produce, viz.	16,150
Total	£26,603

There can be no doubt, therefore, that if the proposal is heartily gone into by the shareholders, there will be ample funds to complete the line to the foot of Scotland-street.

But, supposing the line to be thus far completed, the important question remains, what is the probable return which may be expected? To ascertain this, in such a form as would be satisfactory, the Directors instructed their Secretary to put himself in communication with Mr. Grainger, and to procure from him certain calculations upon the subject; and the result will now be submitted:—

On being informed of what was wanted from him, Mr. Grainger suggested, that, as some considerable time had elapsed since any means had been taken to ascertain the actual passenger traffic on the roads leading from Edinburgh to Trinity, Newhaven, and Granton, it would be desirable to obtain a return on the subject as at the present time. This suggestion was adopted, and proper persons were accordingly stationed at the two points most favourable for this object, under the superintendence of the Company's Assistant Engineer. They commenced on the morning of Monday the 9th, at 6 o'clock, and continued till 8 o'clock at night, and the same on Tuesday and Wednesday, when their report was ordered to be given in. It was afterwards considered by Mr. Grainger, however, that it would be more satisfactory if extended to Saturday evening; and they were accordingly again set to work, but commencing at 7 o'clock, a. m., and continued till 9, p. m. The result of the enumeration is as follows:—

Monday, coach and foot		10,920
Tuesday,	do	10,480
Wednesday	do	9,080
Thursday	do	9,983
Friday	do	8,015
Saturday	do	9,231
Total		58,609
Average		9,767
Being, of coach passengers	1,046	
do foot ditto	8,719	
		9,767

Proceeding on the returns thus obtained, Mr. Grainger was requested to give an estimate and calculation of what he considered might safely be taken as the probable traffic on the railway:—On that part of the line from Scotland-street to Trinity, now in progress. But, at same time, to add what, in his opinion, it would be—supposing the whole line to Market-street completed, including the tunnel; and supposing a good landing pier, or the proposed harbour at Trinity, to be built at the northern terminus, and a connection made with the Glasgow Railway at Market Street. The following is the calculation which he has made on the given data:—

Supposing the line open only as far as Scotland-street, he considers that only *one-ninth* of the passengers ought to be reckoned on to go by the railway. The daily average, as before, is 9,767—one-ninth of which is 1085, which, for 313 days, is 339,605 persons; of these, say,—

80,000 1st class, at 6d., is	£1250
259,605 2nd class, at 3d., is	3620
Together	£4870
Deduct, for expense of working the line, &c.	1950
And there remains a profit of	£2920

without reckoning on anything for goods.

Supposing, again, the whole line from Market-street to Trinity to be completed, Mr. Grainger considers that the proportion likely to go by railway may safely be raised to one-seventh of the former average, for 313 days.

One-seventh of 9,767, is 1,396 daily, or per annum, 436,635	
Of these, say 100,000 of 1st class, at 6d., is	£2,500
336,635 of 2d class, at 3d., is	4,207
And add for goods, say 8,000 tons, at 1s. 6d.	600
Together	£7,307
Deduct, for expense of working the line	2,923
And there remains a profit of	£4,384

Supposing, lastly, that a good landing pier or harbour was built, and that a connection was formed with the Edinburgh and Glasgow Railway, Mr. Grainger is of opinion that the proportion of passengers may very safely be raised to one-sixth of the average.

One-sixth of 9,767, is 1,628 daily, or per annum	509,564
Of these, 120,000, 1st class, at 6d., is	£3,000
389,565, 2d class, at 3d., is	4,869
And add for goods in this view, 40,000 tons, at 2s.	4,000
Together	£11,869
Deduct, for expense of working the line	4,749
And there remains a profit of	£7,120

The Directors consider that, in all these cases, the number of passengers per railway might have been assumed as likely to be considerably greater than has been done, but they prefer taking the figures as given by Mr. Grainger, whose opinion must have more weight with the shareholders, than any which they might have presumed to offer. Even on the data given, however, the prospects of the concern appear, to say the least of it, to hold out considerable encouragement to proceed, while to stop short now, would be to incur a total loss of all which has been already expended, besides the risk of incurring heavy damages at the instance of the contractors.

It will be seen that the free return from the line from Scotland-street alone, is estimated at 2,920*l.*, which would yield a dividend of 3 per cent. on the capital paid up and expended. In the event of the tunnel being formed, and the railway consequently completed to Market-street, it would require, as nearly as can be calculated, about 25,000*l.* additional, and the return would be 4,384*l.*, equal to 4 per cent. on the capital: and in the event of a good landing pier being formed at Trinity, and a connection made with the Glasgow Railway, taking only the same average, the return would be no less than 7,120*l.*, or about 7 per cent. to the shareholders, while all experience goes to prove that the traffic, in such an event, would be enormously increased, and that the dividend to the shareholders, would be as great, as the most sanguine of the supporters of the undertaking could desire.

Such being the prospects of the undertaking, the Directors have resolved to make a last effort, to induce the shareholders to support them in the present emergency, by instructing their Secretary to proceed to London and Liverpool, for the purpose of calling the shareholders together, and explaining to them fully the position in which they are placed.

The Directors are now in a condition to borrow money, under the authority of the Act of Parliament, but in the present critical condition of the undertaking, and until at least that portion of the line now in progress is completed and in operation, it is in vain to expect that a sufficient loan can be obtained in the market, and the only plan which occurs to the Directors, as likely to be successful, is that of offering to the shareholders the forfeited stock at 10*l.* discount, or borrowing from them, in place of the public, the necessary amount of funds. By the former method, the shareholders would obtain an immediate return of 3 per cent. on the whole number of shares held, with the prospect of an ultimate increase, by the latter they would receive 5 per cent. interest on the loan as a preferable debt, with a fair prospect of a respectable dividend on their original shares.

Should, therefore, the views above submitted, and the statements which will be made by the Secretary, induce the shareholders to adopt one or other of the plans suggested, there is nothing whatever to prevent the line from Scotland-street being completed and put in operation before mentioned. But should the present effort be unsuccessful, and the return of the Secretary be accompanied by the refusal of the shareholders to aid in the way suggested, the Directors have no alternative but immediately stop the progress of the works, the effect of which will of course be, that the whole expense already laid out will be lost, and the stock rendered altogether valueless.

By order of the Board.

HENRY INGLIS, Dep. Chairman.

A. G. FIELD, Secretary.

Edinburgh, 14, St. Andrew-street, 16th August, 1841.

A CARLOW correspondent, in noticing a recent case of danger and delay on a railway occasioned by the difficulty of turning the engine and *tender*, recommends the adoption of engines (such as those used upon the Dublin and Kingstown Railway) upon six wheels, and carrying their own fuel and water. He is of opinion that more especially upon *short* lines this arrangement would be found highly satisfactory.

since endeavoured to carry out what he knew to be the wish of the Board of Directors, that that investigation should be full and complete; whether the result had proved satisfactory or not, it was not for him to anticipate. The Directors had however given instructions to the different servants of the Company to facilitate, in every possible manner, the investigations of the Committee, not only into the manner of keeping the books and accounts of the Company, but to expose in the plainest manner the existence of official working. This information he hoped the Committee had in every instance received; and it now only remained for him to observe, that he had been requested by the Committee to say that they had given the greatest attention in their power to the investigations of the various matters referred to them, and that they had completed it so far as to enable them to lay before the proprietors a Report, which he trusted would prove a satisfactory one; but he was instructed at the same time to say, that in consequence of being unable to derive from Mr. Robert Stephenson all the information which they hoped to obtain from him, owing to his numerous and important occupations there were some inquiries which they were desirous to continue still further, and they therefore hoped to be permitted to carry on the investigation, and with the view, should they think it necessary, of reporting again to a future meeting. So far as the Directors were concerned, he, (the Chairman), had the satisfaction of saying, that the suggestion fully met with their wishes. They courted the most rigid investigation, and he believed they would be able to show the propriety of all the expenditure which had been incurred in carrying on the affairs of the Company. They likewise hoped, that whilst completing the undertaking, as some financial difficulties might possibly arise, the Committee would afford them the advantage of their advice and assistance. If the proprietors concurred in the request of the Committee, he could only say, that it would be most satisfactory to the Directors. He would now request the Committee to allow their Report to be read to the meeting.

The common seal of the Company having been first affixed to the register of proprietors,

Mr. CARTER, the Company's Solicitor, by request of the Committee, read their Report, which will be found in our advertising columns.

The CHAIRMAN said it was not for him to express any opinion which he might have formed on hearing the Report read. Of course so far as it reflected (and he could not doubt that it did so justly) on the conduct of certain officers of the Company, he could not help expressing his regret at the circumstances out of which that reflection arose—a regret which he was sure was deeply felt by the parties themselves. It would, however, now be for the proprietors to say what proceedings should be founded on that Report.

The Rev. RYLAND BEDFORD inquired whether the item of 2,220*l.* for the mails was paid for conveying them from Birmingham to Derby, or only from Hampton to Derby?

The CHAIRMAN—The amount is for the whole distance.

The Rev. Mr. BEDFORD wished for some explanation in reference to the much larger sum which it appeared the Birmingham and Gloucester Company received for the conveyance of the mails.

The CHAIRMAN replied that the amount had been settled by arbitration, a mode of adjustment which was resorted to whenever a difference of opinion occurred, and that the Gloucester Company conveyed two mails, whereas this Company conveyed but one.

Mr. BAKER would be glad to know whether the sum of 2,220*l.* contained any arrears of the past half-year.

The CHAIRMAN said that no portion of the 2,220*l.* belonged to arrears of the former half-year.

It having been moved and seconded that the valuable and satisfactory Report of the Committee of Investigation be entered on the minutes and circulated amongst the proprietors, and that the Committee be requested to continue their investigations, and report, if necessary, to a future meeting, the Chairman inquired whether any gentleman had any remarks to make before he should put the resolution to the vote.

A conversation at some length, between the Rev. Ryland Bedford, and the members of the Committee took place, explanatory of the present estimate of traffic as compared with former Reports.

Mr. BEDFORD observed—They must all feel greatly obliged to the Committee for the trouble they had taken; but there was one great point which he would wish to bring to their minds, and it was this—that as the traffic had not yet turned out as they anticipated, the only way to meet it was to reduce the expenses. He would take the London and Birmingham Railway, on which he found the expenses to average from 32 to 40 per cent., while on the York and North Midland and the North Union Railways, both of them shorter lines than their own, the expenses of the former averaged only 32 per cent., and the latter 36 per cent.

Mr. CRAWSHAY said, that the Committee had entered into a communication with the Chairman of the York and North Midland Company as to all expenses, and it was very true that those expenses were much less than their own. Only yesterday he had a communication with Mr. Hudson, with whom he went through every item of expense, and he had found that in many particulars, salaries especially, larger sums were paid on the Derby line, and no one could doubt the efficiency with which the affairs of the York and North Midland Railway were conducted. He expected to receive two or three other comparative estimates of the expenses of other Companies, when he would be in a better position for forming an opinion upon the subject; but in the meantime he had the satisfaction of saying, that the locomotive expenses on their own line were very moderate.

Mr. LEWIS (of Derby) said, there was another point in which the Derby Company stood higher in apparent expenses than the York and North Midland Railway, but which could be explained in this way, that the maintenance of way did not extend over a period of six months, the Contractors being under engagements to keep the line in repair for a certain period after its construction.

Mr. BEDFORD thought it was satisfactory to the proprietors to know the amount that would be required for completing all the works, as they would not be called upon unexpectedly to advance the sum named by the Committee.

After some further inquiries by Mr. Bedford in respect to certain forfeited shares, and the mode in which the works had been contracted for, upon which points satisfactory explanations were given, the resolution for the adoption of the Committee's Report was put to the meeting and carried unanimously.

The CHAIRMAN said, that the next part of the business would carry them back to what would be the regular course of proceeding at the first meeting. At that meeting a report from the Directors of the proceedings, with a statement of the accounts for the last half-year, was laid before the proprietors, and it was now for them to state whether they approved and confirmed that Report. The Chairman concluded by submitting a motion upon the subject for the approval of the meeting, which was unanimously adopted.

The adoption of this Report and statement of accounts was followed by a resolution, stating, that under present circumstances it was not desirable to make a dividend, but that the balance of 6361*l.* 2s. 5d. be carried on to the credit of the revenue account.

On the proposition being put for the re-electi
of the three Directors who retired from the Bo
the Chairman took the opportunity of exp
that it was the wish of Mr. William
from the Direction. Mr. Beale ha
since the commencement of t
had rendered most efficient an
the Proprietors from his exp
knowledge of the trade of th
pily his state of health was
his power to perform those d
him as a Director, and whic
him to feel that he did not discharge. The Chairman begged to suggest on the part of the Directors, in the room of Mr. Beale the name of Mr. Josiah Lewis, of Derby, who was then present, and whose accession to the Board would he was satisfied, be received by the proprietors and Directors with great satisfaction, the residence of that gentleman at Derby affording him an opportunity of promoting the interests of the railway. The election of Mr. Lewis, and the re-election of the Chairman and Mr. Walker having been carried unanimously.

Mr. LEWIS, in expressing his acknowledgments for the honour conferred upon him, said that while he did not underrate the importance of having a Director living at Derby, the end of the line at which the greatest competition arose, yet he could not undertake the duties, unless it was clearly understood by the Shareholders that he should not be expected to attend all the weekly meetings of the Board. He would attend as frequently as his own concerns permitted him, but such services as he could render by looking to the interests of the Company at Derby, he would freely give to the proprietors.

Mr. ROUTH seeing Mr. George Stephenson present, said he was very anxious to know what his opinions were with regard to the mineral traffic of the line.

Mr. STEPHENSON stated his conviction, founded now on experience, that the trade in coal, coke and lime must be most extensive. He certainly had expected it would have earlier become more extensive, but the absence of sufficient stations, and the high tolls of the Oxford Canal Company had much retarded it. His best exertions were being used to promote the trade on this railway in minerals, and would be continued.

A resolution, authorising the Directors to raise the said additional capital required to complete the railway having been passed,

Mr. BEDFORD said, he had one more question to ask, and he promised that it should be the last. He asked Mr. Stephenson whether it would not be a great benefit to the Derby Company to carry on their line to Warwick, and thence to Stratford, to get into the Stratford and Morton Railway.

Mr. STEPHENSON replied that it certainly would.

Mr. CRAWSHAY—What would it take to do it?

Mr. STEPHENSON—From ten to twelve thousand pounds a mile. If that line was carried out, it would be sure to be carried on to Oxford.

The business of the meeting being declared at an end,

Mr. BAKER proposed a vote of thanks to the gentlemen composing the Committee of investigation, for their very valuable attention to the interests of the Company.

The resolution having been seconded, was carried with acclamation.

Mr. ROUTH, in acknowledging the vote of thanks, said, that he knew he was only speaking the sentiments of the gentlemen who acted with him, when he assured the meeting that they went into the inquiry with an anxious wish to conduct it for the interests of the Company, and he felt bound to say that in prosecuting those inquiries they had received the zealous and cordial assistance not only of the Directors, but of every officer of the Company. There were many other points upon which it was the anxious wish of the Directors that they should prosecute their inquiries, and for himself he could say that he would have no objection to do so, believing as he did that good would result; every thing they had seen in the course of their investi

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

Sir,—I am instructed by the Directors of the Edinburgh, Leith, and Newhaven Railway Company, to send you the enclosed statement issued to the shareholders, which the Directors consider will be a very sufficient answer to the extraordinary, and certainly unfounded statements made in your paper of the 14th instant.

I am, Sir, your most obedient servant,

ALLEN GEORGE FIELD.

Statement by the Directors of the Edinburgh, Leith, and Newhaven Railway Company, in regard to the present position of the affairs of the Company.

In calling upon the Shareholders to relieve them from their present difficulties, by adopting the proposals submitted in their last Report, of taking up the forfeited shares of the Company's stock at 10*l.* discount, the Directors feel themselves bound to show to their constituents, the effect which the doing so, or the not doing so, will have upon the undertaking.

The Directors have all along been exceeding embarrassed in their operations by the want of the necessary funds, and to this cause must, in a great measure, be imputed the delay in the completion of the works, which might all along have been pushed on at a much more rapid rate, had they been assured of the supplies necessary to meet the consequent demands. During the last half-year the sum expended on the works has amounted to 11,049*l.* 3s. 7d., while the amount received from calls has been only 9,538*l.* 13s. 9d., and the Directors are now placed in such a position that unless immediately assisted, and that to a very considerable extent, they have no alternative, but to put a complete stop to the progress of the contractors. Their engineer reports that the amount of work remaining to be done under the current contracts, and to finish the line to the foot of Scotland-street, will require about 24,000*l.*, while at present the Directors have barely the means at their command of meeting the pay Bills for the current month; and the whole available funds, from arrears of calls, and from the call which has still to be made, cannot be estimated at more than 10,453*l.*

In this situation of matters, it appears to the Directors that the only chance of inducing the shareholders to come forward with assistance, is, in the first place, to show them that the adoption of the proposed plan will produce such an amount as will really enable them to complete that portion of the line in progress; and next, that, when completed, such a return may be reckoned upon as will be a fair inducement to make the required effort; and they are happy to say that they consider themselves able to give a satisfactory answer on both points.

In regard to the first, it may be sufficient to refer to the abstract of the Report, which has just been circulated among the shareholders. The completion of the line, as there and above stated, will require 24,000*l.*, an amount which is taken from a Report made by Mr. Grainger, at their request, to which they beg to refer for further particulars.

And to meet this expense, there is the amount of the arrears of calls, and other available funds, as before.....

And the amount which the sale of 1,615 forfeited shares, at 10*l.* discount, will produce, viz. .....

Total .....

There can be [illegible] posal is [illegible] there will [illegible] the foot of [illegible]

On being informed of what was wanted from him, Mr. Grainger suggested, that, as some considerable time had elapsed since any means had been taken to ascertain the actual passenger traffic on the roads leading from Edinburgh to Trinity, Newhaven, and Granton, it would be desirable to obtain a return on the subject as at the present time. This suggestion was adopted, and proper persons were accordingly stationed at the two points most favourable for this object, under the superintendence of the Company's Assistant Engineer. They commenced on the morning of Monday the 9th, at 6 o'clock, and continued till 8 o'clock at night, and the same on Tuesday and Wednesday, when their report was ordered to be given in. It was afterwards considered by Mr. Grainger, however, that it would be more satisfactory if extended to Saturday evening; and they were accordingly again set to work, but commencing at 7 o'clock, a. m., and continued till 9, p. m. The result of the enumeration is as follows:—

Monday, coach and foot	.....	[illegible]
Tuesday,	,, ...	[illegible]
Wednesday	,, ...	[illegible]
Thursday	,, ...	[illegible]
Friday	,, ...	[illegible]
Saturday	,, ...	[illegible]
Total		[illegible]
Average		[illegible]
Being, of coach passengers		1,046
,, foot ditto.....		4,724
		[illegible]

Proceeding on the returns thus obtained, Mr. Grainger was requested to give an estimate and calculation of what he considered might [illegible] taken as the probable traffic on the railway [illegible] that part of the line from Scotland-street [illegible] now in progress. But, at sometime to [illegible] in his opinion, it would be—supposing the [illegible] line to Market-street completed, including [illegible] nel; and supposing a good landing pier at the [illegible] posed harbour at Trinity, to be built at [illegible] terminus, and a connection made with the [illegible] Railway at Market Street. The following is the [illegible] calculation which he has made on the above [illegible] data:—

Supposing the line open [illegible] street, he considers that only [illegible] sengers ought to be reckoned [illegible] way. The daily average, [illegible] ninth of which is [illegible] 339,605 persons; of these [illegible]

50,000 1st class, at 6*d.* [illegible]
289,605 2nd class, at 3*d.* [illegible]

Together .....
Deduct, for expense of [illegible]

And there remains [illegible] without reckoning [illegible]

Supposing again [illegible] street to Trinity [illegible] siders that the [illegible] may safely be [illegible] average, for [illegible]

One [illegible]
Of these [illegible]

And [illegible]

Total [illegible]

---

been assumed as likely to [illegible] than has been shown by Mr. [illegible] figures as given by Mr. [illegible] must have more weight [illegible] any which they might [illegible] on the data given, [illegible] concern appear, to [illegible] considerable [illegible] stop short now, [illegible] which has been [illegible] incurring heavy [illegible] contractors.

It will be seen, [illegible] from Scotland [illegible] which would [illegible] capital paid [illegible] [illegible] [illegible]

MARYPORT AND CARLISLE RAILWAY COMPANY—GENERAL MEETING.

The general half-yearly meeting of the proprietors of the Maryport and Carlisle Railway Company was held on Friday last at Aspatria, when the following report was read to the gentlemen assembled, and unanimously agreed to. We greatly rejoice at the prosperous condition of this spirited project, which has had many difficulties to contend with since its commencement, but which now, we rejoice to say, bids fair to triumph over every adverse circumstance with the most distinguished success. The details of the report are of the most flattering description, and can leave no doubt on the minds of all reasonable men that the undertaking will, at an early day, increase in profit to the proprietors, and prove highly contributive to the advantage of the important district through which it runs.

REPORT.

The traffic for the six months ending 30th of June last amounts to		£2,334 19 2
Namely, for coal traffic	2,130 11 0	
passengers	182 9 3	
parcels and goods	71 18 11	
The cost of maintaining		1,153 4 3
This deducted from gross receipt leaves net profit on the six months		£1,181 14 11
The traffic is regularly increasing, and the proceeds of the last month of this period give an annual rate of		£7,000
Deducting cost of maintenance		2,500
Leaves an annual profit of		£4,500

During the first two months of the past half year the coal trade of this coast has been ususually dull; and, though from the facilities afforded by the railway to shippers from the Vale of the Ellen, Maryport has enjoyed a much larger larger portion of the export than would otherwise have fallen to its share, the trade in general is far below the reach even of its former importance.

A powerful additional locomotive engine, of 6 coupled 4½ feet wheels, and 14 inch cylinder, has been built by Messrs. Tulk, Ley, and Co., of Lowca Works, and applied to the purposes of the traffic. By this engine upwards of fifty waggons of coals have been brought to the shipping in one train. And, though this is a visible indication of the importance of the coal traffic of the portion of way now open, yet no satisfactory return can be expected until the whole line is completed through to Carlisle.

With this impression, the Directors think it necessary to accelerate the remainder of the work by all the means in their power.

The Carlisle contract, a distance of 4¾ miles, has been let to an able and experienced contractor, at a lower rate than former contracts, and the excavations are now being carried on at a very rapid rate.

Tenders have been received for the contract from Dalston to Wigton (6½ miles), and it will be forthwith let. These contracts are to be completed within 18 months.

On the remaining contracts, between Wigton and Aspatria, 9 miles, there is a greater portion of earthwork than on the other contracts, and which will require a longer time for the completion of the excavations. This part of the work will be undertaken as soon as the plans and specifications are settled, and proceeded with so as to ensure the completion of the whole line within the time prescribed by the Act of Parliament.

Whilst this important undertaking is thus rapidly progressing, it is not too much to expect that shareholders in arrear will now pay up their subscriptions, without giving the Directors the trouble either of enforcing the payment of such arrears or of forfeiting the shares.

The Directors also feel their confidence much strengthened by the way in which the loans to the Company are made by the public, as nearly the whole sum which the Company is authorized to borrow is already subscribed, and the works consequent thereon are progressing with rapidity. Hence the shareholders may look forward to receive, ere long, a handsome return for the capital they have invested.

(Signed) F. L. B. DYKES, Dep. Chair.

—*Whitehaven Herald*, August 21.

FATAL ACCIDENT BY FIRE ARMS UPON A RAILWAY.

On Friday, August 20, an accident occurred at the Stockport station of the Manchester and Birmingham Railway, which has been attended with fatal consequences to a gentleman much respected in the neighbourhood of Liverpool. It appeared that a party of sportsmen, consisting of Mr. W. Redfern and Mr. Storey, of Manchester, and Mr. James Fish, of Moss House, Roby, near Liverpool, were on their return home from a grouse sporting tour on the Derbyshire Moors, at Castleton, bringing with them indisputable trophies as to the extent of their success. They proceeded to the station, and were booked for the six o'clock train. Their luggage, dogs, and game, having been regularly deposited in the boot, they were about to enter the third class carriage, two of them, Fish and Storey, carrying three double barrelled guns. The porters, however, acquainted them that they did not permit luggage in the third class carriages, particularly fire arms, and requested they would allow them to be placed with their other luggage in the boot. This they obstinately refused to do, treating the subject as something laughable; and being withal somewhat elevated either by the success of their sport or the effects of wine. The porters called to their assistance Mr. Murnane, the superintendant, who being desirous of enforcing the rules and regulations of the Company, remonstrated with the party upon the impropriety of their refusal, and in particular the manifest danger of attempting to take fire arms into a carriage amongst a crowd of 60 or 100 passengers. At length they conceded, and gave up their fowling pieces to Richard Yeomans, one of the porters, who proceeded to put them into the boot, under the seats of the second class carriages, the muzzles being towards him, and Mr. Fish being immediately behind him. As he was in the act of pushing one of them by the barrel, another in the boot immediately went off, striking and dreadfully shattering the upper part of the porter's left arm, passing through the right hand of Mr. Fish, and entering his right thigh and groin. The porter was immediately taken bleeding to the Infirmary, and the part injured having been cut away, all unfavourable symptoms have disappeared. Not so with Mr. Fish; his wounds were of a more serious character, and he was conveyed in a helpless state to the private residence of the nearest surgeon, which was that of Mr. W. Rayner, Heaton-lane, where he had the advantage of immediate and constant attention. It is satisfactory to know that the unfortunate gentleman, prior to his removal, stated that whatever might be the issue of his injuries the matter was purely accidental. Mr. Redfern then informed the porter that the other barrel of the same gun was loaded, at the hearing of which, the passengers manifested considerable alarm; whereupon Mr. Murnane insisted that the owner, to avert a repetition of the lamentable occurrence which had just taken place, should instantly discharge it, or be amenable to the law for his improper and unaccountable temerity. Mr. Redfern, who expressed his regret at the accident, at once complied, subsequently admitting his knowledge that the gun was loaded when they entered the station. The confusion that necessarily prevailed may be imagined; and the consequence was that the departure of the train was delayed four minutes beyond the regular hour. Mr. Redfern, however, was detained until the last train, in order to explain the part he had taken in this lamentable affair. It is supposed that the fowling pieces must have been on "half cock;" but however we regret the accident, we cannot but deprecate in the most unmeasured terms the conduct of these gentlemen presenting themselves at any railway station with a loaded double barrelled gun, without having taken any precaution to prevent its accidental firing. The friends of Mr. Fish were made acquainted with the nature of the accident with all possible dispatch; and on the followlowing day his wife, accompanied by some other part of his family, came from Liverpool. A considerable portion of the shot was extracted in the course of the night of the misadventure and during the succeeding day; but owing to untoward circumstances, the symptoms which presented themselves were not so favourable as to induce the surgeon on Saturday evening to say that the patient was out of danger. On the contrary, during Sunday, we were informed that Mr. Fish became gradually worse, approaching to a state of delirium. On Monday those symptoms had seriously increased—the door knockers were muffled that the patient might be disturbed as little as possible—Mrs. Fish was permitted to abide in the house, in order to render every possible solicitude to her suffering husband—and considerable anxiety was manifested by his medical attendant and those by whom he was surrounded, for the safety of his life. In the course of the night it was evident that the skill of the surgeon would be of no avail; and the unfortunate gentleman expired about four o'clock on Tuesday morning in the presence of his wife. The following day an inquest was held on view of the remains, before W. S. Rutter, Esq., the coroner of the district, and a respectable jury, at the Cotton Tree public-house, when, after the examination of Yeomans, the wounded porter, James Kerfoot, another porter, also W. Redfern, one of the party, and Edward Kenyon, a cabman, the above facts were proved. It also appeared that the deceased, some time before entering the station, observed to Redfern, that one of the guns was undischarged. He, however, carried that, which turned out to be his own, not having fired a shot throughout the day, and Redfern's; and they were given at length to the porters, when the accident occurred. The deceased had unfortunately indulged for some days back in an immoderate use of ardent spirits, so much so, that he had become ill and nervous. The evidence of the surgeon was somewhat curious. He said the injuries were not sufficient to have caused the death of a person of good constitution. The deceased, in his opinion had died of *delirium tremens*, occasioned by the shock from the accident, but he could not swear it. *Delirium tremens* might, with such a constitution, have come on without such an accident. None of the shots had penetrated the flesh about three quarters of an inch. They were of a superficial character, and the wounds were fast healing up. After some hesitation, the doctor stated definitely that the shock of the accident was more likely to have superinduced *delirium tremens* than anything else. Having died of exhaustion, the result of *delirium tremens*, and the latter being the result of the accident, the accident was the first cause of death. A verdict to the above effect was returned, attributing to the accidental discharge of the contents of the gun into his body as the cause of death. By the request of the jury Redfern was reprehended by the Coroner for having allowed a loaded gun to be taken to the station. The body of the deceased was removed the same evening from Stockport to the place of interment in Liverpool. The family are highly respectable, and the melancholy accident has occasioned great grief among them.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—In the statements of the Northern and Eastern Railway traffic from 15th September to 31st December, 1840, made in the report dated 18th February, 1841, the earnings from the opening of the line are given at 5,257*l.* 4s. 8d. No account of expenses whatever was given, but at the debtor side of the account, there is an amount stated as borrowed of capital, viz., 6,324*l.* 19s. 8d.

As neither of these amounts appears in the traffic account made up to the 30th June, and no mention is made of the profit or loss incurred to 31st of December, perhaps some of your correspondents can state why the dawning of this undertaking is to be hidden from the eyes of the vulgar.

As no account of the expenses incurred from 15th September to 31st December, 1840, appears, who furnishes the supplies of coke, oil, &c., and from what source did the salaries, wages, &c. come?

I am, Sir, your humble servant,

VIATOR.

London, 30th August, 1841.

Carrying Fire-Arms upon Railways.—In consequence of the melancholy accident from the discharge of fire-arms at the Stockport Railway Station (an account of which appears in another part of this day's *Railway Times*), the subject of passengers carrying loaded fowling pieces upon the Manchester and Birmingham Railway has been discussed by the Directors of that Company, and they have come to the resolution that no person, the military excepted, will be permitted to travel upon the above line with guns, unless they have been previously examined by the Company's servants. An order to this effect was issued on Tuesday.

RAILWAY ADJUDICATIONS.

Liverpool Summer Assizes, August 17.—Chas. Thomson, aged 36, a very respectable looking man, was charged with having feloniously passed a receipt for money, with intent to defraud the Sheffield and Manchester Railway Company.

Mr. Brandt and Mr. Hutton appeared for the prosecution; Mr. Shaw for the defence.

The prisoner was secretary to the Sheffield and Manchester Railway Company. An account of 447*l.* was due to Messrs. Mawdsley, of Liverpool, for advertising. The prisoner drew that amount from the Directors, but remitted only 347*l.* An acknowledgment was transmitted, and Thomson, it was alleged, had altered the word "three" into "four."

John Dalton, one of the Directors of the Sheffield and Manchester Railway Company, stated, that in September, 1839, the prisoner was in the employ of the Company as secretary. They had an account with Gore and Son, of Liverpool, for advertising. On September 25th a meeting of the Directors was held at Glossop, and Gore and Son's account was brought forward by Mr. Thomson, and ordered to be paid. A cheque was drawn for the amount on the District Bank of Manchester and Liverpool. The cheque was handed over to Mr. Thomson. Witness and Mr. Sykes signed the cheque, and the body of it was in the handwriting of the prisoner. It was handed to him, and his duty was to send it to the party in whose favour it was drawn. The receipts of parties were usually pasted in the voucher book. (The receipt from Messrs. Gore was produced). The letter r in the word four, the witness thought, was like the writing of Mr. Thomson. The word altogether was like the general character of his hand.

Mr. Cunningham, cashier to the District Bank, stated, that on the 26th September, 1839, the prisoner presented the cheque for payment. It was paid, 100*l.* being given in cash, and a letter of credit for 347*l.*, payable to Messrs. Gore and Son, of Liverpool.

Thomas Kerrison, clerk to Messrs. Mawdsley, (Gore and Son,) proved, that, in September, 1839, the Railway Company owed them 447*l.*, and that they, in that month, received a remittance of 347*l.*, which was acknowledged. The letter of acknowledgment was handed in. Mr. Kerrison showed, that the word "three" had been altered to "four." A letter from Mr. Thompson, which accompanied the letter of credit, was read. It set forth the total sum remitted, namely, 347*l.*, and that some of the accounts for advertising in other papers having come in, the balance was retained till another audit of the board, he would call and see Messrs. Mawdsley (Gore and Son) respecting the accounts. Mr. Kerrison stated, that he had never any conversation with Mr. Thompson on the subject of the letter.

Mr. James Mawdsley stated, that he was a partner in the firm of Gore and Son; there were more than two partners. Mr. Thomson called a month or two after the letter alluded to arrived.

Cross-examined.—Did not arrange that Mr. Thomson was to pay the deficient 100*l.* by an acceptance. Mr. Thomson proposed that mode, but it was not acceded to. He (Mr. Thomson) then proposed to pay by instalments. He (Mr. Mawdsley) agreed to that.

By Mr. Brandt.—Mr. Thomson stated, that the Directors were displeased that he had given such extensive orders for advertisements, and he would therefore pay the residue out of his own pocket. That was the reason why he (Mr. Mawdsley) acceded to the proposal to pay by instalments.

Mr. Shaw took several slight objections to the form of the indictment, none of which were entertained. He then addressed the jury at some length in favour of the prisoner.

The jury retired at twenty-five minutes past three o'clock, and after a brief consultation, found the prisoner *Guilty*.

Sentence deferred.

August 25.—The prisoner was brought up for sentence.

The Clerk of the Crown having asked whether he had anything to say why sentence should not be passed upon him,

The prisoner, with tears in his eyes, replied as follows:—I admit the justness of the verdict, and can assure your lordship that at the time of doing it, I had not the most remote intention of fraud. It was an unfortunate speculation in railway shares that made me do it. I had several gentlemen in court on the day of my trial to show that up to the time in question I had borne an unblemished character. I have nothing more to say, but throw myself on your lordship's merciful consideration, for the sake of my wife and children, who, on account of my sin and folly, are thrown helpless on the world.

His Lordship passed sentence on him in the following terms:—You have been convicted, on clear evidence, of the crime of forgery. The receipt was forged in fraud on those who employed you. I have no doubt of the truth of what you state, that you would have received a good character from several gentlemen, because no one would have held the situation you did without having such a character. But that character makes nothing in your favour. On the contrary, it shows that that character was maintained to outward appearance while your principles were of a different hue. You say you contemplated no fraud, and that unsuccessful speculations led you to commit the act, but I believe no clerk commits such an act without having some such excuse—that is, he hopes to have gains, that no losses will be sustained, and that at some future time, he will be able to save harmless those who suffer. I cannot let such a circumstance have any weight in this instance. The crime of forgery is of so dangerous a nature to the property of such numerous persons, is accompanied with so much of fraud, so much of concealment, and, in your case, so much of treachery that I feel myself bound to put in force the whole sentence of the law. It is with great regret I hear you have a family; but the only question I could entertain is, between a sentence of transportation for a long term of years, and a sentence of transportation for the whole of your life. I think an example ought to be made in a case of this sort. I feel it to be the duty of the court to show that it contemplates with that degree of reprobation which is due to cases of forgery and fraud repeatedly committed, for such was your case, and to the prejudice of those who confided their interests to your care. The sentence of the court is, that you be *transported* to such place beyond the seas as her Majesty, by the advice of her privy council, may be pleased to direct and appoint, *for the term of your natural life*.

The prisoner, on hearing the sentence, sunk down in a fit and was removed with some difficulty.

SHEFFIELD, ASHTON, AND MANCHESTER RAILWAY COMPANY, v. TOWNSEND AND OTHERS, EXECUTORS.

Liverpool Assizes, August 25.—This was an action brought by the Directors of the Sheffield, Ashton, and Manchester Railway, against the three defendants, as executors of John Townsend, deceased, to recover the sum of 300*l.*, with interest, being the amount of three calls on twelve shares in the railway, held by the deceased. Two of the defendants suffered judgment to go by default, the third pleaded full administration of the effects of the deceased, and that no funds remained to pay the demand. It was proved, however, by the cashier of the Sheffield and Hallamshire Bank, with which the deceased did business, that at the time of his death there was a balance of 1,800*l.* in his favour. Evidence was tendered of other property belonging to him, but this was deemed sufficient, and the jury, under the direction of his lordship, found for the plaintiffs—Damages, £311 5s. 6d.

WALKER v. THE LONDON AND BLACKWALL COMMERCIAL RAILWAY COMPANY.

Sheriffs' Court, August 27.—This was a claim for compensation, amounting to 4,800*l.*, made by the proprietor of the Duke of Cumberland's Head public-house, against the above Railway Company, under the 51st section of 6 & 7 Wm. IV., cap. 23, which requires the Company to purchase dwelling-houses and shops within 50 feet of the railway, in the event of such property being deteriorated in value by the construction of the railway.

Evidence having been given in support of the claim.

The Jury, under the direction of the Under-Sheriff, found "that the claimant was not entitled to have his premises purchased by the Railway Company, the whole thereof not being within 50 feet of the said railway."

MARTINEAU v. COLE AND ANOTHER.

Liverpool Assizes, August 27.—This was an action to recover a sum of 817*l.* 19*s.*, being the value of a number of shares in the North Midland Railway, sold for the plaintiff.

Mr. Cresswell and Mr. Crompton for the plaintiff; Mr. Knowles, Mr. Wilson, and Mr. Hoggins for the defendants.

It appeared that in 1836 a person of the name of Bault had commenced business as a sharebroker in Liverpool. He was introduced by a person of the name of Hutton to the defendants, who are sharebrokers in London, and began to do business with them, it being agreed that the commission should be equally divided between them. It August, 1836, Mr. Bault entered into a partnership with a person of the name of Addison, and communicated this fact to Messrs. Coles and Mullens, who expressed themselves satisfied with the arrangement. Mr. Bault had stated to the defendants that he did not intend to do business on his own account, but as a broker merely, and would always give the defendants the names of his principals, if they wished it. They in return expressed their opinion that this would be unnecessary, unless in cases where stamps would be required. On this basis a good deal of business was transacted between the parties. In the beginning of the present year, the plaintiff employed Bault and Addison to sell the shares now in question. They were finally disposed of through the defendants to parties in London, and the money paid. The plaintiff repeatedly applied to Bault and Addison for the amount but in vain, and they finally became bankrupt. It was now alleged that the business relations subsisting between Bault and Addison on the one part, and the defendants on the other, constituted a partnership, and that the defendants were liable for the amount.

It was finally agreed that the matter should be turned into a special case, for the opinion of the Court above, and subject to this a verdict was taken for the plaintiff for the amount claimed.

SHARP AND OTHERS v. GREAT WESTERN RAILWAY COMPANY.

Liverpool Assizes, Aug. 31.—This action was brought to recover a balance of account for goods sold and delivered. The plaintiffs are John Roberts, Thomas B. Sharp, and John Sharp, survivors of Thomas Sharp, engine manufacturers, of Manchester, who claimed from the Directors of the Great Western Railway Company a balance of the amount charged for ten locomotive engines. The defendants pleaded that they had not promised, as alleged, that they had paid, and that they had a set off to a greater amount than that claimed.

Mr. Cresswell and Mr. Yates appeared for the plaintiffs; and Mr. Wortley and Mr. Watson for the defendants.

Mr. Cresswell stated, that in the year 1839 the Directors of the Great Western Railway contracted with the plaintiffs to manufacture for them ten locomotive engines, which amounted to upwards of 20,000*l.*, and it was for the recovery of 662*l.* on those engines that the present action was brought. The contract was dated 21st May, 1839. The engines were to have seven feet driving wheels and tenders, according to drawings. The engines were to be delivered at certain dates. Each engine was to be subject to a trial of 1,000 miles, and Sharp, Roberts, and Co. were to be liable to any breakage which might take place in such trial,

Digitized by Google

arising out of defective materials or workmanship. These trials were to take place within a month of the delivery of each engine. If the engines were not so tried within a month there was an end of all responsibility on the part of the manufacturers. The price of each engine was to be 1,850*l.*, and of each tender 452*l.* In the contract provision was made that the fire boxes were to be of copper, 7-16ths of an inch thick, The engines were delivered from time to time: the Tiger on the 15th May, 1840; the Leopard, 7th June; the Panther, 24th June; the Lynx, 14th September; the Stag, Greyhound, Vulture, Hawk, Falcon, and Ostrich, at other dates; and each underwent its trial of one thousand miles in a proper manner, one of the plaintiffs' men superintending the trials. It appeared that Mr. Brunel was the engineer for the railway, and Mr. Gooch attended to the engines. No complaint was made respecting the engines till after the Company had been pressed for payment of the balance. The plaintiffs received letters from time to time from Mr. Gooch, stating that their engines did very well, that the last was the best; and he was sorry he had not ordered the Hawk to be made with a division in the box, &c. Four months after the Hawk had performed her trial of one thousand miles, a complaint was made that her crank-axle had turned out a bad one, and that the wheel had got out of truth a little. It was alleged that various measures had been tried to remedy the defect in the wheel, and ultimately the crank was sent back. The plaintiffs pressed for the payment of their balance. On the day after Mr. Gooch had, according to the request of the plaintiffs, pressed for payment, Mr. Brunel wrote to them, finding fault with the engines, saying the fire-boxes were all wrong; that they were below the specified thickness; that one of the partners ought to go over and inspect them; that, as they were made of insufficient copper, that he considered the transaction a little discreditable, and was compelled to give notice that he should hold them responsible. Mr. Cresswell said he should prove that the copper was good; that it was bought from a respectable manufacturer, and was of the specified thickness. The complaint had been made nine months after the engine was tried, and if the copper was then found thinner than specified it was probably because some chemical effect had been produced on it by the coke used. He would prove that the ten engines had been delivered and tried according to contract, and that they had all been received by the Company.

The contract having been read, a witness was called who proved the delivery and trial of the engines, that they were in good working order; and that the Company "took to them."

Mr. Wortley, in reply to a question from the Judge, said that he contended that the plaintiffs had not performed their contract: first, that they had not used the best copper for the purpose; and, next, that they had not put in proper rivets: they ought to have put in copper rivets, and they had put in iron rivets.

Mr. Cresswell said the copper, it was evident, had become thinner from use. As to the rivets, he had never heard a word about them till that moment.

Mr. Wortley said they had not made the discovery till the last week.

Mr. Cresswell said, if the defendants were prepared to go into evidence on the subject of the copper, he was ready to meet them on the subject of the rivets.

His Lordship thought the evidence as to the copper was inadmissible, and Mr. Wortley declined to go into evidence touching the rivets. A verdict was taken for the plaintiff, damages 662*l.*

VIGNOLES *v.* THE RIGHT HON. T. LEFROY.

Liverpool Assizes, Aug. 30.—This, which was a Special Jury Case, came on this morning. The declaration was for work and labour done as a civil engineer, also for money paid by the defendant on an account stated. The defendant pleaded, in the first place, that he did not promise as stated, and secondly, that he had paid all that was due. The plaintiff, in his replication, denied this, and on both pleas issue was joined. Mr. Dundas, Mr. Martin, and Mr. Watson were counsel for the plaintiff; Mr. Cresswell, Mr. Wortley, and Mr. Cleaseby for the defendant.

Mr. Dundas, in opening his case, said that he had the honour to attend before the jury that day on the part of a gentleman probably not unknown to them as a civil engineer of the highest reputation, and as a man of great skill and experience in his profession. His skill and genius it was that planned and achieved the North Union Railway, the Midland Counties Railway, and the Dublin and Kingstown Railway; and he (the learned counsel) referred to these works only as a sample of what had been done by his client. That gentleman (Mr. Charles Blacker Vignoles), was a suitor in this court for between 5,000*l.* and 6,000*l.*, for services performed by him as a civil engineer to the Great Central Irish Railway, and for disbursements and expenses in the course of those services. The defendant was the Right Hon. Thomas Lefroy, a gentleman of distinction at the Irish bar, a member of Parliament for the University of Dublin, and a person respectably connected in the county of Longford, of which his son was at the time in question the representative in Parliament. The defendant was sued by the plaintiff as a Director of the Railway Company; and it would be proved to the entire satisfaction of the jury that he was a Director in the year 1836, and continued to be so during the whole of the time that Mr. Vignoles was employed, presiding over the meetings of the Committee, and acting throughout with intelligence and assiduity. He (Mr. Dundas) did not mean to say that the defendant was the only person liable on the contract. Mr. Lefroy was one of the most active of the Directors; it was with him that the plaintiff most frequently came in contact; and if Mr. Vignoles succeeded in recovering against him, the defendant would have his remedy against his co-Directors. In 1836 there was a great deal of speculation afloat on the subject of railways, both in England and Ireland. Many persons, some from public motives, and some undoubtedly from private motives, interested themselves in the formation of different lines. In Ireland there was a strong feeling that a railway, which should cross the centre of the island, would be very advantageous to that country, as it would open up its internal communications and resources, and extend its commercial relations with England and Scotland, as well as with the United States of America. Some gentlemen of respectability in the county of Longford, and in the neighbouring counties 30 or 40 miles from Dublin, contemplated a railway from Dublin to Sligo, a distance of 120 or 130 miles. These gentlemen formed a provisional Committee, issued a prospectus, and appointed Mr. Vignoles their engineer on the 4th of June, 1836. At the request of the Committee, Mr. Vignoles commenced his survey as early as possible, in order that, if possible, an application for incorporation might be made to Parliament in the session of 1837. Dispatch was requisite, and Mr. Vignoles, as was well known to the Directors of the contemplated Great Central Irish Railway, having at the time other engagements in this country, sent over a number of persons in his employ to commence the survey. At the head of this party was Mr. Nimmo, a young man who had been under the plaintiff for about 18 months. Mr. Vignoles followed shortly after, and from time to time continued to superintend the operations and to advise the Committee, until he had completed his survey and made his report. Some difference of opinion had arisen in the course of the survey as to the most desirable terminus; Mr. Lefroy and Mr. Vignoles differed in opinion; but when the report of the engineer was sent in, it was adopted by the Committee. Considerable difficulties had to be encountered in the drawing out of a line, as the Ordnance map of Ireland had not then been issued, and there was a want of good local maps. With the exception of one or two canals, also, no levels had been found. About this time there was a notion in Ireland that a royal commission would be sent down to regulate the formation of railways in Ireland. This was eventually done. Mr. Vignoles was anxious to become the engineer to this Commission, and it was conceived by some of the members of the Provisional Committee of the Grand Central Irish Railway that it would be to the advantage of their Company if he were no longer appear as their engineer, but that Mr. Nimmo should have the nominal appointment. Mr. Lefroy was one of the Directors who concurred in this opinion. The idea was, that it would be greatly to their advantage if their line were adopted by the Commission; and to have at head quarters a person in the situation in which Mr. Vignoles stood to them was likely to lead to that adoption. It was expresly agreed, however, that though Mr. Nimmo should be Mr. Vignoles' representative, the operations were still to be under the superintendence of Mr. V. Mr. Nimmo, never having had any independent occupation of the kind in his life, was too young a man to have the sole conduct of so vast an undertaking as this, and he was to receive advice and instructions in all things from Mr. Vignoles. And not only was such the understanding, but such was the actual mode of proceeding from the day in question. Though Mr. Vignoles was no longer, in name, the Engineer of the Company, he was, with their knowledge and consent, carrying on their work as before. After the plans had been agreed upon, little of course remained to be done, except going over the selected line more particularly and preparing plans, sections, &c., for deposit in the office of the clerk of the peace and for the House of Commons. He (Mr. Dundas) should show, by an extensive correspondence between Mr. Nimmo and Mr. Vignoles, that they were in constant intercourse and communication as to the line. Unfortunately for the plaintiff, however, Mr. Nimmo was now dead, and they were deprived of that means of proving that Mr. Vignoles had been throughout the superintending power. The whole work having been done, and well done—for no fault was ever found with it—the only remaining question was that of payment. The charge made was 40*l.* a mile for 126½ miles; for such was the length of the three lines agreed upon, namely, from Dublin to Athlone, Kells, and Longford. This would amount to 5,060*l.*, and the Jury would find, by the evidence of competent persons, that this was a reasonable charge. The full extent of line explored was nearly 400 miles; but it was only for 126½ miles that Mr. Vignoles sought to charge. There was on the record a plea of payment; but he (the learned counsel) was at a loss to understand what the defendant meant by it. The only money ever paid to the plaintiff was the sum of 500*l.*, which was put to his credit when he went over to Dublin in June, 1836. If it could be shown that Mr. Nimmo had received any money, as an agent acting under the plaintiff, Mr. Vignoles would be ready to allow for it.

Sir J. Murray said, that at the meeting of the Provisional Committee, in September, Mr. Vignoles distinctly resigned and relinquished the situation of Engineer to the Company. On his cross-examination the witness admitted that Mr. Lefroy had presided at some of the Committee meetings.

Colonel H. Jones proved that the amount charged by Mr. Vignoles, for his surveys for the Royal Commission, was 16*l.* per mile, including 4*l.* per day for his personal superintendance, and including also trial surveys.

A considerable number of engineers and surveyors, assistants and pupils of Mr. Vignoles, were called to prove the work done, The witnesses estimated the value of their services at the period in question, when there was a very great demand for surveyors, at from one guinea and a half to three guineas a day, exclusive of expenses, which were put down at 10s. 6d. a day. Mr. Giles, a gentleman who had been engaged in surveying and constructing several lines of railway, amongst others the Newcastle and Carlisle, the London and Southampton, and the London and Brighton, said he thought that the assistants and pupils called had not overestimated the value of their services. He

Digitized by Google

him-self, at that period, [illegible] to say—was not too much. The charge for superintendence, of five guineas a mile on the line deposited was also reasonable. The whole charge of 40*l.* a mile, considering the extent of exploratory surveys and the particular period, was a very reasonable and just one. Mr. Brunel the Engineer of the Great Western Railway, gave similar evidence. On his cross-examination by Mr. Cresswell, Mr. Brunel said that the Parliamentary estimate of the Great Western was 2,500,000*l.*; the cost was about 6,000,000*l.*

Mr. Cresswell, on the part of the defendant, submitted that there was no evidence of any contract entered into between the defendant and the plaintiff. It appeared from the prospectus, a copy of which he held in his hand, that this was an inchoate speculation—that there had been no Company formed, nor no shares allotted. The defendant, therefore, was not at that time a partner in any co-partnership, for none at that time existed, and any engagement that was made by any person at that time was clearly with a view to a prospective engagement by the constituted Company, and when that Company was constituted, the defendant did not become a shareholder. He (the learned counsel) should add a few facts to the case, and when this had been done, it would be sufficient to show that the plaintiff had no claim on Mr. Lefroy. As soon as the shares had been allotted, it then became manifest that the defendant intended to have no pecuniary interest in the contemplated undertaking, although he was willing to give it all his countenance and support, and in the same way as any other member of Parliament would be ready to do, in a scheme in which his constituents were interested. Mr. Lefroy explicitly declined, when asked to become a shareholder. This was a town which was celebrated for great enterprises; but he (Mr. Cresswell) should be very cautious in giving any of them his countenance and support, if he must, for so doing, run the risk of being ruined. Mr. Lefroy had done no more than he the learned counsel) might be called upon to do by any of his constituents; he merely gave his countenance and support to what he might consider a project beneficial to those whom he represented in Parliament; but it was plain that he did not join in it as a shareholder, for the 18th of June was the date of his letter declining to take shares, and the shares were allotted on that day. Mr. Cresswell then referred to the account Mr. Dundas had given of the resignation of Vignoles, as Engineer of the Great Irish Central Railway, and said that if any gentleman could have acted in the way alleged, it was a very discreditable thing. If, however, such a transaction had occurred, not one iota of the blame could be attributed to Mr. Lefroy. But it would be distinctly shown in evidence, that Mr. Vignoles had actually resigned his situation as Engineer to these Directors, and strongly advised them to take Mr. Nimmo in his stead, offering to give him all his advice and assistance—that the plaintiff then became surveyor to the Royal Commission—that Mr. Nimmo carried on the work on the Great Central Irish Railway survey, in his own name, and that all the plans were lodged in his name.

Mr. Dundas replied in a very animated speech. He contended that the interests of morality and justice would be as well served by a verdict for Mr. Vignoles, as for his more wealthy client. The plaintiff had devoted his own great abilities and time, as well as the talents and services of a great body of his assistants and pupils, to the services of the Company, of which the defendant was a leading Director, and when he came to ask for payment, it was refused, and responsibility was attempted to be shuffled off. Mr. Dundas, to vindicate the character of the plaintiff in the agreement respecting his nominal resignation of Engineer to the Company, pointed out that at the time Mr. Vignoles became surveyor to the Royal Commission (which was in December 1837, as had been proved by Col. Jones all the actual work in the surveying of the Great Central Irish Railway, had been completed. With respect to the letter to Messrs. Young and Murdock, stating the balance due to be 3,481*l.*, he (the learned counsel) had only to remark, that his client was ready to admit the receipt of 2,443*l.*, if it were admitted that this sum had been paid to Mr. Nimmo as his agent, and that there was still due to him the balance there named.

As it was now 20 minutes to eight o'clock, his Lordship left it to the jury to say whether he should then proceed with his summing up, so as to finish the cause that night, or whether they would prefer an adjournment until morning. The jury chose the latter alternative, and the Court adjourned.

Aug. 31.—His Lordship proceeded to sum up. The first question for the jury, he said, was, whether Mr. Lefroy employed Mr. Vignoles, and whether the work which he performed was done on the credit given to Mr. Lefroy either alone or as one of a number of gentlemen. If he had proceeded on the credit of Mr. Lefroy, another question would remain: during how long were the services given on the credit of Mr. Lefroy? and lastly, had the plaintiff received sufficient compensation for his services, and if not, how much more he was entitled to? The commission having decided against the Central Railway, no company was ever formed; therefore, one matter of inquiry was, who was it who had employed Mr. Vignoles? and who was to pay him for his services? for unless they thought he did this work entirely on his own responsibility, which was not very probable, he must be paid by somebody; and the question was, who did they consider to be his employers? If they should think Mr. Lefroy was one of his original employers, then the important question arose as to what time he was the engineer of the Company. His Lordship proceeded to a recapitulation of the more important facts of the evidence, making such remarks as he deemed necessary on its tendency.

The Jury retired at ten minutes to eleven o'clock. They returned at one, and delivered a verdict to the effect, that the defendant was originally liable, and the plaintiff went to work upon such liability of the defendant; that the plaintiff ceased to be the engineer on the 31st of September, 1836, on the appointment of Nimmo, and that after that time the work was done by Nimmo; that the plaintiff had not been paid the value of the work done by him previous to the 31st of September, and that he was entitled to the further sum of 1,980*l.*: further, that the plaintiff was not employed to do any work as engineer preliminary to a second application to Parliament. A verdict was accordingly taken for the plaintiff for 1,980*l.*

RAILWAY COMMUNICATION WITH SCOTLAND.

[From the *Carlisle Patriot.*]

We are happy to observe that the exertions of the Provisional Committee formed for the promotion of the projected line of railway from Lancaster through Carlisle, &c. to Glasgow and Edinburgh are fairly and promptly met by corresponding exertions elsewhere.

On Saturday last the usual Committee meeting took place at the Town Hall, when a very gratifying communication was announced from Lord Lowther accepting the office of the Chairman to the Provisional Committee, and leaving the appointment of the two vice-Chairmen to the Committee.

Letters approving the objects of the Committee were also received from the Duke of Hamilton, the Marquis of Queensberry, and Lord Douglas; and it was intimated that, although the Duke of Buccleugh was largely interested in property on other lines of railway, his Grace would not offer any opposition to the proposed undertaking.

A letter was also received from Mr. John Marr, Clerk to the Commissioners of Supply for the county of Lanark, stating that a meeting of that body, at which Lord Belhaven presided, had cordially approved of the line of railway proposed. And a letter was read from the Directors of the North Union Railway confirming the conduct of their Chairman at Liverpool, and promising the Provisional Committee their cordial co-operation.

Very influential local Committees have been formed, and in compliance with their request copies of the resolutions of the Provisional Committee here have been forwarded to Committees at Edinburgh and Glasgow; means have also been taken to promote the objects of the Provisional Committee at Preston in connection with the Lancaster and Preston Railway; and at Penrith. We are happy to be able to announce that the project has been well received wherever it has been mooted; and the high patronage which has now been secured for the undertaking can hardly fail to secure its ultimate success.

COACH ACCIDENTS.

Friday evening, August 27, the down Hastings mail, driven by Joseph Meppom, and full inside and out, had just passed through Pratt's-bottom Gate when it ran over an old woman seated on the road and quite drunk. The four horses and the coach all passed over her, but wonderful to say, without apparently hurting her, excepting a slight blow in the forehead, probably from the drag chain under the coach. She was lifted up by one of the passengers, and William Johnson, the guard, but being too drunk to walk, was placed on the grass at the side of the road. The mail then proceeded some two miles further, the night being at that time remarkably clear and fine, when the coachman called to the guard to blow his horn, as some waggons were in front. The guard blew and the waggons drew quite on their own side of the road, but, whether by pulling the wrong rein, from nervousness at the late accident, or by a sudden shying of the horses, the mail dashed against the hind wheel of the first waggon—Barnett's Tunbridge van—which it hurled against the hedge, and then ran full tilt into a wain of hay belonging to Mr. Cheessup, when it providentially locked the wheel and ran the splinter bar under the shafts of the waggon, or otherwise it must have infallibly gone over and the loss of life or limb might have been frightful. The shock of the encounter against the first waggon hurled the coachman from his seat and the wheels passed over his body. The guard also, who was in the act of springing down, was thrown to the ground and the wheel passed over his fingers and grazed his leg, besides the great shock of the fall. He, however, sprang instantly up, and with great presence of mind and activity, got to the horses' heads just at the moment of running into the second waggon, and held them till assisted by the waggoners. The poor coachman rolled over once and moaned piteously, but never spoke a word. A medical gentleman from Hastings (Mr. Duke, we believe,) was in the coach, and had him immediately conveyed to the Polhill Arms, near which the accident happened, but human aid was unavailing, and he died very shortly after. None of the passengers were hurt except one gentleman, whose knee was slightly cut and bruised against the wheel. Too much praise cannot be accorded to William Johnson, the guard, who, despite of hurts and bruises, exerted himself much in getting the mail disentangled from the waggon, and one pair of the horses being once more put to the coach, with what broken harness remained, and by tying the splinter bar to the pole, managed to get the mail down to Riverhead, to which place the passengers preferred walking, and from whence the letter bags and passengers were forwarded in post chaises.—*Globe.*

On Monday last, as the York and Harrowgate coach was leaving the latter place, it had only just passed the Granby Corner, when the axletree broke, and the coach was upset. The coachman was severely bruised. No lives were lost. Several of the passengers were much injured, amongst whom the Rev. Mr. Abney had his ankle dislocated.—*Leeds Mercury.*

2. Toll to London and Birmingham 160*l.* 4s. 6d., to be deducted from gross receipts.

4. For six days.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169¼ (118¼+18+33.)

14. The 29*l.* 10s. 1d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The amount given in the table includes the receipts from the horse coaches from Hayward's Heath to Brighton. The divisor, therefore, is 46, although only 37½ miles of the railway are open, including the Shoreham branch of 5½ miles. The toll to the Croydon Company is not included in the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, an 1 is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 5,237*l.* 7s. 10d. are the receipts after deducting omnibus charges, and payments to other Companies.

25. The receipts for goods, &c. include, carriages, 341*l.* 15s. 0d.; horses, 161*l.* 18s. 0d.; dogs, 5*l.* 2s. 6d.; parcels, 233*l.* 14s. 7d.; cattle, 48*l.* 8s. 6d.; corn, 18*l.* 0s. 7d.; heavy goods, 499*l.* 10s. 9d.; coal, 78*l.* 11s. 9d.—Total, 985*l.* 1s. 8d.

27. The dividend includes a sum of 31,780*l.* earned previous to the last half-year.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A Shareholder of the Midland Counties' Railway Company, *will find his query answered if he will look at the report, which we published the week before last, of the proceedings of the General Meeting.*

A Lover of Truth.—*We did not say that the profits of the line he alludes to are at the rate of 5l. per cent.; we only published the report of the Directors, in which the dividend is stated to be at the rate of 5 per cent.*

Checkmate, *in reference to an advertisement, can only appear as such.*

Mr. Bernard of Cardiff *has our best thanks.*

An Old Engine Driver.—*When our correspondent has "entered more into detail" we shall be better able to judge whether the matter is "worthy of public notice," at present we see no reason to interfere.*

We have much pleasure in complying with the request of two correspondents who wrote to us from Glasgow on the same subject. They will see that the alteration has been made as suggested.

The northern correspondent who addresses our publisher by name need be under no apprehensions. He may rely upon the most inviolable secrecy.

Sunday Travelling.—*The sixth and last letter of* An Anti-Sunday Fanaticism, *if possible in our next.*

A Subscriber, *at Shrewsbury, may procure the book he wants at our office in Fleet-street, for one shilling.*

London and Blackwall Railway.—*In answer to an Intending Shareholder, we beg to say that the dinner proposed by Mr. Cruchley at the late meeting did not, we are told, come off on Thursday last as proposed—a circumstance which we attribute to anything rather than to a want of will to show a mark of respect to the Directors. Certainly, they fully deserve it, and we trust that the scheme will not be allowed to fall to the ground.*

The letters of F., Wotton, and others, on the Great Western Railway, Verax, Humanitas, &c. are in type, and shall appear next week.

North Midland Railway.—A Shareholder (*Liverpool*) *must give his name and address before we can pay any attention to his application.*

Edinburgh, Leith, and Newhaven Railway.—*The letter of Messrs. Handyside and Wilson in reference to a statement in the Report of the Directors shall appear next week.*

Edinburgh and Glasgow Railway.—*We have to-day devoted so much space to the affairs of this Company that we have not room for the "Journal" of the Edinburgh Directors. Before the note of a Lancashire Proprietor reached us, we had noticed its subject.*

Mr. Duffield (*Sunderland.*)—*Our correspondent can scarcely do wrong in investing his money on mortgage in any of the principal lines. The debenture holders are sure to be safe whatever may befall the share-holders.*

A Subscriber (*Scarborough.*—*We understand that our correspondent has been answered privately from the Company's offices.*

*** We publish to-day another Supplementary Sheet, for the purpose of getting rid of the large number of meetings that at present press upon us. We now hope to be able to dispense with these extra issues for some time to come.

Traffic omitted last Week.

DUNDEE AND ARBROATH RAILWAY.

Traffic for the week ending August 22, 1841.—Passengers 321*l.* 6*s.* 3*d.*; parcels 13*l.* 11*s.* 1*d.*, goods 50*l.* 12*s.* 6*d.*—Total 385*l.* 12*s.* 11*d.*

GREENWICH RAILWAY.

Traffic for the week ending August 28, 1841.—Passengers 30,5—; Amount 94*l.* 5*s.* 6*d.*

THE RAILWAY TIMES.

SATURDAY, SEPTEMBER 4, 1841.

A REPORT of the proceedings at the General Meeting of the London and South-Western Railway Company will be found in another part of our present number. The meeting was of a very gratifying character, and the explanations and elucidations offered by the gentleman who so ably presided on the occasion, must afford satisfaction to the proprietors in looking forward to the future prosperity of the undertaking.

The part of the Company's proceedings, during the last six months, in which the public are most deeply interested, has reference to the greater punctuality in the arrival of the trains. The South-Western Railway had for some time the unenviable notoriety of being one of the most irregular lines in the kingdom. The peculiarities of traffic, alluded to by Mr. CHAPLIN, may in some measure account for, but cannot justify, so systematic a course of unpunctual arrivals as lately marked this line, and without doubt disgusted many of its best patrons. We are happy to find, however—and, in addtion to the Evidence given by Sir FREDERIC SMITH, before the Committee on the Railways' Regulation Bill, the statements made on this point at the meeting are confirmed to us from other quarters—that a most decided improvement has been discernible during the last few months, and we trust will continue to be observed. To nothing but the most culpable carelessness can any cause of complaint on this score be ascribed, after a line has been opened sufficiently long to have a due system of discipline introduced among the officers and servants of a Company. In this, as in most other points, the greatest of all lines—the London and Birmingham—presents an excellent example for imitation. We had occasion, within the last few days, to travel upon that line, and were both suprised and delighted with the extreme regularity of arrival at the several points, and with the admirable and expeditious manner in which the business at the stations was conducted, without any of that confusion or appearance of bustle so frequently to be observed under similar circumstances. So much for the enforcement of a system of order, the results of which have elicited the commendation of even unwilling witnesses!

It will be seen that the Gosport line, the completion of which has been impeded by an unfortunate failure of a portion of one of the tunnels, is expected to be ready for traffic in about a fortnight from this time. There can be no doubt that this branch, virtually connecting the important and flourishing town of Portsmouth with the metropolis, will contribute essentially to the success of the parent undertaking. The shares of the branch line are held, it will be remembered, under somewhat peculiar circumstances, the proprietors having the option, at any time within six months after its opening, to continue to receive from the funds of the South-Western Company, 5 per cent. on their investments, or to take their chance of a dividend from the joint earnings of both lines. There will, we presume, be but few who will not accept the terms of a dividend.

We rejoice to find that the new docks at the further terminus of the line are rapidly advancing towards completion. That undertaking was for a long time under a cloud—from what causes we will not stop to inquire—but has at last apparently surmounted all its difficulties. We are heartily glad of it, not only for the sake of the proprietors, but because, as was well urged at the meeting, such an auxiliary cannot fail to be of the utmost service to the railway. Whatever may be the final decision in respect of the mail packet station, there can be no question that the local position of the port of Southampton will attract a very considerable trade to the new docks—the accommodation presented by which will, we understand, be very great.

The very handsome and liberal conduct of Mr. HUMPHRYS, one of the Directors, in surrendering to the Company what we cannot but think a most advantageous purchase, ought not to pass altogether unnoticed, contrasting as such conduct very pleasingly does, with that of some Railway Directors of whom we have heard, who have re sold to their constituents a small portion of particular properties for more than the whole had originally cost. Mr. HUMPHRYS has entitled himself to the best thanks of his co-proprietors—and for the example they set, to the thanks of the railway public at large.

It is curious and amusing to observe how the same matters are sometimes regarded at different railway meetings. Take for instance the proposed publication of a list of proprietors' names. It will have been seen from our report of last week, that the subject was brought forward by an influential proprietor at the late North Midland meeting, and that the motion for publication having received the warm sanction of the intelligent Chairman, was unanimously adopted by the meeting. No sooner, however, was a similar proposition suggested at the South-Western meeting than it was as unanimously scouted! We cannot, we confess, see that much practical benefit would be likely to result from the proposed publication. It is true that a holder, or intending purchaser, of shares, might have his confidence in the merits of a line increased, if he knew that men of accuteness and foresight were his partners, but unless he could tell what was the extent of their several holdings—and *this* is on all hands disclaimed—very little stress could be laid upon the appearance of particular names in the list, as a proprietor might hold one share or one hundred. Take again the case of a depreciation fund. At the late Eastern Counties' meeting, a gentleman deeply interested in railway property deprecated the establishment of any such fund, and his sentiments were seemingly sympathised in by a considerable section of the meeting; while one proprietor at the North Midland meeting, and another at the South-Western, severally expressed their regret that a depreciation fund had not been set on foot, and in both cases the Directors accounted for the omission. We are glad to find, however, that whatever differences of opinion may exist upon minor points, railway shareholders at large seem growingly alive to the importance and absolute necessity of good management in the conduct of their affairs. The very pertinent questions put at the North Midland meeting, as alluded to in this part of our last week's number, and the pains taken at the South-Western, on Saturday, to explain various points upon which misconception had arisen, are clear proofs that both proprietors and Directors are becoming impressed with a due attention to their several duties. Long may such feeling exist, and widely and rapidly may it extend! There is still large room for improvement.

WE regret to find from the report of the Edinburgh and Glasgow Railway meeting, which we give elsewhere, that the unfortunate and most unseemly disputes among the members of the Board of Management are still as far as ever from being settled—indeed that recent events have only tended still further to inflame them. We had hoped that the good sense of that section of the Board, of whose views so large a proportion of the shareholders have formally signified their disapproval, would have induced them to give up a point which they cannot retain without

Digitized by Google

prejudice to the interests of the undertaking, nor even persist in striving to secure except at the expense of the pockets of their fellow proprietors, and with a disregard of public decency which will redound neither to their official nor their private honour. An appeal to the House of Lords is now spoken of, and if the shareholders are fools enough to suffer it, by all means let the lawyers make a harvest of the Company! We really had imagined that the natives of the North, proverbial as they are for shrewdness and prudence, would not have looked calmly on and seen their property squandered on "interdicts," "interlocutors," and other technical manifestos, when common sense so clearly pointed out what process it would be most conducive to their own interests to adopt. The legal gentlemen have, as a matter of course, a great deal to say on both sides; and their respective clients are clamorous in the assertion of their real or imaginary rights, and loud in their complaints of the trickery and treachery of their opponents. Meantime, the shareholders should ask themselves this simple question,—*Who will have to pay for all these very edifying exhibitions—the squabbling Directors or the long-enduring constituents?* It is very well for Directors to decide their quarrels at other people's cost; but if as some allege this is merely a case of *Edinburgh* v. *Glasgow*, let Edinburgh and Glasgow, or those who take upon themselves to champion the rival cities, pay from their own pockets for the luxury of going to law, and not throw it upon the shoulders of the shareholders of the Edinburgh and Glasgow Railway, who care not one straw for local disagreements, and are only anxious that their property should be so managed as to be rendered as largely and as speedily productive as it is possible to make it.

Whatever may be the legal interpretation of those clauses of the Company's Act, out of which this dispute has arisen, the bare fact that there can be *a doubt* whether there are not at present three separate, independent, self-acting, executive bodies, having equal and similar, though undefined, powers and functions, *beyond the limit or control of the shareholders at large*, ought to be sufficient to convince all reasonable men that the sooner some alteration is effected in the constitution of this triune Board the better. To think of carrying on the traffic of a railway under a responsibility so divided and consisting of so many jarring elements is preposterous in the extreme; and one can only wonder that even the construction of the line has not been greatly impeded by the peculiar constitution of the Direction. That *some* hindrance must have occurred we make no doubt, and if to this cause and the jangling now going on, be attributable the delay in the opening of the line beyond the day originally anticipated, the belligerents have much to answer for.

The simplest, the cheapest, and the most effectual way of setting the matter at rest, is an application to Parliament for amended powers. One of the Edinburgh Directors had the assurance to say at the meeting, that his friends and himself would resist such an application to the utmost of their ability. We trust the proprietors will take care that *their* property is not used to oppose their wishes and inflict damage on their undertaking. Why do not the shareholders at large at once call upon the Directors to resign *en masse*, and then reappoint such of them as will act harmoniously together, and with any new members that may be introduced? Should any of the Directors be shameless enough to retain his seat, after a requisition from (we shall suppose) nine tenths of the proprietors, his motives and objects would be pretty clearly developed. We call on the *English* shareholders in particular, who can have no local bias in the matter, to rescue this important undertaking from its present anomalous position. We care not where the seat of government be fixed—whether at Edinburgh or Glasgow; but that the government itself should be one and undivided, is so self-evident an axiom, that we are surprised it can in practice be for one moment disputed. On no account should the earliest possible opportunity of applying for an amended Act be neglected. Unopposed, such an Act would cost much less than the interminable litigation into which the Company has been cast; and without an Act of Parliament these contentions, if amicably arranged to-morrow, might in less than six months break out again and burn more fiercely than ever.

As regards the line itself, we are glad to find that it will very shortly be completed and open to the public. The works, we are informed by parties who have personally inspected them, are well constructed, and if the statement of the Chairman as to the total expected disbursements should prove correct, will have been made cheaply. The plan proposed to be adopted of fixing for the present *permanent* stations at those points only where the traffic is certain, is most judicious. A contrary course has entailed much inconvenience and expense upon many Companies, and has already led to the abandonment of several stations, and will yet lead to the shutting up of more.

The estimation in which the proprietors regard the undertaking may be judged of from the fact stated by the Chairman, that in less than a month after the call last made became due, nearly the whole amount was paid up. Let them get rid of intestine broils, and the proprietors will have nothing to fear and very much to hope!

We insert elsewhere a "Statement" issued by the Directors of the Edinburgh, Leith, and Newhaven Railway, preceded by a note from the Secretary of the Company, wherein it is announced that the Directors consider the said document to be "a very sufficient answer to the extraordinary and certainly unfounded statements made" in an Editorial article which appeared in the *Railway Times* of the 14th instant. Brevity seems to be, in the opinion of the Managers of the Edinburgh, Leith, and Newhaven Railway, the soul of official documents, and therefore we have perhaps no right to expect that our "certainly unfounded" statements should have been specifically pointed out and refuted; but in order that our readers may the more easily judge for themselves, we will here briefly recapitulate them.

We "stated," in the first place, that the balance *sheet* (what a misnomer!) of the Company, as laid before the proprietors in the Report emanating from the offices of the Directors, was comprised in two lines. Was there anything "unfounded" in *this* statement, or anything "extraordinary" in the circumstance that we, who had over and over again complained of the scantiness of ordinary financial expositions, should denounce as a piece of cool assurance—as an insult to the understanding of the proprietors—as a disgrace to the parties who issued it—*such* a document as that upon which we commented? Was there anything "extraordinary" or unreasonable in the expectation that the Directors would have condescended to state the sources whence their income was derived, or the mode in which it had been expended? If the Managers of other Companies which are in a comparatively flourishing state consider themselves bound to comply with the provisions of their Acts of Incorporation, and to furnish an annual or semi-annual detail of their financial position, we should be glad to know by what peculiar privilege the Directors of a concern which they themselves declare to be virtually insolvent are absolved from a similar duty.

We "stated," in the second place, that a railway extending to the extraordinary length of *one mile and a quarter* had been five years in progress, and that at the present time it was no nearer completion than at the period of the previous Report, when the Directors distinctly pledged themselves that it should be finished at the latest by the 1st of May last. We drew no inference from the non-fulfilment of the official promise—we made no remark upon the "statement"—was the statement itself correct, or was it "certainly unfounded"?

We complained, in the next place, that while the Directors announced that they had "*now* (!) settled the terms on which they are to obtain possession of the remaining property," they had not thought it worth while to inform the proprietors what those terms were, or what the cost would be. Was there anything "extraordinary" or "unfounded" in *that*—beyond the extraordinary *courage* of the Directors in putting off their constituents with such vague generalities, and the *very* extraordinary—we believe we might say the unparalleled—patience of the proprietors in submitting to it for one moment, instead of doing as we are told by the Directors' circular they *did* do, "unanimously approving of the Report."

It is needless to go through the remainder of our "extraordinary and certainly unfounded statements."* We said then, and we say again most distinctly, that a more unsatisfactory document never issued from a Board-room, and *that* is saying a great deal. The Directors of the Edinburgh, Leith, and Newhaven Railway (the very name is false) may take our word for it, that shareholders are not to be so easily satisfied as they would seem to imagine. If they expect that shares which may be had any day in the market for a few shillings a-piece are to be taken up at 10*l*, they must tell the world a good deal more than they have yet deigned to do "in regard to the present position of the affairs of the Company." Their prospects, even on their own showing, are not very bright, and they will not be rendered more so by the issue of such Reports as that which has given occasion for these few remarks.

We have referred to the management of this Company not from any wish to damage it in public estimation by "extraordinary" or "unfounded" statements, but out of a sense of duty to the proprietors, who are now called upon for further contributions, and in our vocation as the upholders of the real and permanent interests of the railway system, which such proceedings as those thus very cursorily alluded to are so much calculated to injure and destroy. Much more might have been said, but for the present we forbear. The Directors have no reason and no right to charge us with giving publicity to "unfounded" statements to their prejudice, or the prejudice of their under-

* Since the above was in type, we have been in personal communication with a friend of the Directors in reference to our so called "extraordinary and unfounded statements," and the only *fact* which it would seem we have mis-stated is, that the Directors have *not* raised 50,000*l*. Their friend assures us, that they have raised 52,000*l*. More shame to them, say we, that with such means at their disposal, the works have not progressed further and faster,

Digitized by Google

taking. We have prnted in full their own official "statements" with such comments as the case seemed to require. If our inferences have not been borne out by facts, or if our arguments have been unsupported by the contents of the documents themselves, then we are in error, and the public will judge accordingly; but we beg it to be distinctly understood that we have made no "statements"—we have merely offered a few observations upon those of the Directors.

We shall probably return to this subject.

The above was in type, and intended for insertion last Saturday. Since that time the following notice has been sent to us, which we insert precisely as we received it, merely premising that we have no confidence whatever in these *private* meetings, from which the press is excluded. It would seem as if certain questions had been "answered to the satisfaction of the meeting." Why not give the shareholders at large and the public generally the means of determining *how* satisfactory these answers are to be considered?—

"At a meeting of the shareholders of the Edinburgh, Leith, and Newhaven Railway Company, held in London within the George and Vulture Tavern, St. Michael's Alley, Cornhill, on the 1st day of September, 1841.

"Present, Messrs. Pearson, Paine, Rougemont, F. Barnard, Deacon, Nicholas, Ward, Curling, Getting, and proxy held by Mr. Pearson for Mr. Goodeve.

"GEORGE ROUGEMONT, Esq. in the Chair.

"After hearing the Secretary from the Board in Edinburgh, to whom several questions were put, and answered to the satisfaction of the meeting,

"It was unanimously resolved,—That the shareholders present are of opinion that the recommendation contained in the statement issued by the Directors on the 16th day of August, 1841, *should be carried into effect*.

Signed "GEORGE ROUGEMONT, Chairman,
"ALLEN GEORGE FIELD, Secretary."

THERE are one or two points in connection with the Dublin and Drogheda Railway meeting (for a notice of which we are indebted to an Irish contemporary) to which we would very briefly call attention.

In the first place it gives us much pleasure to find that the works of the line are proceeding very satisfactorily. Every essay in railway-making in Ireland possesses peculiar interest; and although we see no reason to modify in the smallest degree the opinion we have so frequently expressed of the total inadequacy of "private enterprise" to the requirements of that country, we rejoice to think that the formation of even one line, such as the Dublin and Drogheda, will be so far a boon to the public, and we hope and believe a benefit to the proprietors also.

It will be seen that the example set in this country, in the formation of Railway Friendly Societies, is about to be followed on the Drogheda line. The remark of the worthy Chairman of the Company, that the moral effect which some little consideration for the welfare of the labourers employed in their service would produce, would be highly to their interest, is most just. It would appear that the society in question is to cease with the completion of the works; but doubtless a similar one will be organized for the benefit of the permanent staff of the Company when the line comes into operation.

A novel power is possessed by this Company, as explained by Mr. MAHONY their legal adviser, namely, of splitting up the 100*l.* shares of the Company into small shares, say of 10*l.* each. Mr. MAHONY strongly recommend the Company to avail themselves of this power, so as to apportion these fractional shares among the small farmers and others of contracted means in the vicinity of the line, in order to make them feel a direct interest in the prosperity of the undertaking. The scheme is an excellent one, and we trust will be carried out. The purchase of a hundred pounds' share is totally beyond the reach of many an individual of the class referred to, who may nevertheless feel well-disposed towards the railway.

We are sorry to perceive that the Directors are about to have recourse to the plan of paying interest on calls. It is, as we have long since shown, fallacious in principle and has proved utterly inefficient in practice. The Directors state in their Report that "this plan has been advantageously adopted by *several* railway companies in England." We should be glad to have *one* such instance pointed out to us.

WE understand the Devon and Cornwall Railway case is steadily preparing, in the hands of the Committee of the county, who will lay their Report before the county as soon as the members return. Should the county meeting resolve to promote and support the undertaking, the intention will be carried out that the landowners shall be individually addressed, in order to make such conditional agreements for the appropriation of their lands for the line as will exhibit proofs of their support, and appreciation of the advantages which the railway will give to their properties. When the subject has been thus carefully prepared, and the present commercial distress becomes less, the whole project will, it is expected, be submitted to the public.

There is one feature which we could wish to see added to the present position of the parties, and that is, a cordial understanding and co-operation between the inhabitants of Plymouth and the people of North Devon and Cornwall. To attempt to carry two lines in the present day through such counties as Devon and Cornwall would most likely end in the failure of both. Each party—one for Plymouth and the other for Cornwall and Falmouth, will probably think its own case the best; but if, as we have some reason to suppose, a united line not seriously prejudicing the interest of either, could be agreed upon, it is certainly the most sensible course to unite operations, and with such union we should have no doubt of their common success.

IN our advertising columns appears a statement in reference to the proposed line of railway to Scotland *via* Lancaster and Kendal, which cannot but be of considerable interest to all who are anxious to see the benefits of an improved mode of communication such as railways present, as widely and as speedily extended as possible. Lord LOWTHER has accepted the Chairmanship of the Central Committee, and from his Lordship's influence with the new Cabinet, there can be no question that the choice of the Committee has been most judiciously fixed. Important co-operation is, we understand, promised from other influential quarters, and altogether the prospect is most encouraging.

We would again earnestly urge upon all concerned the desirableness of pressing this subject upon the attention of the Legislature. We would fain hope that the new Parliament will consider this matter in a different light from that in which it was regarded by their predecessors—that they will look upon it, as it really is, as an important national undertaking, in which the community at large are most deeply interested. A very few facilities, which the Legislature might extend without the smallest prejudice to parties or individuals, would do much towards the accomplishment of this great work; and why these facilities were withheld, after the steps taken to have the preferable route pointed out, it puzzles us to conjecture. Very many persons are of opinion that a line, such as either of the proposed railway routes to Scotland, ought to be entirely undertaken at the public expense; but without going so far as *that*, we do think that the very least the Legislature and the Government can do is to afford every facility in their power to parties who may feel disposed to embark their property in the venture. We have seen how in the case of the competing lines to the Welsh coast, a resolution of the House of Commons—good, under ordinary circumstances, we freely grant—could not be dispensed with; albeit, it was proved that no detriment could thereby arise to any of the interests connected with the execution of the project; and such being the case, the new Parliament will differ very materially from the old, if any consideration is extended towards the Scottish Railways. We trust that it will so differ, and that means will be speedily devised for carrying out a scheme, which will certainly prove advantageous to the public, and which we have not the slightest doubt will ultimately become liberally remunerative to its promoters.

A VERY interesting Report in connection with the Birmingham and Derby Railway, will be found in our advertising columns. It will be seen that a most extraordinary discrepancy exists between the actual receipts of the railway and the amounts furnished by the officers of the Company, and published from week to week in our columns. We readily acquit the Directors of any attempt at wilful falsification, but we must say, that nothing short of gross carelessness on the part of the superior officers of the Company can at all account for *mistake* after mistake of a character so likely to be looked upon as purposely committed. It is quite clear that the offices of the Company require revision—indeed, the Committee appointed at the previous meeting hint this pretty plainly—and we trust that no time will be lost in establishing matters upon a more satisfactory basis. The proprietors of the Company will naturally infer that Directors who have omitted so common a duty, as looking to the efficiency of the executive staff, are by no means the best qualified parties to preside over the affairs of an undertaking, which is admitted on all hands to require *more than ordinary* energy and good management to render it productive. We learn from the Report, that the Directors have voluntarily surrendered their usual allowance—an act highly creditable to them, considering the embarassed position of the Company—but which, taken in connection with the unaccountable error to which we have referred, affords another proof that unpaid services are not always the cheapest in the end.

IT gives us great satisfaction to learn that the inhabitants of Brighton are about to show their sense of the benefits which the railway is certain to confer upon their town, by inviting the Directors to a public dinner on the occasion of

Digitized by Google

the opening of the line throughout, on the 14th instant. This is as it should be. We could wish, indeed, that the residents of districts, the prosperity of which is likely to be promoted by the formation of railways, would assist them in a more tangible shape than they generally do, but these complimentary notices are nevertheless not without good effect. The completion of the Brighton line, in a manner so rapid and so able, entitles all connected with it, to every mark of honour and respect which can be conferred upon them.

A VERY interesting and gratifying sight was exhibited on Monday morning last in the arrival at the Euston-square station of a large number of the members of the Birmingham Mechanics' Institution, who had availed themselves of the facilities presented by the railway for a trip to the metropolis. A special train had been provided for the occasion, the Directors of the Railway Company having most liberally reduced the charges to the rate of 18s. per passenger *both ways*. The number of passengers was 473.

We have the satisfaction of knowing that the appearance of the parties was in the highest degree creditable, and their general demeanour most unexceptionable. It had been previously arranged that they should visit the Colloseum Regent's Park, the Zoological Gardens, the Royal Gallery of Practical Science, the Exhibition of the Society of Arts, and the United Service Museum in Whitehall; and we are informed by friends who had an opportunity of witnessing the conduct of the strangers in these several localities, that nothing could have been more proper, or could more completely have given the lie to the calumnious assertion that the lower orders (as they are called) of English society are behind their brethren of the Continent in a proper appreciation of public exhibitions of art.

Excursions of the kind referred to, are, we are happy to see, becoming very general. We learn from the *Midland Counties' Herald*, that a party consisting of about 100 members of the Birmingham Athenæum, made a second excursion on the Derby line of railway on Tuesday last. Although during the whole of the forenoon the weather was most unfavourable, and marred considerably the enjoyment of the party, yet it cleared up in sufficient time to enable many to visit Keddleston Hall, and the extensive and beautiful scenery around it. The evening was spent in the Derby Arboretum, and the party returned to Birmingham the same night, much gratified, on the whole, with the day's excursion. It is the duty, and we are sure will be the delight of Railway Managements to *encourage* similar excursions by every means in their power. Nothing has so direct a tendency to elevate the manners and morals of a people as a well-regulated association with their compatriots at a distance.

—o—

THE only petition for a Railway Bill which has yet been presented to the House of Commons, during the present session, is from the London and Greenwich Company. It has been ordered to lie on the table.

—o—

MR. FRENCH had given notice that he would move on Tuesday last for a Committee of the whole House on Irish Railways, but in consequence of the adjournment the motion was necessarily deferred. We understand that recently the counties of Clare, Limerick, and Cork, and the cities of Limerick and Cork, have unanimously adopted petitions to the legislature in favour of the scheme of Irish Railways. A very sensible article on this subject from a correspondent will be found in a subsequent collumn. The "Bill for the making and maintaining of public railways in Ireland," has just been published, but in the present crowded state of our columns we cannot find room for its verbiage. We shall have frequent opportunities of noticing its substance.

—o—

MR. EWART has placed on the books of the House of Commons for Tuesday night next, a notice of the following proposed resolutions; but in consequence of recent political events it is more than probable that the motion will be postponed:—

"1. That it is expedient that Committees on Private Bills should be approximated, more nearly than they now are, to judicial tribunals, and exempted, as much as possible, from all motives of local and personal interest: And that the responsibility and efficiency of Committees of this House in general would be promoted by diminishing the number of members composing them.

"2. That, with a view of attaining these objects, the number of members composing Committees on opposed Private Bills be reduced to seven.

"3. That such seven members be appointed by the Committee of Selection, after the second reading of such Bills.

"But that, previous to such appointment, the Committee of Selection do ascertain from each of such seven members that he is willing to serve, and that he is, neither through his constituents nor himself personally, interested for or against the Bill in question:

"And that, in case he is unable to serve, or is interested as aforesaid, the Committee of Selection do appoint some other member to serve in place of him.

"4. That the Committee of Selection appoint no member to serve on more than one such Private Bill Committee at a time."

—o—

IN the *Sun* newspaper of Monday last a correspondent writes as follows. We suspect that if all similar "experimental trips" were faithfully reported, this one would not stand alone:—

"On Thursday morning last a new steam carriage, built by a Company of gentlemen at the west end of the town, started on an experimental trip from London to Hastings, where they arrived in the afternoon, a mile from Hastings, when unfortunately the boiler burst. The carriage was brought into the town of Hastings, and on Friday it was repaired, and on Saturday morning the party left Hastings on their return to London. In descending the long and steep hill, within one mile of Sevenoaks the skid or drag-chain broke, and they descended the hill at the rate of 63 miles per hour, and fortunately reached the bottom of it undamaged in person, although in the descent they every moment expected to be dashed to pieces. On their attempting to proceed up the opposite hill into Sevenoaks, it was found impossible, the whole of the machinery being broken and out of place. With the assistance of ten horses it was conveyed to the Crown Inn, at Sevenoaks, where it remains much damaged."

GLASGOW AND AYRSHIRE RAILWAY.—The seventh half-yearly meeting of the proprietors of the Glasgow and Ayrshire Railway was held on Monday, James M'Call, Esq. in the Chair. The Report of the Directors was unanimously agreed to with this slight addition:—"That the number of Directors instead of being fixed at twelve, as recommended, should be any number, not below nine, and not exceeding fifteen, as the shareholders might see fit." The works remaining to be erected, it is stated in the Report, are limited in number and extent. The Directors are, in the whole, much satisfied with their experience during the last year of the passenger traffic, and recommended the meeting to declare a dividend out of the profits of the Company's credit of 12s. pershare.—*Glasgow Cour.*

RAILWAYS IN IRELAND.

"Soon shall thine arm unconquered steam afar,
Drag the slow barge or drive the rapid car,
Or on wide waving wings expanded bear
The flying chariot through the fields of air."

DR. DARWIN.

How little did the imaginative author of the above lines contemplate the prodigious advantages likely to arise from the use of steam in the present day. That this mighty abridger of time and space has entirely revolutionized the commerce of our own country is now generally admitted. But extraordinary as are the advantages that have resulted from the use of the steam carriage in England, they are as nothing when compared with what it promises to do for Ireland, and as public attention is now most anxiously directed to the extension of railway conveyance in the sister kingdom, it may be advisable to examine the most interesting of the facts which bear on the subject. We shall thus place this great national undertaking in a clear point of view, and it will at once be seen that its importance has been in no shape overrated by the philanthropic and wealthy individuals who are so actively engaged in furthering the plan. It is in the first instance proposed to construct a continuous line from Dublin to Limerick by Holy Cross, the expense of which, acccording to Mr. Vignoles' abstract of the Railway Commissioners Report, will be considerably under one million three hundred thousand pounds, the capital to be raised by the Act of Parliament. But the direct route, as well as separate items of expense, will be best understood by taking this portion of the abstract as it has been put forth officially:—

	Miles.	
Entrance into Dublin	1¾	£60,389
Inchicore to Celbridge	9	125,797
Celbridge to Rathangan	24	176,610
Rathangan to Maryborough	19½	126,700
Maryborough to Holy Cross	37¾	233,734
		£723,230
Holy Cross to Tipperary	13	70,718
Tipperary to Limerick	22¾	159,914
	127¾	£953,862
Carrying establishment		127,250
		£1,081,112
Contingencies, 10 per cent.		108,111
Commissioners' estimates		£1,189,223*
Surplus		110,777
Total		£1,300,000

Let us now examine what is likely to be the result of this outlay. In the first place it opens a communication from sea to sea, so that a direct route is opened with America from portions of our island that formerly presented a very dangerous and uncertain passage. But its value in developing the internal resources of Ireland are so great as almost to defy description. Vast districts of that fruitful portion of the country that border the river Shannon will at once be brought into cultivation as a market will be found for their agricultural produce, and the ready means of transit which will thus be afforded must of necessity protect the inhabitants of particular districts from the extremity of want at periods when an abundance of food could readily be procured in other parts of the island. A very important feature in the proposed line is its connection with the Shannon, as this river washes the shores of the following ten counties—Galway, Tipperary, Clare, King's County, Leitrim, Roscommon, Longford, Westmeath, Limerick and

* It may at first view appear that the sum named here as the entire outlay for more than 127 miles of railway, and the connecting works, is much too small from the experience of other Companies, but this arises from the peculiarly favourable nature of the ground recommended in Mr. Vignole's able Report.

Digitized by Google

Kerry. These counties are abundant in population, and susceptible of great improvement by an increased attention to agriculture, mining, and manufactures generally. It may be right to add, that for a distance of 60 miles from the sea to the proposed junction with the railway, the Shannon presents a fine estuary, without bar or other impediment whatever, and with a flood of full 20 feet up to the very verge of the railway, so that the largest vessels would receive and deposit their freights without the usual transfer to smaller craft.

When the great arterial line of rail is completed, extraordinary advantages will be derived by the formation of cheaper branches diverging into the mining districts, as Ireland is rich in mineral treasures to an extent far beyond what the public have ever estimated. Some late surveys prove that both in copper and lead ores the Irish mines surpass those of this country, and that there are good markets for their produce if they possessed but the means for conveyance and capital to work them.

It is, however, in her manufacturing industry that Ireland will be ultimately most benefitted. The first spur to her national improvement will be given by the railroads increasing the value of agricultural produce; and that advantage will be instantaneous, affecting the British agricultural labourer as well as those of the sister kingdom. But the copper and lead which are found so abundantly in Ireland will give birth to a variety of manufactures far beyond what the most sanguine lovers of their country could have contemplated in their day-dreams of philanthropy. Some notion of the value of Irish mining property may be gleaned from the fact, that a single Company has employed more than 2,000 families, consisting of at least 17,000 individuals; but the great bar to the progress of manufactures in Ireland has been the want of a sufficient supply of coals, an evil which will be entirely obviated by facilitating internal communication.

In concluding this brief notice of the advantages that Ireland is likely to derive from the introduction of an efficient system of railways, through her rich but hitherto unproductive districts, it is gratifying to see that party spirit has in no instance ventured to raise its hand against the promoters of this great and good work. Truly may the commencement of their labours be said to constitute an era in the history of Irish amelioration, and the base-stone of future prosperity, of a country which has been justly designated as the brightest jewel in the British crown.

C. F. P.

GLASGOW AND GREENOCK RAILWAY—PRESENTATION—On Tuesday evening last, Mr. John Cook Alcroft, superintendant of the locomotives on the Glasgow, Paisley, and Greenock Railway, was presented with an elegant gold watch and appendages, valued at 40*l.*, by the workmen under him, the guards upon the line, and a few other friends, as a mark of the high estimation in which he is held by them, both in his official and private character. The watch bore the following inscription:—Presented to Mr. John Cook Alcroft, superintendent of the locomotive department in the Glasgow, Paisley, and Greenock Railway, by the men employed on the line, and other well-wishers, as a mark of their esteem. Glasgow, 24th August, 1841." The presentation took place in Mr. M'Liver's Railway Tavern, Clyde-place; James Halliwell, Esq., in the Chair, Mr. James Andrew, croupier. About 60 gentlemen sat down to supper on the occasion, and the evening was spent with the greatest harmony and good friendship. The health of Mr. Alcroft was of course drunk with the greatest cordiality, and a variety of other toasts, prefaced by appropriate addresses, were given, and warmly responded to by the meeting.—*Scotch Reformers' Gazette, August 27.*

THAMES HAVEN DOCK AND RAILWAY COMPANY.

THE Adjourned General Meeting, which should have been held yesterday, was again adjourned *sine die*, in consequence of the non-attendance of the requisite number of proprietors. The following is the Report which it had been intended to submit to the meeting:—

REPORT.

The Directors have been unremitting in their exertions since they last met the proprietors, but they are obliged to add with regret, that they have as yet made but little progress. The difficulties, which on former occasions have been explained, still impede them; while on the one hand they can state with confidence, that in proportion as the project has become known, and its merits attracted discussion, the utility, feasibility, and eventual success of the speculation are acknowledged, yet on the other, the distaste for all speculation, however safe its promise, has increased with the public and commercial difficulties of the times.

It is well known that all enterprise has been checked by the uncertainty and apparent instability of public affairs for many months past, and the prospects of the Company have been clouded only in common with those of other bodies of similar character. The Directors are convinced that it is to these causes that their continued disappointment can be fairly attributed; nor do they entertain any doubt that when the commercial horizon becomes brighter, and business in general has been restored to a vigorous and healthy state, the shares in the Thames Haven Railway will be regarded as a safe and beneficial investment. Other circumstances have certainly assisted to impede their operations. They had calculated upon receiving large support from the proprietary of the Eastern Counties' Railway, whose interests are so obviously identified with the interests of this Company, that it is difficult to account for the indifference with which they have viewed its tardy progress, unless the commercial difficulties of the times have prevented from affording as promptly as could be wished what lays in their power to advance the interest of this Company.

The coal owners in the north have been equally remiss in coming forward to promote subscriptions; and this is the more unaccountable in them because they have publicly admitted the large benefits which they would derive from the reduction and uniformity of price to which the Thames Haven Railway and Dock would assuredly lead. The slow motion of large bodies is proverbial; it must therefore be the work of patience to overcome the hesitation and timidity of the coalowners, but it cannot be doubted, that with them, as with the proprietors of the Eastern Counties' Railway, self interest will soon produce its effects.

The Directors believe also, that a better state of commercial affairs will induce the proprietors and inhabitants at Margate, Herne Bay, and Ramsgate, to follow up their good and expressed opinion of this undertaking by taking shares in the Company—the Directors of the Margate Pier Company and the Commissioners of the town having held meetings and passed resolutions in its favour. The Directors have spared no trouble, nor will they shrink from similar exertion hereafter to gain the confidence and co operation of the public, in a scheme which they honestly believe to be of not less importance to the community, than to the individuals who have individually embarked in it; but they cannot hope, without being powerfully seconded by those whom they represent, to realise very speedily the splendid results which greater energy must infallibly secure.

While they have thus felt it their duty to explain the difficulties of their position, the Directors rejoice to say they see no cause whatever to distrust the soundness of the prospect, nor the accuracy of the calculations on which it is founded. On the contrary, they daily find greater cause to be satisfied that whenever the funds of the Company are so increased as to enable them to proceed, it will soon prove itself to be at once the most important and the most profitable line of railway in the United Kingdom.

WEST DURHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—In reply to "An Old Subscriber," I beg to inform him that the West Durham Railway is in this predicament. By their second Act the Company are *compelled* to make their railway either under or over the highways which it intersects. In defiance of the express provisions of the Act, the Directors have made the railway to pass the highways *on the level*. The consequence is, that the Company are at the mercy of any landowner or individual, who can compel them to make the railway either *under* or *over* the highways which it intersects. But this cannot be done without entirely altering the levels of the whole railway, besides involving the Company in endless litigation with landowners. This evil the Directors and their Solicitor were fully aware of. I would recommend "An Old Subscriber" and his suffering brethren to come into this neighbourhood, and inquire what probability there is of any quantity of coals passing on the West Durham Railway. I do not deny that there is a large tract of coal in the district; but what is the quality of the coal? Let "An Old Subscriber" apply to Messrs. Bulmer and Gillan, parliamentary agents, in Parliament-street, London, for a copy of the evidence given by Christopher Tennant, before a Committee of the House of Lords, on the passing of the first Act for making the West Durham Railway, and he will learn that that gentleman honestly confessed the coal in the district was of the second rate quality and order. Now, that sort of coal is not, under the present circumstances of the trade, worth working—that is to say, it is profitless, owing to the prodigious quantities brought into the market. * * * For the comfort and satisfaction of "An Old Subscriber," I must tell him that a landowner in this neighbourhood intends to apply in due time for a mandamus against the Company.

I am, Sir, yours, &c.

AN OBSERVER.

Bishop Auckland, 26th August, 1841.

[We have omitted a few passages of our correspondent's letter. It would not be *safe* to give it entire.—ED. R. T.]

EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—In answer to a correspondent in your paper this week, I am not surprised that people should prefer an omnibus direct from Stratford to the Bank, instead of going first by railway to Shoreditch, at about the same expense, and then having a full five minutes' walk afterwards to arrive at the same place.

But I *am* surprised at the low price of the Eastern Counties' shares, which are only worth 8*l.*, when the Directors announced in their Report they could give 5*s.* dividend per share. I believe the Directors speak truth, and if at this unfavourable period of the Company's affairs, they could give yearly above 6 per cent. on cost of shares, what may we expect at a more advanced period. If the Company is receiving 900*l.* a week, and very little of the traffic is taken from the road, I think the prospect most cheering. I understood very few of the *long coaches* are discontinued, that there *were* 50 coaches in and out, and now there are 46, which latter is as much as were on the road between Liverpool and Manchester before their railway was open. Is this account correct? For reasons above stated, I do not expect *much* increase in the business for the first three or four miles from London.

I am, Sir, yours, &c.,

W.

August 21, 1841.

EASTERN COUNTIES' RAILWAY.—At a late meeting of the Eastern Counties' Railway Company, the Chairman expressed his belief that the whole of the line to Colchester would be opened in the course of another twelvemonth, and the present appearance of the works justifies that belief. The viaduct over New Street, Chelmsford, is completed, and the embankment from Springfield having been connected with it, is now carrying on in the Town Field. In about a fortnight the houses in Duke Street, standing on the intended line, will come down, and shortly after the viaduct across that street will be commenced. Further on the workmen are engaged in preparing to throw a bridge over the Can, and the embankment which is to join it from Cherry Garden Lane is being carried on with considerable effect. The work is also going on well at various points between Chelmsford and Colchester. At Hatfield, there is a valley of considerable depth, over part of which the embankment has already been formed.—*Essex Mercury.*

SAFETY IN RAILWAY TRAVELLING.

Self-acting Apparatus for obviating Collisions on Railways. By CHARLES BERWICK CURTIS, Esq., of Acton, Middlesex.

Fig. 1.

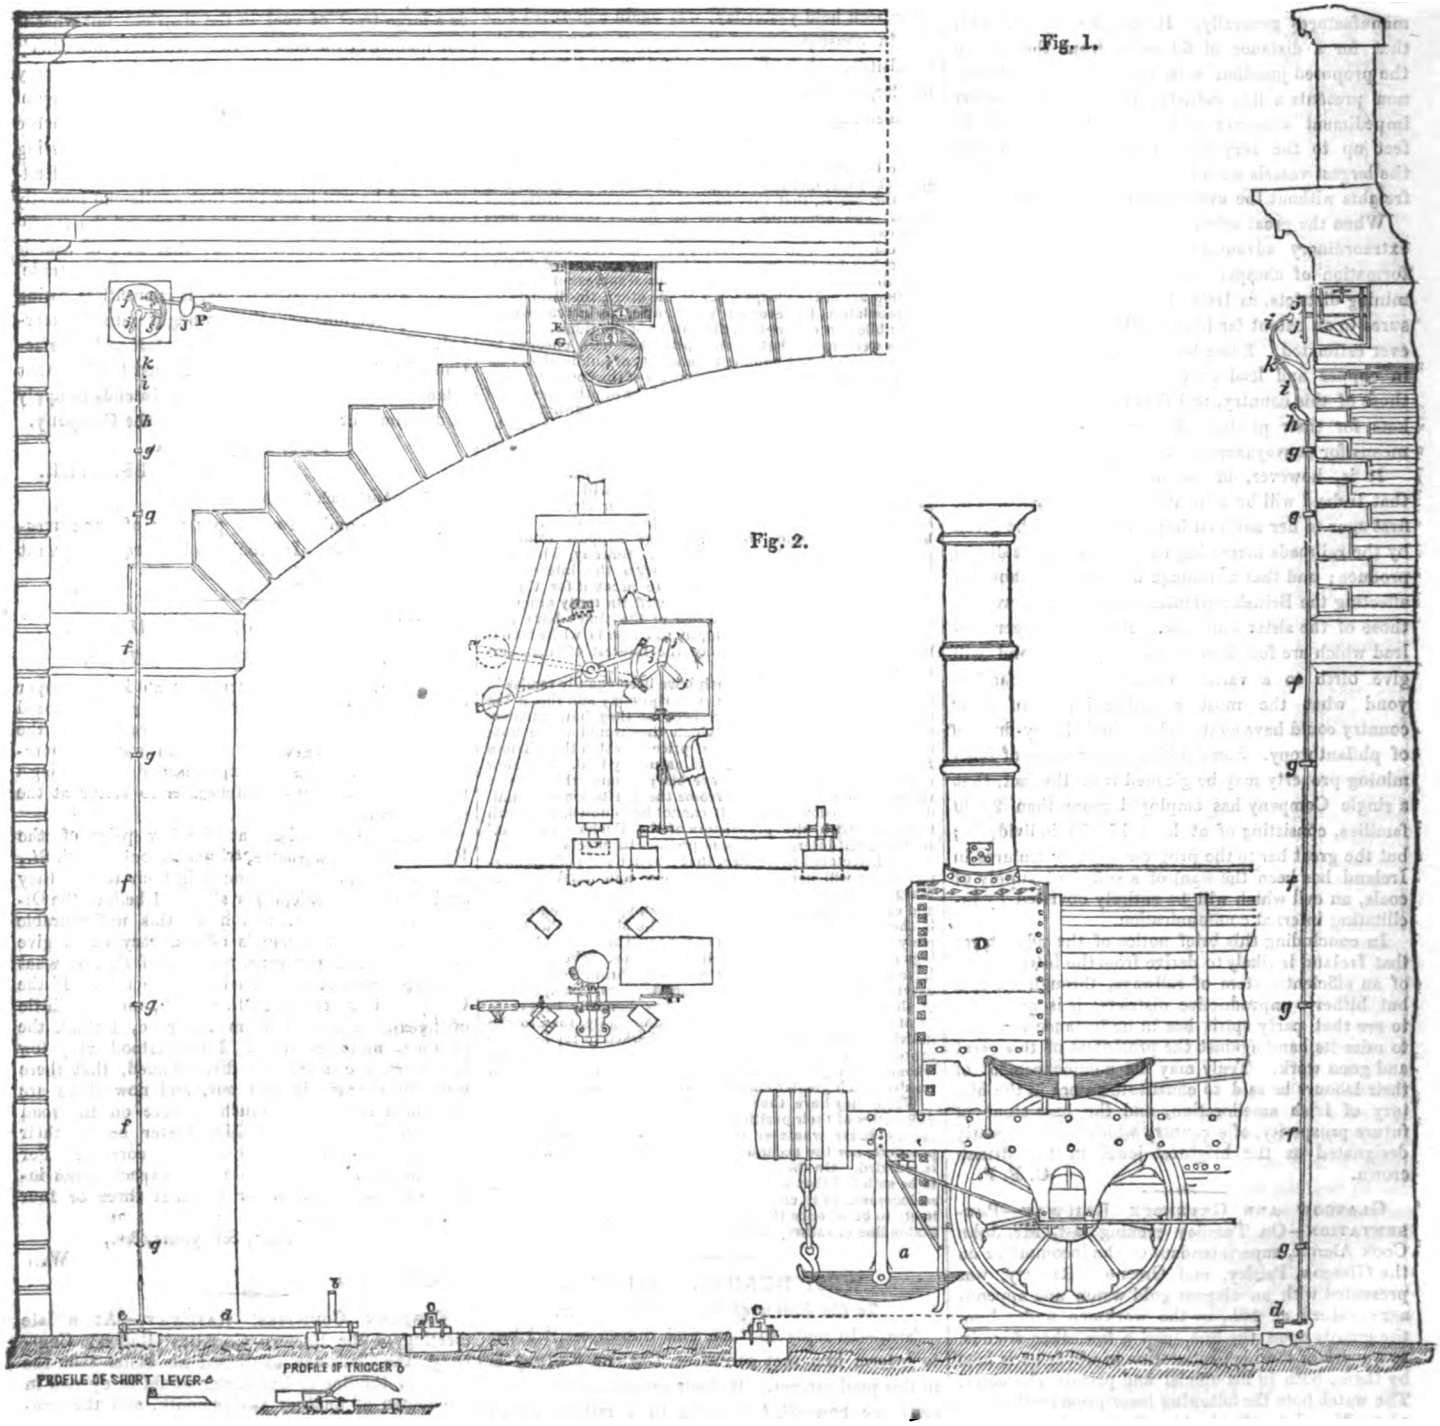

Fig. 2.

THIS patent was granted on the 19th of January, 1841, and the following particulars, taken from the specification, as enrolled, will, with the engraving, show the nature of the invention.

The methods comprised in the patent, are intended to be carried into effect by means of self-acting apparatus; the distinguishing character of which is, that at every time when a train travels along that part of the railway, where any such apparatus is situated, so as to pass by that apparatus, the same will exhibit a signal immediately on the train so passing by, and will continue to exhibit the signal without alteration in its appearance, so long as there will not have been sufficient time for the said train to have advanced far enough along the line beyond the apparatus, to permit of any succeeding train to follow after the said first mentioned train, and the signal so exhibited will give information to the driver of any such succeeding train which may happen to come up in sight of the apparatus that he is to stop and not proceed; and which apparatus, after having so exhibited such signal, then, in due time, begins to withdraw the same gradually from full view by the motion of suitable wheelwork, and whilst so withdrawing, the said signal is caused to change its appearance in some marked manner, in order to give information to the driver of any train which may happen to arrive within sight of the apparatus whilst the signal is so exhibiting in its changed appearance, that such train may proceed slowly, but not at full speed; and the said apparatus, also, after having so exhibited the signal in its said changed appearance, wholly withdraws the signal from view, or withdraws the same into an inactive or resting position, and then the motion or action of the apparatus ceases; and it continues in its inactive or resting position until another succeeding train passes, and the signal in its said inactive or resting position, serves to inform the driver of any such succeeding train which may happen to arrive in sight of the apparatus when in that state, that he may proceed at full speed without risk of collision with the preceding train.

Fig. 1, represents an apparatus fixed to a bridge which crosses the line, or at the entrance of a tunnel.

Digitized by Google

C C line of railway.

D locomotive engine, to show the manner in which the action is communicated to the apparatus.

e Piece of wood attached to each side of the engine.

b Curved lever-arm, or trigger, or camb, fixed upon a horizontal axis (*d*), which extends sideways, in order to reach towards the side pier of the bridge, which axis is sustained by suitable bearings set upon a sleeper of wood or stone.

c A short lever extending horizontally from the axis (*d*) towards the face of the pier.

f Upright rod, joined to the end of lever (*c*), and carried up the face of the pier.

g g Guides fixed to secure the rod (*f*).

h An oblique link, connecting the upper end of the rod (*f*) with the lower end of the lever (*i*), being bent in the form of (*i*) a goose-neck, whereof the fulcrum is sustained by a centre-pin in a bearing-bracket (*k*) fixed in the wall.

j Three arms radiating from the centre arbor of an apparatus of wheelwork, with liberty to slide backwards and forwards thereupon, and kept out to its working position by means of a curled spring; the arms are furnished at the extremities and on the outer face with short pins.

HHK Box or screen fixed on the face of the bridge, partly or wholly over the arch, placed in a horizontal line, or nearly so, with the centre arbor of the three arms (*j*), projecting a short distance from the wall; coloured in three compartments, black at top, green in the middle, and red at the bottom, the red and black being about one quarter each of the surface, and the green taking up the intermediate space.

F Is a signal at the end of a lever *n*, *p*, G, having its bearing at *p*. The signal consists of a rim of iron, enclosing two pieces of coloured glass, the top piece being red, and forming about one-third of the surface, and the lower part being green, and forming the other part. On the top of the rim, a round plate or pointer, painted white, is fixed by a strong wire, cranked so that it shall work freely through a groove cut in the front of the box HHK, and traversing over the face of the box.

G Is the end of the lever to which the signal F is fixed.

J A counterpoise to balance the signal F.

L The round plate, or pointer.

N The position of the lamp for night-signals, in front of which signal F falls.

p The bearing or fulcrum upon which the lever, *n*, *p*, G works.

n Is the point of lever (*n*, *p*, G) acted upon by the pin upon the three arms (*j*).

r The guide to secure the end of the lever.

s The stop for the end of the lever (*n*, *p*, G).

The action is as follows:—

Upon an engine passing the spot where such apparatus is fixed, the piece of wood, *a*, strikes in a glancing direction the trigger or camb *b*, which depresses it about 1¼ inch, turning by that depression the arm *d*, and raising the short lever *c*, which forces up the rod *f*, and by means of the oblique link *h*, drives out the lower end of the bent rod or gooseneck *i*, which drives the head of the same against the centre of the three arms *j*, and presses them back upon the arbor of the wheelwork. The end of the lever *n*, *p*, G, is held in its resting position, or behind the screen or box by one of the pins at the extremity of the three arms *j*. As soon, therefore, as the arm is pressed in, the pin is withdrawn from its hold, and the lever *n*, *p*, G, being free, falls by its own weight, and exhibits the glass-field signal F, below the screen, in front of the lamp at night, and draws down the white painted plate or pointer from the compartment painted black, to the front of the red compartment at the lower part of the screen.

The wheelwork now begins to be in action, and that arm of the arms (*j*), which is next in rotation moves slowly round without at first having any intercourse with the lever *n*, *p*, G; at length it arrives at the point of contact, and then commences to press down the short end of the lever, and the signal F rises gradually behind the boxing, withdrawing the red portion of the signal from before the lamp, and carrying the pointer over the red compartment of the screen on upon the green compartment, showing by degrees an altered appearance of the signal during the day, or a green light during the night, and the white plate or pointer continues to traverse the green compartment, and the signal diminishes at the upper *limb*, still showing for night a green light until the signal arrives at its resting place, carrying the white plate or pointer on upon the black compartment, and then being withdrawn entirely from view, discloses the lamp in its regular white colour. The action of the wheel-work is now arrested, and remains at rest till the passing of the next train.

The notice which the apparatus exhibits to drivers of trains is as follows: The signal, after being released by a preceding train, remains exhibited motionless for about 3½ minutes, and it consumes about half a minute for the wheel-work, when it begins to operate, to raise the lever so far up as to withdraw the red portion of the signal, or conceal one-third of its area, and to raise the white plate or pointer from the red compartment on upon the green. A driver, therefore, arriving at the spot and observing the whole of the signal visible, and the pointer upon the red, or the red light at night, is informed that the preceding train has passed less than four minutes ahead of him, and that it is dangerous to proceed. If upon his arrival he observes that one-third of the signal is withdrawn into the screen, and the pointer upon the green, or the green light at night, he is informed that the preceding train is more than four minutes but under ten minutes ahead, and that he must check his speed, and go cautiously; but, if on arriving at the spot he finds that there is no signal visible, (the pointer being on the black compartment, or a white light at night,) he may drive at his usual speed without risk.

NOTE.—The periods of time here specified are only mentioned by way of example; they can be adjusted as circumstances require.

Fig. 2, represents a mode of applying the same or similar apparatus to the signals commonly fixed at the top of poles or masts, which are made to revolve on a pivot at the foot, and sustained in a vertical position by a fixed collar, so as, by turning the pole one-quarter round, a circular signal on the upper part is exhibited; but when turned back again through that quarter of a circle, then the circular signal will be exhibited edgeways, and an oblong signal immediately beneath the circular signal, crossways thereto, will then be exhibited in lieu.

The self-acting apparatus for producing these changes may be made on the same construction as in fig. 1, except as to the strength and force of wheel-work and lever with its counterpoise, which must be much stronger, and will require that the maintaining power be weight, and not a spring. The lever, in place of having the signal itself at the long end, as in fig. 1, has a heavy weight fixed upon it, which is allowed, as soon as the short end of the same (which is acted upon as in fig. 1,) is freed from the holding of the pin, (of arms *j*, fig. 1), to fall at once. The lever is mounted on a horizontal axis from which a bevil tooth sector or quadrant ascends so as to work into the bevil teeth of a sector or quadrant fixed on the pole below the collar which supports it; then, by the falling of the lever, the pole is drawn round one quarter. The wheel-work begins, as in fig. 1, to travel round until it reaches the point of the lever in the opposite direction to that end having the weight, and gradually presses it it down, and raises the weight, and causes the bevil wheels to act one with the other, and draw the pole round again to its former or resting position. A lamp with distinguishing colours may be equally applied to this mode.

The indications made to drivers of engines or conductors of trains in the two latter modes, do not vary from those mentioned with relation to fig. 1.

[There is another mode of effecting the same object, which we have not thought it necessary to describe.]

THE *Bristol Journal*, in referring to this invention, says:—

"Having recently been witness of an escape from a collision on a railway, which, had it taken place, must have been destructive of human life, it was with pleasure that we perused a small pamphlet, just published, descriptive of a very simple invention to prevent such accidents, for which Charles Berwick Curtis, Esq., of Acton, Middlesex, has secured a patent right. This patent, the pamphlet informs us, was granted in January last; the following particulars, extracted from the specification, may suffice to explain the nature of the invention, which is more clearly illustrated by an engraving annexed. 'The apparatus is self-acting. Its distinguishing character is, that—at every time when a train travels along that part of a railway where the apparatus is fixed (on a bridge for instance) it will exhibit a signal, without alteration in its appearance, so long as there will not have been sufficient time for the said train to have advanced far enough along the line beyond the apparatus to permit of any succeeding train to follow after the first mentioned train; and the signal so exhibited will give information to the driver of any succeeding train which may happen to come up in sight of the apparatus, that he is to stop and not proceed; and which apparatus, after having so exhibited such signal in due time, begins to withdraw the same gradually from full view by the motion of a suitable wheelwork, and whilst so withdrawing, the said signal is caused to change its appearance in some marked manner, in order to give information to the driver of any train which may happen to arrive within sight of the apparatus whilst the signal is so exhibiting in its changed appearance, that such train may proceed slowly, and not at full speed; and the apparatus, also, after having so exhibited the signal in its changed appearance, wholly withdraws the signal from view, or withdraws it into an inactive or resting position; and then the motion or action of the apparatus ceases; and it continues in its inactive or resting position until another succeeding train passes, and the signal in its said inactive or resting position serves to inform the driver of any succeeding train which may arrive in sight of the apparatus when in that state, that he may proceed at full speed without risk of collision with the succeeding train.' The figures and working of the apparatus are very clearly described in the engraved plate; after an inspection of which, its nature and object may thus be concisely explained. 'The apparatus is attached to a bridge: When a train passes, a disc, or fan, as the inventor calls it drops; the conductor of a train following will know by the disc not being restored to its former position, that another train is just before. The time required to restore the disc is sufficient for the previous train to be out of danger, and at night a light will be exhibited in the disc. The expense we understand will not be great, and we would earnestly call upon the proprietors of railways, so many of whom are now about to assemble at their half-yearly meeting, to press the invention on the notice of their Directors, or managing Committees. The more the Directors attend to the safety of their passengers, the more traffic their railway will be sure to command."

BRISTOL AND EXETER RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly Meeting of the Proprietors of this Company was held on Thursday, at the White Lion, Bristol; F. RICKETTS, Esq., in the Chair.

The proceedings having been opened in the usual way, the SECRETARY, (J. B. Badham, Esq.) read the following Reports.

DIRECTORS' REPORT.

Your Directors have the satisfaction of congratulating you upon the successful opening of a considerable portion of your line of railway.

The 33 miles to Bridgewater, as well as the Weston Branch, have been in active operation for nearly three months; and although the responsibility of managing the traffic has devolved to the Great Western Company during the lease, it will not be the less gratifying to you to know, that not a single accident attended with personal injury to any passenger has taken place.

No separate account of the traffic upon the Bristol and Exeter line has been published: but your Directors have good reason to believe that it fully equals the expectations heretofore formed of it, and that it steadily increases both in passengers and goods

On the 28th of April last a fire broke out in Temple Meads, which for some hours threatened destruction to the whole of the stock of timber belonging to this Company; but by great exertions, and the assistance of the public authorities, a considerable part was saved. The loss to this Company would, however, have been severe, had not the timber been fully insured.

The contracts for the works between Bridgewater and Taunton have been undertaken by respectable contractors, on such conditions as fully justify the favourable anticipations of your Directors, both as to the cost of that portion of the line, and the practicability of opening it for public traffic next summer.

Contracts are preparing for the tunnel at White-Ball hill, and some other heavy works beyond it, and will be advertised soon after the present meeting.

For the general state of the works, your Directors refer to Mr. Brunel's Report.

The Act of Parliament sanctioned by you in March last, and which extends the period for purchasing lands, received the Royal Assent on the 21st of June.

The subjoined Accounts will show you that the amount received for debentures up to the 30th of June, was 88,310*l.*

On the 31st ultimo it exceeded 130,000*l.*, and tenders continue to come in regularly.

The sum received to the 4th March for forfeited shares, allotted and sold, was about 70,000*l.* It now amounts to upwards of 83,000*l.*, leaving only 440*l.* in arrear.

The arrears on calls to the 30th of June amounted to 11,215*l.*; they are now reduced to about 8,000*l.*, and for a part of this sum security has been taken; but there are still a few shares, the proprietors of which have failed to fulfil their engagements; and some others, which, for the security of the registered proprietor in paying up the calls, your Directors have likewise declared forfeited.

The numbers of 209 shares will accordingly be submitted to you for confirmation of forfeiture.

Arrangements have been made for the immediate disposal of them on terms advantageous to the Company.

The account of receipts and expenditure to the 30th of June, shows that a balance of 28,122*l.* 7s 4d. was then in the hands of your bankers, and the receipts having kept pace with the expenditure, the amount remains nearly the same.

Your Directors cannot close this Report, without offering to you their cordial congratulations upon the present highly prosperous and encouraging state of your undertaking.

Your Register is most respectable, the perfect security offered to capitalists is attracting tenders of loans from all parts of the United Kingdom, and many of the more recent shareholders are paying in advance the full amount of 100*l.* per share.

FREDERICK RICKETTS, Chairman.

MR. BRUNEL'S REPORT.

GENTLEMEN,—Since the last Half yearly General Meeting, the line between Bristol and Bridgewater has been opened to the public, and in my Report upon the general progress of the works, I shall confine my observations to those now in progress, or preparing for execution, upon the remainder of the line between Bridgewater and Exeter. Of this portion, a distance of about eleven miles, extending from the station in the former town to the proposed station at Taunton, is in active progress.

Of the five contracts into which the work is divided, and which are all let, by far the heaviest work is in contract No. 2, C., and this is in a very forward state. The terms of the contract require its completion, ready for receiving the permanent way, in the middle of May next.

The last of these contracts, that next to the town of Taunton, already in a very advanced state, is to be completed by the end of the present year, and the others are required to be finished at different periods, not extending beyond the month of May. The contractors are at present proceeding satisfactorily, and there appears no reason whatever to anticipate any difficulty in the fulfilment of their several contracts.

We may, therefore, fairly calculate upon commencing the laying of the permanent way in the beginning of the year 1842, and consequently, as ample time has been allowed for the performance of the several works, there can be no reason to doubt that this further portion of the line will be opened to the public about the month of July next.

With respect to the line beyond Taunton, I have been engaged, as directed by you, in carefully reviewing the line generally, and setting out those works, including the tunnel at White Ball Hill, which are likely to occupy the most time, with the view to their being immediately let by contract, and commenced.

To enable detached parts of the whole to be thus put in hand, it is of course necessary to set out exactly and definitively the intermediate and connecting portions, and I have been, and am at present, most anxiously engaged in examining carefully the ground, and revising every part of the line, so as to reduce the cost of its construction to the lowest possible amount; and as the ultimate cost depends more upon the care and attention devoted to this preliminary operation than upon any subsequent attempts at economy, I feel sure that the time bestowed upon it is well and profitably expended. The contracts for the extension of the line for about eight miles beyond Taunton, to a point upon the Exeter Turnpike-road, at Bream's Bridge, could be ready for letting in a few weeks, and the works might be completed very soon after the opening to Taunton, should it be considered desirable to do so.

The tunnel which will not be more than 1,200 yards in length,—a cutting at a short distance north of Cullompton,—the crossing and diversion of the Culm, below Cullompton, and two or three bridges over the Ex, near Exeter, not in themselves at all formidable, are the works which I would more particularly recommend to be immediately commenced, as requiring time, and the expense of which will be materially reduced, by ample time being allowed for their completion.

The tunnel will of course require the longest time, and this I should hope to be prepared to let by the end of the present month, and the other works successively within a few weeks after; so that in the following Spring, if the circumstances of the Company should warrant the immediate and vigorous prosecution of the works of the whole line, no time will have been lost; while the expenditure in the meantime upon the early stages of these the more important works will have been comparatively small.

I am, Gentlemen, your obedient servant,
I. K. BRUNEL.

Bristol, 1st September, 1841.

Statement of Receipts and Expenditure, 30th June, 1841.

RECEIPTS.

Amount of 10 calls on 15,000 shares			
42 unallotted,			
Less on forfeited shares 14958			
viz.: per last account..... 3835			
Since..... 167 4002			
10,956 shares at £60 per share.....		£657,360 0 0	
Amount received on said forfeited shares, before forfeiture, viz.—			
Per last account.....	£37,867 10 0		
On the additional forfeitures.....	3,320 0 0		
	£41,187 10 0		
Amount received for shares allotted or sold.....	83,234 0 0		
		124,421 10 0	
		£781,781 10 0	
Deduct arrears, viz.—On 5th call, 10 shares at £5 .	£50		
On 6th call, 63 at 5 ..	315		
On 7th call. 168 at 5 ..	840		
On 8th call, 211 at 10 ..	2110		
On 9th call, 311 at 10 ..	3110		
On 10th call, 479 at 10 ..	4790		
.....		11 215 0 0	
		770,566 10 0	
Amount of deposits in anticipation of calls.....		7,225 16 3	
Amount of loans on the Company's debentures.....		88,310 0 0	
Amount received for certificates of registration.....		227 10 0	
Total		£866,829 16 3	

EXPENDITURE.

	Total to 31st Dec. 1840.	This Half-Year.	Total to 30th June, 1841.
	£ s. d.	£ s. d.	£ s. d.
Parliamentary expenses, including Parliamentary agents and fees to counsel, solicitors' bills, witnesses, canvassing, taking road traffic, hire of Committee rooms, and all law charges and disbursements to the time when the Act of Parliament received the Royal Assent	18,592 1 10	....	18,592 1 10
Engineering, including survey of the whole line, plans and sections, maps, professional evidence in Parliament, and all other expenses and disbursements in this department up to and since the time when the Act was obtained	6,429 11 8	....	6,429 11 8
Travelling expenses, before and since the passing of the Act, and country agency employed in relation to the line generally	3,659 7 9	188 13 6	3,848 1 3
Printing, advertising, stationery, bookbinding, and various incidental expenses in Bristol and London, from the first projection of this undertaking	5,992 4 0	710 14 3	6,702 18 3
Ascertaining and setting out the line..	5,005 1 8	439 0 8	5,444 2 4
Purchase of land, compensation for damages, surveying, valuing, and law expenses, in the conveyance of the land to the Company	98,516 5 10	14,545 11 7	113,061 17 5
Purchase of machinery, implements, utensils, tools, maps, plans, &c., for use on the line and at the Engineer's office including cost of the alterations and repairs at the office in Coronation-road, furniture, and disbursements ..	4,636 0 2	487 4 11	5,123 5 1
Payments to the contractors for work executed on the line under the several contracts	389,159 17 7	60,750 10 1	449,910 7 8
Salaries in the engineering and surveying department, and to draftsmen ..	28,700 11 6	1,921 12 9	30,622. 4 3
Office expenses, Direction, salaries, office furniture, rent, postage, and carriage of parcels	12,586 7 0	493 17 0	13,080 4 0
Law expenses in London and Bristol, in procuring new Acts of Parliament.....	3,024 17 9	....	3,024 17 9
Law charges connected with the general Direction of the Company's affairs	5,912 6 6	1,150 10 6	7,062 17 0
Permanent way	44,836 11 4	103,634 3 8	148,470 15 0
Interest paid to shareholders and on debentures	9,704 10 7	14,012 1 4	23,716 11 11

	£636,705 15 2	199,001 13 9	835,707 8 11
Balance in the hands of the bankers and Secretary		£28,122 7 4	
Amount deposited with the Treasurer of the county of Somerset, pursuant to section 95 of the Act of Incorporation.....		2,500 0 0	
			30,622 7 4
Total.....			£866,329 16 3

FREDERICK RICKETTS, Chairman.
J. B. BADHAM, Secretary.
ROBERT FLETCHER, Public Accountant.

Mr. FUSSELL moved that the Reports be received and adopted.

The motion having been seconded,

Mr. CARLISLE rose to put a question to the Engineer. He said, that he found the amount paid to the Contractors was 449,910*l.* allowing 20,000*l.* of that to have been expended westward of Bridgewater, left about 430,000*l.* expended between Bristol and Bridgewater. He should like to know how it occurred that that sum was so much larger than the original estimate.

Mr. BRUNEL explained, that contracts were taken at certain amounts, and that circumstances occurred in the course of the works which varied them. The payments were made at schedules of prices, and it must be perfectly in the recollection of Mr. Carlisle, from his having been formerly in the Directory, that circumstances frequently occur which increase or diminish the cost. There had been cases where the contractors had entered into heavy contracts and the actual certified amounts would not cover his weekly

Digitized by Google

payments; and under those circumstances advances had been made to the contractors.

Mr. CARLISLE—A great deal had been said on the subject of the statement that 35*l.* per share would carry the Company to Bridgewater. That not proving to be the case was materially accounted for when they found the contracts amounted to 430,000*l.*, when they were originally stated to be 210,000*l.*; that would make the difference between the 35*l.* and the 60*l.* per share. He could not understand how the difference in the contracts should exist to that extent, unless there was a material alteration in the cutting in contract.

Mr. BRUNEL—As to that there was a report laid before the Directors, and it was determined to reduce the gradient on that part of the line where it was very steep, and the cutting was consequently increased.

Mr. CARLISLE—The advance was something like 50 per cent.

Mr BRUNEL—If you draw that inference, and thereby lead others to do so, as to the whole of the works, you are exceedingly mistaken.

Mr. RUSSELL intimated that the most rigid control should be exercised over the Engineer.

The CHAIRMAN said that the Directors themselves were large shareholders, and it was their own interest as well as their duty that the most rigid economy should be practised.

Mr. DIVETT said, that with reference to the estimate of 35*l.* a share being sufficient to carry them to Bridgewater, he did not recollect that it was ever made. He himself never believed it could be done.

Mr. BERNARD said, that the statement was made officially.

Mr. C. B FRIPP thought it very hard that the proprietors should bring a charge against the Directors, of their want of providence, and their having no control over the expenditure of the Engineers. There was a mode of constructing a line by doing it cheaply, and without reference to the accommodation of the public, which would prove in the end a very dear one. There was another method of using the very best materials, and giving the greatest accommodation to the public, which if obtained, would prove at last the most rigidly economical. The general accusation of the Directors being under the control of the Engineers was not a fair one, and he believed it could not be substantiated. He had seen repeated instances where the Engineer had not followed up his own judgment in consequence of the contrary opinion held by the Directors; and that was a strong proof that they were not under his control. The case which Mr. Carlisle had alluded to, of an extra expenditure, stood thus—that the contracts were taken with certain gradients, and the works set out with certain slopes; it was afterwards deemed expedient to make the gradients flatter, and that very greatly increased the cost of the earth work. Contracts were frequently worked before a considerable portion of the operations were ascertained; culverts and things of that kind, it was impossible to include in the first estimate. When fair allowances were made for such works, and the rebuilding of the bridges, he did not see that there was any ground for complaint. He did not think the Directors could be fairly charged with lavish expenditure. (Hear, hear, hear.) With regard to the estimate of 35*l.* for the completion to Bridgewater, the subject had undergone such complete discussion at previous meetings, that it was not necessary further to notice it. He thought that Mr. Brunel's own report furnished very strong intimation of his desire to finish the work with the greatest economy; and from the greater degree of attention which they were likely to receive from Mr. Brunel, he was convinced they would find a great difference in the construction of the future works.

A PROPRIETOR inquired what was the cost of the line from Bristol to Bridgewater.

Mr. C. B. FRIPP said, he had taken great pains in anticipation of that question, in order to ascertain that, and after apportioning the expenses which had been incurred, throwing them very heavily on the Bristol and Bridgewater portion of the line, he found that it would be as nearly as possible 880,000*l.*, including of course the cost of the addition necessary to join it with the Great Western, and which made it tantamount to 36½ miles in length, being at the rate of 25,500*l.* per mile.

Mr. DIVETT observed, that assuming that to be correct, and that the other part of the line would cost as much (they had reason to believe that it would cost less) the whole line to Exeter would be completed under the sum which they originally asked Parliament for power to raise.

In reply to a Proprietor,

Mr. FRIPP observed, that the sum mentioned did not of course include any station necessary when the line reverted to the Bristol and Exeter Company.

Mr. BERNARD rose to propose a series of questions which he thought required to be answered. The proprietors were in a situation to prevent a very large outlay in the expenditure on the remainder of the line. With the example of the Great Western Company before them, and knowing that the Engineer was the same for both lines, he thought they should be very cautious. It was possible that the Great Western Company might work their own line, and this at 10 or 15 per cent. less than they now did, by which means they would put all the difference into their own pockets, and the Bristol and Exeter shareholders would have to put their hands into their pockets for a very large additional outlay, in order to bring their line into as good a condition as the Great Western. (Hear, hear.) Mr. Bernard then referred to the opposition in which he had always found himself to the Directors, and remarked on the error in formerly estimating that 35*l.* per share would finish the line to Bridgewater. He thought they ought not to take the Great Western line as an example of construction, but rather that of the Grand Junction. He believed Mr. Brunel was the most talented Engineer in England, but they all knew that he was body and soul wrapt up in his determination to construct the best line of railway that was ever travelled on. (Hear, hear.) As the Company were just now beginning to tunnel through what he might call the Somersetshire Alps, he would recommend that the whole estimates should be re-considered, and that if possible they should confine themselves to the gradients which were laid before Parliament. He should not divide the meeting on the Report but would recommend that the course adopted by the North Midland Company should be adopted here, namely, that of appointing Auditors, whose duty it should be to report to the shareholders on the circumstances of the Company. Mr. Bernard then read a series of questions, to which he requested replies from Mr Brunel. Previous to the answers being given, a Proprietor asked the present number of shares held in Manchester and Devonshire, whether they bore the same proportion they did on a former occasion to those held in Bristol.

Mr. BADHAM—Yes, with this difference—that within the last two months we have a great number of west country holders from the neighbourhood of Plymouth, Devonport, and the lower part of the country. I have no less than ten transfers from that part of the country this morning—(cheers)—and all of them professed with the intention of paying up 100*l.* per share. (Loud cheers.)

Mr. BERNARD said, the reply was certainly very satisfactory. He would wish to know the total loss on the forfeited shares.

Mr. BADHAM said the account was not finally made up, but he believed it would be about 115,000*l.* So that instead of the capital being 1,500,000*l.*, it would be about 1,400,000*l.*, which, with the 500,000*l.* the Company were authorised to borrow on debentures (and the loans were coming in very fast every day) good judges believed would carry the Company to Exeter.

Mr. BERNARD then commenced putting the questions which he had announced, to Mr. Brunel, but that gentleman declined answering them, unless allowed to do so without interruption, from which he should not be free if Mr. Bernard was allowed to interpose remarks on the answers he might be able to give. A warm discussion ensued, and it was eventually determined that Mr. Brunel should have a copy of the questions, which he would severally answer.

The first question related to the cost of stations. Mr. Brunel replied, that there had been no calculation of the cost; but it must be evident to all who had passed along the line that this item was but trifling.

Q. What was the original estimate of the cost of the line to Bridgewater?—A. The first estimate was the Parliamentary, which did not contain any separate estimate for the line to Bridgewater. That estimate was 1,500,000*l.*, and the rateable portion for Bridgewater would be about 650,000*l.* A revised estimate which had been given about a year and a half since, stated 820,000*l.* was the probable cost.

Q What are the gradients between Bristol and Bridgewater, and what were the gradients originally proposed?

A. The gradients proposed in the Parliamentary estimate were 30 feet per mile for the Ashton cutting; after mature deliberation, at a time when it was at all events probable that Bridgwater would have been the terminus of the line, it was determined to alter the gradients to 26 feet per mile. Mr. Bernard had incidentally mentioned that the Great Western Company might save 10 or 15 per cent. by having favourable gradients; and this he thought a sufficient reason for the alteration [illegible]. The difference of the expense was, he believed, 24,000*l.* No alteration had been, he thought, made in the Pile Hill cutting, and beyond Ashton no alteration was made to the best of his recollection.

Q. What is the number of cubic feet of earth removed between this city and Bridgewater?—Mr. Brunel observed that Mr. Bernard had answered the question himself on his paper—he had there written that the estimate was one million cubic feet, whilst the actual amount removed was 2,500,000 feet.

Mr. BERNARD wished to know if that was a correct statement.

Mr. BRUNEL could not undertake to say. He was aware that the quantity of earthwork was necessarily increased by the alteration of the gradients and the increased slopes at Ashton; besides this they were compelled, in order to escape the opposition of the Trustees of the Bath Roads, to engage to pass that road in a particular way, which obliged them to cut much deeper.

Q. Has the whole line to Exeter been set out?—The greater part had been, and the remaining portion was being accurately surveyed by himself, in order that the best line may be taken to within five yards.

Q. Have the original gradients been maintained in the contracts from Bridgewater to Taunton?—He was afraid not. The formation of the Chard Canal since the line was originally set out, on the level proposed for the railway, had compelled them to alter the gradients, in order to pass over or under the canal.

The remaining questions referred to the probable cost of the remaining portion of the line; the original estimates for ballasting, and the number and elevation of the bridges beyond Bridgewater. With regard to the bridges, Mr. Brunel said, that the elevations had been altered, and with respect to the remaining questions he would make a few general observations, and he trusted his explanations would be satisfactory, although he had not been able to furnish them off hand with the figures, which he could have done had he been put in possession of the questions a day or two before the meeting. He thought it strange that neither Mr. Bernard nor other gentlemen, who appeared to be anxious for details at the different meetings, had ever applied to him for information out of court.

Mr. BRUNEL then proceeded, having answered the questions proposed by Mr. Bernard to the best of his power, he would here remark, that with respect to the general question of gradients, he had uniformly acted on the principle, that unless it was palpable that the expense would be comparatively trifling and the advantage great, he had never recommended any alteration, and he could safely affirm that he had been especially anxious on account of his connexion with the Great Western line, not to advise any increase of outlay for the benefit of that Company. He could safely appeal to the Directors of the Exeter Railway on this point, that where the interests of the two lines could by any possibility clash, he had invariably advocated the interests of the Exeter line. With regard to the cost of the remaining portion of the line he felt exceedingly averse to give an answer, had he the necessary figures at hand, which he had not; he would as a mere matter of opinion state, that the expense of the latter portion would be less than the cost of the line to Bridgewater, for this reason; at the time the first contracts were let, the contractors were at a premium, whilst at the present time they had the benefit of great competition. He did not mean that now they should get the contracts executed at a loss, but it was well known that two or three years ago the contractors were at very heavy expenses which they had not now to meet, and the works being certainly not more difficult, there was reason to expect a diminution of expense.

Mr. BERNARD wished to know whether Mr. Brunel could furnish the estimated cost of the contracts between Bridgewater and Taunton?

Mr. BRUNEL said, that it would be extremely imprudent to do so. In that room were doubtless several contractors, and it would hardly be advisable to mention the estimate of the engineers as to the probable cost of works.

After a few words from Mr. Hovenden,

Mr. BRUNEL said, that it would be impossible to give an estimate of the probable cost of the line which could be satisfactory. If he estimated the cost at two millions, the public would say, "your engineer says two, and the cost therefore will be three millions." (A laugh.)

Mr. BERNARD asked if Mr. Brunel could prepare an estimate against next meeting?

Mr. BRUNEL said, that he could do so if required, but he had a very strong feeling of the impolicy of estimating works not yet commenced.

Digitized by Google

Mr. TYRRELL said, that although their Engineer had declined to give an estimate, he had virtually done so; he had told them the expense of the remaining portion of the line would be certainly not more than the part already completed. If so, the total cost would be 1,993,000*l.*, or less than the Parliamentary estimate.

Mr. BRUNEL said, that they had had early proof of the impolicy of his furnishing any estimate. Mr. Tyrrel had certainly wrongly stated his observations, and no doubt to-morrow, or at all events next week, the recollection of present proprietors would be, that he had given an estimate to the effect stated by Mr. Tyrrell. What he really said was that in his opinion the forthcoming contracts would be executed at a cheaper rate than those between Bristol and Bridgewater; but circumstances may arise which would defeat that expectation.

Mr. BERNARD said that Mr. Brunel had answered his questions in a straightforward manner, but he wished to know whether that gentleman could inform him as to the increased amount of the earthwork, and to the cause of that increase?

The CHAIRMAN here interfered. He thought it was now time to bring the first resolution before the meeting.

After a few words from Mr. Bernard, in explanation of the course he had thought proper to pursue,

Mr. CARLISLE asked the Secretary a question respecting the non-payment of 10*l.* per share on a number of the forfeited shares which had been allotted to different parties; but on Mr. Badham's explanation that with the exception of 15 shares the property of deceased persons, all the preliminary sums of 10*l.* per share had been paid. Mr. Carlisle expressed his perfect satisfaction.

Mr. HOVENDEN said, that the Report of the Directors, and the statement of their Engineer were so satisfactory, that he regretted that he had not the pleasure of seconding the first resolution, he would, however, briefly express his satisfaction at the statement of Mr. Brunel, that in his opinion, the remaining portion of the line would not be more expensive than that already formed.

Before the resolution was put Mr. Gravatt, late assistant Engineer rose, and commenced a discussion of a personal nature in opposition to Mr. Brunel, for which we have not room. At the recommendation of the Chairman, however, the resolution was unanimously passed.

Mr. GRAVATT afterwards addressed the meeting at great length, charging Mr. Brunel with mismanagement in the conduct of the Company's affairs; and a motion was made recommending the dismissal of that gentleman from the service of the Company. This motion was seconded by Mr. Gravatt himself, in a lengthened speech, and several amendments were made, having for their object the reference of the affair to the decision of the Directors; which amendments were, however, severally withdrawn, the movers and seconders expressing themselves satisfied on Mr. Gravatt's own admissions, that there was no reason why the matter should be further entertained by the Board.

Mr. SAUNDERS, of the Great Western Railway, addressed the meeting on behalf of Mr. Brunel (who from a feeling of delicacy had left the room as soon as his conduct was likely to be the subject of discussion), and on the withdrawal of the previous amendments proposed one to the effect, that Mr. Brunel enjoyed the undiminished confidence of the proprietors, and was entitled to their warmest thanks for his professional zeal, integrity, and skill, in their service.

The amendment was put to the meeting, and carried amidst loud cheering, there being, we believe, but three hands held up against it.

The forfeiture of 209 shares was then confirmed, and after the transaction of some routine business, the meeting concluded at half-past 5, having commenced precisely at 12 o'clock.—Abriged from the *Bristol Standard* (2nd Edition), September 2.

EDINBURGH AND GLASGOW RAILWAY.—At the Seventh Half-Yearly General Meeting of the Shareholders of this Company, held pursuant to the Act of Incorporation, in the Company's Head Office, Glasgow, on Tuesday, the 24th August, 1841, at One o'Clock.

JOHN LEADBETTER, Esq., in the Chair.

After the advertisement calling the meeting had been read; the minutes of the last General Meeting of Shareholders confirmed; and the Seal of the Company affixed to the Register of Proprietors, the Report of the Directors and Balance Sheet were read. The following Resolutions were then proposed, seconded, and passed. Mr. Cadell, for himself and other Edinburgh Directors, dissenting, and Mr. M'Neill protesting, as stated in the Report.

Moved by Wingate, Esq.

"That the Report and Statement of Accounts, now read, be received, approved of, and circulated among the Shareholders."

Moved by Bailie Robertson, seconded by Thomas Richardson, Esq.

"That the meeting, while they regret to learn that the progress of the works has been so materially retarded by the unfavourable state of the weather, are gratified to hear of the great exertions that have been made to complete them, and at the prospect of the line now being so soon opened for traffic, and that a vote of thanks be given to the Directors for their services."

Moved by Alexander Ronaldson, Esq., seconded by John Learmonth, Esq., of Dean.

"That the Resolutions of the Board of Directors, declaring the forfeiture of 185 shares, as per signed list, be now confirmed; and that the Directors be authorised to dispose of the said shares at such times and in such portions as they may consider best."

Moved by William Nicol, Esq., Liverpool, seconded by John Galbraith, Jun., Esq.

"That the Directors be instructed to provide in the next Act of Parliament a remedy for the defects in the constitution of the Company, which are pointed out in the Report, and which have given rise to the differences between the General Board and the Edinburgh Committee, respecting their powers; and in particular providing, that no powers shall be vested in, or exercised by any Committee, except in matters specially referred to them by the General Board, and also that the number of Directors be reduced to the extent recommended in the Report."

Moved by William Balfour, Esq., and unanimously agreed to:—

"That the thanks of the meeting be given to the Chairman for his conduct in the Chair."

JOHN LEADBETTER, Chairman.

RAILWAY COMMUNICATION WITH SCOTLAND—RAILWAY FROM LANCASTER TO EDINBURGH AND GLASGOW.—At a Meeting held at the White Hall, Kendall, on Monday, the 16th August, 1841,

JOHN WAKEFIELD, Esq., Banker, in the Chair.

It was Resolved,—I. That a Committee be formed, to be called The Kendal District Railway Committee, for the purpose of co-operating with "the Central Committee," at Carlisle, in furthering the Railway recommended by the Government Commissioners, from Lancaster to Edinburgh and Glasgow.

Resolved,—II. That the following Gentlemen (with power to add to their numbers) be constituted such Committee:—

The Hon. H. C. Lowther, M.P., Lowther.
Alderman Thompson, M.P., London.
George William Wood, Esq., M.P. for Kendal.
James Machell, Esq., Mayor of Kendal.
George Wilson, Esq., Dallam Tower.
John Wakefield, Esq., Sedgwick.
Richard Fothergill, Esq. Bridge House.
Arthur Shepherd, Esq., Shaw End.
James Thompson, Esq., Lambrigg.
Hornby Roughsedge, Esq., Fox Ghyll.
Edmund Hornby, Esq., Dalton Hall.
Charles Standish, Esq., Standish.
George Warden, Esq., Wansfell Holm.
J. Waithman, Esq., Yealand.
G. H. Gardiner, Esq., Birthwaite.
James Gandy, Esq., Heaves Lodge.
J. H. Wilson, Esq., The Grange, Sussex.
J. Brancker, Esq., Croft Lodge.
J. Harrison, Esq., Hundhow.
W. Wilson, Esq., Netherfield.
John Gandy, Esq., Kendal.
Isaac Braithwaite, Esq., Kendal.
George Braithwaite, Esq., Kendal.
Roges Moser, Esq., Kendal.
William Whitwell, Esq., Kendal.
Thomas Harrison, Esq., Kendal.
George Gibson, Esq., Kendal.
Robert Benson, Esq., Park Side.
Jacob Wakefield, Esq., Kendal.
G. B. Crewdson, Esq., Kendal.
Joseph Banks, Esq., Kendal.
John Whitwell, Esq., Kendal.
John Jowett Wilson, Esq., Kendal.
Thompson Bindlost, Esq., Kendal.
Wilson Marriott, Esq., Kendal.
C. Ll. Braithwaite, Esq., Kendal.
Thomas Robinson, Esq., Kendal.
John Thompson, Jun., Esq., Kendal.
Mr. Cornelius Nicholson, Cowar Head.

Resolved—III. That the following be the standing officers of this Committee:—

President.—John Wakefield, Esq., Sedgwick House.

Vice-Presidents.—Thomas Harrison, Esq. / William Whitwell, Esq.

Secretary.—Mr. C. Nicholson.

Resolved,—IV. That a Sub-Committee be appointed for the purposes of Correspondence and obtaining "Consents" of Landowners (who shall from time to time report progress to the General Committee), and that the following be such Sub-Committee.

Ex-officio—The President, Vice-Presidents, and Secretary.

George Gibson, Esq.	Wilson Marriott, Esq.
J. J. Wilson, Esq.	C. Ll. Braithwaite, Esq.
John Whitwell, Esq.	Thomas Robinson, Esq.

N B.—Those Gentlemen named on the General Committee, who were not present at the Meeting, have, on being subsequently applied to, severally acquiesced in their appointment. CORNELIUS NICHOLSON, Secretary.

August 28, 1841.

LONDON AND CROYDON RAILWAY.—SUNDAY TRAINS.—On and after SUNDAY, the 5th day of September, the HALF HOUR TRAINS will be DISCONTINUED, and the following Trains only will run, viz.:—From London, morning, five minutes past nine and ten o'clock; afternoon, twenty minutes past one o'clock, and twenty minutes past every hour, until twenty minutes past nine o'clock From Croydon, morning, five minutes past eight, nine, and ten o'clock; afternoon, twenty minutes past one o'clock, and twenty minutes past every hour, until twenty minutes past nine o'clock.

R. S. YOUNG, Secretary.

LONDON AND CROYDON RAILWAY COMPANY.—NOTICE is hereby given, that the next HALF YEARLY GENERAL MEETING of the PROPRIETORS of this Company will be holden at the London Tavern, Bishopsgate-street, within the City of London, on Tuesday, the 7th day of September next ensuing. The Chair to be taken at One o'Clock precisely.

WILLIAM ARTHUR WILKINSON, Chairman.

The Books for entering memorials of the transfer of Shares will be closed from the 31st August to the 7th of September inclusive. R. S. YOUNG, Secretary.

205, Tooley-street, August 23rd, 1841.

TO RAILWAY COMPANIES AND IRON MANUFACTURERS.—LOSH, WILSON, and BELL beg to recommend to parties employing or manufacturing Rails their improved Machine for straightening them, in which by a simple and powerful application of the screw they are rendered perfectly even, without being disfigured by hammer marks.

For terms and description apply to the makers, Walker Iron Works, Newcastle.

26th July, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—At the Half-yearly General Meeting of the Proprietors of the Birmingham and Derby Junction Railway Company, held at the Waterloo Rooms, Waterloo Street, Birmingham, on the 26th of August, 1841, by adjournment from the 10th of August, 1841, under the provisions of the Act of Incorporation, for the election of three Directors, in the place of the same number who will retire by rotation, and for other purposes,

HENRY SMITH, Esq., Chairman of the Board of Directors, in the Chair.

The common seal of the Company was affixed to the Register of Proprietors.

The following Report, presented by the Committee appointed by the Proprietors assembled at the General Meeting, held on the 10th of August, 1841, was read, and the subjoined resolutions were unanimously agreed to.

REPORT.

Birmingham, 26th August, 1841.

In compliance with the resolution of the half yearly meeting, held on the 10th instant, we have proceeded upon the investigation then referred to us, and we have associated with us in the enquiry Colonel Blane, and Messrs. W. Mayo and J. L. Prevost, Shareholders in the concern, who, from various circumstances, were enabled to afford us valuable assistance.

We have been attended also by Mr. Smith, the Chairman of the Company, and Mr. Samuel Beale, one of the Directors; by Mr. George Stephenson, a considerable Shareholder, and a freighter on the line; by Mr. R. Stephenson and Mr. Birkinshaw, the Engineers; and Mr. Carter, the Solicitor of the Company.

Our first object was to investigate the circumstances under which so large a discrepancy exists between the published weekly returns of traffic of the last half-year and the actual receipts, and in connection therewith to examine the method in which the books are kept, and their efficiency for showing from time to time the actual state of the concerns of the Company.

We have much pleasure in reporting that we are entirely satisfied with the system on which the books are kept, and are convinced that they afford the means of detecting the existence of any error which may at any time creep into the accounts.

It appears that the difference alluded to is £1,989 18s. 8d., arising from errors in making out the weekly statements of the goods traffic during the half-year, those of the passenger traffic being quite correct.

The principal error is in amount £915, and arises from credit having been taken in the weekly returns for the toll on coke and other articles consumed and used on the line. It further seems that the quantity of coal as reported in the weekly returns was calculated upon an estimate of five tons per waggon, though the quantity was only four tons; and that though the weekly returns from the London and Birmingham Company of the through goods, being calculated upon the whole distance, and therefore including the toll upon such part of the Birmingham and Derby as they passed over, the tolls upon such traffic on the Birmingham and Derby were included in our own station returns, and consequently appeared twice in the weekly reports. There are various other sources of error, all of them showing an equal degree of negligence and want of proper thought on the part of the agent managing that department.

We further find that the same system of error exists in the weekly returns for the month of July, showing a difference in the month of £150 4s. 10d. over the actual receipts; but since that time the weekly returns have been correct.

It does not appear to us that any pecuniary loss has been sustained by the Company in consequence of these errors, but they afford conclusive evidence of a want of attention to system, which, added to the want of activity on the part of some of the servants of the Company, must have very

Digitized by Google

there is abundant proof of the neglect of check on the part of the superior officers, which cannot in any way be satisfied.

We were informed by the Directors that they had adopted measures with a view to prevent the recurrence of errors of the same description, and for their more certain and speedy discovery if they did occur, and that they had always intended to re-model the whole system of traffic management as soon as the new line was completed, but that their recent investigation had satisfied them that this ought not to be delayed, and that they intended forthwith to proceed to make the changes which circumstances had shown to be necessary.

We then proceeded to examine the financial position of the Company, and the Directors submitted to us accounts to show that to pay the sums still due upon the old line, the whole expense of completing the line into Birmingham, and for providing the stock of engines and carriages necessary for the most extensive passenger and goods' traffic, so as to put the line with all its stations in a state of the most complete efficiency, a sum not exceeding £[illegible] would eventually be wanted, beyond the sums of £[illegible] raised by shares, and £[illegible] raised by debentures. This estimate is founded upon accounts and explanations given to us by Messrs. Stephenson and Birkinshaw.

We are directed by the resolution of the meeting to report our opinion as to the most eligible mode of raising the funds necessary for this purpose; but as we find that the present resources of the Company afford the means of opening the double line into Birmingham, completing the station, and making the communication with the connecting lines of railway there, we do not feel it necessary to say more upon this point at present than to recommend that the proprietors should authorise the Directors to take steps for an application to Parliament in the ensuing spring, for powers to raise the additional capital above stated, before which time the opening of the new line will have materially assisted in developing the resources of the Company.

We have further, in compliance with the instructions given us, examined the state of the share list, and of the arrears now due thereon. The proprietors are aware that 72 of the original shares of £100 each were forfeited in 1838, and they have not been re issued; the proprietary, therefore, consists of 6,728 shares of £100 each, and of 6,800 nominally of £33 6s. 8d. each, which were issued at £25.

The sums remaining due on the 10th of August upon the 6,728 shares of £100 each amount to £3,810, and the Directors have taken the steps necessary to bring these claims to a settlement. Upon the first £10 call on the new shares, which amounted to £68 000, the only arrears are £3,068 18s 8d; and upon the second call of £5, amounting to £34,000, which was due on the 6th May last, there is an arrear of £11,230; and the Directors appear to us to be taking the most judicious means of realising these funds.

Interest has in all cases been charged.

We further proceeded to consider the present prospects of the Company, inquiring, as this inquiry did, the effect that was likely to be produced by the opening of the direct line into Birmingham.

We found that the traffic in the year 1838 was, on the first application to Parliament, estimated at—

£47,021 for passengers, including the carriage of the mail, assuming the number at 145,645.	
26,221 for goods, assuming the quantity at 32,360 tons.	
4,719 parcels.	
2,043 agricultural produce.	
1,310 cattle.	
£80,314	

Up to the present time no agricultural produce and but little cattle have been carried on the line, nor can any facilities be afforded for this kind of traffic until the direct line is opened into Birmingham, and proper station accommodation is provided.

During the year ending the 30th June last, the income from passengers, parcels, and mails, has amounted to £43,052, being £8,667 less than the estimated traffic from that source. The goods have, in the same time, yielded an income of £13,478, being about one-half of the estimated traffic. Carriages and horses have produced an income of £1,820, which was not included in the Parliamentary estimate.

The total revenue of the past year has thus been up to the 30th June last	£58,350
And in 1840, the month of July and the three first weeks of August produced on the local traffic a revenue of £7,686 10s. 8d., while the corresponding period of the present year has produced £9,080 11s. 11d., showing an increase of 17 per cent.; and if the same rate of increase should be found to extend itself over the remainder of the year, the result would be an addition at the rate of £14,384 per annum to the receipts, without calculating upon any part of the benefit which must necessarily arise from the advantages of the direct line into Birmingham when opened.	
With respect to these advantages, we have most anxiously and attentively investigated the details laid before us by the Directors, who estimate that the three stations to be opened between Nether Whitacre and Birmingham, upon the direct line, must produce at least £20 each per week, making in the year	3,120
That the traffic of Tamworth, Atherstone, Coleshill, and the adjoining districts, which are now all of them about ten miles further from Birmingham by the railway than they are by the turnpike road, but will be brought to an equal, and some of them to a less, distance, will produce an increased in-	
That the shortened distance of ten miles upon the present traffic between Birmingham and Derby must produce an increase of at least 10 per cent. upon the passenger traffic of £36,881, being	3,688
That, as in the case of all other railways, there will be a progressive increase in the passenger traffic, arising from the better knowledge and appreciation of the facilities which the railway affords, equivalent to at least	5,000
The increased charge now obtained for carrying the mails has only affected twenty-one weeks of the past year, and an addition must therefore be made to the future annual revenue of	2,855
That there will be an increase in the goods traffic of	18,200
The expectations of this increase are founded chiefly on the following considerations:—	
That the trade between Birmingham and Hull, and the Eastern Coast of Scotland and Germany, is not yet touched.	
That for the trade between Gloucester, Bristol, Cheltenham, and the West, to Derby, Nottingham, Sheffield, Leeds, Bradford, York, and Hull, the railway communication is not yet completed.	
That the trade between Birmingham and Nottingham, Newark, Leicester, and the Eastern Districts, is not yet developed in any considerable degree.	
That a considerable traffic is now commencing between Nottingham and the East, and Liverpool and the towns on the line of the Grand Junction Railway, Chester, North Wales, &c.	
That the traffic between Birmingham and Sheffield, Leeds, Bradford, &c. although become already important, is regularly increasing.	
Taking all these sources of trade into consideration, it is estimated that an increase to the present goods traffic may be expected of at least 1,000 tons a week when the direct line is finished, and all the communications are completed which are necessary for the development of the trade.	
And taking an average charge at 7s. per ton, a yearly amount is given as above estimated.	
That the quantity of coal carried on the line, which is now about 600 tons per week, will be increased to 2,000 tons per week, being 1,400 tons in excess of the present quantity, which, even at the lowest average rate of toll, will produce upwards of	16,250
That there will be an increase of 300 tons per week in the quantity of coke, which, at equally low tolls, will produce	3,250
That there will be an increase of 100 tons per week on the quantity of lime, which, at the same toll, will produce	1,125
Total gross	£113,498

From which deduct—		
Interest of borrowed money	£17 833	
Present working expenses	32,000	
Estimated increase of expenditure for increased traffic, office establishment after completing the line, &c., as estimated by the Directors, and by Mr. Robert Stephenson and Mr. Birkinshaw	3,060	
		52,893
Leaving a net income of		£60,605

With respect to the increase which is anticipated in the mineral traffic, the Committee have received a Report from Mr Robert Stephenson, upon the assurances in which they rely, and from which they are led to the conclusion that the increase here stated may be calculated upon.

It will be seen that the Directors' estimate in both cases falls short of former statements submitted to the proprietors, especially that for the mineral traffic. But we are aware that the Directors have thought it right to act under the influence of extreme caution; and, as far as the details submitted to us can guide our judgment, we feel justified in reporting, that neither the estimate for goods nor that for the mineral traffic can be in the present instance considered as over-rated; and in the estimates affecting the increase of the passenger traffic, which we have tested by the experience of the increase constantly taking place in all other railways for the first four years after their opening, and also by the increase which is actually taking place in our own, we have as little hesitation in stating it as our opinion that the different sources of increase are not over-rated.

The completion of the line and its various communications is, of course, necessary for the development of the full traffic upon this as well as upon every other line of railway. But it is evident that the opening of the direct line, which will at once relieve the Company from the burthen of the toll to the London and Birmingham Railway, at the present rate equal to more than 1 per cent. upon the whole capital of the Company, will also immediately produce a very important effect upon the passenger traffic; and it is clear that it will place the Directors in a situation to afford facilities for the transmission of goods and minerals, for the want of which the trade hitherto has been completely crippled, and that a very early increase of the traffic must be the result.

For these reasons we have felt most anxious about the early opening of the direct line; and we have the pleasure to report that the contractors are now in possession of the whole of the land, that the station is in a state of considerable forwardness, and that the Engineers inform us that both lines of rail will be open for traffic by the end of the year; and we are bound to express our own belief, founded upon the present rate of progress, that this may easily be accomplished.

On the other points referred to us, we have to report, that we find that the coke has all been delivered at Derby, and at prices varying from 16s. 9d. to 20s. per ton; and we find that it is the opinion of Mr. R. Stephenson that some little reduction in the price may be expected; and that for the future there will be a saving to the Company, by the use of a better quality than was last year procurable.

The item of £371 11s. 3d. charged as for agency, has been explained to our entire satisfaction, and is, in fact, made up of various payments connected with the delivery of goods.

We have also had before us an account of the salaries now paid to all the parties in the employ of the Company. Many of these appointments are now on the eve of ceasing, by reason of the present advanced state of the works on the direct line and station; others must necessarily cease at Christmas; and such changes in the general arrangement and establishment as are necessary, will, of course, be brought under the notice of the Directors on their early consideration of the whole subject.

We fully rely upon their anxiety for the welfare of the Company, and upon their intention of doing all that justice to the proprietors requires; and we do not think it necessary to do do more than to observe, that the best consideration we have given to the subject convinces us, that in the original establishment of Railway Companies, salaries generally were arranged with reference to the exertions and labour of a Parliamentary contest, or of other circumstances that have long since ceased, and that they were, consequently, fixed upon a higher scale than the nature of the annual service seems otherwise to justify.

The account of the current disbursements, is still under inquiry; in the meantime it appears to us that the different items have been charged to revenue and capital in the usual way. The proportion of the expense of the Direction, which is usually charged to revenue while the road is still incomplete, has been voluntarily given up by the Directors, for which act of forbearance we feel that they are entitled to the best thanks of the shareholders; but we observe that the sum of £1,700, the dividend on the new shares issued for the construction of the direct line into Birmingham and the station there, has been carried to the revenue account.

It was, perhaps, prudent to engage to pay the same dividend upon these shares as was paid upon the original capital, to induce parties to take them. But as it is a payment on account of capital not actually raised, and to be applied to objects from which the revenue account is not yet deriving the least benefit, it appears to us to be incorrect to charge it to that account, and that on the contrary the payment most decidedly ought to be charged to capital.

Taking this view of the case, the balance of the revenue account to the 30th June, is £6,361 2s. 5d.

In conclusion, we have much pleasure in reporting, that in the course of our inquiries we have received every assistance and facility from the Directors; that they have acted throughout with the most perfect candour; and have been ready on every point to meet our wishes, expressed as these have on all occasions been for the welfare of the concern.

RESOLUTIONS.

Resolved—That the common seal of the Company be now affixed to the register of proprietors.

Resolved—That the Report from the Committee of Proprietors which has now been read, be entered on the minutes and printed, and that a copy be sent to each proprietor; and that the Committee be requested to complete the investigation of the matters referred to them, and to report—if they shall think it necessary—to a future meeting of the proprietors.

Resolved—That the Report of the Directors read to the meeting of proprietors on the 10th instant, now laid before this meeting, and the statement of accounts thereto annexed, be approved and confirmed, subject to the alteration suggested by the Committee, as to the sum of £1,700 which has been charged to the revenue account; and that the proceedings of the Directors be approved and confirmed.

Resolved—That under present circumstances no dividend be declared, but that the surplus revenue, amounting, with the addition of £1,700 referred to in the preceding resolution, to £6,361 2s. 5d., be carried on to the credit of the revenue account.

Resolved—That the Directors be empowered to apply to Parliament in the ensuing session, for powers to raise the additional capital required.

Resolved—That Mr. Henry Smith and Mr. Joseph Walker, Directors retiring by rotation, in accordance with the provisions of the Act of Incorporation, be re-elected Directors of this Company; and that Mr. Josiah Lewis, of Derby, be elected a Director of this Company, in the room of Mr. William Beale, who from ill health declines offering himself for re-election.

Resolved—That the thanks of the proprietors be given to the gentlemen who have formed the Committee of Investigation, for their valuable services.

Resolved—That the thanks of the proprietors are due to Mr. Smith the Chairman, and to the Board of Directors, for their attention to the interests of the Company.

(Signed)
HENRY SMITH, Chairman.

NORTH MIDLAND RAILWAY COMPANY.—Tenth Half-Yearly General Meeting of the Court of Proprietors.—At the Tenth Half-Yearly General Meeting of the North Midland Railway Company, held at Derby, in pursuance of the provisions of the Act of Incorporation.

GEORGE CARR GLYN, Esq., in the Chair.

The Secretary read the advertisement convening the meeting, and stated that a sufficient number of Shareholders were then present to constitute a meeting.

The Secretary read the proceedings of the last meeting.

The Chairman moved, that the common seal of the Company be affixed to the register of proprietors.

The seal was affixed accordingly in the presence of the meeting.

The Secretary read the Report.

Resolved, that the Report now presented to the meeting be adopted and printed for circulation among the proprietors, and that a dividend upon the net profits of the Company's revenue up to the 30th of June last be now declared of 2*l.* per share upon the 100*l.* shares, and 1*l.* per share upon those of 50*l.*

The following resolution was moved by Mr. Alston, and seconded by the Chairman, and adopted unanimously:—

That the Accounts presented to the Half-Yearly General Meeting be in future examined, and signed by two Auditors to be appointed by the Directors previous to such Accounts being exhibited to the Proprietors, and that a list of Proprietors with their respective addresses be annexed and circulated with the printed proceedings after each Half-yearly meeting.

The following resolution was moved by Captain Porter, R.N, and seconded by Captain Ramsey, R.N.—That Mr. Hubbard be requested to express the best thanks of this meeting to George Carr Glyn, Esq., the Chairman of the North Midland Company, H. Houldsworth, Esq., M.P., Chairman of the Manchester and Leeds Company, and George Hudson, Esq., Chairman of the York and North Midland Company, for their kindness in meeting according to the suggestion made at the last North Midland meeting for the purpose of arranging the working of the three lines to the greatest advantage Mr. Hubbard then put the resolution to the Meeting, and it was unanimously adopted.

Mr. Bradley proposed, and Mr. Vickers seconded, a motion that free tickets along the North Midland line of railway should be given to proprietors attending the half-yearly meetings.

This proposition was, upon a show of hands, negatived by a large majority.

Mr. Birchall proposed, and Mr. Hudson seconded, a vote of thanks to the Chairman and Board of Directors. Carried unanimously.

26th of August, 1841.

PARIS AND ROUEN RAILWAY.—CONTRACTS FOR WORKS.—The Directors are now ready to receive Tenders for the Construction of the Works necessary for this Railway between the Bridge now building across the River Seine, near Oissel, and the terminus at Rouen.

The Contract includes all labour and materials for the formation of the cuttings, embankments, bridges, culverts, fencing and other works; and the ballast sleepers, pins, and other materials necessary for laying, forming, and entirely finishing the permanent road. The Company will provide the land, iron rails, chairs, and wooden keys. The contractor will be required to provide every other thing whatever.

The plans, sections, specifications, &c.. may be seen at the Company's offices, 52, Rue Basse du Rempart, Paris, and information may also be obtained from Mr. Locke, the Company's Engineer, at his office, 20, Adam-street, Adelphi, London.

All Tenders must be delivered at the Company's offices, No. 52, Rue Basse du Rempart, Paris, before 12 o'clock on Tuesday, the 28th September, after which time no Tender will be received.

A Security will be required.

By order of the Board,

A. THIBAUDEAU, Sec.

September 1st, 1841.

TO TIMBER MERCHANTS, RAILWAY CONTRACTORS, HOUSE-BUILDERS, &c. &c.—VALUABLE WOOD on the Estate of Aboyne, in Aberdeenshire, for Sale.

The following valuable Woods, belonging to the sequestrated Estate of the Marquis of Huntly, are to be sold by private bargain:—

First, the Queenshill, either in one or in five different lots, as delineated on the lithographed plans of the woods. This plantation consists of about 268 imperial acres, and contains by a minute and particular survey, 39,762 trees, or 479,324 cubic feet of timber, besides 34,000 spars.

Second—Part of the Newhill, containing 2,358 trees, or 44,652 cubic feet of timber, and 526 spars.

It may confidently be stated that these plantations, now offered for sale, contain some of the finest specimens of Scots Firs which are to be found in any part of Scotland.

The woods are situated within a short distance of the Dee, which is an excellent floating river, and thirty miles by land from Aberdeen, which is the nearest seaport.

Further particulars may be learned on applying to Donald Lindsay, Accountant, 56, George-street, Edinburgh, Trustee on the Sequestrated Estate of the Marquis of Huntly; Walter Duthie, W. S., 6, Great King Street, Edinburgh; David Walker, Land Surveyor, Aberdeen; or Thomas and Newell Burnett, Advocates, Aberdeen.

John Strachan, ground officer at Aboyne, will show the woods upon the ground.

Edinburgh, 27th August, 1841.

DUBLIN AND DROGHEDA RAILWAY COMPANY.—At the General Half yearly Meeting of the Shareholders of the above Company, held at the Northumberland Buildings, on Thursday, the 26th August. 1841:—

The Reports from the Directors, the Auditors, and the Engineer having been read.

It was moved by John Parkes, Esq.; seconded by Miles O'Reilly, Esq., and

Resolved—That the report now read be received and printed—that the half-yearly statement of the accounts, as audited, and the Engineer's report, be appended thereto, and circulated for the information of the Shareholders.

Moved by John Betty, Esq.; seconded by P. Mahony, Esq, and

Resolved—That the registry of the Proprietors of this Company, as now prepared, be sealed in the presence of this Meeting, and be received and adopted as the registry of the Company.

Moved by Francis Purcell, Esq.; seconded by James Doyle, Esq., and

Resolved—That the best thanks of this Meeting be presented to H. B. W. Darley and John Parkes, Esqrs., for their services as auditors of the last half-yearly accounts.

Moved by Captain Cottingham; seconded by H. Mooney, Esq., and

Resolved—That Francis Purcell and Fred. C. Ferguson, Esqrs., be requested to audit the accounts previous to their exhibition at the next half yearly meeting.

Moved by Thomas Brodigan, Esq.; seconded by Richard Wright, Esq., and

Resolved—That in the opinion of this meeting it is desirable that a Friendly Society, under the sanction of the Friendly Societies' Act, be formed for the benefit of the labourers employed during the progress of the railway works, insuring them, on the payment by them of a certain monthly sum, the advantages of a certain allowance to any subscriber while unable to work, in consequence of any accident happening to such person while actually employed on the works; as also to the wife, parents, or children of any subscriber, a certain sum in the event of a death happening in consequence of an accident as aforesaid. That the Directors be authorised to take such measures as they may deem advisable to carry out this resolution, and to insure to them the advantages held out by such society.

Passed unanimously.

Moved by A. S. Ball, Esq.; seconded by E. S. Walker, Esq., Manchester, and

Resolved—That the cordial thanks of the meeting be given to Mr. John Macneill, for his valuable services as Engineer to the Company.

Moved by Captain Cottingham; seconded by Francis Purcell, Esq., and

Resolved—That the best thanks of the meeting are due, and are hereby tendered to the Directors, and particularly to the Managing Directors, for the judicious and zealous manner in which they have hitherto conducted the affairs of this Company.

G. A. HAMILTON, Chairman.

Mr. Hamilton having left the Chair, and Mr. Brodigan having been called thereto, it was moved by E. S. Walker, Esq., and

Resolved that the best thanks of this meeting are due, and are hereby given to G. A. Hamilton, Esq., not only for his conduct in the Chair to day, but also for his valuable services to this Company from its first establishment.

THOMAS BRODIGAN, Chairman.

GUARANTEE SOCIETY, for providing SECURITY for Persons in SITUATIONS of TRUST, where Sureties are required, on payment of an Annual Premium.

DIRECTORS.

Thomas Attree, Esq.	G. Palmer, Esq.
David Cannan, Esq.	Major Prosser, F.G.S.
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col Moody, R. E.	B. G. Windus, Esq.

Standing Counsel, R. Ryder Dean, Esq.

Solicitors, Messrs. W. & S. COTTON, No. 76, Basinghall Street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages.

1.—No individual need hereafter incur the responsibility of becoming security for the integrity of another.

2.—Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss, by insuring with the Society.

3.—The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise, will be altogether obviated.

4.—All risks attending irresponsible sureties will be removed.

5.—The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate Premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

(By order,)

THOMAS DODGSON, Secretary.

GREAT WESTERN RAILWAY TO BRISTOL and BRIDGEWATER.—Messrs. WHITMARSH, ALEXANDER, SPENCER & Co., beg to inform the public, that all goods committed to their care, will in future be forwarded daily from the Castle and Falcon Inn, Aldersgate, *via* Great Western Railway, to Bristol, and thence by their Fly Waggons from Mr. Shurmers's Warehous, 13, Temple-street, to Shepton Mallet, Bruton, Wincanton, Bourton, Mere Hindon, Gillingham, Shaftesbury, Stalbridge, Milborn Port, Sherborne, Castle Cary, Lydford, Kempton, King Western, Butleigh and Somerton; and from Bridgewater, to Yeovil, Crewkerne, Ilminster, Chard, Axminster, Lyme, Charmouth, Bridport, Beaminster, Honiton, South Petherton, Martock, Stoke-under-Ham. Also, to Taunton, Exeter, Wellington, Tiverton, South Molton, Barnstaple, and Bideford, and all intermediate and adjacent towns.

Messrs. W. and Co., particularly request that all goods intended for their waggons, may be directed "by Whitmarsh and Co. from the Castle and Falcon," Aldersgate Street, to ensure immediate and direct transit, they having no connection with any other inn or receiving-house in London.

Proprietors, { ALEXANDER & CLARE, London. / WHITMARSH and SPENCER, Taunton.

Also W. and Co.'s Vans to and from the Castle and Falcon (*via* South Western Railway, from the Andover-road Station,) through Salisbury, Wincanton, Sherborne, Yeovil, (with branches to Bridport, Beaminster, Crewkerne, Chard) Ilminster, Taunton and Barnstaple.

Thirty-five Cart Horses, Waggon Harness, &c.

TO BE SOLD BY AUCTION, by MR. DIXON, at his Repository, Barbican, on FRIDAY, September 10, 1841, commencing at One o'Clock precisely, Twenty-four Short-legged, Firm, Powerful, Active Waggon Horses, and Two Sets of Road Waggon Harness, the genuine known good stock of Messrs. Alexander and Clare, that have been working their Taunton Waggons, from the Andover-road Station, on the South Western Railway, sold in consequence of them being now forwarded to Bridgewater, *via* the Great Western Railway.

Eleven remarkably fine, powerful, young, seasoned CART HORSES, the property of Mr. John Sloss, of Chippenham, being the last portion of his valuable Stock that have been employed on the Corsham contract of the Great Western Railway, and sold in consequence of it being completed.

Colours—Blacks, Browns, Bays, Greys, Roans, and Chesnuts.

☞ The above lots of fine, young, seasoned Cart Horses, are worthy the attention of Brewers, Distillers, Wharfingers, Town Carmen, Carriers, Agriculturists, and all other persons wanting active, powerful draught Horses for immediate work, as they are without exchange or addition, and positively for unreserved sale.

On view, and Catalogues had, two days before the sale.

A great variety of New and Second hand Carriages, of every description, always on private sale at this establishment, remarkably cheap.

THE COURT OF ASSISTANTS OF THE GOVERNOR AND COMPANY OF COPPER MINERS IN ENGLAND hereby give Notice, That they will sell on Thursday, the 14th day of October, now next ensuing, at their Offices, in Old Broad Street.

One Thousand Tons of British Grain, Refined, and Common Tin; in blocks, ingots, and bars in barrels, in Lots of not less than Two Tons, deliverable from their warehouses in London, Liverpool, and Bristol, or from their Smelting Works at Pensance and Truro.

The Sale to commence at Twelve o'clock precisely.

Catalogues will be issued in due time, containing Particulars and Conditions of Sale, which will be delivered on and after the 14th day of September next, either at this Office, or by the Company's Brokers, Messrs. Short and Mahony, No. 1, Newman's Court, Cornhill.

The Public Sales of Tin by the Company will henceforth be held quarterly, viz. in January, April, July, and October, and the quantity put up will be regulated by the average quarterly consumption.

N.B.—The Company binds itself not to make Sales of Tin, during the quarter, beyond the quantity advertised.

Office of the Governor and Company of Copper Miners in England, Old Broad Street, London.

12th August, 1841.

FOR SALE.—A newly finished Six-wheeled Locomotive Engine. 4 feet 8½ inch gauge, 12 inch cylinders, 18 inch stroke, 5 feet driving wheels, copper firebox, brass tubes, with a new arrangement for regulating the fire, whereby the consumption of coke is very materially lessened. The working gear of this engine embraces all the most recent improvements, and is finished in the best style of workmanship.

For particulars apply to Isaac Dodds, Esq., Resident Engineer, Sheffield and Rotherham Railway, Sheffield.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph, Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street (facing Saint Bride's Church), in the Parish of Saint Brides, Fleet-street, Middlesex.—Saturday, September 4, 1841.

SOUTH-EASTERN RAILWAY COMPANY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant mortgages of the same, bearing Interest at the rate of 5 per cent per annum, payable, half yearly, at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and the term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Coleman-street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, 1a Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

NEW STEYNE HOTEL, BRIGHTON, (opposite to the Chain Pier,) S. BACON, having entered upon the above Hotel, begs leave to apprise the Nobility and Gentry, he has considerably extended and improved its accommodations. The Coffee Room, with a commanding sea view, has been much enlarged. The Apartments are spacious and convenient—the Bed Rooms lofty and airy, presenting every comfort for families and gentlemen, and by uniting moderate charges with strict attention hopes to receive those favours which it will ever be his study to merit.

N.B. Excellent Stabling, Coach Houses, &c.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad street, City; 63, Princes street, Leicester-square; Manufactory, Mill wall, Poplar, and also of the following Agents —

Robertson and Co., 12, Goree Piazzas Liverpool.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom, but reference is particularly made to the London and Blackwall Railway, where it has been in use upwards of twelve months.—"It gives entire satisfaction, and has never broken."—*Vide extract of the Tenth Report, Thursday, 19th instant.*

NORTH KENT RAILWAY, FROM GRAVESEND TO ROCHESTER.—Capital, £300,000 in 15,000 Shares of £20 each; deposit, £2 10s. per Share.

Prospectuses may be obtained and applications for Shares made at the Company's Office, 42, Lombard-street.

GEORGE WALTER, Chief Superintendent.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating Intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster row; Hyde & Co. and G. Bell, Fleet-street, Mann, Cornhill; and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY for 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Railway Times Office, and Hyde and Co., Fleet-street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by all booksellers.

GREAT NORTH OF ENGLAND RAILWAY COMPANY.—At the 11th Half-yearly General Meeting of the Proprietors, held pursuant to their Act of Incorporation, at the Company's Office, Darlington, the following Resolutions were agreed to by the Meeting.

G. H. WILKINSON, Esq. in the Chair.

1st.—That the Common Seal of the Company be affixed to the Register of Shareholders, now produced.

2nd.—That the Report of the Directors, now read, be adopted.

3rd.—That a Dividend of £1 2s. 6d. per share on 9095 shares be now declared, and be made payable on the 1st of November next, and be then paid to the Proprietors of such shares as shall have fully paid up all arrears of Calls and Interest.

4th.—That this Meeting do now adjourn to Tuesday, the 5th day of October, 1841.

G. H. WILKINSON.

Great North of England Railway Office,
Darlington, September 7th, 1841.

LONDON AND BRIGHTON RAILWAY.—Open from London to Hayward's-heath, from thence per coach to Brighton.

Daily Trains Down to Brighton.—Morning, half past 9, and half past 11. Afternoon, half-past 1, and 5 o'clock.

Daily Trains Up to London.—Morning, 7 and 9. Afternoon, half-past 12 and half-past 4.

Sunday Trains Down to Brighton.—Morning, 8. Afternoon, half-past 5.

Sunday Trains up to London.—Morning, 7. Afternoon, quarter past 5.

Fares.—First Class, 15s.; Second Class, 11s.; Children under ten years of age, half-price.

The Trains stop at all the intermediate Stations, if required, to set down or take up passengers.

As only a limited number of passengers can be conveyed throughout, from London to Brighton, places must be secured by booking them the day previous at the principal booking-offices. On the day of departure places can be secured only at the London-bridge Station, in the event of the limited number not being full. A Daily Down Train, at 9 p.m. for Croydon only, and an Up Train from Croydon at ¼ past 8 a.m. and on Sundays a Down Train, for Croydon only, at 8, and half-past 9, p.m.; and an Up Train from Croydon at 7, p.m. Fares to Croydon. First Class, 2s.; Second Class, 1s. 6d.

By Order,
THOMAS WOOD, Sec.

August 18, 1841.

BERDOE'S VENTILATING WATERPROOF for rendering every description of Woollen Cloth, &c. thoroughly impervious to rain, *without confining perspiration*, or imparting any objectionable property whatever. After more than three years' extensive and most successful trial, public attention is again invited to this invention, and which is confidently recommended to Travellers, and all who are exposed to the rain. Many of the principal Railway and other public Companies have already adopted it for their servants' clothing.

W. B. also invites especial attention to his well-known and much approved

WATERPROOF CODRINGTON FROCK,

a light and gentlemanly garment, adapted for general use at all seasons, and described by those who have tried them as the most convenient and valuable protection from the weather ever invented. Also his

WATERPROOF SHOOTING JACKET,

made from a new, very strong, and much approved material, manufactured for this express purpose.

The above made only by

WALTER BERDOE, TAILOR, &c., 69, CORNHILL,
(Eight doors from Bishopsgate-street.)

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

SHEFFIELD AND ROTHERHAM RAILWAY COMPANY—GENERAL MEETING.

The Annual General Meeting of the Sheffield and Rotherham Railway Company was held (by adjournment from the 11th of August) at the Sheffield station, on Thursday, when a very considerable number of the proprietary were present; Mr. Wm. Vickers, the Chairman of the Board of Directors, took the Chair.

The common seal of the Company having been affixed to the registry of shares,

Mr. Badger read the Report, which expressed the regret of the Directors that the annual meeting should have been delayed for so long a period (it having been held *pro forma* only on the 11th of August), in consequence of the inability to obtain from the North Midland Company, according to the understood and recognised principles of accounts, a statement of the half year's traffic, until the preceding day. There was (the Report also stated) great difficulty in separating the amount of the traffic of the local and North Midland trains, inasmuch as a portion of the Company's receipts appeared in the general balance of profits arising from traffic of all kinds, in the general account. The depressed state of trade affected the general, but more particularly the local traffic. The number of passengers conveyed by the local trains during the six months ending 30th of June, 1841, amounted to 148,623; by the North Midland trains 65,171, making a total number of 213,794. The total sum received for traffic during the same period was 10,093*l.* 3s. 2d.; the total outlay being 4,240*l.* 9s., and leaving a balance of 5,852*l.* 14s. 2d. The Directors recommended the declaration of a dividend upon the original shares of 1*l.*; and upon the new shares (on which 7*l.* 10s. per share is paid) of 5s. 9d., being after the rate of 8 per cent. per annum. This would leave a balance of 702*l.* 14s. 2d. to carry to the reserved fund, and making the amount of that fund 2,995*l.* 6s. 10d. The Directors went on to observe that they thought it to be incumbent on them to draw the attention of the proprietors to any project which had for its object the increase of the traffic of the undertaking. In a former Report, the Directors had with that view called attention to the project for establishing a line of railway from the neighbourhood of Swinton to Doncaster, and they begged to state, that, in order to remove all apprehension upon the subject, an application would be made to Parliament during the next year. The Directors felt themselves bound to call the attention of the shareholders to the project, which was one deeply affecting their interest. By the new Act of Parliament, three Directors retired by ballot. The ballot had taken place, and the gentlemen who had to retire were Mr. Pitt, of Barnsley, Mr. Chambers, of Masbro', and Mr. S. Jackson, of Sheffield; and in place of those gentlemen three other Directors would have to be elected.

Mr. Henry Vickers read the general account of the Company.

The Chairman said that some of the proprietary might, perhaps, regret that the traffic had not increased to a greater extent than it had. The traffic upon the short line had decreased; upon the long line it had increased, but only in a slight degree. The traffic of goods upon the long line had considerably increased. Under these circumstances the receipts were considerably less than those of the preceding half year, but not so as to make it manifest to the Directors that when trade becomes in a more flourishing state, that the decrease of income would continue. It was a matter of regret to the Directors that hitherto they had not been able within fourteen days of the 30th June, or the 31st of December, to obtain from the North Midland Company a statement of accounts to enable them to make up the accounts regularly within a few days of that time. But from what passed between themselves and the officers of the North Midland Company, a promise was made by the latter, that the accounts should be kept for the future in such a state that they (the Directors) might go and examine them by their own books, as was the case last year. They could not be made from the books, but it had been agreed that the accounts should be examined by vouchers, and if any errors were found on either side, either party should be debited or credited with it as the case might be. The depression which the shareholders were aware was acting generally upon the public, was acting peculiarly upon the North Midland and the other railways in the commercial parts of the country; but he hoped at least that before that day six months, there would be a removal of the depression, and that the change we had had politically—(question)—would do good to the Company, by producing a more extended traffic. At any rate they had this remote consolation, that they could not be much worse; we were in so bad a state that we could not well be worse, and he sincerely hoped that during the next half year the traffic would increase. If any shareholder wished for any further explanation of any matter alluded to in the Report, the Directors would be most happy to give it.

Mr. Booth asked a number of questions respecting the reserved fund, and the outstanding demands against the Company, which in the abstract of the accounts were left blank.

Mr. Henry Vickers entered into a number of statements in answer to the queries of Mr. Booth, in the course of which, he stated that the present outstanding claims might be estimated at 450*l.*, to which sum an addition would certainly have to be made, inasmuch as the North Midland had made a claim upon this Company for the broken carriages in the late lamentable accident in which the engineer and stoker were killed, of upwards of 400*l.* He was afraid this Company would be liable to the greater portion of the demand, but he thought not the whole; what the proportion would be he could not tell; but by his advice the Directors had not recognised the entire claim, on account of the servants of the North Midland Company being in some degree to blame in the accident. But supposing them to establish the whole of the claim, the outstanding claims upon the reserved fund of 2,995*l.* would be about 900*l.*

The Chairman then entered into a rather lengthened explanation of the difficulties of making out the statements of the accounts in the manner desired by Mr. Booth. The substance of the explanation was this, that the amount of their own local traffic was a gross sum, out of which their outgoings had to be paid, while the sum received for the North Midland traffic was net profit—that no separate account of the locomotive power furnished to the North Midland Company could not be kept distinct from their own—that from the gross amount of the North Midland traffic they had to deduct various expenses, and also the interest for the outlay of money at the station by both Companies, and that they had then to calculate the proportion which they had to receive.

Mr. Henry Vickers also entered into an explanation to the same effect.

Mr. Booth alleged that the explanation was somewhat mysterious, and that the Directors might, at any rate, give them a separate statement of the total traffic upon their own line.

Some further discussion ensued, in the course of which, the Chairman and Mr. Chambers explained that they had three kinds of traffic, namely, their own independent traffic, the passenger traffic between Sheffield and Masbro', which was their own, after deducting an allowance for the use of the North Midland carriages, and a proportion of the passenger traffic for the longer distances.

Mr. Booth said, he did not imagine that the discussion would have been protracted to such a length, and he would bring it to a close by proposing that the Report should be adopted, printed, and circulated among the shareholders.

The resolution was unanimously adopted.

Mr. S. Jackson moved that a dividend should be declared in conformity with the recommendation in the Report. He thought 8 per cent. was a handsome dividend, and that they could not safely have a greater without seriously trenching upon the casualty fund.

Mr. James Wilkinson seconded the motion.

Mr. Blackwell thought they might safely declare a dividend of 10 per cent., which would leave a reserved fund of 1,500*l.*, and moved an amendment that they should do so.

Mr. Wilson, of Wakefield, seconded the amendment.

A discussion ensued upon the amendment, in the course of which, the mover and seconder of the amendment, Mr. Ingleson, Mr. M'Turk, and others contended that a dividend of 10 per cent. would leave a sufficient reserved fund—that the casualties, and wear and tear of carriages and machinery, should be defrayed out of the income of future half years, and that those who were shareholders now ought not to be taxed to supply deficiencies at a future time.

Mr. Jackson, Mr. Booth, Mr. Badger and others, contended that they could not, with a due regard to the interests of the Company, divide more than 8 per cent., which was a handsome return upon their capital, and that if a greater dividend were declared, there would be a falling off in future dividends, which would lower the present high character of the undertaking in the eyes of the public.

The Chairman said, he should have advocated a dividend of 9 per cent. had it not been for the probability of the addition to the reserved fund.

On the question being put from the Chair, the original motion was carried by a large majority, only thirteen hands being held up for the amendment.

A discussion next arose upon a suggestion being made by the Chairman, that the meeting should place the sum of 250*l.*, which would be a mere trifle from the reserved fund, in the hands of the Directors, to be expended by them, in making the necessary preliminary inquiries, previously to applying to Parliament for an Act to authorise the making it a railway from the neighbourhood of Swinton to Doncaster, which railway he thought would materially benefit this railway, by bringing a large additional traffic upon it. He said the Directors wished to calculate the traffic between Sheffield and Doncaster, during the ensuing race week, the general traffic having been calculated.

The Rev. Mr. Watkins and others, dissented from the proposition, on the ground that it would be throwing the money away, as the projected line of railway could not possibly answer, that if it benefitted any Company it would benefit the North Midland more than this—that the North Midland should be left, if thought proper, to take the matter up, and that, moreover, any interference on the part of the Sheffield and Rotherham Company might pledge them hereafter to support the project, however impracticable it might turn out.

The Chairman and Mr. Henry Vickers stated in reply, that a respectable and intelligent coach proprietor in this town had expressed a confident opinion that the projected railway would pay 5 per cent., and that the traffic in grain alone, between Sheffield and Doncaster every week, amounted to 100 tons, not an ounce of which now came upon their line, and that the railway would certainly be made at some time or other. In the course of the discussion it was proposed that 100*l.* should be voted for the object stated by the Chairman, but on the motion being put, it was negatived, only sixteen hands being held up in its favour.

The Chairman said, he certainly should think he would be neglecting his duty if he did not agitate the matter at their future general meetings, until his proposition was adopted.

Mr. Henry Vickers called the attention of the meeting to a proposition which was made at the last half yearly meeting, for allowing the nine Directors the sum of 300*l.* annually, as a remuneration for their services, and which was adjourned to the present occasion as being a question which ought to come before a yearly meeting rather than a half yearly one.

Mr. Roberts thought the remuneration only a fair and reasonable one, considering what was done by other Companies, and more especially the prosperous condition of their own affairs; and he accord-

Digitized by Google

ingly moved that the proposition should be then adopted.

Mr. HAMMOND seconded the motion.

A tedious discussion arose upon the question, in the course of which, the Rev. Mr. Watkins, Mr. M'Turk, and others, expressed their disapproval of the principle of remunerating the Directors of railways and other public companies, and one which ought not to be followed by this Company. In reply to this, it was argued that as other railway companies (even those which are not in a prosperous condition, and who had only the Directors to thank for their want of success) granted an annual remuneration to their Directors, it would be a reflection to refuse it in this instance, that such remuneration had a tendency to promote the prosperity of companies, by securing a regular attendance of Directors, and that as most of the Directors of this Company are tradesmen, they ought not to be expected to devote so large a portion of their time, as was consumed by a proper and conscientious discharge of their duties, for nothing.

Mr. M'TURK contended, (in opposition to the opinions of the Solicitors,) that the shareholders had not the power to order such an appropriation of their funds, and that the shareholders were annually *bored* by the introduction of this subject. In the course of the discussion, it was proposed by Mr. JENKINSON that the Directors should have nothing.

We did not observe who seconded the motion.

Mr. BLACKWELL proposed that the Chairman should receive 100*l.* annually, and the rest of the Directors nothing.

The CHAIRMAN declined received that sum, observing that he had no objection, on his own part, to serve the Company to the best of his ability for nothing, though he did not think it right to expect others to do the same. The motion, therefore, fell to the ground.

Mr. BOOTH disapproved of the allowance of 300*l.* per annum to the Directors, as he thought there was a danger of its tempting parties to use means to obtain appointments as Directors. He proposed that a piece of plate, to the value of 20*l.*, should be presented to each of the nine Directors, and that 100*l.* should be voted for division among the three gentlemen who act upon the joint Committee of this Company and the North Midland, and whose duties are much more arduous than those who form a part of the ordinary Board.

Mr. HENRY THOMAS seconded Mr. Booth's motion.

On Mr. Jenkinson's amendment being put, only one hand was held up for it; and the original motion was carried by a large majority.

Mr. WILSON suggested that the Report should be placed in the hands of the shareholders at the same time as the accounts, previously to the annual meetings.

The CHAIRMAN said, that if the Report were printed they would never get persons to attend the meetings.

Mr. SPENCER thought that in order to prevent disappointment for the future, a specific motion had better be entered upon the books relative to the printing of the accounts. He therefore proposed that the accounts should be printed and supplied to the shareholders on application at the Company's offices in Sheffield, six days before the annual meetings.

The CHAIRMAN said he hoped the Directors would be able to send the accounts to the shareholders in future; and several gentlemen thought the meeting had better rest satisfied with the assurance given, and not pass any specific motion upon the subject.

Mr. S. JACKSON thought if they passed a motion they would have the strongest argument on which to rest the necessity for a punctual settlement of accounts with the North Midland Company.

Mr. BLACKWELL seconded Mr. Spencer's motion, which was unanimously adopted.

The meeting then proceeded to the election of Directors—Mr. TYAS, of Barnsley, proposing that Mr. S. Jackson, Mr. G. W. Chambers, and Mr. George Knowles, should be appointed.

At the close of the election the numbers were as follows:—

Mr. S. Jackson	725
Mr. Chambers	537
Mr. Bradley	471
Mr. Knowles	434
Mr. Wheatley	269
Mr. Ingham	183
Mr. Blackwell	160

Thanks having been voted to the Chairman, the meeting broke up about half-past three o'clock, having occupied more than three hours.—Abridged from the *Sheffield Mercury*, Sept. 11.

GREAT NORTH OF ENGLAND RAILWAY COMPANY—GENERAL MEETING.

THE Eleventh Half-Yearly General Meeting of the Proprietors of the above Railway was held, pursuant to the Acts of Incorporation, at the Company's Offices in Darlington, on Tuesday, September 7. The attendance of shareholders was numerous; G. H. WILKINSON, Esq., in the Chair.

The CHAIRMAN opened the business by calling upon the Secretary, Captain O'Brien, to read the advertisement calling the meeting; which was done accordingly. The Chairman moved, that the common seal of the Company be affixed to the register of shareholders now produced.

The motion was seconded by a shareholder, and carried.

Captain O'BRIEN (the Secretary) then read the following

REPORT OF THE DIRECTORS.

GENTLEMEN,—The proprietors are aware that since the last Ordinary general meeting the railway has been opened for general traffic. It has been examined, and fully approved of, both as to the formation of the road, regulation of the working, by Sir Frederic Smith, Inspector-General of Railways, and others, have the satisfaction of stating that every thing previous to that has been then—and that has since successfully taken—to insure to the public both comfort and safety. Third class carriages have been attached to some of the trains, to accommodate the local traffic, and the scale of fares fixed so as to enable all classes, according to their means, to avail themselves of the facilities afforded of travelling on the railway. Arrangements have been made for the conveyance of merchandize, &c., and considerable quantities of goods are now passing the line. The traffic on coals has been large, and a great increase may be anticipated, when, by great facilities, has been conveyed, the demand for home has also been considerable, and both promise to prove most important items of traffic.

When last the Directors met the shareholders, the coal trade had been opened under very favourable circumstances, during the summer months, however, as might have been expected, the sales fell off. At York and Acne the trade had to contend with great difficulties, from the large reduction in the price of river borne coals; but these difficulties are now being gradually overcome, and as the winter approaches the Directors every reason to expect a large increase at these places, as well as at all the other stations along the line of railway. There has been a steady increase in the weekly receipts, and though it is impossible to come to a satisfactory conclusion as to what the ultimate traffic on the line may prove to be, from so short an experience of its working, the Directors trust, judging from the great increase on every portion of the railway, that the Great North of England Railway will fully realise the expectations of its projectors.

The statement of the revenue account which accompanies this Report, shows a balance on the same to the 30th of June of 11,021*l.* 16*s.* 9*d.*, independent of what is due to the Postmaster-General for the conveyance of mails, the rate of which has not yet been decided upon, but on the other hand no charge has been made for the maintenance of way, nor for depreciation of the Company's stock, nor for rates and taxes. The minute ante of way has been included in the capital account, under the head of contra work, the Directors having followed the example of other railways, which have merged this charge into that outlay of capital which year after year is spent, as until that time, at least, has elapsed, the embankments and the cuttings traded, and therefore the expense of keeping them up properly, belongs to the maintenance of the line, at the end of the first year the repairs become of an ordinary description, and will then become a charge on the revenue account. The Directors have not thought proper to introduce into the revenue account an estimate of depreciation of the Company's stock, however correct in principle, or advisable it may be to do so at a future period, as it was thought would be a matter of difficulty to make a correct estimate now, and a valuation unnecessary after so short a period of working.

The rates are limited, as arrangements connected with them are still pending, and until completed it would be unadvisable to estimate them.

A profit amounting to 11,021*l.* 16*s.* 9*d.*, being shown by the statement, the Directors recommend that a dividend of 1*l.* 2*s.* 6*d.* per share be declared on 9,000 shares, being for the quarter of a year during which the railway has been open for general traffic at the rate of five per cent per annum on the amount of shares issued. That this dividend be payable on the first of November next, and be then paid to the proprietors of such shares as shall have fully paid up all arrears of calls and interest.

The Directors having stated so much that must be gratifying, have now to enter on a less pleasing task, viz. the forfeiture of shares. So long as the formation of the line was in progress, they deemed it prudent to avoid forfeiting shares, though they repeatedly and most urgently called upon proprietors in arrear to make good their engagements. But the time having now arrived when a profitable return has been realised, the Directors consider it only just that those who have borne the expenses of the undertaking, by paying up their calls, shall benefit by a dividend, more especially as the latter class of proprietors have been subjected to heavy additional charges, in raising the money which ought to have been paid by the former, and without which the whole undertaking must have been abandoned. They have, therefore, this day declared all shares forfeited upon which all calls have not been paid up. This declaration of forfeiture being made, a special general meeting will be convened, under the provisions of the Act, for confirming the same, to be held three months after the notices of forfeiture are issued.

Hitherto the Directors have deferred entering with the proprietors on the question of execution of the portion of the line between Darlington and Newcastle, in the county of Durham, having deferred them from its prosecution until that between Darlington and York was completed; but the advantages desirable from a continuous railway communication to Newcastle have become so palpable, not only to the Great North of England Railway Company, but to all the other Railway Companies with which it is connected, that a meeting of the Directors of the railways between Darlington and Rugby, and of the Manchester and Leeds, the Brandling Junction, the Durham Junction, and the Newcastle and Carlisle Railways, has been held, in order to obtain such decision as to that arduous and important undertaking possibly have been attained by the unanimous exertions of the Companies. The first object was that meeting to set yet a definite measure to be adopted before the proprietors, but the Directors have not since been idle, and it is well calculated to attain the desired result, as soon as it presents itself with ease to advance and the work may be begun as soon as the proprietors of the Companies united to have given their assent. It does not rest with the shareholders of the Great North of England Railway in any further outlay of capital. The exclusive responsibility and expense of formation will be removed from this Company, and divided among several, whereas, the advantages to the proprietors of the Great North of England Railway, when completed, will be as great as if the original line from Darlington to Newcastle had been carried out. The proprietors may depend upon the Directors keeping a strict watch over their interests in any arrangements arising out of this proposal, and the plan to be adopted will be placed before the proprietors at an adjournment of this meeting, when, having all the details before them, they will be in a position to decide. (Applause.)

REPORT OF THE ENGINEER-IN-CHIEF, R. STEPHENSON, ESQ.

Since I received instructions from you to report on that portion of your line remaining unexecuted between Darlington and Newcastle, I have examined the surface of the country carefully, with the special view of ascertaining how far I could feel justified in recommending the immediate construction of this important and only remaining portion of your original undertaking.

During this examination, I have studiously kept in view the great importance of extending your line northwards to Newcastle with the least possible expense, and from the knowledge I have of your feelings in this respect, I know that in making this an element in all my considerations, I was acting in strict conformity with your wishes.

In my former Report upon the executed portion of your line between York and Darlington, I had occasion to observe on the remarkable facility which the face of the country offered for the attainment of excellent gradients with works of small magnitude.

A similar remark will not, however, apply generally to the distance between Darlington and Newcastle, as I soon found on a cursory examination of the ground with your Parliamentary plan and section in my hand.

After crossing the Stockton and Darlington Railway, the line may be described as generally following the course of the river Skerne to a little beyond Great Aycliffe. Here it diverges from the course of the river, crossing a tract of rather elevated and rough country to Chilton and Thrislington Gap. At the latter place the line follows the course of the valley leading towards Croxdale, where an abrupt rise of the country takes place.

Here the formidable part of the section from Darlington commences, and continues without interruption for several miles. Indeed a very small part of the remaining distance to Newcastle can be deemed of an ordinary character.

In the high tract of country, near Croxdale, your Parliamentary section exhibits an excavation which would yield on a moderate calculation, upwards of one and a half million of cubic yards. This great work is succeeded by an embankment over the Shincliffe Valley of upwards of 100 feet in height, and more than one mile in length, and containing nearly three millions of cubic yards. This is again succeeded by a very large excavation or tunnel through the bold promontory on which one part of the city of Durham is situated, called Gilligate-Moor; and then the line shortly encounters the valley of the Weir, which is crossed at an elevation of 140 feet, involving another embankment of 800,000 cubic yards From the crossing of this river just alluded to, the excessive and costly character of the works gives place to another much more moderate, yet, upon the whole, exceeding the average of the already executed portion of your line.

I may at once state, that I am fully aware of several proposed alterations in the course of this route, by your late engineer, Mr. Storey; but notwithstanding the improvements of which the line in this district may be susceptible, by slight modification both in the direction of the line and in the system of gradients, originally applied to the sections, I cannot bring my mind to recommend you to adhere to it. The inordinate quantity of cutting and embankment which is concentrated within a few miles, and confined to two or three points, is such as would certainly occupy several years to execute, even though an unusual degree of dispatch were brought into operation. When I add to this circumstance the fact, that in the course of my experience it is in such works as are here contemplated, by far the larger share of contingencies which the engineer cannot controul or anticipate, have their source, I feel persuaded that I am amply justified in strongly urging upon you the propriety of instituting further inquiry on the most advisable means of avoiding this expensive part of your undertaking, without involving the abandonment of all the advantages which the completion of the one through this district of country would contribute to that section which is now in such successful operation between York and Darlington. Having, I believe, fairly estimated the obstables which present themselves in carrying out your original plan, and feeling satisfied, after much deliberation, that the completion of your line to Newcastle, where it would unite with the line to Carlisle, is the only step now remaining to be taken to establish the eastern route to Scotland, I turned my attention to the attainment of a more economical route than the one I have briefly described. I was naturally led to consider how the exercise of your own powers, in conjunction with portions of existing lines, would tend to the accomplishment of the object in view; and it affords me much satisfaction in being able to lay before you a proposal which appears to me to combine not only economy in execution, but what is of equal importance—a speedy completion of this link of railway communication.

I regard its prompt completion of great importance, not merely to the Great North of England Railway (whose revenue it would, beyond all question, immediately augment) but also to those railways which are now in operation between the Rugby Station of the London and Birmingham Railway, and Darlington.

I do not rest this importance so entirely as some appear to do on the early establishment of a line which is looked upon as a rival to that which has been projected through Westmoreland and Cumberland I would rather rest the case solely on the importance of securing an uninterrupted railway communication with the thickly populated districts of Newcastle, Sunderland, Shields, Hartlepool, Stockton, and Darlington.

In the traffic of all these places your extension may be made to participate, as well as in that of the whole of Scotland, which you will obtain through the medium of the Newcastle and Carlisle Railway.

At the present moment an active intercourse is maintained between Newcastle, Shields, and Stockton, by the Brandling Junction, the Durham Junction, and the Clarence Railways, with an interval of eight or nine miles of travelling by coach or omnibus.

An attempt has been made to fill up this interval by parties who have deposited plans under the title of the Northern Union Railway Company. This design contemplates joining the Great North of England line, near Shincliffe, thus establishing at once an uninterrupted communication between the Great North of England Railway and Newcastle, through the medium of the Durham and Brandlington Junction Railways.

This project, if the parties promoting it were able to carry it out, appeared to me at once to relieve the Great North of England from prosecuting that portion of their line which abounded in formidable engineering difficulties. I proceeded without delay to examine the plans and sections of the Northern Union Railway, and also the country over which it is proposed to pass, and I found, that by the introduction of occasional steep gradients, not however exceeding 30 feet per mile, that a very good communication might very shortly be opened between the Great North of England Railway and the towns of Newcastle, Carlisle, Gateshead, Shields, and Sunderland.

On satisfying myself that the proposed line might be executed at a moderate cost, I had sections made of the Great North of England Parliamentary line between Darlington and Shincliffe, for the purpose of determining how far the cost originally contemplated might be reduced by the introduction of similar gradients to those proposed on the Northern Union Railway.

The result has been, that you may reckon with the utmost confidence, in extending your line from Darlington to Shincliffe, at a cost of certainly not less than 20,000*l.* per mile. The character of the works on the proposed Northern Union are somewhat similar to those on this portion of your own line, and will incur nearly the same cost per mile in execution.

As this line may be regarded as a substitute for your own from Shincliffe to Newcastle, I would suggest that steps be taken for aiding in the application to Parliament which is to be made next session, the necessary plans and sections having been deposited last March.

This proposed substitution of another line for that portion of your original project which was likely to involve serious outlay, strikes me as being so feasible that I cannot hesitate in recommending it to your attentive consideration. It may be thought that I overrate the importance of this link of railway to the north, but I would ask those who doubt its importance to consider for a moment the influence which its completion to the populous districts already frequently mentioned, and also the Newcastle and Carlisle Railway, is calculated to exercise on the whole of the capital invested in railways between Darlington and Rugby. When this is fairly and impartially considered by the proprietors of these railways, it is reasonable to suppose that they will rise unanimously to urge the continuation of the line forthwith. This feeling on the part of the different Railway Companies has already given demonstrations of its existence, and I am glad to learn is likely to lead to a union of efforts, which if carried on with judgment and proper spirit, cannot fail in the accomplishment of the object in view.

Before concluding, it is necessary that I should briefly mention the only two objections which I have heard urged to the proposal now submitted to your consideration. First, that much difficulty and confusion are likely to arise from the line between Darlington and Newcastle being in so many hands; and secondly, that the communication to Newcastle will be very indirect. To the first, I would reply that all difficulty in this respect would be obviated by leasing the intermediate lines to the Great North of England Company as far as the Brandling Junction at Brockley Whins, thus placing the working in one Company: and to the second I have to observe, that the distance to Newcastle is only increased five miles, while much greater accommodation is given to the whole of the population of Shields and Sunderland, from both of which places a considerable traffic must be derived. So far, therefore, from this method of concentrating the traffic being an objection, I believe it will be found a positive benefit both to the public and all the Railway Companies concerned. I have not had an opportunity of going minutely into the estimate of cost of your line from Darlington to Shincliffe, nor of the line from Shincliffe to the Durham Junction, but I have no difficulty in stating most confidently, from the calculations and examinations I have already made, that it cannot exceed, nor even equal, 20,000*l.* per mile, and the works are such as may easily be executed within two years. I would but add, that exclusive of the immense reciprocal benefit which which will immediately accrue to all the railways thus brought into union with each other, the local traffic alone as it at present exists is sufficient to repay a remunerating interest on the outlay.

(Captain O'Brien was frequently, while reading the above Reports, interrupted by the applause of the shareholders.)

Mr. Oxley (a Director) stated some important facts in support of the establishment of the northern line. The railways south of the Great North of England had all benefited more or less since the opening of the latter, and if Companies felt the advantage of a line opening to so small a space as Darlington, it was only reasonable to suppose that they would feel still further the increased value in their property, by extending the line to Sunderland, Newcastle, and Gateshead. Mr. Oxley proceeded:—"If property at a distance from this important district has been increased so much in value, how much greater will the value be to us on the part of our line already executed. I am sure I am speaking within bounds, taking for my guide what has been already effected on the southern lines, when I tell you that we shall certainly have an increase on our line already executed of from 700*l.* to 1,000*l.* per week. I am not at all stating that which is not borne out by facts, because it is well known that, if the line be carried on to Newcastle, it decides the question whether the extension to Scotland is to take place on the east or the west side of the country. (Hear, hear.) We know that there are important, wealthy, and influential parties at work on the other side of the country; that they are making great efforts to carry on the line on the western side of the kingdom. It is only by a vigorous and energetic movement that we can be expected to arrest the progress of that scheme. There is no doubt that the extension of our line has great advantages over that projected on the other side, inasmuch as by an expense of 500,000*l.* we shall have advanced as far north to Scotland as they will by an expenditure of five millions." He then stated what had taken place at an important meeting of railway proprietors, held the day previous at York. He said—"We had deputations present at the meeting from all the railways south of us as far as Rugby, including representatives from the Leeds and Manchester Railway. We had also present deputations from the northern railways, from the Newcastle and Carlisle Railway, from the Durham Junction, the Brandling Junction, and other Companies interested in carrying this undertaking out; and I do not hesitate to say that it was one of the most important meetings that has taken place in the north of England, whether with respect to numbers or wealth; a body of gentlemen not likely to stop short of

Digitized by Google

carrying out the works which they have now undertaken. The carrying out of the plan at present proposed is dependant on the interests of this Company being fairly and properly considered, and the expenditure which shall have taken place being taken into consideration, and an equitable arrangement made. I do not hesitate to declare that you may confidently rely on your Board of Directors to watch your interests in this matter. The principle of the plan contemplated appears to be this—that a new Company shall be formed; that they shall issue shares to the extent of 500,000*l.*, that the interest payable on these shares shall be guaranteed in certain proportions by the different Companies at the rate of 6 per cent. per annum for ten years; and that the Company shall take up the railway from our connection with the Stockton and Darlington Railway, and pursue it till they reach the railway already in existence, which will form part of the way of our line to Newcastle; the route to be continued by means of the Durham and Brandling Junctions; the direction they will follow will be to Shincliffe, a distance of above 15 miles. After that they will lean a little to the east, and afterwards communicate with the Brandling Junction. I have stated the principle proposed very generally—the question was referred to various Boards of the different respectable Companies for their consideration and approval. An adjourned meeting will take place on the 27th instant, when the various reports of the several Boards will be brought forward, and something like a decision arrived at, that may be laid before the proprietors of each Company.

The Report of the Directors was then received, and a dividend declared of 1*l.* 2s. 6d. per share, payable on the 1st of November next. In the course of conversation it was stated, that the expense of the whole line from Darlington to York would be about 1,050,000*l.*

The meeting was then adjourned to Tuesday, the 5th day of October next.

ULSTER RAILWAY COMPANY—GENERAL MEETING

[Abridged from the *Northern Whig*, September 11.]

THE usual Half-yearly Meeting of the Proprietors of the Ulster Railway was held on Thursday last, in one of the waiting rooms at the Belfast terminus. On no former occasion was the attendance of shareholders so numerous.

Mr. JAMES GODDARD having taken the Chair, opened the proceedings by reading the following

REPORT.

The Directors, in meeting their constituents at the end of another half year, feel themselves justified in congratulating the Company on the present state and prospects.

The Railway between this town and Lisburn has now been in operation for two years, and the experience of that period has fully borne out the anticipations of the Directors as to the amount of traffic to be expected on that section of the line. It will be observed on looking at the statement of traffic, that the number of passengers during the last half year, has scarcely equalled that of the corresponding months of last year. The falling off, in this particular, is also, other attributable in the opinion of the Directors, to the circumstance, that passengers coming from considerable distances, by coaches, feel very great inconvenience in transferring themselves and their luggage to another vehicle—an inconvenience which the advantage of quicker travelling over so short a distance as eight miles is not sufficient to counterbalance. The number of passengers conveyed on the railway from the 1st of March till the 31st of August, inclusive (excluding one week, commencing 19th July and ending 25th July was 176,299

And during the Maze race week the number was 18,503

Being a total during that half year of 194,802

The amount received from passengers during that period was £5,185 3 0

And for parcels it was 154 12 4

The gross receipts for traffic thus amounted to £5,339 15 4

The Directors feel happy in drawing the attention of the Company to the fact that during the same period, while they have maintained the works in the most perfect efficiency, they have been able to effect, at the same time, a considerable reduction in the expenditure, under the head of "Working the line." The saving of fuel, a most important item of expenditure, to which the Directors referred in their last report, has been successfully carried out, under the judicious conduct of your Manager; and, as will be seen by the statement of accounts, the system of economy as far as practicable, consistently with safety to the interests of the shareholders and to the public, has been introduced into other departments of the concern.

The amount chargeable to the traffic account, for working the line, during the last six months, as appears by the annexed statement is 2,708*l.* 6s. 11d.; and when this is deducted from the gross amount of traffic given above (say 5,339*l.* 15s. 4d.), there appears a net profit, on the working of the last half year, of 2,631*l.* 8s. 5d., being a greater amount by 490*l.* 6s. 8d. than the Directors were able to report for the corresponding period of last year.

The Directors, therefore, feel warranted in recommending to the Company to declare a dividend of 4s. 6d. per share out of the above amount of profits. This will be at the rate of upwards of 5 per cent., on the amount chargeable for the completion of the section of the line now at work, and leaves 290*l.* 14s. 11d. to be added to the "Reserved Fund,"—a fund, it will be observed, entirely independent of the wear and tear fund, mentioned in the statement annexed.

The Directors cannot conclude the observations respecting the already open section of the line, without calling the attention of the Company to the perfect safety with which their traffic has been hitherto carried on. Even during the week of the Maze races—when, as the great bulk of the proprietors are aware, there was a very great concourse of passengers—not the slightest accident occurred, either to the passengers or to any of the Company's servants, except one. It is with regret that the Directors state, that one collision was fatal; but they must at the same time, make it known, that it occurred neither through any defect of the Company's regulations, nor from any default of your officers but entirely from the unfortunate young man's own imprudence.

With respect to the state of the works between this town and Lisburn, and of the working stock, engines, carriages, &c., as well as for an account of the progress made on the extended line to Portdown, the Directors beg leave to refer to the Engineer's Report, which is annexed.

Deeply impressed with the conviction, that, in concerns of this nature, economy is to be strictly pursued, in the original formation, as well as in the working of the line, in order to secure due advantages to the shareholders, but assured at the same time, that there is a false and deceptive economy, which, however beneficial it may at first appear, proves ultimately disadvantageous and disastrous, the Directors, in every thing they have done, have used their best exertions to secure what appeared to them the true interests of the Company. In the course of their labours, the Directors have not felt it to be their duty to accept offers for work merely because the money price asked happened to be the lowest. Other circumstances have uniformly been taken into their consideration of tenders, so as to insure, as far as in them lay, that the interests of the Company should not be sacrificed. The conduct of the Directors, with respect to certain contracts, having been lately brought under the notice of the proprietary body, by a circular dated "Lurgan, 16th July, 1841," and signed "John Hancock," they feel themselves called on to put the whole facts of the case referred to fully and fairly on the face of their Report.

In the month of October last, the use of iron knees or stays, for the purpose of securing the longitudinal wooden bearings on the cross or transverse sleepers, was suggested to the Directors by the Manager. In conformity with the usual practice in such cases, the Committee of Directors, on the 22nd of October last, resolved,—"That offers for the supply of the requisite quantity of iron knees or stays for the line be solicited from houses in Belfast." In obedience to that resolution, circulars were addressed to several houses in Belfast, who were likely to make tenders for the work. The following tenders were received in consequence:—One from Messrs. Coates and Young, offering to supply the requisite quantity at the rate of 22s. 6d. per cwt., another from M'Adam, Curell, and Co., at the rate of 22s. per cwt.; one from John Devenport, at the rate of 21s. per cwt.; and two others, from other parties at the rate of 23s. 4d. per cwt. These tenders were considered by the Board of Directors on the 26th November last, when it was agreed to take one half of the required quantity of knees from Messrs. Coates and Young, and the other half from Messrs. M'Adam, Curell, and Co., provided those parties agreed to supply those quantities at the rate of 22s. per cwt. This, it will be observed, was not, in fact, an acceptance of the tenders of these parties, but a varying of the terms upon which they offered to supply the Company. The offer of these varied terms by the Company to Coates and Young, and M'Adam Curell, and Co., had not been legally accepted by these parties, when, at a meeting of the Directors, on the 24th of December last, a letter was received from Mr. John Hancock, of Lurgan, requesting the Chairman to put the following notice upon the books —

"We, the undersigned, being two Directors of the Ulster Railway Company, do hereby give notice, that on the next Board day after the 24th inst., we will move to have two duly qualified proprietors elected Directors, in the places of Messrs. Wm. Coates and John Curell, who have become disqualified by being lately concerned in certain contracts for iron, under this Company.

(Signed) "JOHN HANCOCK.
"HENRY CUPPAGE."

At a meeting of the Committee of Directors, on the 31st of the same month, Mr. Coates and Mr. Curell declined accepting the contracts for iron knees, as appears by the following minute:—

"Mr. Coates and Mr. Curell, in consequence of a clause in the Act of Parliament, prohibiting a Director from accepting a contract under this Company, decline accepting the contracts for iron knees, as offered to Coates and Young, and M'Adam, Curell, and Co., on the 26th of November last."

It was, therefore, resolved—"That our Manager be directed to take such steps for obtaining the article in question as may be most expedient, at a price not greater than that offered to the parties above mentioned." Such being the state of facts, the Directors, at their next meeting, on the 7th January, 1841, after the fullest discussion of the merits of Mr. Hancock's motion resolved (that gentleman alone being a dissentient, Mr. Cuppage having voted with the majority)—"That, under the existing state of circumstances, this Board is of opinion that Messrs. Coates and Curell are not disqualified from voting or acting at any meeting of Directors of this Company." Subsequently to the time of passing this resolution, Mr. Godwin, in obedience to the resolution of the 31st December, purchased the iron knees that were required for the Company's use, and he procured part of them from Messrs. Coates and Young, and the remainder from M'Adam, Curell, and Co. The matter was never again, however, brought under the notice of the Board by Mr. Hancock; and the Directors, whose interests in all things connected with the railway, are completely identified with those of the Company at large, did not, and do not, think, that they would have been acting so as to promote the interests, and consult the general welfare, of the shareholders, if they had deprived themselves of the able assistance and valuable counsel afforded by Messrs Coates and Curell, as members of the Board.

As the period for the opening of the line, as far as Portadown, is approaching, the Directors have been employed in making the necessary preparations for carrying on the increased traffic which may then be expected. The stations at Lurgan and Portadown, which it is at present deemed expedient to erect, have been contracted for; and that for Lurgan will be in a sufficient state of forwardness for the purposes of the Company, by the time the line will be open to that town.

In preparing the plans of these stations, care has been taken to make them sufficiently commodious for the commencement of the trade, without running the risk of unnecessary outlay, in making extensive erections; but at the same time to arrange them so that any addition which an increase of traffic shall call for, may be readily made to them. Waggons also, for the conveyance of heavy goods, are in course of construction. The Directors have, after much anxious inquiry and discussion, and after frequent communications from influential bodies of the proprietors, resolved upon starting a third class open carriage, afford ing at least as much accommodation as is given in a similar class of carriages on any of the English lines. The obtaining of the wheels, and other necessary portions of the iron work, from England, has delayed the starting of this new class, but the Directors hope to make an experiment with it on the Lisburn section some time before they will be ready to open any further portion of the line.

The Directors are happy to be able to state, that the necessary notice has been forwarded to the Board of Trade, preparatory to opening the line as far as Lurgan, in the first week of October next; and they entertain the strongest confidence, that they will be able to open all the way to Portadown by the 1st of November, agreeably to Mr. Dargan's contract.

In order to secure the greatest amount of accommodation to the public, and, at the same time, guard the interests of the shareholders, the Directors are anxious to settle rates of fare, when the whole line is opened, upon some equitable principle, and on as moderate a scale as possible. In this matter much must be confided to discretion, inasmuch as they cannot appeal to the experience of any other Company in Ireland, similarly situated, for their guidance. It is quite possible that the experience of a few months' actual working may bring to light circumstances to affect the rates of fare, which speculation never could have foreseen; and the Directors must be prepared to take advantage of all such circumstances.

The following, as the proprietors were informed in the Directors' Report, in March last, are the names of the gentlemen who now retire from the Board in rotation, agreeably to the Act of Incorporation, and whose places it is necessary that you should this day fill up, viz.:—William Steen, John Kane, William Gray, William Coates, Thomas Walkington, James B. Boyd, and George Scott.

There is only one other topic to which the Directors deem it necessary to advert,—that is, the state of their finances. In the annexed statement of accounts, the proprietors are furnished with a full detail of all the receipts and expenditure, distinguishing those of the half-year now brought to a close, from those of the period from the formation of the Company to the 28th of February last.

The last occasion on which the shareholders were brought together, viz., on the 1st April, was for the purpose of confirming the forfeiture previously declared by the Directors, of 1,607 shares; of that very large number, only 16 were actually sold, the others having been all redeemed by the proprietors in whose names they stood. The entire number of shares which have been forfeited for non-payment of calls amount to 1,287; and although there may be some, the Directors do not expect that any considerable number will be added to it.

(Signed) JAMES GODDARD, Chairman.

ENGINEER'S REPORT.

In obedience to the resolution of the last meeting of proprietors, I have the honour to present to the Company the following report on the "state of the railway;" and, in doing so, it may be proper, first, to notice that section of the line between Belfast and Lisburn, now open to the public.

The excavations and embankments on this portion of the line, with the exception of the slip in the Farm-hill cutting, are in good condition, and have shown no symptoms of giving way; and I do not anticipate any further expense in Farm-hill beyond what will be incurred in the removal of the present slips, and the adjusting of the slopes of the cutting, and which will, probably amount to 200*l.*

The permanent way, and the other works on the line, are in good condition, and have, so far fully borne out the anticipations which were entertained at the commencement of the undertaking, as to the advantages likely to arise in laying the line on longitudinal bearings of timber.

The whole of the locomotive engines are in excellent condition, and have required very little repair since they have commenced running. I attribute this circumstance, in some measure, to the elasticity of the longitudinal bearings of the permanent way, and to the vigilance exercised in this department of the works.

The present cost, per mile, for locomotive power on this line, including the repairs and maintenance of engines, cost of fuel, drivers' and firemen's wages, porters, &c., amounts to about 11¼d. per mile. I believe this to be exceedingly low, as compared with other lines; and I do not think it possible that the expenditure in this department can be further reduced.

I annex, for the information of the proprietors, the average daily consumption of coke for the last half year; and, also, that for the corresponding period of the year previous:—

	Tons.	Cwts.	qrs.
From 1st March, 1840, to 1st August, 1840	2	7	0
Ditto ditto 1841, ditto 1841	1	13	3
Daily saving	0	13	1

This saving has been brought about, in some measure, by regulating the blast of the engine to the work, or load to be conveyed, but principally by insisting on economy and vigilance on the part of the drivers and firemen.

The bridges, and other buildings on the line, are in good condition.

The following statistical account, in reference to the working of this portion of the line, for the last six months, may not be uninteresting to the proprietors, as it will enable them to compare the different items with other lines, similarly circumstanced:—

Miles run by engines	18,415
Cost of locomotive power, per mile	11¼d.
Consumption of coke, do.	35·75lbs.
Rate of travelling per hour, including stoppages	20 miles.
Rate of travelling per hour, exclusive of stoppages	25
Number of passengers	194,802
Average fare per mile for second class	4–5d.
Average fare per mile for first class	1 3–5d.
Maintenance of way, per mile	£50

I now refer to the state and progress of the works on the extended line from Lisburn to Portadown.

The principal part of the earthwork on this section is nearly complete, and from the favourable nature of the material in the cuttings, I do not expect that any slips or casualties of that kind will occur; and as most of the principal embankments have had time to consolidate, there is little inconvenience to be apprehended from their slipping or sinking.

About eight miles of the permanent way are already laid, and I may mention, in this place, that from the increased scantling of the timber, and also the increased weight and improved make of the rails, as compared with the line to Lisburn, I anticipate a reduction in the expenditure for maintenance of way, as well as increased steadiness in the motion of the trains.

The whole of the bridges on the line are nearly completed, and are substantially and well built.

From the forward state of every department of the works, I may venture to state that the line will be ready for opening to Lurgan in the first week in October, and to the Portadown terminus early in November next; but much will depend, in this matter, on the favourable state of the weather.

I think it right to take this opportunity of bearing testimony to the energetic and skilful manner in which the contractor, Mr. Dargan, has executed the several works on this part of the line, and to the readiness which he has, at all times, shown in meeting the views and wishes of the Directors.

(Signed) JOHN GODWIN.

Mr. HUGH MONTGOMERY moved the first resolution:—

That the Report and statement of accounts which have been read be received, adopted, and printed, along with the proceedings of this day, for circulation among the proprietors.

The motion was seconded by Mr. S. G. Fenton, J.P.

Mr. JOHN HANCOCK, J. P. (Lurgan) moved an amendment, and a very long and somewhat angry discussion followed. Mr. Hancock had previously issued the following circular:—

To the Shareholders of the Ulster Railway Company.

Lurgan, 16th July, 1841.

GENTLEMEN,—A difference of opinion having arisen between my brother Directors and myself on a subject of great importance, and one, in my mind, virtually affecting the prosperity and well-being of the Ulster Railway Company, I feel compelled, however reluctantly, to lay the case before you, merely premising that in so doing I am not am actuated by any personal feeling, but solely by a desire that the proceedings of the Directors should be strictly legal, and above suspicion.

The question on which we are at issue is, whether a Director of the Company, contracting for or participating in any work to be done for the Company, can retain his office at the Board; or, in plainer terms, whether the same individual should be both Director and Contractor—buyer and seller.

The Act of Incorporation provides—

"That no person holding any office, place, or employment, or being concerned or interested in any contract under the said Company, shall be capable of being chosen, or, being so chosen, of continuing a Director of said Company."

And, further—

"That any person who shall be elected a Director of said Company, or Chairman, or Deputy-Chairman, of the said Directors, shall at any time subsequently to his election, accept, or continue to hold, any other office, or any place of trust or profit under the said Company, shall, either directly or indirectly, be concerned in any contract for any article to be used or consumed by the said Company; or shall offer to take, and succeed in taking, or shall participate in any manner in any work to be done by the said Company, or shall at any time cease to be a proprietor of 20 shares in the said undertaking, every such person shall thereby become disqualified from rating or acting at any succeeding meeting of such Directors, this office shall thereupon become vacant."

The facts of the case are as follow:—

In the month of November last, a large quantity of what are termed "iron-knees," amounting in value to about 1,000*l.*, were wanted for the railway; and in consequence of a circular issued by the Manager, three tenders were received; and on the 24th of November last, the Board of Directors, passing over the lowest offer, agreed to give the work, in equal shares, to the two Directors who had sent in the other tenders. I remonstrated against this proceeding, as being an infringement of the law and policy of the Act of Incorporation; and gave notice, that on the 7th January, 1841, I would move to have two duly qualified persons appointed Directors, in place of these gentlemen who became disqualified by accepting contracts. The Committee of the Directors seemed to feel the force of this objection, and endeavoured to evade it, by passing the following resolution, at a meeting held on the 31st December:—

"Mr. Coates and Mr. Curell, in consequence of a clause in the Act, prohibiting a Director from accepting a contract under the Company, decline accepting the contract for iron-knees, as offered to Coates and Young, and M'Adam, Curell and Co., on the 24th instant."

Resolved—"That our Manager be directed to take such steps for obtaining the article in question as may be most expedient, at a price not greater than that offered by the parties above-mentioned."

Whatever steps the Manager may have taken, the same quantity of iron-knees, originally contracted for, were furnished by the same parties, at the same price, and have since been paid for by the Company.

At the meeting, on the 7th January last, a long discussion arose on my motion; but in consequence of the proceedings of the Committee, on the 31st December, the Directors came to the following resolution:—

Resolved,—"That, under the existing state of circumstances, the Board is of opinion, that Messrs. Coates and Curell are not disqualified from voting and rating at any meeting of the Directors of said Company."

As I was not satisfied with this decision of the Board, I submitted a statement of the case to the Solicitor-General, and here subjoin his opinion:—

"If a valid contract was entered into between the Company and any of the Directors, it is plain that the Directors, so entering into the contract, vacated their offices; and the question therefore is,—was there a valid contract or not? If there was any such valid contract, I think that a subsequent rescinding of it would not restore the Directors to the office previously vacated by them. The written tender made by the Directors, Curell and Coates, was not accepted; but a parole tender appears to have been made, by which each was to have half, at a specified price, and this tender was accepted by the resolution of the 24th November, 1840. Although this acceptance of a parole offer, by Curell and Coates, might not bind them to the contract, for want of a note in writing, signed by them; yet, it might be binding in the Company, if the resolution signed by them was such as would satisfy the Statute of Frauds, and also, the enactments of the Railway Act. The resolution does not appear to be signed by any one; and I conceive that, under the 105th section, a contract to bind the Company should be signed by three Directors, and counter-signed by the clerk; and I think, that if the resolution of the 24th November has not been so signed, there has not been any valid contract binding the Company; and, as for want of a note in writing, signed by Curell and Coates, there was no valid contract binding on them, then there would not be any valid contract at all, and their office would not be vacant. If, on the other hand, the parole offer of Messrs. Coates and Curell was accepted, by a resolution signed, as directed by the 105th section, then I think the contract was such as to bind the Company, on which Coates and Curell might sue, though they were not themselves bound: and in that case they would have vacated their office of Directors.

"If Messrs. Curell and Coates are disqualified, I think they cannot be of the number making up a quorum, or constituting a majority, under the 104th section, and any acts done in such cases would be invalid; but I think, that, if there was a quorum exclusive of them, and also, a majority exclusive of them, the acts done at such meeting would not be rendered illegal or invalid by their presence. I believe it is the habit of the Directors who approve of the resolutions on each day, to attest them by their signature. If no such signature takes place, it might be matter of evidence whether the requisite number of legal Directors were present at and sanctioned the resolution.

"I think that, under all the circumstances, the best course to adopt would be to bring the matter before the next general meeting, and not, in the mean time, to throw any doubt on the validity of the proceedings.

"Although there should not be any valid contract with Curell and Coates, yet, if they are participating in the work to be done for the Company, I think they would, under that part of the 103rd section, vacate their offices as Directors; and I think that, if they make the knees with the understanding that the Company was to buy them, and that the Company accordingly did buy, it would be a participation in the work.

"RICHARD MOORE."

This being the advice and opinion of an eminent lawyer, I will follow his directions, and lay the whole matter before the shareholders, at the General Meeting in September, when I hope to be able to prove, that the firms of which Messrs. Coates and Curell are partners, made the knees with an understanding that the Company was to buy them, and that the Company actually did buy and pay for the same; and that, consequently, in the opinion of the Solicitor-General, Messrs. Coates and Curell have vacated their office. It appears evident to me, that it cannot be for the interest of the Company, that Directors should also be contractors. How can it be expected that a manager or other servant of the Company, appointed by the Directors, would condemn work executed by his

Digitized by Google

masters? How can you have competition when it is known that the lowest offer is passed over for the purpose of giving the work at a higher price to Directors?

Under these circumstances, conscientiously believing that the course adopted by the Board is fraught with the most injurious consequences to the Company, I feel that I would be betraying the high trust with which you have honoured me, did I not bring the matter under your notice; and, by a timely warning, enable you to record a deliberate vote, on a subject of such importance; and it is for you now to say, whether you will entrust the management of the affairs of the Company to Directors, who, although disqualified by extensive participation in the works executed by the Company, have continued to act in defiance of the law.

In order to save your time, I have made this statement as succinct as possible, but will be most happy to afford any further information on this subject, to any shareholder who may wish for it

I have the honour to be,
Your faithful representative,
And very obedient servant,
JOHN HANCOCK, J.P.,
Director of the Ulster Railway Company.

Mr. JAMES G. BELL seconded the amendment.

Mr. BELL said, that Mr. Hancock's amendment was not levelled against Messrs. Coates and Currell, personally, but against the violation of a public principle. He regretted the view which the meeting appeared to take of the question, and was sure that it would not raise the Company in the eyes of the English public, with whom the character of Irish Companies generally, was held at a very low estimate already, on account of their jobbing.

Mr. WALLACE wished to state a fact which had come to his own knowledge, and was, perhaps, not unknown to other shareholders—namely, that the very thing complained of was by no means uncommon in other public bodies. For instance, Mr. Boyd, of Belfast, was at once a member of, and a contractor for, the Belfast Ballast Board, the laws of which corporation were much more stringent than those of this Company, inasmuch as they affixed a penalty of 100*l.* to each offence in violation of their provisions.

Mr. ALLEN said, there was scarcely a railway in England or Scotland where the thing was not in practice.

Mr. W. BRAZELEY (Manchester)—May I ask the gentleman (Mr. Allen) to name any English Railway Company in which Directors are permitted to accept contracts?

Mr. ALLEN said, his information was, that the practice was general.

Mr. CURELL instanced Mr. Tayleure, of Liverpool, who was largely interested in the Liverpool and Manchester Railway.

The amendment was then put from the Chair, and negatived by a large majority; and the original motion passed, with a few dissentient voices.

Mr. GEORGE FERGUSON proposed the next resolution—

That a dividend of 4s. 6d. per share be now declared, out of the clear profits of the last half-year; and that the same be payable, on and after the 1st day of October next, to each proprietor who shall not at the time of payment, be in arrear on account of any call heretofore made."

Mr. GRAY seconded the resolution, which passed unanimously.

Mr. JAMES BRISTOW moved the third resolution—

That this meeting tenders to the Board of Directors its warmest thanks, for the unwearied attention which those gentlemen have uniformly paid to the welfare of the Company generally, and in particular, that this Company hereby expresses its conviction that, in the course which the Directors pursued, in reference to the iron knees which have been purchased from Messrs. Coates and Young, and Messrs. M'Adam, Currell, and Co., for the use of the railway, they have consulted the true interests of the Company.

Mr. JOHN DUNVILLE seconded the motion.

Mr. HANCOCK, after some observations, proposed the following amendment—

It appearing to the proprietors, that Messrs. William Coates and John Currell are partners in firms who have made iron knees for the Ulster Railway Company, and that they are thus participating in such work, contrary to the Act of Incorporation,—Resolved, That the above named gentlemen in consequence of having done such work, are disqualified from voting or acting as Directors

Mr. BELL seconded the amendment, which was put and negatived, and the original resolution was adopted.

Mr. EDWARD WALKINGTON moved the fourth resolution—

That the sum of 525*l.* be placed at the disposal of the Directors, as remuneration for their services during the past year.

Mr. WALLACE seconded the motion, which was passed.

Mr. BRISTOW, in the absence of Mr. Fenton, presented a petition, signed by the Rev. J. L. M. Scott, Hu. Montgomery, James Bristow, S. G. Fenton, John Charley, Dr. Thompson, Jones A. Smith, J. Douglass, John M'Entire, James M'Entire, Robert Workman, and Arthur K. Miller, praying the Company not to continue their sanction of making the Sabbath a day of traffic. The memorialists stated, that they could not approve of the attacks which had been made, in certain quarters, upon the Company, in reference to this subject; and that they had reason to fear, that such attacks had tended to prejudice, rather than serve, the cause they had at heart, by exciting the tempers and wounding the feelings of the proprietors. Mr. Bristow moved,

That the memorial now read be referred to the new Board of Directors, with authority to adopt such measures on this subject as may appear expedient, after having given this matter their most serious consideration.

The CHAIRMAN then put the question, and the motion passed unanimously.

The CHAIRMAN stated, that when a motion of this kind was first negatived, the amount of traffic on the line averaged about 50*l.* each Sunday. This may have influenced the decision of the meeting. For the last six months, however, the average had only been about 14*l.* 17*s.* By and bye, when the line was opened to Portadown, and the mails were probably carried by the Company, it would be impossible to accede to the motion.

Mr. SCOTT would join his brother shareholders in a respectful memorial to the legislature, against all Sunday carrying of mails.

Mr. HANCOCK had been entrusted with the votes of several proxies, and he must insist on having an opinion recorded upon the following motion:—

That we are decidedly of opinion, that any Director participating, in any manner directly or indirectly, in any work to be done for the Company, is, *ipso facto*, disqualified, and ought not to take a part in the future proceedings of the Board.

Mr. GRAY seconded the resolution.

The motion was put and negatived, on a division, by a majority of 541 to 102.

Mr. GRAY moved,

That we recommend to the Directors the propriety of selecting seven from the Board as a Committee of Management, five to be a quorum, to whom may be intrusted the general control and management of the railway—the remaining fourteen being honorary Directors only.

Mr. JOHN WORKMAN seconded the motion.

Mr. GREER understood, that what Mr. Gray proposed was the actual practice in the Company, at present. There was a Committee of seven, which met weekly. He would not think it advisable to deprive themselves of the counsel of the other fourteen, for the sake of saving a few paltry pounds.

Mr. ALLEN said, the change would only save about 120*l.* a year. Still, he must admit, that he had always found small Boards more efficient than large.

The motion was put, and negatived.

A ballot was then taken for seven Directors, to serve in the room of seven others, vacating in the usual rotation. The numbers stood as follow:—Mr. William Steen, 624; Mr. John Kane, 624; Mr. J. B. Boyd, 609; Mr. Thomas Walkington, 592; Mr. G. Scott, 542; Mr. William Gray, 496; Mr. Coates, 470. These gentlemen (those vacating) were re-elected. The other members proposed were, Mr. John Charley, Mr. J. G. Bell, Mr. John Dunville, and Mr. J. Workman.

On the motion of Mr. ALLEN, Mr. Dunville was called to the chair; and thanks having been returned, on the motion of Mr. C. Dobbin, seconded by Mr. T. M'Cammon, to Mr. Goddard, for his attention to the interests of the Company, as well that day as on all former occasions, the meeting separated.

THE LATE FATAL ACCIDENT ON THE NORTH UNION RAILWAY.

[From the *Manchester Courier*, September 11.]

ON Thursday morning at ten o'clock, a highly respectable jury met at the Railway Hotel, Euxton, to inquire touching the death of the Rev. Robert Ivy. Richard Palmer, Esq., of Preston, presided as coroner.

The jury having been sworn, the coroner briefly addressed them, begging that they would go through the inquiry patiently, deciding upon the evidence alone, and dismissing from their minds any reports they might have heard as to the cause of the accident.

The Rev. Giles Hoyle, independent minister of Staley-bridge, deposed that he knew the deceased. He was an independent minister and resided at Duckenfield. He was about 55 years of age.

Robert Sargeant, labourer, of Euxton, deposed that he was employed on the railway. On Tuesday, at a little before one o'clock, he was going to his work. He was about 200 yards from the station at Euxton, on the Preston side, when an engine drawing a number of empty waggons passed by him towards the station, and directly after he heard a tremendous smash. He did not hear any whistle before he heard a smash. Witness turned to the station house, and when he got there he saw Thomas Nixon, the keeper of the station, lying down against the wall on his side. His foot was almost off. There was an old man, named John Arnold, lying a piece off the station door. Witness also saw two more people four or five yards from him, and a woman much hurt near them. He also saw a gentleman ying dead some distance down the line. Witness also noticed the pieces of a coach; it was smashed all to bits. He had not seen the coach before. Some of the fragments were in the middle of the road, and part on the pavement alongside. One horse was in the road dead, about ten yards from the station. Another was lying a considerable distance further down the line towards Wigan. The engine stopped opposite to where the last horse laid. The engineer's name is George Holland. *When the engine passed witness it was going at the rate of* 30 *miles an hour, the usual speed.* One of the horses was betwixt the two lines of rails, and the other was fast upon a break on the Euxton side of the railway. Witness passed the gates about four minutes before the accident; he could not say whether they were closed. He did not see any flag flying, or any person at the station. The engine was travelling tender first. *The engineer had a good deal of steam up, and a considerable quantity issued from the chimney.* It was raining very hard and the morning was rather misty. When witness was at the gates he did not see or hear any engine coming. They can generally, when on the line, hear the engines when two or three miles distant.

Mr. James Johnson deposed that he was agent to Mr. Pearson, of the colliery, at Ince. On Tuesday at a little before one o'clock, witness was on the tender of the *Asa* engine. There were seven empty waggons attached to the engine. They, with the engine, were the property of Messrs. Thomas Pearson and Co. Witness acted as breaksman to the engine. They were travelling on the North Union line towards Wigan. When within 30 or 40 yards from the Euxton station gates, witness observed a grey horse with his fore feet about the middle of the two lines of rails. It appeared to witness that the horse was floundering as it could not get on. Witness could not see the coach on account of the excavation. The engineer called out "My God, Johnson, here is the coach." Witness put the break on, and the engineer reversed the motion of the engine instantly. His name is George Holland. Witness was greatly confused. He thought they would be all lost together. He could not recollect what occurred afterwards until the engine was stopped. *He is positive the engine was not going faster than* 14 *miles an hour, and he did not think more than* 12. He got the break fast down. They stopped the engine in less than 140 yards after witness saw the horses. They could not

Digitized by Google

have stopped in that short distance had they been travelling at a greater speed. He had measured the distance. The engine weighed about 13 tons; the tender (half full of water) 5 tons, and the waggons averaged 43 cwt. each. When the engine stopped witness and the engineer got off and ran towards the station to give assistance. The first person he saw was the deceased. He was about 40 yards from the station, between the two rails on which the waggons had travelled. He was lying on his face. Witness got hold of him: he was not quite dead, but senseless. His foot appeared dreadfully mangled. Witness thought he had no chance to survive, and left him, to attend to other coach passengers. It appeared to witness that the deceased had fallen from the coach between the buffers and chains, and then to have fallen (after being dragged some distance) upon the rails. When witness returned to the station he found the fragments of a coach in front of the building. There was also the seat of a coach in one of the waggons, and a coach wheel on the buffer, on the hinder part of the engine. The tender was before the engine. Witness saw the grey horse very distinctly. There was no breaksman on the waggons. The horses were afterwards found on the centre of the railway, between the two lines. The deceased was between the two rails leading to Wigan. Witness saw no flag hoisted —or any men, or anything about the station. The whistle was not sounded when they saw the horse. *The steam was very low.* The regulations of the Company do not require engineers to sound the whistle on passing Euxton station. Witness knew that an engine could be seen from the turnpike road full 50 yards.

Mr. C. E. Paton deposed, that he resided in Manchester, and was engaged in the Manchester trade as a manufacturer. On Tuesday he came by coach from Rawlinson station. He sat on the box seat. Just as they got on the railway line the coachman said, "Why, the devil has left the gate open." Witness turned round and saw a train advancing. Witness said, "We are all dashed to pieces," and in an instant he felt the shock. He remembered nothing more: he had spectacles on, and being near-sighted he did not notice any gate. It was raining, but witness did not carry an umbrella. He had not seen the engine, or heard the steam, before he got to the station, and he heard the coachman make the remark. The engine was then 10 or 15 yards from them. Witness did not see the concussion, as it was on the coachman's side. The engine was coming down the line towards the coach. The coach was drawn by three horses, the first of which was an iron grey. When the coachman spoke the first horse was on the line. Witness cannot tell whether the coachman endeavoured to stop the horses. One lady behind witness carried an umbrella in such a way as to obstruct the coachman's view of the railway. Witness did not think that in case the coachman had pulled up when he saw the engine, that the accident would have been avoided. It was a wet drizzling morning.

George Holland deposed that he was an engineer in the employ of Messrs. Pearson and Co., of the Ince Colliery. On Tuesday morning he was driving the *Asa* engine on the North Union line. When he got within 30 and 40 yards of the gates at the Euxton station, he saw the station-keeper come out of the house and run. His name is Thos. Nixon. Witness immediately said to Mr. Johnson, who acted as breaksman, "I believe there is a coach coming." Witness could not see whether the gates were open or shut. He immediately reversed, and turning round saw the gate-keeper get hold of the first horse, a grey one. The horse either knocked the gate-keeper down or out of his sight. Witness then saw the horse break away from the coach, and spring over the line. This happened before they came in contact with the coach. The tender was before the engine, and witness saw the tender buffer knock the hind horses across the line. The first waggon of the train then caught the hind wheel of the coach, and drove it against the wall of the station-house. Three of the waggons were thrown off the line. When witness saw the gatekeeper had caught hold of the grey horse, it was through the gate, and about two yards from the rails. Witness stopped the engine as soon as he could. It had got past the station. Witness then got off, and, turning back towards the station-house he saw the deceased lying nearly dead, 30 or 40 yards down the lane. Witness tried to lift him up, but could not. He then called out for assistance, and some men came and got him up to the side near where the luggage is discharged from the trains. Witness left him only just alive, his had was hurt, and there was some blood on his face. Witness saw the gatekeeper lying by the side of the station-house. Witness had no time to put on the whistle. He had not an unusual quantity of steam on. It is not usual to sound the whistle before arriving at the Euxton station. Witness produced the rules of the Company. From the line, owing to an embankment, carts or coaches cannot be seen on the turnpike-road. It would take 100 or 120 yards to stop an engine going at the rate of fourteen miles an hour. Witness turned the steam off directly he saw the station-keeper run. Witness had not his regular fireman, but Mr. Johnson had frequently gone with witness, and was an experienced man. Witness frequently drove the tender first. There is a rule against it. He could not have seen better if the engine had been first. The gates of the Euxton station are sometimes closed and sometimes open when trains pass. The gates are not on the line, but on the turnpike-road. The coal trains are not allowed to travel faster than fifteen miles an hour, but the Company do not employ any person to take an account of the time.

Mrs. Battersby, the landlady of the Railway Hotel, proved the gates at the station to have been open five minutes before the accident occurred, and spoke to seeing the leading horse gallop by the house at the time of the accident.

Mr. John Pollard, surgeon, of Chorley, spoke to the nature of the injuries received by the deceased. Death was produced by the shock given to the nervous system resulting from the fracture.

Mary Nixon, the wife of the gatekeeper, deposed that her husband, after going to look out, so as to see that nothing was coming along the line or turnpike road, went into the kitchen to get his dinner. He had scarcely sat down when he heard the coach coming. He immediately ran out. It was his duty to have closed the gate. Witness saw the train coming towards the coach, and knew what was about to happen. She heard, but did not see the collision. Her husband had since had his leg amputated. He told her he had been thrown down by the horses.

Mr. Part, the Solicitor to the Company, said he was anxious on the behalf of the parties whom he represented, to state that the gate-keepers on the line had great difficulty in keeping the gates closed, as several persons, including gentlemen whose names appeared in the commission of the peace for the county, had threatened to pull them down, alleging that the Company had no right to obstruct the turnpike-road.

The Coroner said, that evidence of that nature was immaterial to the inquiry.

The whole of the depositions were then read over.

The Coroner charged the jury, observing that it was their peculiar province to find by what means the deceased had come by his death. According to the evidence which was produced before them, it did not appear that any blame could be attached to the engineer in charge of the train, as he had done all in his power to stop the train the moment he saw the horses drawing the coach upon the line. It was much to be regretted that the gatekeeper had not seen the coach and engine advancing, in time to have closed the gates, as it was admitted even by his wife that it was his duty to have put the gates to. The jury would, therefore, consider whether such a degree of blame was attached to him as to warrant their returning a verdict of manslaughter against him. It was not sufficient for them to say it was a simple case of neglect, as gross negligence must be proved before they could be justified in finding a verdict of manslaughter.

The jury, after a short deliberation, returned a verdict of "Accidental death."

ACCIDENT ON THE BRISTOL AND EXETER RAILWAY.

On the arrival at the Bridgewater terminus, on Saturday last, of the four o'clock afternoon train from Bristol, the engine which brought down the train was employed, after the passengers had left the carriages, in removing the train from the down line to the other. To effect this transfer it is necessary to remove the carriages from the station to a point on the line about 150 yards distance, where proper means are provided for transferring carriages from one line of rails to the other. Between that point and the station is a crossing for coaches, &c., over the rails; the engine had already transferred some carriages from the down to the up line, and was returning for others, with its tender in front, when, on arriving at the crossing, the *Exquisite* stage-coach, with passengers for Exeter, was in the act of passing over the rails. The tender struck the fore part of the coach, which it shivered to pieces. The hind wheels, with a part of the body of the coach, were forced off the line by the violence of the shock, and fell over, while the passengers were scattered about in every direction. The horses, from the complete smash of the coach, were liberated, and escaped with but little injury. Six persons are more or less injured. Mr. Burford, of Bristol one of the passengers, was removed to the Clarence Hotel, where he is suffering under a concussion of the brain, and other internal injuries. His head was so far jammed under one of the wheels of the tender, that he could not be extricated until the engine was backed; another inch and his skull would have been crushed to atoms. Johns, the driver of the *Exquisite*, and Hatchwell, the respectable and well-known coachman to the Sheriff at our Assizes, are both seriously mangled. The other passengers have escaped with some serious bruises; but Ann Gore, a poor old woman of 73, who had just crossed the railway, was caught by the falling coach, and is not expected to survive. She was taken to the Bridgewater Infirmary, when it was found that both bones of one leg were broken close to the ancle joint, a considerable portion of the skull laid bare, and a frightful contusion over one of the temples. She has continued, with slight intermissions, in a high state of delirium, and cannot be expected to recover. In the present condition of some of the sufferers, it would be improper to make any remarks on the cause of this accident; but from a careful inspection of the spot, and from the evidence of some bystanders, we cannot learn that the least blame can be justly attached to the driver of the engine.—*Sun.*

RAILWAY FROM CARMARTHEN TO SWANSEA.

On Monday last, pursuant to notice, a meeting was held in the Town Hall, for the purpose of taking into consideration a plan for furthering the above named very desirable object. After waiting some time, it was proposed by W. Long Wrey, Esq., and seconded by Mr. Samuel Tardrew, that T. T. Webb, Esq., our much respected Mayor, should take the chair, which he accordingly did, and stated to the meeting that they were there for the purpose of considering the propriety of a railway from Swansea to Carmarthen; such a railway might be advantageous to the town, and he would be glad to hear a feasible plan proposed, and the sense of the meeting could be taken on the subject.

The meeting was very flat, nor thirty respectable people being present at any time, and altogether displayed that lethargic apathy for which the inhabitants of Carmarthen are so rapidly becoming notorious. We regret this neglect, as we are convinced, that unless something be done, this town will in a short time become nothing but a salubrious residence for decayed half-pay officers; and trade, commerce, and all the vital energies of a well-conducted community will be utterly and irrevocably banished from among us.—Abridged from the *Carmarthen Journal.*

RAILWAY ADJUDICATION.

ASSESSMENT OF THE MANCHESTER AND BIRMINGHAM RAILWAY.*

New Bailey, Manchester, August 12.—This was an appeal by the Manchester and Birmingham Railway Company against a poor-rate made for the township of Ardwick.—Mr. Greene appeared for the appellants, and Mr. Duck for the respondents.

The notice of appeal being admitted, Mr. Duck put in the rate-book, and called Mr. Benjamin Goodwin, one of the overseers of Ardwick, who deposed that the rate had been allowed by the magistrates on the 10th of June. The assessment on the Manchester and Birmingham Railway was 1020*l.*; the gross value was 1200*l.*—the usual reduction, 15 per cent., being made; the rate, at 2s. in the pound, was 102*l.* In laying the rate, they consulted with Mr. Thomas Lings, who told them that the part of the railway in Manchester paid a guinea a yard; the length in Ardwick was 1511 yards, but upon Mr. Lings's recommendation they assessed it at 1200*l.*; in Manchester there were 280 yards, and the gross assessment was 300*l.*

In cross-examination by Mr. Greene, the witness said they had acted altogether on information and belief; they had no other grounds to go upon. He did not know that the overseers were entitled to inspect the books of the Company, and send surveyors on the railway. He did not know what were the gross receipts of the Company, nor their disbursements, nor the probable cost of insurance, repairs, tenants' rates, and taxes.

Mr. Duck said, that having proved the rate, it was now for his friend to show that they were overrated.

Mr. Greene contended that his friend was bound to go on to show that the rate was a correct one, and that it was laid on the principles required by the Act of Parliament.

Mr. Maude said the magistrates had not the power enjoyed by the quarter sessions of questioning the whole rate, if laid upon a wrong principle; all they could do was to amend a particular assessment. Therefore, it was sufficient to put in the rate.

Mr. Greene said he had various objections to the rate. He should show that this railway could never be let to a tenant at anything like 1020*l.* a year, which his learned friend would have to contend. He would first show what were the gross receipts and disbursements of the railway, from July, 1840, to July, 1841, and then what were the deductions which undoubtedly ought to be made if it were let to a tenant. If the whole line were in operation, the income would be considerably greater, and according to the rule in *the King v. the Barnbridge Gas Company*, the rating was to be levelled all throughout the line. This railway was only open as far as Heaton Norris, the whole extent being 9279 yards, of which 1511, or about one-sixth, were in Ardwick. The gross receipts from July, 1840, to July, 1841, had been 17,111*l.* 5s. 10d.; the receipts for the two half-years being 8444*l.* 12s. 6d., and 8,666*l.* 13s. 4d. The disbursements for the same period, including wages, and the actual current expenses of carrying on the establishment were 9129*l.* 15s. 8d., leaving a difference of 7981*l.* 10s. 2d. In addition to this, the Company claimed five per cent. interest on their outlay of capital for carriages, and so on; the cost was 19,749*l.*, and the interest on this sum, 987*l.* Engines on this or any other railway were not expected to last above three years; of course, a person renting the line would expect to pay a less rent on this account; and a person would be called to prove that the average annual repair of engines was one-third the original cost. Six engines were employed; and the engineer would prove that this was the proper number; for while two were in work, it was proper that there should be two spare ones to supply them. One-third the original cost of all engines employed would amount to 3016*l.* For the renovation of carriages and waggons, one-ninth the original cost was required—966*l.* The maintenance of way was reasonably calculated at 300*l.* a mile, or 1,581*l.* for the whole line. These deductions amounted to 7,150*l.*, which taken from 7,981*l.* 10s. 2d., left 831*l.* 10s. 2d. In addition to that, before they could estimate the yearly rent to be paid by a tenant they must deduct 100*l.*, at which the Manchester station was assessed to the poor-rates, which was of course a tenant's disbursement. Considering the danger attending the use of engines, a tenant would expect a profit of at least 20 per cent. on the 831*l.* 10s. 2d., which would be 166*l.* 6s.; adding this to the last item of 100*l.*, and deducting it from 831*l.* 10s. 2d., it would leave 565*l.* 4s. 2d. as the rent which ought to be paid by a tenant for the whole line to the extent now open. Were the line open through, they should expect to pay a great deal more, because the receipts would be far greater, while the cost of engines, &c., would not be much increased. To the sum of 9,129*l.* 5s. 8d. his friend could make no objection, those being the actual disbursements for carrying on the line. With regard to the sum of 19,749*l.*, on which they claimed interest for the capital they had laid out, it might probably be objected that the capital thus laid out was almost sufficient to carry on the whole line, and ought not therefore to be allowed for carrying on this short distance. It would also be a question for the court whether the allowance for the renovation of the engines was fairly fixed at one-third the original cost, but when a tenant knew that his stock in trade would be continually lessened and destroyed by the very act of working on the railway, becoming as it were part of the railway itself, he would of course take that into the account of the rent he was to pay. It was a very different case from a man renting a warehouse in which to deposit goods; he of course merely paid for them being left there. The same question would arise as to the renovation of the carriages and waggons; it would be matter of evidence that 1-9th the original cost was a fair allowance for the annual wear and tear. The cost of maintaining the line, 300*l.* a year, was undoubtedly a thing which a tenant would have to pay, and would take into account. A person had contracted to do it at that price, but he would state that it cost him a great deal more. The assessment of 100*l.* to the Manchester poor-rate was of course a tenant's payment, and ought to be deducted from the whole line; and 20 per cent. upon the net receipts, 831*l.* 10s. 2d., was only a fair interest for a tenant. He should prove, by persons to be called, that this enormous assessment of 1,020*l.*, ought to be reduced to 82*l.* 0s. 3d. It would not then be for his friend to show that they had gone on a better principle of rating than that described by Mr. Goodwin, of going from one neighbour to one another for information. The Company were bound by their act to keep books, which would be put in evidence, to which the overseers had access, and surveyors had undoubtedly a right to go and examine the line, and thus get the very best information. Instead of that the overseers seemed to fancy that railways were so exceedingly profitable that they had nothing to do but assess them at a pound a yard; and probably Mr. Goodwin would have applied the same rule to any other railway. But his friend must show a better principle of rating than that. Mr. G. concluded by calling Mr. James Hilton.

Mr. Duck said he would not put his friend to put the proof of all these figures; he would take them for granted, for they were not in a position to dispute their correctness. The only confidence he required was the return of the gross amount of tonnage received upon passengers up to this time. The Company were required to keep an account of all passengers, goods, and merchandise, carried for their own profit, and a separate account showing the amount which would have been received by the railway if they were carried by other parties. He also wanted the account of the sum actually received.

Mr. Greene said, they could not produce the first account alluded to, for this reason, that no other parties but the Company had traded upon the line.

Mr. Maude—But are you not bound to put up a notice what you would allow them to do so for?

Mr. Duck said, if the Company had not given notice of the tolls being reduced, they must be taken at the highest amount allowed to be charged by their Act of Parliament, which was 2d. a mile for each passenger.—Mr. D. then cited the 225th and following clauses of the Company's Act, which required notice of the reduced tolls, if such reduction were made, to be painted on boards, and exhibited at the stations. If this notice had not been given, they were entitled to take it—that the tolls had not been reduced below the amount authorised by the Act.

Mr. Greene said, the readiest answer in the world to that argument was, that his friend was referring to a part of the Act which related to the Company letting off the line to other parties as carriers. But they had not let it to any person whatever; and they surely ought not to be called upon to pay for it. Besides, he could show that at the maximum rate of toll fixed by the Act, no person could possibly have benefitted by carrying on the line. And surely they were not to be charged more than they could possibly make.

Mr. Maude said, the question was whether they could dispute that to be a fair rate of toll which they themselves fixed.

Mr. Duck said, he would admit the accuracy of all the figures given in by his friend, also of the return of passengers, which were stated at 604,700 for the year. The tonnage upon these passengers, at 2d. a mile each, would amount to 24,370*l.* 7s. 2d. for the whole line, or about 4,000*l.* for the part in question. He then quoted the 6th and 7th Wm. IV., and considered that the proper mode of making this assessment would be by taking this amount of tonnage, and deducting from it only such expenses as were necessary to keep the railway in a condition to command a certain rent; and that all the other disbursements sought to be allowed ought to be set off against the profits of the Company's trade as carriers, not against the tonnage which came to them as proprietors of the railway. The proprietors, in respect of the outlay of capital made upon the land for the purpose of bringing it into its present condition as a railway, were entitled to charge a certain tonnage, which the legislature considered would be an equivalent to them for bringing the railway into a state fit for use; it was therefore, in effect, the annual profit of the land in its present improved state. If the Company, in addition to this, chose to take up the trade of carriers, and to furnish their own locomotive power, carriages, and waggons, then they were authorised by the Act to make certain other charges, not as tonnage, but as common carriers' charges; and it was against the charges that they were authorised to make in this way, that the disbursements for carriages, engines, police, servants' wages, and everything that did not actually belong to keeping up the permanent way, were to be set off. They were willing to deduct 20 per cent., the amount fixed in the King v. the Oxford Canal Company for tenants' profits, from the gross receipts, also 800*l.* per mile for keeping up the permanent way, the expense of collecting the tolls, and the poor rate chargeable on the line; and in the assessment that had been made, they had allowed, on a very liberal scale, for outgoings of that description.

Mr. Greene contended that this view of the case was extremely unreasonable. Had the Act fixed a shilling as the limit of the tonnage, and the Company had not been able to get more than a farthing, would it have been fair to charge them after the rate of a shilling? The two classes of accounts directed to be kept by the Act, to which his friend had referred as supporting his view, were for the information of the overseers in case the Company thought proper to let the traffic on any part of the line. His friend contended that they were bound to give notice of the reduction of the tonnage, if such took place; but this was not necessary unless other parties were carrying on the line. It was extremely unfair to take the extreme rate of tonnage fixed by the Act; as well might it be argued, from a private Act of

* This case has been in type for several weeks, but always unavoidably postponed to make room for matters of more pressing interest.—Ed. R. T.

Digitized by Google

Parliament which restricted a person from letting his land at more than 30*l.* an acre, that it was necessary all let at that rent. The distinction drawn by his learned friend between the expenses which he allowed and those which he said ought not to be allowed, was entirely unfounded; for was it not obvious that a tenant must take all these disbursements into account in estimating his rent. Suppose the case of a person leasing the traffic on a common highway from the Government, or from any other party, would not the nature of the road, and its effect on the vehicles, enter into his calculation?

Mr. MAUDE had little or no doubt that the principle laid down by Mr. Duck was a correct one. Before the railway was formed it could only be rated as common farming land: how it was formed, or at what expense, was no question for the overseers, but simply what it would let for, and in how far it was beneficial to the proprietors. Their only measure of this was the tolls the Company was authorised to ake. The receipts consisted of two separate items, which the Act contemplated, by requiring two sets of accounts,—the charge for passing along the line, which the Act limited to 2d. a mile, and the charge for the expense of conveyance.

Mr. GREENE begged pardon, but there was not the slightest proof of the Company receiving a farthing beyond 2d. a mile; the respondents ought at least to have shown that, if they could do so.

Mr. MAUDE said they had a right to make these charges, and it must be assumed, as they occupied their own property, that it was beneficial to them in both ways. The Company were estopped from denying that the tonnage was lower than 2d., because they had not given the legal notice of the reduction. The expense of the carriages and locomotive power ought to be set off against the profits of their business as carriers, and this principle being laid down, they would have no difficulty in agreeing about the facts. He had little or no difficulty in giving this opinion, believing that it was the plan on which all the railways were assessed.

Mr. DUCK said the principle being admitted, he believed the amount of their assessment would be considerably under the mark.

RAILWAYS IN BRAZIL.

(From the *Journal de Commercio*, Rio de Janeiro.)

THE following Report from the Committee of Agriculture, Commerce, Industry, and the Arts, respecting the Memorial of the Imperial Brazilian Railway Company, was read and approved of. This Company was formed under a decree of the 4th of November, 1841, whereby exclusive privileges were granted to it for a period of eighty years.

"1st. That the Brazilian Government purchase four thousand shares of the Company, equal to 500,000*l.*, one-fourth of the capital to be raised.

"2nd. That the shares of the Company shall not be liable to any embargoes, mortgages, or judicial seizures whatever, and shall be guaranteed in time of war.

"3rd. That for a period of five years all the steam-carriages, machinery, and every kind of utensil for the use of the railway imported by the Company, shall be admitted free of all duty.

"Considering the magnitude of the undertaking, and the immense advantages attendant thereon to the Brazilian empire, the Committee deem the enterprise as one which well deserves the exclusive privilege for eighty years granted by the Government, as also that it is entitled to every reasonable pecuniary support.

"But as the 1st and 3rd clauses of the Memorial affect the interests of the public Treasury, more particularly the 1st. to the extent of 500,000*l.*, the value of four thousand shares, the Committee deem it judicious, in so important a matter, previous to making its final decision, that the Government be referred to, in order that every information may be granted to the Chamber and the Committee for their better guidance.

(Signed) "RAMIRO.
"FERREIRA PENNA."

"Chamber of Deputies, July 5th, 1841."

So deplorable are the roads within the fertile provinces through which the railroad is to pass, that it is stated on the evidence of the Government statistics, the actual expenses incurred yearly in transporting the various kinds of merchandize to Rio de Janeiro for exportation amount to ten thousand contos and upwards, a sum of money considerably above the capital required to construct the railroad.

The undertaking is so popular that four thousand shares are already subscribed for, in addition to the same number which the Brazilian Government show every disposition to purchase, in furtherance of the interests of the empire. Not the slightest calculation appears to exist with reference to the shares being disposed of out of the country, as the funds are confidently expected to be raised among the Brazilians themselves.

BIRMINGHAM AND DERBY RAILWAY.

To the Editor of the Railway Times.

SIR,—Your very pertinent remarks respecting this railway have drawn my attention to the subject, and I confess have occasioned me much pain, as I have been a proprietor from the commencement.

On examining the different Reports from the beginning I really am astonished to think how it could be possible for any set of gentlemen to be so decidedly mistaken in all their assertions, calculations and prognostications as these Directors appear to have been! It really would appear to be almost impossible to point out one single instance in which they have been correct! Well may Mr. E. T. Moore, Sir Oswald Mosley, and even Mr. W. Beale, retire from the Directory. There remains but one point left for this affair to turn out one of the most complete failures in Railway history, and that is, for the new or direct line into Birmingham not to pay the interest of the outlay. The Directors' Report stated it would pay 10*l.* per cent., but then they did not know that 80,000*l.* more would be wanted, but asserted that the money raised would be quite ample. It is only from past experience that we can arrive at anything like accuracy for the future, and judging from the many past transactions, I would assert that the new line, considering the separate terminus, will prove more disadvantageous to the Company in a pecuniary point of view than if they had continued to pay the London and Birmingham Company for going round. It is now proved beyond a doubt that a railway from Birmingham to Derby ought not to have been attempted, and that to endeavour to interfere with the Midland Counties in going to Hampton-in-Arden or Rugby was still more incorrect in *every point* of view. It seems impossible to account for men falling into the error of supposing the line would produce 120,000*l.* annually by opening before the Midland Counties' line, which, according to their Report would be the case, from "*a calculation carefully prepared from the Stamp-office, and other authentic sources!*"

In the beginning of the Report for June, 1838, it is stated that their land purchase included twenty acres at Derby, for the purpose of a general terminus, and that a portion of the same would be to be disposed of to the North Midland and Midland Counties' Companies. Now, in the last Report we read of a charge made by the North Midland for "the station accommodation at Derby," and no where does there appear to be any account of land being re-sold.

It is very natural for interested sub-Committees to make the best of a bad matter, but really the statements about 2,000 tons of coal per week to be expected, amounting to 16,250*l.* additional, &c. (after what has been heretofore so falsely, though confidently predicted, and since acknowledged to be disappointments,) appear to my now incredulous ears quite laughable, and what no one can believe until it actually takes place. Mr. Stephenson even, in answer to Mr. Routh, stated that "he certainly had expected it would have earlier become more extensive, but the absence of sufficient stations, and the high toll of the Oxford Canal Company, had much retarded the traffic in minerals!"

No doubt the vote of thanks to the Directors was most *cordially* given and most *thankfully* received, after the reading of the proper remarks about the "*want of activity on the part of some of the servants of the Company, and the abundant proof of neglect of check on the part of the superior officers, which cannot in any way be justified!*"

I am at a loss to know how the Directors can apply to Parliament so soon again for 80,000*l.* without calling a special meeting for the purpose of considering the subject after *due notice*. The recommendation of a sub-Committee certainly is not a notice, and I for one, had I known of such an intention, would have attended the meeting and endeavoured to have prevented Messieurs the Solicitors, from having another good picking out of this poor goose. Why not endeavour to do as other lines have done—raise the money on loan notes, even at 6 per cent., which most likely will be obliged to be given on the renewed debentures; as to creating new shares at 50 or 60 discount, it is frightful to contemplate!

Some of us poor *little* proprietors would have felt more obliged to the *large* proprietors composing the sub-Committee, if they had condescended to have stated how all parties happened to be so completely out in so short a time and so short a line, as 80,000*l.*; and how it happens that the paltry dividend of 10s. per share is withheld from us, when a just demand made for too long-standing arrears might have fully covered the difference, particularly as the new third shares were to be entitled to a share of the dividend expressly on account of their being called upon within seven months from the meeting held in August, 1840.

I remain, Sir, your constant reader,
AMICUS.

September 13, 1841.

THAMES HAVEN DOCK AND RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me to ask,

1st, If the Thames Haven Railway and Dock is not a bad or doubtful speculation, how is it that it meets with no support from the public?

2dly, If it is to produce such an immense increase of traffic to the Eastern Counties' Railway, why does not that Company come forward, and further the prosecution of the railway in question, in hopes a higher remuneration may be given to their own proprietors?

3dly, If the Directors of the Eastern Counties' Railway fear recommending the Thames Haven Railway to their proprietors, as a means of furthering and securing the hope of dividends till some "more convenient season," how is it the Directors themselves individually do not render every assistance in their power? How is it they do not take shares, and further the knowledge of the undertaking? If they were shareholders in the Thames Haven, how much more readily might they not expect their own proprietary to follow in their own steps?

4thly, Why or how is it the name of *one* railway Director has never appeared in the Direction of the Thames Haven Railway? Out of twelve they surely might, if the speculation were to be so profitable, have had *one* railway capitalist to further the concern.

Lastly, If the Dock and Railway are really to confer blessings alike on the poor and the rich, if they are to prevent loss of life, to further trade and commerce generally, why do not those to whom these are of the first importance (the merchant, the speculator, and even the philanthropist), however trivially support and interest themselves in its favour?

These are observations I have been led to make with reference to this Company, which has for five years been seeking public support, and should like much to have a clear reply, either from your own pen or that of some of your able correspondents; meantime I beg to subscribe myself yours,

Your obedient servant,
HUGH HUGHES.

Kensington, 31st August, 1841.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

SIR,—Oblige me with a small space in your valuable paper in reference to the above undertaking.

I do not like the proposal to stop at the Uxbridge road, nor do I think the shares will be taken. They say 10,000*l.* will do it, but we must bear in mind that though 9,000 shares were applied for, in order to complete the *whole* line, only 2,800 were paid upon, and why should we expect more will be when the object is to go *half way*, and the traffic cannot be much.

The following plan has suggested itself to my mind, and if submitted to the Great Western Railway Company, might command attention, as we know their original wish was to adopt our line.

On a moderate computation, we have 5,000 good shares; now, say the Great Western Railway Company create 10,000 Great Western shares of 5*l.* each, giving us two shares for every one we now hold, and a credit of 1*l.* per share, that will leave the estimated sum 40,000*l.* to complete the line and pay the pressing debts, and will be 2*l.* per share for the old shares, which we assume as their value by the price at which we issue the new.

I am decidedly of opinion that unless some assistance is rendered us by the great railways, we must sink, for we have poor and apathetic shareholders, and a Board so deficient in number as to be unable to carry any measure.

I am, Sir, your most obedient servant,

A SHAREHOLDER.

9th September, 1841.

MIDLAND COUNTIES RAILWAY.

To the Editor of the Railway Times.

SIR,—A report is in circulation that the Directors of the Midland Counties Railway Company, no doubt with a view to reducing expenses without infringing on the convenience of the public, have been induced to take off the line one train per day of the 3rd class carriages, and contemplate the same thing with a train of the 2nd. If it has been done as an experiment, it would seem it has been successful, judging from the revenue produced; and it is a very reasonable inference it will increase, so much so as to attract the attention of the monied world, and instead of being, as it now is, at a ruinous discount (without cause), will command a very considerable premium. Take 2,900*l.* per week (which is about the average from the 1st July to the 31st December), it leaves 75,400*l.* against 56,900*l.* for the preceding six months, with a balance in hand of 3,300*l.*; thus enabling the Directors to divide at the rate of 6 per cent. per annum, allowing 50 per cent. for working, which I have reason to believe to be near 10 per cent. over the mark. If this state of things be not such as to cause exultation on the part of the proprietary, it ought to cause them to pause selling at the present very great discount. But my object in writing to you was to enquire if the information above alluded to is correct; and if you cannot, perhaps some one of your numerous readers may be kind enough to do so, for a judicious reduction on the expenditure is so very much to be desired.

I am, Sir, your most obedient Servant,

A PROPRIETOR.

Liverpool, 16th September, 1841.

GREAT WESTERN RAILWAY.

A correspondent of the *Glasgow Constitutional*, under the head of "Notes during a trip in August, 1841," thus speaks of the Great Western Railway.

"Got on by coach from Cheltenham to Cirencester, the station of the Great Western Railway. Fare by coach, three shillings and sixpence. I may say I had never seen a railway before. The Great Western Railway, in all its details, and its conduct, is one of the most splendid works in England, and the most creditable to the spirit and enterprize of its people. It is indeed a noble work, and sincerely do I trust that the shareholders may reap a full reward. The station houses, how chastely beautiful,—the refreshment houses, how tastefully fitted up! The rails are laid nearly all the way on great logs of wood, and eight feet asunder, giving a feeling of the most perfect security; while the smoothness with which the carriages dash along, always at the rate of thirty, and frequently at forty miles an hour, tend to lull passengers into dreamy slumber. The carriages, too, are quite *unique*, and a man may stand erect in them, with his hat on, although he be six feet high. They are, in fact, most comfortable little parlours. In the carriage we occupied there were eight seats, but betwixt the half of them there was a door, with silk curtains to shut up when people wish to be alone. Nothing wanting to render the establishment complete, except a cooking apparatus, which could very easily be connected with the engine,—and a centre passage from thence, through all the carriages, for the waiters, is a work which would not require great art in either the planning or construction. Were such a line extended through the whole county, we have no doubt this would be done;—at present it is not necessary, from the rapidity with which it is traversed. What a fine thing it would be to be killing two dogs with one stone in this way—coolly taking dinner, and moving on while doing so, at the rate of thirty-five or forty miles an hour."

CONTINENTAL RAILWAYS.

THE third section of the railway from Berlin to Frankfort on the Oder, passing through Dessau and Rosslau to Koswig, has been opened to the public. All the portions of the line which traverse the duchies of Anhalt-Dessau, Anhalt-Coethen, and and Anhalt-Bernberg are thus completed.

The official Gazette of Breslau announces that the King of Prussia has authorised the construction of a railway from Breslau to the frontiers of Saxony, passing through Leignitz and Goertletz.

M. Pereyre, Director of the Versailles Railway, applied to the Council-general of the department of the Eure for aid in the extension of the railway from Versailles to Chartres. The expenses he estimates at twenty millions of francs. The mode of guaranteeing interest would not suit, connected as the new line would be with the two old lines to Versailles. But if government would lend eight millions for fifteen years without interest, and if the two departments of Seine and Oise, and Eure and Loire, would consent to give eight hundred thousand francs each, payable in annuities of 100,000 francs each year for eight years, together with the free grant of the ground to be occupied by the railway, then the Versailles companies would undertake to complete in four years the line between Versailles and Chartres. The Counsel General discussed this offer. Two of its members abstained from voting one way or the other. The rest unanimously voted that the department should give a million of francs to the railway in yearly payments of one hundred thousand francs each year for ten years. But the payment and the annuity is only to commence from the period of the opening of the railway. It was required, too, that the town of Chartres should pay one-fifth of the yearly one hundred thousand francs. The municipality of Chartres immediately engaged to do this.

A workman on the Versailles railway was nearly caught by a train on Saturday last, and his attention was so much taken up by it that he did not perceive another coming in the opposite direction. He was evidently about to be placed between the two trains, which would have been a position of much danger, but, with great presence of mind, he laid himself flat on the ground longways between the rails, and the trains passed without touching him.

We have received from a correspondent, now travelling on the Rhine, some particulars relative to the Belgian railways, which cannot fail to interest our readers. That part of Germany has already been brought very near to London by the steam navigation, and at a very cheap rate; but the continuation of the railway from Liege to Cologne will, in a short time, add materially to the rapidity of the communication. From the latter place to Aix-la-Chapelle the line will be opened in a few days; though two years will probably elapse before the part of the line from Aix to Liege is completed, that not having been begun so soon as the other, and there being much greater difficulties to surmount. The terminus of the Ostend line at Ans, near Liege, is on a very high level, and it is now in the course of being brought down to cross the river Meuse, near the town, by inclined planes. It will afterwards follow the pretty and romantic valley of the Verder to Verviers, crossing the river no less than six or seven and twenty times, and the road six times, by very handsome bridges, as they promise to be from the piers that are already constructed, of very good looking stone, which is found almost close to the spots where it is wanted. There are nine galleries, as the French called them on the Simplon, through projecting masses of rock, round which the river flows, so that in many places there is a very handsome bridge on each side of the entrance to the tunnel. This will be a most beautiful road to travel on the rails, and the railway, with its bridges, stone embankments to the river, &c., will also form a most interesting object to those who travel by the post road, both in point of picturesque appearance, and as being worthy of notice in an engineering point of view. From Verviers the road runs in a different direction to that followed by the post road.—*Brighton Gazette.*

COACH ACCIDENT.

ON Monday evening about eight o'clock, as one of the coaches which is occasionally employed in the temporary absence of the omnibus which takes passengers for the railway, from Huddersfield to Cooper-bridge station, was on its way from the latter place and when near Whitaker-bridge, one of the axles gave way, and the wheel coming off, the coach was thrown over and several persons much hurt. Mr. Townly, of Huddersfield, accountant, was severely shaken and internally hurt; a weaver belonging to Taylor Hill, near Huddersfield, and who was on his return from a visit at York, was thrown violently off upon a heap of stones, with his leg bent up under him, and a heavy person falling upon him, he sustained a very severe compound fracture of the leg, just above the ancle; he was immediately conveyed to the Huddersfield and Upper Agbrigg Infirmary, where the greatest attention is being paid to him. From the severity of the injuries amputation is deemed necessary, to which the patient will by no means consent. He is, under such circumstances, as well as can be expected; but his medical attendants consider the final results to be very precarious.—*Halifax Guardian.*

RAILWAY TO SCOTLAND.—The Central Committee continue to prosecute their labours with diligence and energy. At the weekly meeting on Saturday last, numerous letters were read from influential parties, approving of the line. The Duke of Buccleuch has intimated that he will offer no opposition. The consent of nearly the whole of the proprietors through whose property the line passes in Westmorland has been received. As far as the inquiry has extended in Scotland, the result is similar; and the project now wears the most favourable appearance. The Directors of the Lancaster and Preston Railway promise to use their utmost endeavours to promote the line; and in a very short time we expect to see the scheme fairly launched before the public. The talent and skill shown by Mr. Larmer in selecting the present line, we hear spoken of in all quarters; and we trust he will yet reap the advantage of his labours. On the Eastern side most strenous exertions are being made to continue the line from Darlington to Newcastle; and therefore it behoves all who feel an interest in the prosperity of the west, to leave no stone unturned to secure to themselves the benefit of railway communication to Scotland by Carlisle.—*Carlisle Journal*, Sept. 11.

RAILWAY SHARE-LISTS.

The London Prices are taken from Mr. Wetenhall's List; those at Liverpool are furnished by Mr. C. J. Townley, Sharebroker, and are the closing prices on Thursday. The quotations marked * are the latest Edinburgh prices; those marked † the latest Glasgow prices. The former are supplied by Mr. Robert Allan, of St. Andrew-square; the latter by Mr. J. Watson, of Frederick-street.

2. Toll to London and Birmingham 163*l.* 15s. 8d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 25*l.* 9s. 6d. from goods, &c. is for toll only.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The amount given in the table includes the receipts from the horse coaches from Hayward's Heath to Brighton. The divisor, therefore, is 46, although only 37⅜ miles of the railway are open, including the Shoreham branch of 5½ miles. The toll to the Croydon Company is not included in the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of which has been issued at 50 per cent. discount,

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 5,074*l.* 2s. 5d. are the receipts after deducting omnibus charges, and payments to other Companies.

25. The receipts for goods, &c. include, carriages, 421*l.* 9s. 0d.; horses, 22*l.* 4s. 6d.; dogs, 6*l.* 13s. 6d.; parcels, 217*l.* 2s. 8d.; cattle, 78*l.* 12s. 6d.; corn, 7*l.* 0s. 8d; heavy goods, 428*l.* 4s. 10d.; coal, 94*l.* 10s. 1d.—Total, 956*l.* 17s. 9d.

27. The divedend includes a sum of 31,786*l.* earned previous to the last half-year.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Y's peculiarity is somewhat mysterious.

Ulster Railway.—*We should have had much pleasure in making the corrections pointed out by a Belfast correspondent, had we been able to find room for more than a mere sketch of the proceedings.*

A Constant Reader and Shareholder.—*We, in common with our correspondent, have a very high opinion of the talent and zeal of the gentleman referred to, and are sure the proprietors at large duly appreciate his services, but we doubt if the present be the fittest time, or a public journal the proper medium, for bringing forward in the first instance such a matter as that to which our correspondent refers.*

The Patent Propellers for Steam-Boats *do not come within the scope of our paper.*

Justice, *who complains without cause, as we think, of what he calls the uncourteous terms in which the improvements of Mr. John Gray were spoken of by one of our last week's correspondents, falls himself into the inconsistency of abusing his opponent. If our correspondent will come to facts, we shall with great pleasure give him a hearing.*

West-London Railway.—*Mr. White requests us to correct an error in the report of his remarks at the meeting of the West-London Railway Company, held last week. Instead of saying that the Great Western Railway Company had at one time offered to guarantee to the Kensington Canal Company an amount of traffic to the extent of 30,000l. a year, Mr. White wishes it to be understood that they had offered to guarantee the carriage of 30,000 tons. The difference is, of course, very material.*

A Railway Proprietor *may rest assured that when the invention is fairly put to the test we shall not fail to report the result. We cannot, however, give publicity to a scheme however plausible, the merits of which have not got been practically proved.*

A correspondent, *who adopts the very appropriate signature of* Invest sua gratia parvis, *wants a question which we leave to the decision of those who are more conversant than we can pretend to be with points of form. He says:—*

"In your report of the Croydon meeting, it is stated, that 'Mr. B, in order to get rid of any formal difficulties as to disposing of the original motion, would move *the previous question.*'

"'The previous question was then put, and carried nem con.'

"It appears that the original motion was thus considered as got rid of.

"I beg to ask what 'the previous question' is understood to be? If, as I conceive, 'the previous question' is, 'that that question, namely, the original motion, be now put?' then it follows that in this case, where the original motion was not put, the previous question was not *carried*, but *negatived*. If this point be, as in some cases it may be, important, the sooner you put people right about it the better, and even if it be trivial, it is as well to be correct even in trifles."

A correspondent, C. M., says—"Can any of your readers inform me what has become of the Steam Conveyance Company for running Steam carriages on Common Roads, under Sir James Anderson's patent? There was a meeting at Freemason's Hall about a little time ago but I am not aware of the result, and I see that a steam-carriage has lately been started on common roads apparently not by the Company."

Edinburgh and Glasgow Railway.—*We really cannot find room this week for the long statement of the Edinburgh Directors (of which a second copy has been sent to us), but we will see what can be done with it next week.*

A Well-Wisher (Torfaen) *is assured that we have no prejudice whatever against the line referred to. The delay was wholly unavoidable.*

The Liverpool Shareholder who has written to us twice on matters connected with one of the northern lines is informed that we have made inquiry, and find that although there is some foundation for the statement made in his first letter, the inference which might be drawn from it (not by our correspondent certainly, who appears to view the matter in a proper light), would be wholly erroneous and unjustifiable. Our correspondent will, therefore, we doubt not, excuse us if we do not at this moment publicly agitate the question, the more especially when we assure him that there is not in reality the smallest ground for complaint or alarm.

Croydon Railway.—*The letter of J. P. on what he deems the mis-management of the affairs of this Company shall be given next week.*

Manchester and Leeds Railway.—*The notice forwarded from Manchester of the General Meeting held on Thursday did not reach us in time to allow us to do the proceedings justice. We have thought it better therefore to postpone the report till next week.*

We have nothing to do with the Talacre Coal and Iron Company. *It appears, however, to furnish a remarkable specimen of joint-stock jobbery. This to a correspondent who wishes us to correct a report in the Sunday paper.*

Templeton's Mathematical Tables for Practical Men.—*A copy of a very excellent work published by Simpkin and Marshall under this title, has been sent to us. We strongly recommend it.*

*** It is requested that in future all communications intended for the *Railway Times* be addressed, "To the Editor," and not to any individual by name, now or recently connected with the establishment.

THE RAILWAY TIMES.

SATURDAY, SEPTEMBER 18, 1841.

We give in another part of this day's number as full an account as we can find in the local journals of the inquest held on the body of the unfortunate gentleman killed by the late accident on the North Union Railway. It will be seen that the jury have returned a verdict of "Accidental Death," without imposing any deodand on the Company, or even conveying a censure upon any one of the Company's servants. We confess that we are very much opposed to the infliction of deodands, which in nine cases out of ten impose upon the innocent many, a punishment which ought to be directed against a guilty individual, and therefore we are by no means sorry that in this instance the Company has escaped a pecuniary mulct. At the same time we doubt whether, under all the circumstances, something more than the simple verdict to which we have referred ought not to have been returned. It is the practice with at least one of the metropolitan Coroners to discourage all inquiries into the collateral circumstances of cases that come under his cognizance; and, in general, this rule may be both politic and humane, when family arrangements and personal feelings are likely to be brought under discussion, but in instances of railway accidents it is far otherwise. In the latter case, nothing but the most searching inquiry into all the concomitant circumstances can satisfy the public, and ought not to satisfy the Companies themselves. We are sorry, therefore, that the inquiry in the North Union case was not prosecuted somewhat further, had it been only to convince the public that there was nothing to keep back or conceal.

There can, we think, be no doubt whatever that the unfortunate accident was attributable to the inattention of the gate-keeper, NIXON, who, although he has already suffered severely, ought not, in our opinion, to be allowed to escape the penalty of his neglect of duty. It would seem as if the coroner, in summing up the evidence, had drawn a distinction between "a simple case of neglect" of duty, and a case of "gross negligence," telling the jury that if they conceived NIXON to have been guilty of the latter, they would be justified in finding a verdict of "Manslaughter." The jury, however, seem to have thought NIXON guilty of the lesser fault, or perhaps altogether guiltless, and it is not for us to carp at their decision; but we should be glad to know what *more* gross negligence could possibly be brought home to any servant of a Railway Company, or to any offender whatever, than the fact of having left a line exposed (as it is admitted NIXON did) to the intrusion of common-road vehicles.

The discrepancy in the evidence of the witnesses cannot be overlooked by our readers. The witness, SARGEANT, swore that the train, at the time of the collision, was proceeding "at the rate of 30 miles an hour, *the usual speed*," whereas the engine-driver was "positive the engine was not going faster than 14 miles an hour, and he did not think more than 12!" Again, the witness, SARGEANT, deposed that the "engineer had a good deal of steam up, and a considerable quantity issued from the chimney;" while the engine-driver himself affirmed, that "the steam was *very* low!" How are these discrepancies to be reconciled?

We gather from the evidence that a portion of the traffic of this line is conducted by other parties than the immediate servants of the Company. The engine-driver was, it appears, "in the service of Messrs. PEARSON & Co., of the Ince Colliery;" and not only was the breaksman not in the employment of the Railway Company, but he was not even usually engaged in the duty which on this occasion he had taken upon himself. We cannot conceive anything more fraught with mischief than such an arrangement as this, where the parties employed in working a line of railway are, or appear to be, under the control of different masters.

The primary cause of the mischief was, as we remarked last week, the crossing of the railway by a common road on a level. A more dangerous practice could not be invented; and we are glad to find that not only is it being discouraged by Parliament, but that the Companies themselves are becoming sensible of the manifold inconveniences which result from such an interference with their customary operations. If further proof were wanting of the dangers alluded to, it would be found in the fact that, since the occurrence of the North Union accident, an almost identical casualty has taken place on the Bristol and Exeter line, happily, however, unattended with loss of life. On some of the Northern lines, we regret to say that the crossing not merely of highways by railways, but of one railway by another, is far from uncommon. We are surprised that a greater number of accidents do not arise from this cause, and attribute it rather to good fortune than to anything else; for with the utmost caution that can possibly be observed, it must at times be next to impossible to guard against the occurrence of danger.

The Croydon Directors are so impressed with the dangerous impediments which such crossings create, that they are now, at considerable expense, sinking one of the common roads, in order that it may pass *under* the line, instead of crossing it on a level as at present. That this alteration is a most judicious one in a neighbourhood and upon a line where the passage of vehicles is very frequent, will be seen from the following statement made by a correspondent of the *Times* in reference to the same railway:—

"A few days since I drove three ladies in a four-wheeled chaise through Dulwich to Lewisham, and on arriving at the Sydenham station, where the public road crosses the railway, I stopped to inquire of a man in the employ of the Croydon Company whether I might safely pass over. He instantly flung open the gate, and I passed over the railway. Behind my chaise was a donkey-cart with two women; and scarcely had my horse reached the middle of the line before we heard a train rapidly approaching. We passed over safely, but in order to get the donkey-cart over five or six men rushed on the line, and by main force pushed it across, and then closing the gates, just saved themselves by a rapid flight from being crushed. I immediately remonstrated with the men, but they re-

Digitized by Google

plied, that 'they wished to *oblige* the public,' *and were quite ignorant of the times of the trains passing by.** This train, I should add, was a Brighton train, not stopping at Sydenham, and passed at the rate of near 30 miles an hour. We were only saved by 'the skin of our teeth.' Ten seconds later and we should have been inevitably smashed to atoms!"

The only safe mode of proceeding in cases where highways must of necessity cross railways on a level is to keep the gates across the road constantly locked, unless when a vehicle is about to pass over. Had this been done in the present instance, it is quite clear that the accident could not possibly have occurred, and herein was NIXON, the servant of the Company, greatly blameable. It would seem, indeed, from the statement of the Company's Solicitor, that the "gatekeepers on the line have great difficulty in keeping the gates closed as several persons, including gentlemen whose names appear in the commission of the peace, have threatened to pull them down, alleging that the Company have no right to obstruct the turnpike road." If ever there was a case calling for the interference of a Company, it surely is such a one as this. It is of course not without legislative sanction that the railway has been allowed to cross these same "turnpike roads," and it is for the Directors to show the law-dispensing and law-breaking squires that an Act of Parliament is not to be over-ridden at their caprice or in reference to their prejudices. Now that an accident *has* occurred, we take it for granted that the gates at this point will be kept closed, and we trust that on the occasion of any future threats to "pull them down," whether by "gentlemen whose names appear in the commission of the peace," or by offenders of less note, the Directors will be prepared to vindicate their own privileges, and to prove that the safety of the public has not been entrusted to unworthy hands.

A VERY important question was mooted, and (so far as that undertaking is concerned) decided, at the recent general meeting of the proprietors of the Ulster Railway Company, namely, whether it is proper that a party shall be at one and the same time a Director of a Company, and a contractor for work or articles which such Company may require. Into the details of this individual case, we need not minutely enter. The statements which we give elsewhere, from both sides, will enable our readers to judge pretty accurately of the facts of the case, and with the personal or local feelings which led to the decision above referred to, we have nothing to do. There may be peculiarities in the position and circumstances of this Irish line, which render it expedient that the two apparently very active and useful Directors pointed at in the proceedings of the meeting, should not at this moment retire; but when we find the proprietors negativing by a majority of more than five to one, the proposition that a participation in the work done for a Company ought to disqualify for a seat at the Board, we think it right to express very briefly our own sentiments upon the general question thus brought forward.

Our opinion, then, is most strongly and decidedly opposed to any participation, direct or indirect, on the part of any member of a Board of Management in the profits derivable from supplying his co-proprietors in a railway with articles in the way of trade. It is not so much that we fear the positive commission of acts of favouritism and jobbing to the profit of particular persons and the prejudice of the rest, as because, however pure the Directors may individually and collectively be, the public at large will be prone to judge otherwise, and because the official conduct of Railway Directors, like the chastity of the Roman dame, ought to be not even suspected. If Directors are disposed to abuse their powers by turning them to purposes of individual gain apart from the welfare of the general body, they can find or make a thousand occasions of doing so, let the clauses of an Act of Parliament be as prohibitory as you will. Much, therefore, must after all depend upon the personal character of the parties selected for office—whether they are men of strict integrity and trustworthiness, not merely keeping themselves clear from charges of positive, tangible, gross, misconduct, but acting invariably in a spirit of honour which would make them spurn even the appearance of evil—or whether on the other hand they are men who would consider themselves "pure in their high office" if they contrived to escape the censure of their colleagues or their co-proprietors—men, for example, who would not themselves make an extortionate gain of a Company, but would not scruple to throw a "good job" in the way of a friend, and to wink at that friend's short-comings—men who, if too "honourable" to regulate their own holdings by the proceedings of the Board-room, would just hint in another quarter how the transactions of the Stock-exchange might at particular periods be turned to account—men, in short, who would seek office and cling to it, not for the sole purpose of promoting the prosperity of the undertaking committed to their care, but for the furtherance of other objects totally distinct from such prosperity, or, it may be, diametrically opposed to it. Such being the case, it may seem a matter of small moment whether Directors are or are not in so many words restricted from certain acts; for while it is possible, nay, we should hope by no means rare, that the majority of a Board shall hold the balance as evenly between one of their colleagues and the proprietors at large as between the latter and a stranger, so nothing can prevent a corrupt Board from indulging in corrupt practices; if they cannot job openly they will job covertly—if they cannot do it directly they will do it indirectly—if they cannot do it by themselves, they will do it by means of accomplices. There is, however, to be taken into consideration the inference which may be drawn by the public at large from placing a member of a Board in a position which *bad* men *might* turn to account; and this brings us back to the main ground upon which we disapprove of Contractor-Directors, namely, the desirableness, the policy, nay, the absolute necessity, if their Management is to be creditable and efficient, of preserving the purity of the members of a Railway Board not merely unspotted but unsuspected.

The *law* of the case we are not now called upon to discuss. In the Ulster Railway Act there appears to be a prohibitory provision, which, however, in the present case, means were found to evade; and here we would remark, that such evasions are calculated to impress the minds of the public at large much more strongly with an idea that favouritism is intended, than if the provisions of the statute were openly and boldly set at nought, and the violation avowed and justified on the ground of expediency or otherwise. We believe a similar clause is to be found in almost all the English Railway Acts; and notwithstanding the assertion of one of the speakers at the Ulster meeting—an assertion, however, which when called upon to give specific instances, he could not support—to the effect that there was scarce a railway in England or Scotland where the practice complained of was not carried on, we trust that the spirit as well as the letter of such clauses is in this country very generally acted upon. In one Company, if we mistake not, where an article of consumption is occasionally supplied by one of the Directors, a re-election of that gentleman takes place after a contract has been concluded with him, in a manner somewhat analogous to that of a member of Parliament on accepting office. This course of proceeding is we have no doubt, in strict conformity with the requirements of the Company's Act of Incorporation, and equally satisfied are we that no undue advantage is taken by the individual Director referred to, or by his colleagues, of his position with respect to the undertaking, but still, we must repeat our opinion, that it is much better to avoid such a combination of apparently clashing interests and duties, as the very names of Director and Contractor—of the party supplying an article, and the party deciding upon its merits—seem to point out. Little beyond empty fame is to be secured by an honourable and conscientious man from a seat at a Railway board. If he value such distinction more than the pecuniary results likely to be derived from a business connection with a particular Company, let him by all means remain in office, and give up his other ties, but do not let him attempt to occupy a position where honour and interest seem (although it may be but in seeming) to point different ways.

IT would seem that certain of the City Solons are again doing all they can to annoy, and obstruct the operations of, the Blackwall Railway Company. It is already known to our readers, that the extension line of this Company, from the Minories to Fenchurch-street, is wholly covered in, and in fact presents the appearance of a large and elegant shed, the trains being impelled in one direction by gravity, and in the other by the impetus previously acquired. The roofing-in of this part of the line has, of course, the effect of deadening the noise of the carriages, and is moreover highly conducive to the comfort of the passengers. It appears, however, that a sapient body, known by the designation of "Commissioners of Sewers," have taken offence at this erection, and at one time actually went so far as to indict the Company for a nuisance, dangerous to the public health, but the Grand Jury before whom the matter was brought had more sense than Messieurs the Commissioners, and at once threw out the Bill; and these same Commissioners are now, it is said, about to commit a trespass upon the line, for the purpose of having the question tried! We are not the advocates of rough measures, but really the ignorant audacity of these Jacks-in-office deserves but very little courtesy or consideration at the hands of the railway authorities; and we should scarcely be sorry if, on the occasion of the contemplated trespass, the most active of the intruders found reason to have something else to carry to a court of law, beyond the question of erecting an enclosed viaduct.

Never was there a more unfounded or hypocritical pretence than that the construction of the Blackwall Railway, or any part of it, has been, or can be, prejudicial to public health. In fact, it is not one of its least merits, so far as the public are concerned, that this line has opened up and purified a district abounding

* This surely cannot be the case.—ED. R. T.

with every element of disease; and this consideration alone ought to have made the City people pause, before they commenced the course of active hostility which, although happily it was ineffective, entailed so much trouble upon the Directors and so much cost upon the Company.

In proof of the change of feeling which has come over the most prominent of the *quondam* opponents of the railway, we cannot do better than quote a sentence from an article in the *Times* of Thursday, in which the circumstances above noticed are detailed:—"It is whispered" (says our contemporary) "that the inhabitants of Portsoken ward, who at first complained so bitterly of the establishment of a terminus in the Minories, have been by use so far reconciled to it, that they are now actually enraged at its removal to the immediate neighbourhood of Fenchurch-street." This is extremely likely to be the case. The inhabitants of Portsoken have *felt* the benefits arising from the railway, and they are "enraged" that they should to a certain extent be hereafter shut out from them. It is consolatory to the Directors to know that even their opponents now acknowledge the soundness of their views; but if a succession of bigots is thus to spring up, when are the labours and anxieties of the Board of Management to have an end?

We have great pleasure in giving publicity to the following scheme for facilitating the process of "booking through" on connected lines of railway by means of a clearing house. We understand that a plan upon the principle therein explained is on the eve of coming into operation upon the lines more immediately referred to in the article. The benefits of such an arrangement will be felt as well by the public as by the Railway Companies, and admit of an extension much beyond what appears to be contemplated at the first outset. We are convinced that it is only necessary that the system should be in action for a short time to ensure all that is expected from it. The following is the scheme:—

With the view of affording increased facilities to railway travelling, and of simplifying at the same time the business of lines in connection with each other, having their common terminus in London, at the Euston station, and on which the practice of "booking through" prevails, it is proposed that the several lines should, as respects the booking-through process, be treated as a single line; that the adjustment and audit of accounts connected with the settlements of the separate interests of the respective Companies, should be conducted in a clearing house, common to all, and of which the control and management should be arranged between the parties interested in it, on principles of mutual accommodation and equity.

The result of the adoption of the proposed system will be, that passengers may be as easily booked by single tickets, from a given station on any one of the connected lines, to a station on any other of these lines, as they now are between stations on one and the same line, the details being few and simple which are required for an arrangement so important for the public accommodation. These details are as follows:—

1. The station for the clearing house being determined, and a Committee of Directors and a clearing clerk appointed, the associated Companies will have to fix the booking-through stations on the respective lines.

2. The clearing house is to supply to each Company, forms of the necessary tickets, books, and classified statements, which may be required: uniformly being indispensable.

3. Returns are to be sent daily to the clearing house (according to a prescribed form) of the tickets issued with their progressive numbers, and the number of passengers booked, specifying by what trains, their destinations, respective fares, and the gross amount thereof.

4. The clearing house on the other hand is to send a daily return to each Company in a form which may be easily checked, of the sums due by and to such Company, for each day's operations.

5. The collected tickets are to be sent daily to the clearing house, and when examined, to be returned to the Company from whose stations they were issued.

6. Returns of all excess fares connected with the booking-through are to be made to the clearing house, and no claims for return fares which may be connected with the booking through are to be allowed (except in cases which admit of no doubt) without the previous sanction of the clearing house. Proper vouchers to be sent to the clearing house in all cases of returned fares.

7. Each booking through station is to be provided with bags, under lock and key, which are to be designated "clearing house bags," one key to remain with the station clerk, the other with the clearing house clerk.

8. Balances of accounts between the respective booking-through Companies to be liquidated weekly.

9. The principle of clearing, as well as the details of it, are understood to apply equally to passengers, parcels, carriages, and horses, and where necessary to merchandise.

10. A skeleton map of all the northern lines, and the principal places with which they communicate, to be furnished by the clearing house to each booking-through station.

It is presumed that the expense specially chargeable for the establishment of a clearing house will be more than covered by the saving which the adoption of the system would effect in the booking and audit offices of the several Companies. If it should be established at the common terminus of all the northern lines in London (which appears the more desirable, as the payment of balances will, with few exceptions, be made to the Company at that terminus, and more tickets collected there than at any other station), an arrangement may be made by which the expense common to all may be at once defined, and the proportion of relative charge to each Company be regulated by the amount of its relative receipt.

It is understood that such returns as it may be necessary for the clearing house to furnish to the several Companies, are to be supplied to them on application to the clearing clerk.

A STATEMENT of the income and expenditure of the turnpike trusts in England and Wales, which has been printed by order of the House of Commons, will show, in reference to those counties which are more or less intersected by railways, how the income of those trusts for the year 1839 was affected. In Bedfordshire, the total income in 1839 amounted to 12,599*l.*, and the total expenditure to 12,914*l.*, leaving a deficiency of 315*l.* In Berkshire the total income was 18,362*l.*, and the expenditure 17,151*l.* In Buckinghamshire the income amounted to 14,828*l.*, and the expenditure to 16,199*l.*, leaving a deficiency of 1,361*l.* In Cambridgeshire the total income was 15,123*l.*, and the expenditure 14,525*l.* In Cheshire the income amounted to 50,854*l.*, and the expenditure to 52,015*l.*, leaving a deficiency of 1,161*l.* In Derbyshire the income amounted to 40,997*l.*, and the expenditure to 42,800*l.*, leaving a deficiency of 1,803*l.* In Durham the income amounted to 32,612*l.*, and the expenditure to 32,204*l.*, leaving a surplus of only 408*l.* In Essex the income amounted to 31,460*l.*, and the expenditure to 31,729*l.*, leaving a deficiency of 269*l.* In Gloucestershire the income was 78,339*l.*, and the expenditure to 81,594*l.*, leaving a deficiency of 3,255*l.* In Hampshire the income amounted to 26,957*l.*, and the expenditure to 27,972*l.*, leaving a deficiency of 1,021*l.* In Kent the income amounted to 61,721*l.*, and the expenditure to 60,964*l.* In Lancashire the income amounted to 148,822*l.*, and the expenditure to 139,288*l.* In Leicestershire the income and expenditure were respectively, 25,250*l.* and 23,772*l.*, and in Lincolnshire 31,274*l.* and 38,574*l.*, leaving a deficiency in the latter county of 2,300*l.* In Middlesex the deficiency amounted to about 2,418*l.* In Northamptonshire the deficiency was no less than 4,443*l.* In Oxfordshire the income was 23,680*l.*, and the expenditure 22,006*l.* In Shropshire the deficiency of income was about 2,595*l.* In Somersetshire there was a surplus of 578*l.* In Staffordshire the income amounted to 58,128*l.*, and the expenditure to 59,752*l.* In Surrey the income was 61,000*l.*, and the expenditure 63,578*l.*, leaving a deficiency of 2,578*l.* In Warwickshire the income was 28,685*l.*, and the expenditure 28,384. In Worcestershire the income amounted to 42,824*l.*, and the expenditure to 35,820*l.* In Yorkshire the income amounted to 201,438*l.*, and the expenditure to 199,107*l.*, leaving a surplus of 2,331*l.* Thus, of the above twenty-four counties there are no fewer than twelve in which the income was exceeded by the expenditure. These statements furnish a curious addition to the history of railway travelling and its effects in this country.

—o—

ANOTHER example of the defective condition of railway fencing is supplied by the *Berks Chronicle* of last Saturday. It appears that on the night of Sunday, the 5th instant, a valuable horse, and a donkey, the property of Mr. Hathway, of Tockenham, near Wootton Bassett, strayed upon the line of the Great Western Railway, and one of the night trains coming by in the dark struck both animals and passed over them. The horse's head was severed from his body, and his bowels protruded; the donkey was also cut and maimed very dreadfully. The death of both must have been instantaneous. The engine-driver, slackening his speed, told the policeman stationed at some little distance that he was fearful two men were killed, yet so little alteration did it make in respect of the train's movement, that the passengers were ignorant of any unusual occurrence.

—o—

AN alteration has recently taken place in the route of the mail through Dorchester, to and from Exeter. Instead of proceeding by way of Salisbury, as formerly, the mail is forwarded to the Southampton terminus of the Southampton Railway, and goes thence, *via* Ringwood, Wimborne, and Blandford, to Dorchester. This alteration will not materially affect the time of arrival of the mail either on its up or down journey. By the recent arrangements made in the alteration of the mails, letters, &c., for the following places, are forwarded either *via* Exeter in the morning, or *via* Salisbury in the evening, ac-

Digitized by Google

cording to the hour at which they may be posted:—Bristol, Bampton, Bath, Bridgewater, Bradford, Calne, Chippenham, Collumpton, Devizes, Glastonbury, Marlborough, Melksham, Pewsey, Shepton Mallet, Somerton, Tiverton, Trowbridge, Wells, Wincanton, Wiveliscombe. For the following places the letters, &c., are forwarded *via* Exeter only:—Cross, Ilchester, South Petherton. For the following places the letters, &c., are forwarded *via* Honiton in the morning, and Salisbury in the evening:—Chard, Crewkerne, Shaftesbury, Sherborne, Yeovil, Ilminster, Taunton, and Wellington. A bag for Salisbury will still be made up at Dorchester, and forwarded by cart either from Blandford or Ringwood.

—o—

We find from the *Carlisle Journal*, that on Monday week, a special train was set apart by the Directors for the accommodation of those persons in the neighbourhood of Carlisle who wished to visit Newcastle, and return on the same or the following day at the low rate of 7*s.* 6*d.* for both journies. At six o'clock the train started, consisting of fifteen carriages, and containing about 360 individuals from Carlisle, Scotby, Wetheral, and Brampton, and reached Newcastle at ten o'clock, A.M.

Some few of the parties returned the same night, but the majority did not return until the latest train on Tuesday, which was extended to 18 carriages for their accommodation.

—o—

The Newcastle and Carlisle Railway Company have recently raised their fares about 20 per cent. This is the only long line, the example of which, in reference to *very* low fares, was alluded to by Mr. Vickers, of Sheffield, in his speech at the late meeting of the North Midland Railway Company.

—o—

One day last week, as we learn from the local journals, the Great North of England Railway Company sent from Darlington 40 tons of fish (chiefly herrings), part of which would be in Billingsgate market at six o'clock next morning!

—o—

Sir Frederic Smith, Inspector-General of Railways, has, we understand, reported favourably on the London and Brighton line, which will positively be opened throughout on Tuesday next.

The official announcement of the times of starting, &c. will be found in our advertising columns.

—o—

During the present week active operations have been in progress for taking down the unsightly structure, late the offices of the Greenwich Company, at the Tooley-street terminus of the line. The premises had never been roofed in!

—o—

In another column will be found a letter from Mr. Hawkshaw, the able and intelligent Engineer of the Manchester and Bolton Railway, in reference to a paragraph which we copied last week from a provincial journal. It will be seen that the propensity of the newspapers to exaggerate the details of "Railway Accidents" is far from being allayed.

RAILWAY OFFENCES AND OFFENDERS.

Last week, as we learn from the *Essex Mercury*, an injury was inflicted upon one of the passengers the Eastern Counties' Railway, by a stone thrown from one of the bridges across the line. The passenger had his head cut by this wanton act, and the occurrence no sooner was made known to the Managing Director, Mr. Hall, than immediate measures were taken, and a reward of two guineas offered, to get hold of the offender. It was ascertained that the stone had been thrown out of mere wantonness by a boy, who was immediately taken into custody for the purpose of being properly dealt with by the Ilford Bench of Magistrates. Applications were made not only by the friends of the boy but by the injured party himself, for a lenient course—but the Company were of opinion that the duty they owed to the public forbade them to act in any other way than to follow up the charge, and to leave it to be dealt with according to magisterial discretion. It is not stated what amount of punishment was inflicted, but we trust that it was what, under ordinary circumstances, might be termed "severe." [We have since learned that a fine of 5*l.* was imposed, and in default of payment, imprisonment for seven days.]

A much more serious case is recorded by the same journal, but here again the punishment is unfortunately not specified. "Two men (says our contemporary) had placed some wood across the rails purposely, by which the waggon train was thrown off; but, fortunately, no injury occurred to any person. The railway constables apprehended the delinquents, and they were taken to Chelmsford, and punished by the magistrates with a commensurate term of imprisonment." What the "*commensurate* term of imprisonment" may have been, we cannot tell; but sure we are, that *no* term of imprisonment can be *more than commensurate* with such a diabolical act of deliberate scoundrelism.

The two men, George Boardman and Robert Rangill, who were last week remanded for further examination on the charge of having embezzled various sums of money belonging to the Liverpool and Manchester Railway Company, (as noticed in the last number of the *Railway Times*,) were again brought up before D. Maude, Esq., and C. J. Walker, Esq. It will be recollected that the defendants were carters in the employ of the Company, and were allowed to receive the money for carriage from the different warehouses in the town. When it was discovered that they were much behind in their accounts they were questioned by the cashier, Mr. Wilson, and admitted that they had appropriated various sums of money to their own use, but said they would return them or work out the amount. A great number of cases of a similar description were afterwards made known, and the men were then apprehended. The court ordered their liberation, no further evidence being adduced to support the charge of felony. This case (says a Manchester contemporary in giving it) clearly shows the want of some better arrangement on the part of Railway Companies and carriers to protect them against similar impositions.

A man named Bryant, was charged at Marylebone Police Office, on Thursday, with having robbed a fellow-passenger by the Birmingham Railway, of 200*l.* The case was not made out, and the prisoner was discharged. It is somewhat singular that a woman having so much money in her possession should have travelled in a second class carriage—yet so it was!

An apparently respectable person, named Chapman, was fined ten shillings by the same magistrate on the same day, for smoking on the platform of the Great Western Company's station at Paddington. The magistrate (Mr. Long,) "wished it to be distinctly understood, that any future complaints relative to an infringement of the Company's rules and regulations, would be visited with the full penalty."

RAILWAYS AND THEIR FUTURE RIVALS.

To the Editor of the Railway Times.

Sir,—It has occurred to me that one thing more than anything else has tended to depress railway prospects to their present unaccountably low value, and that is, the impression which seems to prevail in the minds of many persons who have not thoroughly investigated the matter, that in this age of invention some scheme less costly and equally advantageous may be propounded to supersede railway travelling, such as steam coaches, electricity, or galvanism, applied to locomotives on common roads. It requires, however, but little calculation to prove that the cost of running such machines would be far greater on a common road than on the rail, besides the danger and utter impossibility of running at an equal rate of speed. It is possible in the course of invention some moving power preferable to steam may be brought to bear upon locomotives, but this, instead of superseding railway conveyance, will greatly add to its efficiency and cheapness, in diminishing the present heavy working expenses. Whatever improvements of this sort are invented will add greatly to the value of railway property, and tend to make it more difficult than at the present time for common roads to compete with them. Some parties, however, who seem bent upon depressing railway stock, are continually puffing up those schemes of running locomotive carriages on common roads. No later than last week one of your contemporaries inserted a minute account of a gentleman connected with the Bank of England having invented a moving power, which he applied to a Bath chair, by which he came backward and forward from London and St. Alban's every morning in an incredibly short space of time, and then adding that he could travel from London to Liverpool at the rate of 20 miles an hour, for the sum of *seven pence!* It is unnecessary to say, that when this story was probed it turned out a complete hoax upon your contemporary's gullibility.

I am, Sir, yours, &c.,
A CONSTANT READER.

Liverpool, August 31, 1841.

THE SAFETY VALVE.

To the Editor of the Railway Times.

Sir,—Having read a short time since Mr. Stephenson's valuable work on "Locomotive Engines," and having been struck by the defects of that most important instrument, the "Safety Valve," I beg to offer a few remarks, which may perhaps be turned to some practical purpose.

Searching through several of Nature's contrivances, I at last hit upon the oyster, and the immense strength shown by that animal in keeping its shell closed: which shows that a spring might easily be applied so as to move through a *very* short distance to open the valve to its utmost extent; and perhaps this would be the most convenient mode of repairing the chief defect of the spring, viz., its increased resistance, as it undergoes compression; but in applying it to my valve I would have it fixed in such a manner as to *lengthen* and not compress the spring on opening the valve. To remedy another fault in the common safety valve, viz., that as it opens a smaller surface is presented to the direct action of the steam, I would not have the seat of the valve as is usual, horizontal, but at some convenient angle to the horizon—so that as the valve rises a greater portion will be continually presenting itself to the direct action of the steam.

I am, Sir, yours, &c.,
FUNNEL.

THE QUESTION OF SUNDAY TRAVELLING ON RAILWAYS.

NO. VI.

To the Editor of the Railway Times.

SIR,—I have shown that every assignable reason for the establishment of a Sabbatic law, as well as every circumstance connected with its establishment, leads us to the belief that it was intended for all mankind; and that these reasons apply with augmented force as time rolls on. I have also shown that certain passages of the New Testament, sometimes cited as a repeal, are inconclusive. I cannot better sum up this part of our inquiry than in the language of an author you deservedly respect. Bishop Horsley says, "To the general question, what regard is due to the institution of a Sabbath under the Christian dispensation? the answer is plainly this, neither more nor less than was due to it in the patriarchal ages before the Mosaic covenant took place. It is a gross mistake to consider the Sabbath as a mere ritual of the Jewish Church deriving its whole sanctity from the Levitical law."*

If then the Sabbath be thus perpetual, it remains for us to determine how it is to be kept? and when? where and what is the law regarding it?

These questions carry me again to your own authority. Bishop Horsley goes on to remark, "The religious observance of the seventh day hath a place in the Decalogue among the very first duties of natural religion." The conclusion is plain. The fourth commandment is no more Jewish, than any other of the ten. The fourth commandment continues, like the rest of the Decalogue, not as a part of the Mosaic covenant, but a standing declaration of God's will concerning us. The fourth commandment is the law of the Sabbath.

All that remains then, is the simple question, why do we not obey it to the letter? We have no more power to modify, than to abridge or annul it. What is our warrant for transferring its observance to another day—in other words, for quoting the law of the Sabbath-day as applicable to the first day? The solution of this question will complete my response to your challenge.

I have three things to demonstrate—that we have authority for the transfer—that there are manifest reasons for its being made—and that the essentials of the law are not hereby invaded.

1. *We have authority for the transfer.*—This, it will be seen, consists of two parts, the relinquishment of the obligation, as regards one day, and its authoritative enforcement as regards the other. For the one part I need say little. Unless it can be assumed, that under the Christian dispensation we are to have two Sabbaths, the systematic devotion of the first day of the week to those precise objects for which the seventh was set apart, involves, if it be established, all we have to prove. I say this in consideration of those who think that the seventh day was not included by the Apostle among "the Sabbath days" (Col. ii. 16). Those who think it was, cannot call me to defend my non-observance of it. It will be seen also, that the transfer, if made at all, was in all probability, a very gradual one. The great principle of the law being the same, whether obeyed on its original day or any other, and those amongst whom the gospel was first preached being proverbially pertinacious of national customs, it might be expected that such a change would be gradually developed, and that concession would be made, in this as in other matters, wherever it could be made without prejudice to what was essential. Of such concession we have decisive evidence in the direction to the Gentile converts (Acts xv. 28), Paul's circumcision of Timothy (xvi. 3), and the whole affair of his appearance in Jerusalem (xxi. 20-27). We have to look, therefore, for decisive but gradual indications of the will of God. Such indications we find.

The two greatest events which, spiritually considered, the world has ever seen—I mean the resurrection of Christ and the Pentecostal opening of the Christian dispensation, took place on the first and not on the seventh day of the week. This was a suspension of foregoing analogies. It might have been expected, that as the seventh day was made in paradise the day of special blessedness—had seen the imprisoned human family delivered from the ark—had witnessed the emancipation of Israel from Egyptian bondage—and borne testimony, thorugh so many ages, to God's covenant mercies in the sanctuary, these two events, the very foundation stones of all Christian faith, would have taken place on that day also. God ordained it otherwise, as if to identify devout commemoration hereafter with another day. Again, it was prophesied that God would, in the latter day, make those who kept his Sabbath joyful in his house of prayer: but Christ for the first time revisits his disciples on the first day of the week, making, as the historian significantly tells us, "the disciples glad when they saw the Lord;" and his subsequent recorded visits to them collectively, occur again and again on the first day of the week (see Mark xvi. Luke xxiv. John xx.) So, as we have observed, the Comforter descends on the assembled Apostles on the first day of the week, as if further to identify that day with the promise. Accordingly the first day became henceforth to the Apostles, then inspired, their special day of holy convocation. I will not trouble you with proofs; this is notorious and undisputed. The non-existence of any injunction amongst the Apostolic writings gives no shadow of ground for cavil as to the real transfer here involved. We have before proved that the Sabbatic law was binding. The transfer is all we have now to do with. These holy convocations were authoritative. St. Paul enjoins converts not to forsake the assembling of themselves together. (Heb. x. 25.) The fourth commandment remained unblotted in the Decalogue, which was constantly quoted as a standing rule of life. The Jewish dynasty with all its rites had been long doomed, and was left to fall. The ceremonial Sabbath died, shall I say a violent death, when the holy city was laid waste; but holy day was still kept on the first day of the week. The disciples were called by "a new name" to distinguish them from the ceremonial Israel; and their Sabbath, in like manner, was called by a new name. Christians met henceforth to worship Christ on "the Lord's Day." In due time the transfer became practically developed. Ecclesiastical historians bear testimony to it with one collective voice. "I assert it," says our Bishop Andrews, "on my credit, that there is not an ecclesiastical writer in which it is not to be found."*

I go on to observe—

2. *There are reasons for the transfer.*—The old day had become inappropriate. It not only did not agree with the great event to be commemorated, the birth-day of the "new heaven and the new earth" God had promised; but it was otherwise disqualified, if I may so speak, for such appropriation. The Sabbath is essentially a day of jubilee. Its rest is not mere rest. Physical relief is but the foundation stone, fair and solid, but nothing else. From this all shoots heavenward, and becomes lustrous accordingly. There is a beautiful moral symmetry in the Sabbatic institution. God rested from his six days work, and complacently blessed what he had made: man is to rest from his six days work, and to realise that blessing. The wheels of trade are to be stopped, that the "still small voices" may be heard. They are to be stopped the whole day, that its echoes be not broken. But there was a greater work than creation to be wrought, a work so stupendous that the former was to be forgotten in comparison, (Isaiah lxv. 17), a moral universe in which an incarnate God should be the "sun of righteousness." The first creation was so glorious, that "the sons of God shouted for joy" to see it: of this the mystery is so deep, and the rapture so intense, that the angels stand still and silent, desiring to look into it. This is the work the Christian Sabbath was to celebrate. But this work could not be celebrated on the original day. The day agreed not with it; the work was not complete. The voice had not gone forth, "Let there be light." Hell seemed to have triumphed. "The life of men" was in the grave. Faith's hopes were buried with him, and there was a sealed stone upon them. This was the last day of the original Sabbath. It showed that nature's glories had set in night. I put it to the heart of every devout believer in Christ, whether the seventh day could henceforward be the holy Sabbath unto the Lord.

Every way we look on this subject, we read the same great truth. Christ's resurrection made a new epoch. Old things past away—the veil of the temple rent in twain—a new and living way opened for all mankind to the very holy of holies—sacrifice and burnt offering at an end for ever—circumcision abolished—God's covenant mercies no more confined to one family—the spirit promised to write the moral law on fleshly tables of man's heart—a new order of things established in the spiritual world, and an order so distinct from all that went before, that it was death for even faith to cling to what was vanishing away. Was it not fitting that the Sunday of all the week should be lit up with a new radiance? Was it not fitting that an ordination still needful as ever, should, whilst continued, bear witness to the change? Was it not fitting that, as Bishop Horsley has well observed, a new protest should be made, against Judaism, as well as Atheism, now that to retain Judaism was nothing less than to fall from grace?

Such reasons being manifest for the transfer of the Sabbatic rest, we need not be surprised that even in Jewish prophecies it had been darkly foretold. The 118th Psalm, to go no further, is, as we can now read it, in point. The Psalmist had been speaking on the 19th verse of public worship, the great characteristic of the Sabbath-day. In the 22nd verse he says, "The stone which the builders refused is become the head of the corner." Who is really meant is indisputable: Christ applied the passage to himself, as did Peter to him afterwards. (Acts iv. 11). The Psalmist goes on to say, "this is the day that the Lord hath made, we will rejoice and be glad in it." Now what day this despised stone was made the head of the corner we have already seen; and it is this day, emphatically, on which jubilee is to be kept.

I will not multiply superfluous proofs. I have duced these to illustrate, rather than to justify the transfer, and to strengthen by moral arguments, the conviction that there was a real transfer. There are reasons for the institution being changed: *there were none for its extinction.* We should positively invert the whole order of God's arrangements of mercy, could we strike out such an institution from the Christian covenant.

I observe,—

3. *The essential character of the Sabbatic law is not damaged by the transfer.*—The fourth commandment reserves to God one day in seven; that day is still reserved. The fourth commandment marks the provision God has established for purposes which are apt to be lost in the secular labours of our earthly life: this provision is still preserved, and secured to the same objects. The fourth commandment bids us undo heavy burdens which physical nature was never made to bear continuously: we are still under the same obligation, to "let the oppressed go free." The fourth commandment bids us commemorate God's creative goodness; we still commemorate it. The inspired motto of the Christian Sabbath has been just quoted, "this is the day which the Lord hath made." Its superinduced connection with the blessed Saviour's second birth is no real infringement of the principle of the law. It is in perfect keeping with the whole tenor of Church history. The old economy, I might say the Old Testament, is in like manner every where spiritualized by the Gospel. The bounties of creation are all types of better things. The sun, the stars, the rock, the river, are all so many images appropriated to Christ. The beautiful 65th Psalm is a prophetic mirror, reflecting in the gifts of nature, the blessings of his grace. It is not unseemly, therefore, that we read the brighter in the darker. Nor is

* First Sermon on Mark ii. 27.

* Bishop Andrews on the Commandments.

Digitized by Google

it a solitary instance. We sing old David's songs in all the churches of Christendom. No one thinks of turning our Sabbath harmonies to discord because these ditties were first written for Jewish harps and hearts. Nor is the objection that we celebrate creative goodness on the wrong day admissible. There are state reasons why kings' birth-days are not always kept by nurses' reckonings. Nature's birth-day may be royally kept, though "that which was made glorious hath no glory in this respect, by reason of the glory that excelleth." There is a sublime analogy in all this. "Whatsoever things were written aforetime, were written for our learning." Translate Jewish letters into Christian ones, and the heart finds itself at home. "We are come to the general assembly and church of the first-born." The promise is perpetual, it is still "to you and to your children." And the law, the moral law, is perpetual; and both are but parts of a magnificent whole. Live on the one and you will live after the other. Neglect the one and the other will come to nought. And the fourth commandment is part and parcel. It cannot be severed without something worse than mutilation. It has special promises connected with it that we cannot do without. It remains an essential member of the Christian code. You have no possible right to call it "Commandment fourth with the principal part left out."

I have thus, sir, answered, as I trust, your challenge as to the Divine Command. I really know not how a devout and reasonable man can put together what has been brought under review without feeling that the Sabbatic law is still as binding as ever. This has been the simple object of my efforts; and in pursuit of this object I have been less anxious to accumulate all the arguments which might be urged, than to present, in distinct order and due proportion, the great substantial proofs. I shall be prepared, if needful, to substantiate what I have advanced. I could easily present an array of authorities enough to make a reflecting man tremble ere he spake flippantly or acted presumptuously as regards the Sabbath.

Ere I forget, however, the word authority, I must add a remark or two. Had those members of the Church of England you have referred to, held the opinions you have supposed them to hold, they had sinned grievously against the pledge they had given of their better faith. The Church bids them read the fourth commandment *as a part of God's law*; and they have both subscribed a declaration that this was sound and good, and either read this law, or been present when it was read before the people, accordingly. I know not how men can eat something more than the church's bread, and stand forth the while as impugners of the fourth commandment. This is, of course, their business. There is something, however, which belongs to me. Whatever their arguments, their authority is good for nothing. Be they Archbishop or Archdeacon, or but simple parish priests, the collective wisdom, and I must add, collective integrity of their own church is against them; and the church's voice finds an echo throughout the great collective body of the Church Catholic. As regards one of them, however, I must yet detain you a moment. The Archdeacon gets hard measure. You, Sir, quote him as your authority, yet elude one half at least of his verdict. He says, "the assembling on Sunday for Divine worship and religious instruction, is a law of Christianity, of Divine appointment, the resting on that day longer than is involved in such worship and instruction is a human ordinance, *binding nevertheless on the conscience* of every individual of a country in which a weekly Sabbath is established for the sake of its beneficial purposes." And he even goes into some close reasoning, to show that there were in the peculiar circumstances of Apostolic times, grounds sufficient for the non-appearance in the Apostolic writings of a distinct ordinance on the subject. Paley leaves you thus, practically, in the precise predicament to which my arguments reduce you. He says, God's law binds you one half, and conscience the other. It is plain that Paley must no more be quoted than Horsley, for what you call a "worldly sort of issue." Conscience admits no such thing as a worldly sort of issue; and conscience, I need not say, were there no written ordinance, is law.

I might ask what Paley could mean by resting longer on the Sunday than is necessary for worship and instruction. The times of detention will of course vary, whether from the prescribed rules of the service or the prolixity of the preacher. Those of attendance must also vary by the individuals own sense of the need of "line upon line, and precept upon precept." Am I to suppose that the Archdeacon contemplated a "sliding scale of duties?" But I will not indulge pleasantry on such a subject. I must solemnly protest against the absurdity of such an arrangement. Had not Paley declared the whole day's rest to be binding on conscience, I should have wondered how so acute an observer of men and things could have thought a moment of public worship as a standing rule of social life, without an authoritative suspension of all secular business. On this subject I will not repeat what I have elsewhere urged. I grieve to see that you, Sir, seem disposed to make the experiment. It must fail, were it even lawful; but the law of God forbids it. I recur to it only to say, that even Paley does not sanction it.

I have now redeemed my pledge, and will not trespass longer on your limits. I leave a thousand matters of detail, because I am not called on to offer them; and feel bound to respect the limits you have prescribed. What you say about our proposed treatment of Jews and Sabbatarians shall be gravely answered when I have reason to look on it as anything beyond a joke. At present I content myself with responding to your challenge. I trust that "the Divine command" is satisfactorily vindicated. I am not answerable for all the incidental difficulties it may involve, still less for all the crudities or scrupulosities its advocates may deduce from it. Its interpretation demands discretion as well as docility. I believe that the conscience is likely to be enlightened, as it is responsive to God's claims; and that "if the eye be single the whole body will be full of light." This, however, is beyond my purpose. The Sabbatic law is before us all. In its broad essential lines it is binding as ever. It is not more authoritative than necessary. God will not dispense with it. Man cannot do without it. He who obeys it—I say it not with Pharisaical formality, but with the obedience of the heart—launches on an ocean of happiness, exhaustless, interminable. He who impugns it, breaks it in his own conduct, or "teaches men to do so," plunges into a gulph from which "modern toleration" cannot save him. Whether you, Sir, will devote your useful columns, or those for whom you write their beautiful machinery, to purposes at once so unwarrantable and disastrous, I must leave to other consciences, and to the grace and mercy of our common Lord. That you may not do so, is the sincere and not unfriendly desire and prayer of

Sir, your obedient Servant,

AN ANTI SUNDAY TRANSITARIAN.

Bristol, Aug. 28, 1841.

RAILWAY DIRECTIONS, &c.

To the Editor of the Railway Times.

SIR.—In your last Saturday's paper I observe a reply to my letters on second class carriages, from your correspondent "G.," and I hasten to assure him, through your indulgence, that if my waggery has been too freely used, it was not in the least my intention to wound the *amour propre*, of one, who, from the style of his letter, is both a good man, and a gentle, and, therefore, is as much a friend of decency and civilization as I am; and while I declare that my assumption of this characteristic was by no means intended as a set off against any want of it in him, by throwing his heart or manners into the shade, which he seems half to imagine it was, I must still remind him, that there is a vast difference between being a friend *of* decency and civilization, and a friend *to* the same. That he is a promoter of improvements I can well believe, but I cannot as readily admit that one who sets the moral injunction, "to do unto others as you would they should do unto you" aside, to suit his worldly views of gain, or who advocates a cruel system, (for cruel I still call it) merely because he does not see the present remedy, (and a remedy there always is for every thing if diligently sought for,)—I say I cannot quite admit, that such a one, though loving civilization quite as much as myself, is either quite as much a friend to it, or quite as much a promoter of it. The application of a proper remedy for the prevention of first class passengers choosing a seat among their inferiors in the second class carriages, for the saving sake, and which I do not admit, as I said before, will ever be a common practice, is matter rendering this a longer letter than I would impose on your good nature the insertion of in your paper. It is my maxim to do, and advocate the doing, on all occasions, the right—the humane—and the decent thing, and then to trust afterwards to the remedying any trivial injury to myself by the so doing. This is what I call being a true friend to decency and civilization. My friend "G." has unequivocally declared his desire to write for truth alone; and the very handsome way in which he acknowledges the force of my arguments is the best proof of his sincerity, and, such being the case, I the more readily undertake to set him right upon another point in his last letter, referring to the free ticket system, as he calls it, on which I feel sure I can speedily convince him of his errors.

Much has been said by people both ignorant of the duties of a Director, and envious of their temporary power, of their overpaid services, of their too great number, and, of their privilege of travelling gratis along their lines. I propose to deal with each of these in as short a way as this letter will admit of.

1st. It is certain that the salary of Directors, if set at 100*l.* per annum, which is about the average, is a very limited reward for the arduous services of a gentleman; by arduous, I do not altogether mean positively laborious, (though from the passing of the bill to the final opening of a railway, they indeed are so), but for the loss of time, or of other gain he is obliged to forego, in favour of those duties.

Directors, it should be remembered, are—or ought to be, at any rate—men highly respectable in society. Their position, therefore, requires that they should be adequately remunerated for the loss of their time, and for the advantages of their education. The position they occupy in the good opinion of the world, and the reputation they enjoy, is to the former the surest guarantee of their fitness to be entrusted with the concerns of a Company by whom millions are to be disbursed. If, through a mean consideration of economy, the salary now given to Directors were curtailed, it is obvious to every discerning mind, that the result would be, that the situation would not be worthy the consideration of a man of character or position in society, the consequence of which would be, an abandonment of his duties or his retirement from his board. In the former case the business of the Company falls into the hands of a limited *clique* of persons, not always the best portion of the Board, who find it to their account, by pocketing his *fines*, to render their constant attendance; and thence arise those little backslidings which but too often degenerate into *jobs*, where a small section of a body obtains the entire controul over a large mass of money. In the latter case, of his resignation, it is equally obvious that the office of a Director would be wholly unworthy the notice of gentlemen whose education and integrity ought always to procure them better employment, and that, therefore, the direction would gradually become filled by a class of men of a LOWER GRADE in society, and whose position in the estimation of the public would fail to render to the proprietary *that confidence* on which the security and well-being of such undertakings are entirely based. Men not absolutely what the world, alas, calls dishonest, but whose moral guidance does not recognize the turpitude of a *job*, and who, throughout their lives, had made their interests their only guide, would

Digitized by Google

attain the supremacy, at any rate, if it were worth the while of the better class to continue in the Direction, it *could only be* through a system almost equally destructive of the welfare of the Company—namely, that of their laying themselves out to be Directors to many other similar concerns. The danger of such a division of their labours (to say nothing of the total impossibility of their doing their duty conscientiously, if conflicting interests should arise between the several Companies) is too palpable to require comment.

2ndly. As to the *number* of *Directors* which has been so carped at. With this subject I propose dealing precisely after "G.'s" recommendation, who is for "taking human nature as we find it, and legislating accordingly." It is an old and equally well-approved maxim, that no government is so good as that of a despotism, under a single head, *if*, (how much depends on *that* if!!!) it be possible, always, to ensure the dominion of a truly good and wise man. From the patriot king down to the Chairman of a private Company of Directors, this truth is *admitted*; but, such *is* human nature, that, we are, few of us, even wise or virtuous enough to be able to divest ourselves of prejudice in the choice of such rulers, were they easy to be found, which they are not: but when once installed what becomes of the affairs of the concern if he retires or dies? Can such another be immediately found? The plan is visionary—the consequences would be fatal. The same argument applies exactly to the danger of suffering the power of the many to fall into the hands of a small clique subservient to the Chairman of a Company. The fewer the Directors, the easier he can obtain entire control, and the more temptation does there exist for resorting, with impunity, to malpractices. There is always in every such society a large section, who from interest, indolence, or incapacity, make the Chairman's opinion the rule of their guidance; and it is human nature, when we find ourselves in absolute power, to do things which we should otherwise have questioned our right to do, and thus abuses ever creep into Governments, and would become established but for the vigilant eye of opposition. In all Boards there are a number of men who from public or private calls of business cannot always attend their meetings, and these amount to about *one-third* of the whole Direction. If, therefore, one-third be deducted from the number, is it not a fact that, if the Board is constituted of only six or eight, for instance, the Chairman's party—having a point to gain, and understanding each other—can always outvote the opposition? On the other hand, there are always a few out of all large numbers who, from their position in society and their natural rectitude of conduct, are not only enemies to all jobbing, but fearless in the expression of their opinions, and determined in their opposition. One brave man has been known to stay an army; and so may one conscientious one frequently restrain a body of Directors who are being drawn along towards the prosecution of undue practices. Such a man (one who will bell the cat, in fact,) is the nucleus around which the opposition will readily congregate, and to such oppositions all societies are deeply indebted. No Direction, having the disposal of a million of money, should be composed of a less number than twelve, Fifteen would to *me*, as a proprietor, be a better guarantee of the safety of my property. Out of the number 12, any Chairman may reckon, on occasions, on four personal adherents. If, then, four are usually absent, and the remaining four are in opposition—which of course in a Board is not a systematic one—the Chairman's vote decides the question; still, with four in the opposition, a determined man, conscious of a good cause, does not despair of success; and, if he fail, he has at least acted as a check; but if the opposing party be only two or three, by the number of Directors being reduced, few men would feel any hope of carrying a point against the Chairman's party. The greater, therefore, the number of Directors, the greater is the *security* of the concern. And is *this* a consideration to be overlooked, for the sake of a paltry annual saving?

The third and last subject I have to advert to, is what "G." calls the free-ticket system. I think I have above established it as a *fact*, that it *is* dangerous to entrust the powers of a Board to the keeping of a clique few in number; and if so, it is clear that it must be a matter of the highest importance that the many (to be useful) should be intimately acquainted with *all* the details of their profession, as subjected to their jurisdiction at their Boards. Now, Sir, I am led to this conclusion by a remark very common among those who would arrogate to themselves the whole power—that "too many working men at a Board does not *hasten* business." Granted—first as to the *too*, which being a truism speaks for itself; secondly as to the haste: but I deny that there can hardly be too much of *anything* that is *useful* (at all events it is better than too little of it), and I most unequivocally protest against any argument which recommends *haste* versus *prudence*. I never knew of an ill-drawn agreement or ruinous one-sided arrangement between two parties, that was not the result of *haste*. It has been haste which has rendered it a matter of doubt whether some of the best speculations in the world will ever repay the original projectors. Begotten in haste, reared in haste, and ending in *ruin*, is but too often the biography of such *otherwise* profitable undertakings. No one better knows the value of a hurry than a rogue: a wise man should always be distrustful of the motives of those who recommend *great haste*: they are seldom dictated by honesty, never by prudence. Now, Sir, let me ask of "G." how it is possible that a large section of a Board should ever become acquainted with all the details of making, working, and maintaining a stupendous work like that of a railway, with all its complication of expenses—of buildings, machinery, iron-works, carriages, &c., together with the examination of all contracts for works and materials, and the supervision of the duties of clerks, policemen, engine-drivers, guards, and porters, and be competent to direct or detect these latter, without being constantly on the line? Nothing but real *practical experience* can ever make a man master of his business. The soldier is taught his manual and platoon; the surgeon walks the hospital; the secretary begins as a clerk; the lawyer, by engrossing deeds he does not understand; in fact, one practitioner is worth three theorists in any profession. It will be remembered that Directors being gentlemen not dependant for their livelihood on their salary, have other duties which call for their time and attention as well; and not being paid sufficiently by the proprietors to render it a matter of *obligation* their adapting the chief part of their time to railway management, cannot, of course, afford to neglect their private affairs in studying to comprehend the various details they are afterwards called on, at their meetings, to discuss and to legislate upon, and therefore few are the opportunities offered them of travelling on the line.

If there be a fault more glaring than another in the constitution of Boards in general, it is precisely *that which* "G." would, by what "O. Z." calls his "squeamishness," increase rather than diminish the ill effects of, namely, the want of a sound practical knowledge of their profession by Railway Directors, and which can only be attained by a constant and attentive personal examination of everything connected with the business of the working of a line, either in or out doors. Instead, therefore, of lamenting the *injustice* of Directors travelling free over the line, even when on their private affairs, if "G." would quietly sit down and turn his wits to the invention of any practicable bye-law which could render it *imperative* on Directors to travel twice a week, at the very least, along the whole line,—nay, even if it went to the paying them something extra for so doing, I am *confident* he would confer the greatest possible benefit on these undertakings, not with a view of encouraging Directors personally to direct (for it is always understood that, except in very extreme cases, no one interferes with the working officials), but, for the purpose of reporting to their Boards the result of their observations, and tendering their suggestions, valuable only when locally taught them by experience. The next advantage (and a mighty one it is too) is the knowledge, on the part of all the sub-officials, that the eyes of the Directors are constantly supervising all their actions with well instructed scrutiny; and the *more* of these eyes that are on them, or the oftener used, the *less* likelihood does there exist of accident or disaster along the line. This is the case in the military profession more particularly, where the highest example of exactness and punctuality is shown, as attained chiefly by the practice of the officers residing among, and constantly watching over and encouraging by their example, those placed in subjection to them. A Director of a railway must indeed be a *sad idle fellow*, and most terribly *bothered* to kill time, if he can find many days in the month to be travelling up and down the line for *pleasure*: and if he did so, the loss to the Company would be trivial in comparison with the advantages rendered it in the knowledge and experience he gains by so doing—for a man must indeed belong to the family of Dunderheads (not a few of whom, by-the-bye, *do* fill the situations of Directors) not to gather, at each such trip, a certain amount of useful information; besides, it will be recollected that, but for this privilege, very few Directors would pass, three times in the year, down the line on *bona fide* delegated business from the Board.

Thus, Sir, I would endeavour to show that, if any expedient could be hit on, not only for *inducing* the Directors constantly to be on the line, or for residing near it, but to *oblige* them even to pass over a portion of it at least five times a week, the greatest possible service would be rendered to the public in the way of insuring greater security and attention to travellers, and a better promise of prosperity to the proprietors. It is the want of the responsibility that would then attach to a Director if any grievance went unredressed or any malpractices were resorted to by the officials, that is *most* to be lamented; for all will exclaim, on such occasions, "thou canst not say I did it;" and a whole hecatomb of clerks, policemen, and porters, are, *with little compunction, offered up to appease the public indignation*, and to save the reputation of the Chairman of the Board.

I remain, Sir, your obedient servant,
HUMANITAS.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Founded on the Report and proceedings of the Great Western Railway of 20th inst., I beg to send you the subjoined calculations as to its future receipts and profits, showing (notwithstanding its increased capital) that dividends may be expected for the current half-year equal to six per cent. per annum, which for the following year or years will amount to 10 per cent. per annum, exclusive of profits on leases of its branches, which may be reckoned to produce two per cent. per annum in addition.

The said 10 per cent. would require an average receipt of 117*l.* per mile per week on the 118½ miles, and this, I trust, will be deemed moderate, being much less than the annual average of the only two lines worthy at present to be placed in comparison with it, viz. the Liverpool and Manchester and the London and Birmingham, their averages being respectively 134*l.* and 165*l.* for 12 months, ending June 30, 1841.

With respect to working expenses, they are taken at 35 per cent. pursuant to the opinion of the Secretary, expressed at the last meeting, who then explained that the result recently, rather less than 45 per cent., would in the first instance be brought below 40 per cent., and subsequently, not exceed that of the London and Birmingham already reduced below 35 per cent.

Since the entire opening of the line, the weekly increase of traffic has been relatively greater and more rapid than was ever before produced by transition from partial to entire opening, and affords a most satisfactory answer to the apprehensions of many—that the average receipts per mile at the London end would not be equalled by the average of the whole line when opened.

A striking proof to the contrary of such appre-

Digitized by Google

hension is afforded by the receipts of last week, which (deducting 2,000*l.* for the branches of 51 miles) gives a result of 111*l.* per mile per week for the 118¼ miles; whereas for the corresponding week in August, 1840, it was only 92*l.* per mile per week, on the 63 miles at the London end then in operation.

The traffic in merchandise, &c., has not yet reached 9*l.* per mile per week. It may be reasonably anticipated that this will speedily amount to 20*l.* to 30*l.*, being moreover less liable than passenger traffic to diminution during the winter months.

If by possibility the recent addition to the capital of 550,000*l.* should ultimately prove insufficient, it will be found on the same data that for every 100,000*l.* borrowed in addition thereto, the effect would be either to diminish the dividend of 10 per cent. per annum in the proportion of three shillings and fourpence per cent. per annum, or such additional 100,000*l.* (still to yield the 10 per cent.) would require an increase of traffic of rather less than 150*l.* per week. Thus, allowing for argument's sake, that the capital were carried to 6,400,000*l.*, either the dividend of 10 per cent. must be reduced to 9*l.* 16s. 8d. per cent., or an increase of traffic would be required to 13,985*l.* instead of 13,835*l.* per week.

It is to be regretted that the practice of withholding from you the proper separation of the weekly traffic on the main line and branches respectively, should still be persisted in. What good motive can exist for this mystery? As to the statement at the last meeting that it would not be "prudent" to disclose it—why would it not be so? This was left entirely unexplained, and appears to defy conjecture! The want of this reasonable information necessarily places your weekly calculations (compelled as you are to use the divisor of 169¼ instead of 118¼), in a disadvantageous point of view. Yours respectfully, F.

Bath, August, 1841.

Calculation for Half-Year ending 31st December, 1841.

Traffic 169¼ miles, week ending—			
"	" 4th July	£11,902	
"	" 11th "	12,826

Average		£13,953 per week.

GREAT WESTERN AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—I cannot help drawing attention, through the medium of your paper, to the Report presented at the meeting of the Great Western Railway Company last week, as another proof of a practice, too common, alas! with the Directors of these great undertakings. It seems the cost of this "splendid line," as they choose to call it, is now fixed at six and a quarter millions, but who can say even *that* will be sufficient? The Chairman very prudently declined to give any pledge this time, and all the Engineer could say, was, he did not believe it would be exceeded. But let us see what the Chairman said about the cost, at the previous half-yearly Meeting, in answer to a question by Mr. Barnard. These are the words as reported in the *Railway Times*: "The Chairman said there would be no *increase of the present capital*; the estimate *did* include the Locomotive Power. In fact, the entire line of road would be made for the money already got." The last revised estimate at that time was 5,750,000*l.* The Chairman has had a little more experience, which has evidently made him more cautious in making promises, than he was at that time.

When the London and Birmingham line had been finished upwards of three months, the outlay was then stated to be 5,018,816*l.* Since then it has gradually increased to its present amount, 5,724,807*l.* as by Report, February, 1841. If we suppose the additions to the present outlay on the Great Western to be no more in proportion in the same period of time, the cost of this line by midsummer, 1843, will be close upon seven millions. But if we consider that the splendid station of the Birmingham Company at Euston Square, was finished at the time just named, while the Great Western has not at present any London station at all fit for a great Company's station, there is little doubt there must be a further addition to the capital on this account, (indeed it was hinted at), which would swell the gross outlay to something over seven millions. What traffic can pay for such an outlay, I leave the public to determine.

We, in this part of the country, are apt to point at the Manchester and Leeds Company, as an instance of extravagant expenditure, but the Great Western people may now keep them in countenance, for the cost per mile will be about the same on both lines. The traffic on the Leeds line is now 100*l.* per mile per week, while that on the Great Western is about the same, after deducting the tollage and expense of working the branch lines; yet the shares of the former Company are 14 discount on 70*l.* while, strange enough, those of the latter are quoted at a premium. I am not a proprietor in either, but feel an interest in these matters, and can subscribe myself with truth,

A CONSTANT READER OF THE "RAILWAY TIMES."

Manchester, August 31st, 1841.

GREAT WESTERN, AND BIRMINGHAM AND GLOUCESTER RAILWAYS.

To the Editor of the Railway Times.

SIR.—I propose to show that the proverb "Kissing goes by favour," is as true in railway business as in Love's affairs. My proof shall be the contrast of the Great Western, and Birmingham and Gloucester Railways—the one undertaking standing very high in public estimation, and the other equally low.

The data of my calculation will be, as to capital, the last Report of the two Companies, and for traffic their published weekly returns.

First, as to capital. The Great Western Company state that their capital will be 6,100,000*l.* independent of 150,000*l.* for the plant of the two lines which they lease—6,100,000*l.* for 118 miles will give a total cost per mile for this railway of 51,699*l.*

The Birmingham and Gloucester capital is altogether 1,500,000*l.* which for 53 miles will give a total cost per mile for this railway of 28,301*l.*

The cost of the Birmingham and Gloucester Railway per mile, is therefore a little more than one-half the cost of the Great Western Railway.

A minute's reflection will make it clear that to form a correct judgment of the relative value of railway undertakings, two things are required to be known: 1st, the cost per mile, and 2nd, the receipts per mile of the railways to be compared; gross receipts are most fallacious, and indeed, good for nothing, unless taken in connexion with original cost.

But having obtained these two items, it is almost impossible to err in forming a correct opinion. For example, if one railway has cost per mile 50,000*l.* and another 25,000*l.* and if the traffic on the first is 100*l.* per week, and on the other 50*l.* it is manifest that having reference to the original cost, and assuming the cost of working to be equal, the value of a share in each undertaking would be precisely the same, and would produce the same per-centage, although the gross receipts of the one line would be double those of the other.

Keeping these general observations in view, we will pursue our comparison between the Great Western, and Birmingham and Gloucester Railways. The original cost of each per mile we have before stated; we will now refer to the traffic, and which I have taken from the last four numbers of the *Railway Times*:—

Great Western Receipts.

	Total weekly Receipts.	Receipts per mile per week.
July 31	14,196 11 5	£84 1 3¾
August 7	14 933 18 8	88 4 8¾
August 14	14 729 18 11	87 0 7¾
August 21	14,582 0 6	86 3 1¾
Total		£345 9 8¾
Average per week per mile for the four weeks		£86 7 5

Birmingham and Gloucester Receipts.

	Total weekly Receipts.	Receipts per mile per week.
July 31	£2021 5 8	£39 12 7¾
August 7	2244 14 1	44 0 3¾
August 14	2203 12 9	43 4 2
August 21	2177 18 1	43 9 9
Total		£170 6 10
Average per week per mile for the four weeks		£42 11 8¾

These figures show that, with a slight fractional difference, the returns of the Birmingham and Gloucester Railway per mile per week, are just one-half those of the Great Western, and it follows that the one line, costing only half the amount of the other, the real value of shares in the two undertakings is precisely equal. In the estimation of the public, however, the shares are not of equal value, but on the contrary those of the Great Western are at 15 or 16 premium, whilst those of the Birmingham and Gloucester are at 40 discount, being a difference of 55 or 56 per cent. Can there be a clearer demonstration of the truth of the proposition with which I set out, and that if kissing did not go by favour, either the shares in the Great Western Railway would fall, or those in the Birmingham and Gloucester Railway would rise so as to equalize the price of the two. Whether the rise or the fall should take place I do not pretend to determine. Your's &c. WOTTON.

GREENWICH AND CROYDON RAILWAYS —THE TOLL QUESTION.

To the Editor of the Railway Times.

SIR,—In pursuing an inquiry with a view to establish a principle, it is highly conducive to a sound result that the inquirers should not only be so far disinterested as to be open to conviction, but they should be able to appreciate and ready to acknowledge the force of their opponents' arguments; and such an one I take your correspondent "Modus" to be.

Though the plan he suggested, of a fixed rent and a small toll *per capita*, may appear to him more simple in form than a toll taken in a definite proportion of the receipts from traffic passing over the trunk line, it is by no means so easy to arrange, because no amount of rent could be fixed upon as a remunerative toll which would not be continually at variance with the toll justly due, in consequence of the great fluctuations to which all traffic must be subject; and as "Modus," on principle, prefers a definite proportion of the receipts, I will endeavour to find out, if possible, a universal rule for fixing the proportion.

If cost be made the scale of the division, then an amalgamation of interests, as well of profits as of charge, must be the basis. This is precisely the case in every railway undertaking; some part of the line will absorb more capital than another part, and the greater amount of capital so absorbed receives a greater share in the division of the profits than there is received on the capital absorbed in a like distance on the less expensive portions of the line. On this principle the Greenwich Company would be entitled, in respect to its comparative distance, to a larger share of the *net income* of the Croydon Company; because for that distance a greater capital has been advanced than for a like distance in the Croydon line: but on this principle it also follows, that if the Greenwich Company seek a share of these profits in proportion to the capital it has contributed, it must subject to a similar distribution all the profit otherwise derivable from its own portion of the joint railway. Let us then ascertain the capital mutually contributed. I understand "Modus" to say, let one half of the cost of the railway between Corbett's lane and the London terminus be set down to the account of the Croydon Railway. If the Croydon Company have half the use of this portion of the Greenwich Railway, there could be no objection thereto. Care, however, must be taken, that it is only charged with half the capital expended in the construction; and if any interest arises out of this expenditure (such as unappropriated land, rent of arches, footpath, &c.), the Croydon Railway would be entitled to half of all such interest.

On the principle of cost, the expense incurred in making the new viaduct, say 150,000*l.* (not 200,000*l.*, for the sum laid out by the Greenwich Company on the station is solely for its own use) must be added, not to the Croydon Company's half, but to the whole Greenwich outlay; and this whole outlay must be equally apportioned between the Greenwich Company and the Croydon Company, otherwise this latter Company would be paying for the new line, as well as for the old one which they can never use. I anticipate the plea that the new line is made exclusively for the Croydon traffic, and ought therefore to be paid for by that Company; but when it is remembered that the insufficiency of the old line for the united traffic of the Greenwich and Croydon Companies was the real and sole cause of this additional outlay, the cost of the new viaduct cannot be charged exclusively to the Croydon Company any more than to the Greenwich Company, but must be apportioned as the rest of the Greenwich outlay.

By this mode of operation a partnership in the profits of half the Greenwich Railway thus transferred and in the profits of the whole of the Croydon Railway, is effected, and this joint profit will have to be apportioned to each Company according to the amount of capital respectively contributed by them. Objections will always arise to such an adjustment. The terminal railway might be in a position to say to the auxiliary, as is the case with the Greenwich Company, "My neighbourhood is so populous, that I expect the profit made up of what each passenger pays over my distance of the line will remunerate me better than a share of the general profits in proportion to the capital I have contributed." And the auxiliary might on the other hand say, "I have so few passengers passing over your trunk compared with the rest of my profitable business, that I do not choose to yield a large share of my own proper profit for the small advantage I should have in passing my few passengers over your line, I would rather pay a toll per passenger." When, however, two parties agree that such an amalgamation of interests, or, in commercial terms, such a partnership would be mutually advantageous it becomes a just rule of division. Whether "Modus" on the part of the Greenwich Company would consider such a partnership desirable or not, I pretend not to divine, as I cannot enter into the secrets of the Greenwich policy, or into the imaginary prospects of its Directors with respect to the Croydon toll; but as a Croydon proprietor I can tell him I have no affection for such an alliance, except so far as respects the passengers going over the Greenwich portion of the line, because I feel persuaded the Croydon line has resources in itself as well as in conjunction with the Brighton and Dover Railways entirely independent of the Greenwich Railway, and of the London Bridge terminus; for these reasons, therefore, I sincerely hope the Croydon proprietors will never consent to any such partnership.

Having thus solved the problem of the proportions of the profit due as toll for the use of the trunk on the principle of cost, the next problem is —what proportion of the fare should be paid for its use in respect of distance? I can conceive nothing fairer than that of giving up to the trunk or terminal Company all that is paid by the public for the distance travelled upon it—first deducting the cost of carrying. What that cost may be cannot readily be determined, but I think it may be so closely approximated as to remove all dispute on that point. I think the Croydon Directors estimated that it would be about one quarter of the fare. Now, if they would be willing to consider it at that rate in any negociations they may have on the subject of toll with the Brighton and Dover Companies, they manifest their sincerity at least, if not their accuracy.

But there is another rule which, though not founded on the "eternal fitness of things," it may be expedient to adopt for the present difficulty. I will only propose it, and leave others to adopt, refute, or reject it, as they may like best:—

Ascertain the cost of the Greenwich Railway, between Corbett's Lane and London Bridge, including the new viaduct and station.

Deduct from this sum the cost of the station and value of the vacant land.

Divide the remainder—and consider the moiety thus obtained as the capital contributed by the Greenwich Company to the Croydon Railway.

Ascertain the cost of the Croydon Railway.

Let the sum received on passengers passing over both the Croydon and Greenwich Railways, after deducting the *traffic charges*,* be divided between the two Companies in proportion to the cost of each.

I am, Sir, Your obedient servant,
INVESTIGATOR.

RAILWAY GRANTS FOR RELIGIOUS PURPOSES—THE BIRMINGHAM VOTE.

To the Editor of the Railway Times.

SIR,—I observe in the account of the Eastern Counties' Railway meeting, held on the 12th ult., the following passage:—

"Mr. Hewett referred to the proceedings consequent on the Birmingham vote, when at a subsequent meeting a resolution was passed, allowing every person who disapproved of the application of the money to get back his proportion of it."

(Mr. Ratcliffe—"Which nobody did claim back.")

* Traffic Charges—including much more than cost of carrying.

It will be recollected that the above passage refers to the grant of 1,000*l.* of the Company's funds towards building a church at Wolverton.

Now, I feel assured that the gentleman who made the assertion that no one did claim back his quota, will regret that his information has not been more accurate, when I state that I have before me a list of fifty proprietors, holding in the aggregate from one to two thousand shares, who *have* claimed back their proportion of the 1,000*l.* I have reason to suppose that others have also applied for their quota beside the above.

I must express my full concurrence in many of the sentiments of the Editor of the *Railway Times*, enforcing the obligation to attend to the moral and intellectual condition of the workmen and their families congregated about these great undertakings. Never should it be forgotten that in bringing together so many elements of good or evil we are incurring a heavy responsibility. If our best efforts are not used to repress the evil and encourage the good, if we neglect the education of their children—and are regardless about their social condition or spiritual welfare—as we sow so we must expect to reap, and the fruit will be bitter indeed.

Whilst, however, thus anxiously desiring the welfare of those in our employ, many of us do not think that these objects can be suitably attained by the expenditure of the corporate funds for the purpose.

When *a capital raised by Act of Parliament for the specific purpose of a trading Company and limited to that express object*, is diverted to any other use, however excellent may be the proposed application, in our opinion the just and legitimate course of proceeding is abandoned for doubtful expediency. This is not a mere abstract principle which we contend for, but a question of vast practical importance.

Whenever a Company assumes the office of almoner, on behalf of its shareholders, whenever it enters on the province of the philanthropist, it not only narrows the stream of private liberality, but it quits the safe and neutral ground on which persons of conflicting opinions and discordant views on many points have agreed to embark together; it being the very condition implied by their common union, that whilst they comply with the terms of the Act of Parliament, their private views as to all philanthropic purposes, and as to all religious observances, *shall be let alone*.

Especially, then, is it a departure from that safe and neutral ground, and even from common justice, to seek to apply the funds of such a Company to the support of any one set of religious opinions, when these views are held only by a part of its proprietors. Neither is the difficulty obviated by giving to proprietors the option of applying for their share of the trading capital thus diverted from its legal channel. The distinction so made betwixt shareholders is invidious, and ought never to exist. Not a few have already felt hurt by such a proceeding, but it is to be hoped that none have purchased a character for "liberality" by the support of what they cannot approve. Had the question been calmly considered at first in all its bearings, the discussions would have been foreseen which have arisen, and which will, it is to be feared, create the most serious dissentions whenever introduced at our meetings.

I would therefore earnestly press upon those who are interested in these desirable objects to leave the very short time which we have for conference with the Directors to the really necessary business of the day—(for experience proves that it is quite little enough for the proprietors to obtain information on the state of their concerns)—and make their appeal to individual benevolence among the shareholders. I have never yet known such appeals when on right grounds fail in being most liberally answered.

Thus will our business be conducted without those interruptions to its harmony which will assuredly follow the attempt to carry out right objects by what many think to be wrong means.

Whilst in our corporate character we thus dismiss them from our consideration, I sincerely desire that our private exertions may increase, and our efforts

Digitized by Google

be united, for the spread of the Gospel, the extension of education, and the encouragement of habits of morality, temperance, and forethought, amongst our dependants and their families.

EDWARD SMITH.

Sheffield, ninth month 7, 1841.

MANCHESTER AND BOLTON RAILWAY.

To the Editor of the Railway Times.

SIR,—In the last week's *Railway Times* there is a statement copied from a local paper, entitled "Narrow escape on the Bolton Railway," which from its great exaggeration I have thought it right to notice.

Without affirming that "nothing did occur," and that "nobody was to blame," which would not perhaps be greater in extreme than the statement referred to; I beg leave to say that no loaded waggon or any other obstruction was left on the line upon which the engine was coming, and that the other part of the statement that the engineman and fireman jumped off when the train was at speed, and that the engine was stopped by obstacles thrown on the rails so as to enable another engineman to jump on, are equally untrue, as the train was conducted to the station by its proper engineman and fireman, a service they would not have been very fit to perform, had they jumped off as described.

The origin of the whole is, that some men were turning a waggon on a turntable that was on an adjoining and parallel line of railway, and had it at the moment at right angles to the line of rails on which the train was coming, and so near as to to bring the engine buffer into contact with the end of the waggon buffer, at right angles to the waggon.

The position of the train and the waggon was such that there could not be, and there was not, any danger to the train or passengers. Bnt I am not, on this account, attempting to justify the waggon being so left, for it is the duty of railway companies, so far as it lies in their power, neither to endanger their passengers nor to alarm them. The engine man, to enable the men to turn the waggon, had stopped the train, or nearly so, and it appears he alighted for a moment, which is the only foundation for the assertion that the train was abandoned.

JOHN HAWKSHAW.

Office, New Bailey-street, Salford, 13th September, 1841.

THIRD-CLASS CARRIAGES—NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Since I last addressed you I have heard, that the want or absence of seats in the third-class carriages is not peculiar to the Midland Counties' Railway, but is the custom on all railways on which there are third-class carriages; that, in fact, their having seats is the exception, and not the rule, as I supposed in my previous communication upon this subject.

That it is an evil imperatively calling for removal—or, at all events, amelioration—the following, which I had from a gentleman travelling on the Northern and Eastern Railway, and an eye witness, will, I think, prove.

He said, that in coming from Broxbourne he observed the third-class carriage was so full that the people appeared unable to turn either to the right or to the left; when (to his amazement) he observed an excavator, a strong and powerful man, presented himself for admission; the passengers remonstrated but to no purpose; the policeman opened the door, and he laying hold of the handles on each side, actually wedged himself in—although, as the gentleman said, with great difficulty, inasmuch as the carriage was filled, even then, to a much greater amount than it would legitimately contain.

This must be done by the Directors for the purpose of deterring people from travelling by them; for the expense of having an additional carriage can be little or nothing, inasmuch as many are to be seen at the different termini unused and unappropriated.

I thought it necessary to address this explanation to you, as my mentioning the Midland Counties' in my last might possibly be taken for a cavilling at that individual railway, whereas my complaint was against the system which, I regret to find, is much more general than I imagined.

I am, Sir, yours, obediently,

P. Z.

PARIS AND ROUEN RAILWAY.—CONTRACTS FOR WORKS.—From the Bridge now building across the Seine, at Oissel, to the terminus at Rouen.

The Directors hereby give notice, that the time for delivering the tenders named in the advertisement of the 1st instant, is extended from 12 o'clock, 28th September, to the same hour on the 22nd October, 1841, until which period Tenders will be received at the Company's offices, Rue Basse du Rempart, No. 52,

By order of the Board,
ADOLPHE THIBAUDEAU, Sec.

Paris, September 13th, 1841.

GREETHAM RAILWAY STATION.—TO RAILWAY CONTRACTORS, COLLIERY AGENTS, BUILDERS, JOINERS, CARTWRIGHTS, BLACKSMITHS, FARMERS, AND OTHERS.—To be Sold by AUCTION, at Greetham Railway Station, near Stockton-upon-Tees, in the County of Durham, on Tuesday and Thursday, the 28th and 30th September, 1841, and following days, Mr. MERRYWEATHER, Auctioneer.

A large quantity of timber, plank, deals, iron railing, &c. &c., belonging to Mr. THOMAS HUTCHINSON, consisting of 160 excavating earth waggons, 15 000 sleepers, suitable for pit props and colliery purposes, 400 tons of best malleable iron railing, 9 piling engines and 11 rams; 1 portable crane with power to raise 5 tons, 1 ditto smaller, 1,000 feet of Memel and American timber, of different lengths; 1,000 feet of Memel 3-inch plank, 1,200 feet of American ditto, 800 feet of ¾ and ¼ inch boards, 500 feet of oak, birch, and larch timber, 1,000 feet of Scotch deals and slabs, 150 excavating barrows, centres from 1 foot to 30 feet span, poles with wheels for horse roads, switches for crossings, piling windlasses and chains, guy ropes, blocks and scaffolding poles, wood and metal pumps, forced ditto, moulding hammers, hacks, pinches, bellows, anvils, and blacksmiths' tools of all descriptions, 6,000 fire bricks, 60 feet of boreing rods, brick tables, rullies, barrows, stock brick ditto, 2 clay mills, moulds, troughs, iron screens, levers and poles, matts, thistles, spars, cross-cut and hand saws, top screws, taps and dies of various sizes, clappers, 10 ton of round and flat iron, 20 dozen of new shovels and spits, 5 dozen of wood shovels, masons' riddles, hods, cement casks, scaffolding poles, bags of hair, round and square ovens, kitchen grates, a large quantity of windows and doors, fire grates, oil casks, cement ditto, tubs, pails, creels, large scale beam, iron scales and triangles, grindstone and frame, 2 casks of tar, a large quantity of new bed-ticking, 2 road waggons with broad and narrow wheels, 3 coop carts, 1 long ditto, harness for 80 horses, 2 cottages, built with deals and covered with tiles, with ovens and pots; wood-built stabling 240 feet long.

Sale to commence each day at 12 o'Clock.

TO ENGINEERS, IRON FOUNDERS, AND RAILWAY CONTRACTORS.—WANTS A SITUATION AS FOREMAN.—The advertiser has had considerable experience in Turning and fitting Railway Wheels, Axles, Turntables, and all description of Carriage Work. The most unexceptionable testimonials of character and competency can be produced.

Apply by letter, A. C., No. 1, King-street, Manchester.

IMPORTANT SALE of FORTY FINE CART HORSES, Newport Docks, Monmouthshire.—Mr. E. LEYSHOW has received instructions to Sell by AUCTION, on Thursday, the 23rd of September, at 12 o'Clock precisely, on the premises of the Docks, FORTY fine, well-known, good CART HORSES, fine shaped, fresh, young, and powerful, being a portion of the valuable acknowledged superior Stock of Messrs. Rennie and Co., Contractors. They are from 15 to 17 hands high—colours, Greys, Roans, Bays, Blacks, and Chesnuts—remarkable for their symmetry and power; the whole of them being young and sound, and to be sold in consequence of that portion of the work where employed being nearly completed.

Also, Thirty Sets of HARNESS, in good condition.

The Auctioneer has great pleasure in recommending the above Stock, as a finer set of Horses was never submitted for public sale.

A Bloody or a Bloodless Cure, or extraction or no extraction, is now the question? Will Toothache Patients, or a discerning Public, any longer submit to that horrid and dangerous operation of extraction, when a permanent cure is at length afforded by the GREGORIAN PASTE. Caution—This wonderful preparation, the manufacture of the inventor himself, is found genuine only at the Patent Medicine and City Depot, 68, Fleet Street; 6, Cornhill; 57, Pall-mall; and Mr. Sanger's, 150, Oxford-street. Beware of spurious imitations in the City and West-end, and copy the address, 68, Fleet-street.

GUARANTEE SOCIETY, for Providing SECURITY for Persons in SITUATIONS of TRUST, where Sureties are required, on payment of an Annual Premium.

DIRECTORS.

Thomas Attree, Esq.	G. Palmer, Esq.
David Cannan, Esq.	Major Prosser, F. G. S.
James Colquhoun, Esq.	James Row, Esq.
William Crott, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.

STANDING COUNSEL—R. Ryder Dean, Esq.

SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.
2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.
3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.
4. All risks attending irresponsible sureties will be removed.
5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,
THOMAS DODGSON, Secretary.

THE COURT OF ASSISTANTS OF THE GOVERNOR AND COMPANY OF COPPER MINERS IN ENGLAND hereby give Notice, That they will sell on Thursday, the 14th day of October, now next ensuing, at their Offices, in Old Broad Street,

One Thousand Tons of British Tin, the Property of British Mining Adventurers, and lying at the Miners' Smelting Works, at Trereife House near Penzance, and at Truro House in Truro.

Best Granulated Tin, 20 tons, in lots of 1 ton each—deposit, £10 per lot.

Tin Plate Grain Tin, 90 tons, in lots of 10 blocks each—deposit, £20 per lot.

Refined Tin, 370 tons, in lots of 10 blocks each—deposit, £20 per lot.

Common Tin, 370 tons, in lots of 10 blocks each—deposit, £20 per lot.

Ingots (assorted sizes), 50 tons, in lots of 2 tons each—deposit £20 per lot.

Bar (in brls. of 4 cwt.). 100 tons, in lots of 10 barrels each—deposit, £20 per lot.

PROMPT 14TH JANUARY, 1842.

No Interest or Discount.—Deposits to be paid on Saturday, 16th October.

The Sale to commence at Twelve o'clock precisely.

Catalogues, containing Particulars and Conditions of Sale, will be delivered either at this Office, or by the Company's Brokers, Messrs. Short and Mahony, No. 1, Newman's Court, Cornhill.

The Public Sales of Tin by the Company will henceforth be held quarterly, viz. in January, April, July, and October, and the quantity put up will be regulated by the average quarterly consumption.

N.B.—The Company binds itself not to make Sales of Tin during the quarter, beyond the quantity advertised.

Office of the Governor and Company of Copper Miners in England, Old Broad Street, London.

12th August, 1841.

Thirty-two very Superior Cart Horses.

TO BE SOLD BY AUCTION, by MR. DIXON, at his Repository, Barbican, on FRIDAY, September 24, 1841, commencing at One o'Clock precisely, about Twelve valuable young, fine-shaped, powerful CART HORSES, with their Harness and Nosebags, the genuine valuable property of Mr. Jackson, of Pimlico, that have been employed on the Brighton Works of the Greenwich Railway Company; sold in consequence of having completed the part they have been employed on. Twenty remarkably fine-shaped, fresh, young, powerful Cart Horses, being the first portion of the excellent Stock of Mr. Peter Houghton, of Batheaston, have been employed on the Box Ashby Contract of the Great Western Railway, and sold in consequence of his having completed it.

Colours—Bays, Blacks, Browns, Roans, and Greys.

☞ The above lot of young valuable seasoned Cart Horses, are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased at great expense for the above Contract, and are now in remarkable fine working condition.

On view, and Catalogues had, two days before the sale.

A great variety of New and Second hand Carriages, of every description, always on private sale at this establishment, remarkably cheap.

THE EXPRESS AND FIRST CLASS TRAINS will consist of First Class Carriages only, except that two compartments of the leading carriage will be reserved for Servants in attendance on their Employers, at Second Class Fares. THE EXPRESS TRAIN will stop no where on the line to take up or set down Passengers, and no Private Carriages or Horses will be conveyed by it.—THE FIRST CLASS TRAINS will stop at First Class Stations only (designated in the above Table by Capital Letters) but they will take Private Carriages and Horses belonging to Passengers in the Train only from London to Brighton, or Brighton to London.—THE MIXED TRAINS will consist of both First and Second Class Carriages; they will all take up and set down Passengers at every Station on the Line; and Carriages and Horses will be conveyed by them to and from all the Carriage Stations marked thus *.—A Carriage with First Class Coupées will be provided for the accommodation of Families, or Parties engaging them.

CHILDREN under Ten Years of age in the First Class Carriages will be charged Second Class Fare—those in the Second Class Carriages as shown in the Table. No charge is made for Infants in arms.—PRIVATE CARRIAGES AND HORSES must be at the Stations Twenty Minutes before the time of departure. They will be conveyed to and from the intermediate Carriage Stations by the Mixed Trains only; but they will be conveyed throughout by every Train except the Express Train.—Passengers riding in their own Carriages pay Second Class Fare. Grooms in charge of Horses will have seats in the Coupee attached to the Horse Box, also at Second Class Fares.—Carriage Trucks, and Horse Boxes, are kept at all the Carriage Stations, but to prevent the possibility of disappointment, it is requisite that notice should be given the day previous at the station where they will be required.—DOGS will be charged Two Shillings and Sixpence for the whole, or any part of the journey; but they will not, on any account, be permitted to be taken into any of the Company's Carriages.

LUGGAGE.—Passengers are particularly requested to have their name and destination legibly marked on their Luggage, and to have it deposited in or upon the Carriage in which they are riding. The Company will not hold themselves responsible for Luggage, unless it is booked and paid for according to its value; when a receipt will be given for it, which must be produced when the Luggage is received from the Company's servants.

Passengers will be allowed to take with them a certain quantity of Luggage free of charge; such Luggage must, however, in all cases, be personal Baggage, and not Merchandize ..... viz..... First Class Passengers..... 84 lbs. Second Class ditto ..... 56 lbs.

Overweight will be charged as follows.. In the Express and First Class Trains .... One Shilling for any excess up to 28 lbs., and at the same rate for any further excess. In the Mixed Trains ..... Sixpence ditto ditto ditto

OMNIBUSES ply for every Train between the London Bridge Station and the following Coach Offices, viz.:—Griffin's, and Green Man and Still, Oxford-street; Hatchett's, Piccadilly; 41, Regent circus, (Spread Eagle, ditto, (Golden Cross, Charing cross; George and Blue Boar, Holborn; Old Bull, Holborn; White Horse, Fetter lane; Cross Keys, Wood street, and (Spread Eagle, Gracechurch street, from Paddington, both by the New road and by Oxford-street; and at Brighton to and from the Railway Station. Fare 6d.

PARCELS may be booked at any of the above offices marked thus ..; the charge for which, including delivery, will be as follows:—

One Shilling for any weight under..... 28 lbs.
Two Shillings from ..... 28 to 84 lbs.
Three Shillings from ..... 84 to 112 lbs.
} And at the rate of Three Shillings per cwt. of excess.

but this does not include the charge of Twopence for Booking.

POST HORSES may be had at the London Bridge Station, to convey Carriages to or from any part of London, at a charge of 10s. 6d., including the Post Boy; and at the Brighton Station, to or from any part of Brighton, for 5s.; and Hove or Kemp Town for 6s., including all expenses. They may likewise be had at any of the First Class Stations, by giving notice the day previous at the Station where they will be required, specifying the hour.

All the Trains on the Shoreham Branch are Mixed Trains, calling at the Intermediate Stations of Hove, Portslade, Southwick, and Kingston, to take up and set down Passengers. The Trains marked thus † are intended to meet the Trains to and from London.—CHILDREN under ten years of age in the First Class Carriages will be charged Second Class fare, those in the Second Class pay Third Class fare. No abatement for children in the Third Class Carriages, and no charge for Infants in arms.—No Smoking will be permitted at the Stations, or in any of the Carriages.—NO FEES or gratuities are allowed to be received by any Servant of the Company; and it is hoped the Passengers will assist the Directors in enforcing this regulation, as every Servant so offending will be instantly dismissed. (By Order) THOMAS WOOD, Secretary.

10, Angel court, Throgmorton street, London, September 15, 1841.

N.B.—The doors of the Booking Offices at all the Intermediate Stations will be closed Five minutes before the time mentioned above, after which no Passenger can be booked for the Train then starting, and no Tickets will be issued after that time till the Train then arriving shall have left the Station.

RAILWAY COMMUNICATION WITH SCOTLAND—RAILWAY FROM LANCASTER TO EDINBURGH AND GLASGOW.—At a Meeting held at the White Hall, Kendall, on Monday, the 16th August, 1841,

JOHN WAKEFIELD, Esq., Banker, in the Chair.

It was Resolved,—I. That a Committee be formed, to be called The Kendal District Railway Committee, for the purpose of co-operating with "the Central Committee," at Carlisle, in furthering the Railway recommended by the Government Commissioners, from Lancaster to Edinburgh and Glasgow.

Resolved,—II. That the following Gentlemen (with power to add to their numbers) be constituted such Committee:—

The Hon. H. C. Lowther, M.P., Lowther.
Alderman Thompson, M.P., London.
George William Wood, Esq., M.P. for Kendal.
James Machell, Esq., Mayor of Kendal.
George Wilson, Esq., Dallam Tower.
John Wakefield, Esq., Sedgwick.
Richard Fothergill, Esq. Bridge House.
Arthur Shepherd, Esq., Shaw End.
James Thompson, Esq., Lambrigg.
Hornby Roughsedge, Esq., Fox Ghyll.
Edmund Hornby, Esq., Dalton Hall.
Charles Standish, Esq., Standish.
George Warden, Esq., Wansfell Holm.
J. Waithman, Esq., Yealand.
G. H. Gardner, Esq., Birthwaite.
James Gandy, Esq., Heaves Lodge.
J. H. Wilson, Esq., The Grange, Sussex.
J. Brancker, Esq., Croft Lodge.
J. Harrison, Esq., Hundhow.
W. Wilson, Esq., Netherfield.
John Gandy, Esq., Kendal.
Isaac Braithwaite, Esq., Kendal.
George Braithwaite, Esq., Kendal.
Roges Moser, Esq., Kendal.
William Whitwell, Esq., Kendal.
Thomas Harrison, Esq., Kendal.
George Gibson, Esq., Kendal.
Robert Benson, Esq., Park Side.
Jacob Wakefield, Esq., Kendal.
G. B. Crewdson, Esq., Kendal.
Joseph Banks, Esq., Kendal.
John Whitwell, Esq., Kendal.
John Jowett Wilson, Esq., Kendal.
Thompson Bindloss, Esq., Kendal.
Wilson Marriott, Esq., Kendal.
C. Ll. Braithwaite, Esq., Kendal.
Thomas Robinson, Esq., Kendal.
John Thompson, Jun., Esq., Kendal.
Mr. Cornelius Nicholson, Cowan Head.

Resolved—III. That the following be the standing officers of this Committee:—

President.—John Wakefield, Esq., Sedgwick House.

Vice-Presidents.—Thomas Harrison, Esq. / William Whitwell, Esq.

Secretary.—Mr. C. Nicholson.

Resolved,—IV. That a Sub-Committee be appointed for the purposes of Correspondence and obtaining "Consents" of Landowners (who shall from time to time report progress to the General Committee), and that the following be such Sub-Committee.

Ex-officio.—The President, Vice-Presidents, and Secretary.

George Gibson, Esq.	Wilson Marriott, Esq.
J. J. Wilson, Esq.	C. Ll. Braithwaite, Esq.
John Whitwell, Esq.	Thomas Robinson Esq.

N B.—Those Gentlemen named on the General Committee, who were not present at the Meeting, have, on being subsequently applied to, severally acquiesced in their appointment. CORNELIUS NICHOLSON, Secretary.

August 28, 1841.

TO CONTRACTORS. — WILSONTOWN, MORNINGSIDE, AND COLTNESS RAILWAY. The WILSONTOWN, MORNINGSIDE, and COLTNESS RAILWAY COMPANY will be forthwith ready to receive Tenders from Contractors for making, forming, and completing their Railway, which extends from the terminus of the Wishaw and Coltness Railway in the County of Lanark to the road leading from Whitburn by Longridge to Wilsontown in the County of Linlithgow.

The length of the Railway will be Nine miles, and will be let out for Contract in Two Lots.

On the 20th of September current, working plans, sections, and specifications will be in the hands of the Clerk of the Company, 36, Miller-street, Glasgow, and with Mr. Macneill, the Engineer of the Company, 9, Whitehall-place, London, and lie there for inspection till the 15th October next. And tenders will be received by the Clerk of the Company at any time between these dates inclusive.

In the mean time intending offerers wishing information as to the locality to enable them to inspect the proposed line of Railway, will obtain such and any further particulars on application either to the clerk or Mr. Macneill.

The Company do not pledge themselves to accept of the lowest offer, and will not be liable to claims from persons whose offers may not be preferred.

September 10, 1841.

ON SALE.—TWO NEWLY-FINISHED SIX-WHEELED LOCOMOTIVE ENGINES, with 12 inch cylinders, copper fire-boxes, 5 feet driving wheels, and of the usual gauge.

The engines embody all the latest improvements in their valve gearing and motions.

Canal-street Works, Manchester.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 196. Vol. IV.—No. 40.] SATURDAY, OCTOBER 2, 1841. [Price, 6d.

GREAT NORTH OF ENGLAND RAILWAY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of the Great North of England Company, are prepared to receive Tenders for Loans of Money on Debenture Bonds in sums of not less than £100 each, for three, four, five, six, or seven years, for which interest at the rate of £5 per cent per annum will be paid half yearly at Messrs. Prowette and Fowlers, Bankers, London.

Tenders stating the amount offered, and the term of years for which the same may remain, to be addressed to the Secretary, at the Company's Office, Darlington.

By order,

W. O'BRIEN, Secretary.

Great North of England Railway Offices, Darlington; September 21, 1841.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, in sums of not less than £100, and for the terms of three, five, or seven years, on Interest at the rate of £5 per cent per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,

PETER SINCLAIR, Secretary.

Bolton, 25th September, 1841.

EXTENSIVE SALE BY AUCTION OF RAILROAD MATERIALS, on the ground near the Brighton Terminus, by Mr. RIDLEY, on Wednesday, Oct. 6, 1841, at 11 o'Clock precisely, by order of Messrs. Hale and Wise, whose Contract is completed, consisting of about 100 tons of iron rails from 40lb. to 50lb. a yard;

Several tons of cast iron chairs,
Iron slides and fastenings,
Numerous large cast trees,
Many tons of old wrought iron,
Tunnel barrics and skips,
Barrows
Several hundred 3in. deal battens,
Sixty-five 2½ yard waggons, with 2ft. wheels,
An excellent timber carriage (nearly new),
Numerous 3 wheel carts,
Horse-rum, poles and wheels,
Gin and apparatus,
Turn tables,
Upwards of 2000 sleepers,
Several capital draught horses and harness,

And numerous valuable effects, which cannot be particularised in the limits of an advertisement, amounting altogether to a cost of nearly

TEN THOUSAND POUNDS,

the whole of which are to be sold without limitation.

To be viewed and further particulars ascertained by applying to the Auctioneer, 155, North street, Brighton.

A Respectable Married Man is desirous of obtaining a situation as Book keeper or any other employment not inimical in the Railway Department, either in town or country. Most respectable references will be given.

Address A. B., 36, Great Cambridge street, Haggerstone.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

ON SALE.—TWO NEWLY-FINISHED SIX WHEELED LOCOMOTIVE ENGINES, with 12 inch cylinders copper fire boxes, 5 feet driving wheels, and of the usual gauge.

The engines embody all the latest improvements in their valve gearing and motions.

Canal-street Works, Manchester.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs Cooke and Wheatstone's Electric Telegraph. This Invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 24, Cornhill, or 1280, Regent street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of those undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared with its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet street, and sold by Groombridge, Panyer alley, and R. Tyas, Paternoster row, Hyde & Co. and G. Bell, Fleet-street, Mann, Cornhill; and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY FOR 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Railway Times Office, and Hyde and Co., Fleet street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122 Fleet-street, and sold by all booksellers.

NOTICE TO THE RAILWAY COMMUNITY. The Patent Self-Acting Signal Apparatus to Obviate Collisions between Successive Trains, invented by CHAS. BERWICK CURTIS, Esq., of Acton, Middlesex.

The characteristic properties of the above consist in simplicity of construction and certainty of action, freedom from liability to derangement, exemption from manual attendance, and the trifling expence at which it can be erected.

May be viewed in full size and proper working order, at the residence of Mr. Curtis, at Acton, by tickets furnished by Messrs. Ashbee, 74, Lombard-street, Agents, of whom every particular may be received and descriptions and working plans seen or obtained.

A detailed account, with plans, has appeared in the *Railway Times* and *The Mechanics' Magazine* of Saturday, 4th September, instant.

London, 20th September, 1841.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad street, City; 69, Princes-street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas Liverpool,
Mathias Dunn ..... Newcastle-upon-Tyne
Joseph Bothway ..... Plymouth.
John Thompson and Co. ..... Wigan.
J. F. Tregethas ..... Truro.
Thomas Mooney and Son ..... Dublin.
Coates and Young ..... Belfast.
James Kibble and Co. ..... Glasgow.
James Gunn ..... Leith.
John M. Beatts, 14, Clement's-lane, High street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom; but reference is particularly made to the London and Blackwall Railway, where it has been in use upwards of twelve months.—"It gives entire satisfaction, and has never broken."—*Vide extract of the Tenth Report, Thursday, 19th instant.*

Just published, price 7s. 6d.,

A LIST OF ALL THE PATENTS FOR INVENTIONS IN THE ARTS, MANUFACTURES, &c. &c. By ANDREW PRITCHARD.

To Inventors, Patentees, and Manufacturers, this work will be found of great utility, as by it they will be enabled to ascertain all the Patents taken out on any particular article, the names of the Inventors, the date of the Patent, and consequently the time it will remain in force. To Solicitors engaged in making assignments, licenses, &c of Patents, it will be valuable for reference. It contains 6,277 Patents.

Also, price 30s.,

A HISTORY OF INFUSORIA, Living and Fossil, with 500 coloured Engravings.

Also, price 1s.,

A LIST OF 2,000 MICROSCOPIC OBJECTS, with remarks, &c.

Whittaker & Co., Ave Maria-lane; Pritchard, 162, Fleet-street.

THE LONDON AND BRIGHTON RAILWAY GUIDE, illustrated by the Official Map and Section, and a full description of the Line and adjacent country; together with a Time and Fare Table, and a List of Hackney Coach and Cab Fares to the Stations, from all parts of London and Brighton.

London: Published by J. R. Jobbins, 3, Warwick-court, Holborn; R. Tyas, 8, Paternoster-row; Tilt and Bogue, Fleet-street; J. Weale, Architectural Library, Holborn; J. Cross, Holborn; Letts, Royal Exchange; H. S. King, Stationer and Bookseller to the Queen Dowager, 1, North-street, Brighton; and at the *Railway Times* Office, Fleet-street. Price One Shilling, bound in cloth.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

We resume the publication of the Parliamentary Evidence, which has for some time past been interrupted by the press of the meetings. We do this for the purpose of laying before such of our readers as have not an opportunity of seeing the official Reports, many curious facts and opinions; while to those who have such opportunity, their re-publication in our columns will afford a ready means of future reference. The witness under examination in the following extract is Mr. Chapman, of the North Union Railway :—

MINUTES OF EVIDENCE.

(*Continued from page* 812).

1007. But you think it would be advantageous to the public if proper rules and regulations were framed, which should be enforced, under proper limitations and with proper discretion, upon all Railway Companies?—If they could make rules applicable to each particular case, perhaps it might be so; but I think that each particular railway requires a particular set of rules.

1008. How do you reconcile that opinion with the opinion you before expressed, that the general railway conference took a wise and prudent step in recommending those rules and regulations to be circulated among all the Companies for the adoption of all railways indiscriminately?—Because the rules suggested at that meeting are very general.

1009. Do not those rules comprise regulations as to the nature of the lights that are to be exhibited by night as signals on railways, and the nature of the flags that are to be exhibited on railways by day, and the various regulations that are to be observed with regard to those signals, and with regard to whistles as signals upon engines, and various other subjects of the like description?—They do; they were thrown out for the consideration of other Companies, being those which we use, and being what answers our purpose; but I do not believe they would answer every other Company's purpose. For instance, on the Great Western, I am quite sure that in some respects they would not do.

1010. If that was the case you must be of opinion that the general railway conference went too far in recommending those signals as fit to be adopted on all railways?—Not too far in recommending them for consideration, which is all that was done.

1011. Was not an opinion decidedly expressed by that meeting that there should be an uniform system of regulations and signals recognised as applicable to all railways?—There was an opinion expressed that such a thing should be submitted for the consideration of the Companies.

1012. But, besides that, are not these words to be found in the resolution that was agreed to at this meeting in which you concurred: "That this meeting considers it desirable that there should be an uniform system of regulations and signals recognised as applicable to all railways"?—That is the form of the resolution, but it was coupled with a statement that they were thrown out for the consideration of the Companies. That meeting could not presume to make regulations to bind all the Companies.

1013. Still, although the meeting, in suggesting particular rules and regulations, did merely submit them to the consideration of each Railway Company, did they not express an unqualified and decided opinion that there should be an uniform system of regulations and signals made applicable to all railways?—Most undoubtedly, with the reservation, as a matter of course, that whatever was not applicable to the Great Western, or to any other railway, they would not adopt it; but so far as might be consistent with the nature of the case itself, no doubt they were recommended to have them uniform.

1014. Do you think that it would be desirable to attain that object as near as may be by an uniform system of regulations and signals made applicable to all railways?—I do not see any objection as to signals—for instance, we have hitherto had a red light or a red flag as a warning of danger. I think it would be very wrong to go and change the colour, for the sake of changing, and make green the warning. So far as uniformity goes in matters of that sort, I think it would be desirable.

1015. Do you know, as a matter of fact, whether at this time, upon all railways, there is an uniform system of regulations and signals?—I think there is considerable uniformity—more than one might have expected.

1016. Is the same code of signals which is employed upon your line employed upon the Grand Junction, and upon the Liverpool and Manchester, and upon the Lancaster and Preston, and upon the Preston and Wyre?—I think it is. Perhaps I may be permitted to observe, that the Grand Junction may, under some circumstances, want more than we do; if they do, I have no doubt they have it.

1017. But you think there is no essential difference between the signals upon those lines?—I think not.

1018. If there was any difference, do you think that would be a source of danger?—I should think that if there was any difference which might be a source of danger it would not exist a week, it would be changed in a week, for most of the Directors are acquainted with each other.

1019. Does not this expression of opinion on the part of the general railway conference that it would be desirable that there should be an uniform system of regulations and signals recognised as applicable to all railways, and the communication of this resolution to all the Railway Companies seem to imply, that, at that time at least, there was some diversity of practice on the different railways, that was injurious to the public safety?—I think it does, and I believe such to have existed then and to exist now, but I do not apprehend that those differences are very essential.

1020. Lord Sandon—You mean that the differences that now exist you think are not very important?—The differences in the signals, I think, are unimportant.

1021. Lord Granville Somerset—Do you approve of Mr. Booth's opinions with regard to the propriety of running any risk for the purpose of forwarding special trains, rather than not forward special trains?—I do not quite recollect Mr. Booth's opinion.

1022. Mr. Booth, in the letter you have read, seems to think it an important fact to communicate to this Committee that, if the regulation with regard to the interval of 15 minutes between the starting of trains were strictly to be attended to hereafter, he could not send the sheriff of the county either backwards or forwards with his 24 horses at the particular moment when the sheriff might wish to go backwards or forwards?—I do not apprehend that he has quite gone the length of saying that.

1023. Perhaps you think that that particular instance is not of much importance in comparison with the safety of the passengers generally?—I think Mr. Booth in giving that instance states in his letter that he does not attach much importance to it, but he puts it as an instance where he could not comply with the regulation without inconvenience.

1024. Do you think the personal convenience of the sheriff of the county, with regard to arriving a little sooner, or starting a little sooner or a little later from one particular point to another, of so much importance as a sound regulation for the general safety of the passengers?—I do not think so.

1025. Do you think that particular instance ought to weigh in the slightest degree with the decision of the Committee upon this point?—That is for the Committee to judge of.

1026. What is your own opinion, you having the direction of an important railway, as being a means of communication to a very extensive district?—Do you agree with Mr. Booth in thinking that the trivial advantage of forwarding any person, however high his station in society may be, at a particular moment, for his convenience, ought rather to be considered than the general safety of the public by whom the railway is used?—Certainly not.

1027. Do you think that there ought to be proper regulations observed, so far, at all events, as the safety of the public is concerned?—I think there can be no doubt of it.

1028. Do you think the safety of the public is or is not concerned in having a proper interval between the trains?—No doubt, a proper interval of space.

1029. How can you measure space otherwise than by time, so far as railway communication is concerned?—I think it impossible to measure it by time.

1030. You think that two trains may go off, one immediately after the other; that is to say, supposing you allow half a mile interval, you think it is of no importance how long the interval should be?—No, I do not quite think that.

1031. What is your idea of what may be safe for trains with regard to their succeeding one another?—Our rule is at least 10 minutes, but we do not pretend to carry that 10 minutes all the way along the line, because we cannot.

1032. Do you mean to say that you arrange your trains so as to run within 10 minutes of each other ordinarily?—No; our trains are at much greater intervals than that; but there are two lines which join into ours, and which two lines we work and find the locomotive power for them.

1033. What two lines do you work?—The Lancaster and Preston Junction line, and the Preston and Wyre line, and hitherto we have compelled the Preston and Wyre line to come into our station 10 minutes before the train from Lancaster, and the Lancaster train to come in 10 minutes before ours departs.

1034. Then your plan is, that there shall be a 10 minutes' interval between the arrival of one train and the departure of another?—Yes, and I think there should.

1035. What are the arrangements at this moment with regard to one train succeeding another upon your line?—An hour and 25 minutes is the smallest interval, except in the evening, when we are obliged to send an engine very shortly after the four o'clock train without any carriages. It is merely to bring the London mail down; it goes to meet the London mail. The Grand Junction engine brings the London mail to Parkside, and our own engine takes it on from thence to Lancaster. The up and down mails in fact cross each other; at least, the down mail engine crosses the engine that goes to fetch it.

1036. But you have a double line?—We have.

1037. What do you mean by "crossing"?—The engine that goes to fetch the London mail goes out very shortly after the 20 minutes after four train.

1038. How soon after that 20 minutes past four train does this supplementary engine succeed it?—There is a positive direction that it is not to leave the station till five o'clock; an interval of 40 minutes.

1039. And practically it is about 40 minutes?—It is about 40 minutes; it goes as nearly as possible to a minute. But although that engine starts 40 minutes after the other, by the time it gets to Parkside it is within 10 minutes of the other.

1040. It goes so much faster?—It has not to stop anywhere, and it goes so much faster.

1041. What is the velocity with which that engine is supposed to go?—We order them to go very moderately, and we wish them to do so, but we find that they do not. An engine by itself will run very fast; you cannot run an engine without load slowly.

1042. What is the time that you think moderate for that particular purpose?—He is directed to take an hour or an hour and a quarter.

1043. What is the distance?—Twenty-two miles.

1044. Then he ought to arrive at Parkside by six o'clock?—Thereabouts.

1045. At what o'clock ought the 20 minutes past four train to arrive at Parkside?—It should arrive at Parkside about 25 minutes past five, or half-past five, we consider it in good time if it is there at half-past five.

1046. So that if your orders are carried out, there ought to be an interval of half an hour between that single engine and the preceding train?—There should be.

1047. Do you think that ten minutes, upon the average, would be a safe interval to elapse between one train succeeding another, supposing both trains to go at the same speed?—I think perfectly safe.

1048. Supposing a fast train to go after a slow one, would you think it then safe?—That is a case that I have never seen; we send the slow trains after the fast ones.

1049. But supposing a fast train were to start after a slow one, would you think 10 minutes then a safe interval?—I would not, because the fast train would inevitably come up with the slow one.

1050. Are you aware of what Mr. Booth said in his evidence before this Committee, about the practice upon the Liverpool and Manchester, of the fast trains coming after the slow ones; and that if the slow ones cannot get out of the way, of their waiting, and subsequently passing them?—Yes.

1051. Is it your opinion that, however fortunate they may have been upon that railway, in point of avoidance of accidents, that that is perfectly consistent with safety?—I think it is.

1052. Upon what grounds do you think so?—If a man is running a fast train after a slow one he is doubly watchful, and I never knew an instance of a man under such circumstances running into it; it has never happened upon our line; and I think that he would naturally look a-head and see that the slow train had got into a siding before he attempted to pass.

1053. Is the engineman or the conductor of the slow train generally aware when a fast train is coming after him?—He is generally.

1054. He must know the arrangements with regard to all the trains that can in any way interfere with

Digitized by Google

him?—Yes, the enginemen get acquainted with the whole course of the trains.

1055. Do you mean to say that they get acquainted with them, as people get acquainted with things, by accident, or according to their own wishes; or is it a part of their duty to get acquainted with them, and do you take pains to make them acquainted with those matters?—It is not my duty to make them acquainted, but it is the engine-master's duty to do it, and on our line I know that he does it; there is a table for starting—there are tables stuck up in various parts of the engine-shop, and those men know them perfectly well, indeed they cannot avoid knowing it.

1056. Mr Labouchere—When you say there is a table for starting, you do not mean for starting from the original station merely, but applying to all the stations?—No, I mean merely the original station, I do not think it would answer upon so short a line as ours to have time tables for the intermediate stations. As far as the public are concerned we tell them, "You must be at such a spot if you mean to take a train by such a time;" at the same time we always name a time at which it is possible that the train can be up there.

1057. You have no time tables upon your line except as applying to the stations from which the trains start? To the stations from which they start, and to Parkside, the southern terminus of the line: there we branch out to Liverpool on the one hand, and to Manchester on the other, and our carriages are taken on by the Liverpool and Manchester trains, and therefore we are obliged to work tolerably accurately to them.

1058. Chairman—You were understood to say that the contractors for maintaining the road are liable to a penalty if their waggons are on the road within half an hour of the passing of a train?—They are.

1059. Therefore, for that purpose, some time must be fixed upon?—They know habitually the time at which a train passes every part of the line, upon a short line. They say, "The train will be here at 10 o'clock; we must take care to have everything out of the way." Half an hour is a large margin upon a short line; our whole transit is only an hour.

1060. Lord Granville Somerset—You say, that your junction with the Grand Junction trains, and the Liverpool and Manchester trains, forces you to keep your time?—It does, at Parkside.

1061. Do you mean that you are afraid, if you did not keep your time, that there would be collisions?—No, it is not for that, because there would be less chance of collision if the time were not kept exactly. By keeping our time, it frequently happens that three or four trains are all up together at Parkside, and it is clear that if we were to lose our time the number would be lessened by one train; but it is for the convenience of the public.

1062. Then you do not consider that want of exactness at Parkside would lessen the public safety?—No; but if we were not tolerably exact, we could not carry on our business.

1063. Then whether or no the public safety is promoted by exactness as to time, practically you are obliged to be exact?—We are.

1064. Do you find any difficulty in keeping your time for that length of 22 miles?—No

1065. Then where would be the difficulty upon longer lines, where there may be five or six stages of 22 miles each, in keeping time?—I do not know that there would be any.

1066. Would not the general convenience of the public be much promoted by the exactness of arrival and exactness of departure?—So far as I know the practice upon other lines, I believe they are as exact as possible.

1067. From the experience and attention you have paid to these matters, do you see any inconvenience in laying down a general rule that the proper time of arrival at stations should be adhered to strictly?—That rule does exist.

1068. Throughout?—I think it does.

1069. Would there be any difficulty in keeping a register of the arrival and departure of the trains at the stations?—None, I apprehend; I believe such is kept.

1070. That is one of the general rules that you would not object to having laid down?—I should not object to it, except if it was to be accompanied by a penalty.

1071. Why should you object to the enforcement of what you conceive to be a good general rule?—An engine may break its connecting rod, and it may be stopped from any other circumstance; and then if a penalty was to follow, I should object to it.

1072. Mr. Labouchere—Does not that answer imply that the penalty would be enforced without any regard to circumstances, or any exercise of discretion?—If the penalty is not to be enforced it would be no penalty.

1073. Are you aware whether, in the Bill before Parliament, the penalty is one which it is discretionary with the Board of Trade to enforce or not, according to the circumstances, or is it one which any common informer might sue for and recover from the Railway Company?—I am not exactly aware of that.

1074. Do not you think it would make a very material difference whether it was the one or the other?—No doubt it would.

1075. Lord Granville Somerset—Supposing that the law upon any matter is broken by unavoidable accident, is it the habit in this country to punish parties so violating the law by unavoidable accident?—I think not.

1076. Why should you suppose that in the case of an engine rod breaking, or any other unavoidable accident which prevented the arrival of the train at the proper time, the penalties would be exacted?—I have not supposed that they would.

1077. Lord Sandon—You entertain an unwillingness to be put in the position of defendants in case of any delay, even although you were convinced that upon a proper explanation of the circumstances, the penalties would not be inflicted?—Yes.

1078. You conceive that it would expose you to a great deal of vexation and loss of time in the management of your business, if upon every delay that happened, you were bound to show that you were not culpable in the delay?—It would put us to extreme inconvenience.

1079. Would it not involve the transcribing a great number of documents and a great deal of correspondence?—It would be continually so; I should almost despair of being able to do the business. I am sure we must have a much larger establishment.

1080. Mr. Labouchere—Supposing, for instance, this discretionary power were exercised in this manner, that all the Railway Companies were required to transmit periodically to the Board of Trade accounts of the manner in which the time-tables were observed by the trains; and supposing that it was only in case of a Railway Company very frequently, and very greatly, departing from the rules thus laid down, and proving that irregularity was not the exception, but almost the rule, upon such a railway, that interference took place, do you conceive that, under such circumstances, there would be any practical inconvenience of which any Railway Company would have a right to complain? I think there would be a great deal of trouble attending it.

1081. You mean the trouble of making the returns?—Yes.

1082. You have said that you keep, and that every well-managed Railway Company does keep, a register of the manner in which their time-tables are observed by their servants?—I believe they do.

1083. But you think it would be an excess of trouble periodically, at stated intervals, to transmit a copy of the register to a public department?—There would be trouble attending it.

1084. Would it be more than the trouble of the clerk in copying out those returns?—I do not think the trouble very important.

1085. Lord Sandon—How many items would you have upon your line of 22 miles every day?—I think last summer we had 38 trains, in and out, daily to Preston.

1086. How many stations are there upon your line?—We have none that we consider stations, except Parkside, Preston, and Wigan.

1087. How many stations would you have in the time-table?—Preston and Parkside and Wigan.

1088. Then you would have to transcribe 76 items for every day?—Yes; it would be a very great mass of figures.

1089. Mr. Labouchere—But you do actually keep this account, as it is?—Yes.

1090. So that the labour would be nothing but mere copying?—No, there would be no compilation.

1091. Chairman—Merely filling up a table?—Merely so.

1092. Mr. Greene—Have not you more stations than those you have named?—We do not consider Exton, and Standish, and so on, as stations; they are stopping places where we take up passengers, but we have nobody there that would keep a register of time.

1093. But they are stations?—They are stations; but I considered the question as applicable to stations where we keep a register.

1094. Are they not the same sort of stations as some of those upon the Grand Junction?—No, they are not upon the same scale.

1095. But still they are stopping places connected with large towns?—Yes, they are stopping places connected with large towns, but it would be a very troublesome operation, and a very expensive one, to make us keep a register at all those places.

1096. Lord Sandon—Then, when you say that there will be no difficulty in keeping the time at the stations, you omit all your stations but the termini?—Yes.

1097. But if you were to have at every station upon your line a time-table kept, at how many points should you have to keep one?—I think six, besides the termini.

1098. Mr. Labouchere—Do you happen to know whether, upon all well-regulated lines of railway, time-tables are kept, and the times of arrival noted at all the principal stations?—Yes.

1099. Lord Sandon—In that case you would have eight times 38 entries to return daily upon one short line?—Not quite so, for some of those 38 trains do not proceed south, although they come into our station; as, for instance, the four or five which are worked daily from Fleetwood come to our station, but they do not proceed south, but still they form part of the 38.

1100. But it would not be very far short of the number involved in the question?—It would not; there would be a very considerable mass of figures every day to enter.

1101. In the course of a quarter you would have a pretty considerable volume to make out?—Yes; and more, I think, than would be read.

1102. Lord Granville Somerset—You state that your opinion is, that there should be a certain interval of 10 minutes between the starting of each train and its successor? I think it is advisable.

1103. And that a quick train should never come after a slow train, if it can possibly be avoided?—If it can possibly be avoided.

1104. Your general practice, you say, is to have a longer interval than that?—It is.

1105. Taking the case of the special train for the sheriff, what reason should there be for their starting sooner than a quarter of an hour after any preceding train?—Had I been on the spot, I certainly should not have let it start till ten minutes or a quarter of an hour after.

1106. Do you conceive that a train which is unknown by the preceding train ought to have a greater interval before it starts, than a train which is known to be about to start?—The engineman who would have taken the preceding train to the sheriffs' or Judges' train would know well enough before he went away that there was a train to follow him immediately.

1107. Do you think it would be the duty of your superintendent, then, to inform him of such a circumstance?—Certainly it would, if the thing was not so palpable that he would need no information.

1108. Looking at the impediments along the line, the workmen, and so forth, what security have you, with regard to those special trains, for getting such impediments out of the way?—If we have occasion to send a train immediately after another, the guard who goes with the first always warns by a flag, which we have on purpose, that there is a train coming after. That has arisen from a particular circumstance, which, if it did not take up too much time, I would explain. The train is a continuous one from Lancaster to Liverpool and Manchester, divided at Parkside. The rule is, that the Lancaster part of the train is to come into Preston ten minutes before our proper time of starting. Now it has occurred that the Lancaster train has not arrived at all. Then we must go away at our time, or else our Preston passengers will be in the same dilemma as those from Lancaster. Then we send away our engine; and it has sometimes occurred that the Lancaster engine has arrived almost before ours was out of sight. We then let him go on immediately; perhaps keep him a minute or two, to give him a little water, or something of that sort, and then he goes on; but he knows what is before him, and the guard of the other train which went first has a flag to signify to the people along the line that the Lancaster train is coming up after him.

1109. And that flag would do for any extra train whatever?—Exactly, in the same way.

1110. Do you then see any practical difficulty in keeping an extra train till an interval of a quarter of an hour has expired; if no other difficulty arose from such a regulation as that, would that of itself be any difficulty?—It would be a positive difficulty in the case of the Lancaster train, because the Lancaster carriages have to go on to Liverpool and to Manchester by the Liverpool and Manchester trains from Parkside.

(To be continued.)

RAILWAY COMMUNICATION WITH SCOTLAND.

THE following letter appeared in a recent number of the *Scotsman*, a well-conducted Edinburgh journal:—

SIR,—Notwithstanding the publication of the Report and Appendix of the Parliamentary Commissioners, containing the mass of information to which they refer the public for the decision given in favour of Clydesdale and Annandale, as the most eligible route for a railway communication between England and Scotland, it would seem from the numerous letters and paragraphs weekly appearing in the public journals, that that decision had not been unanimously acquiesced in. The extensive, severe, and impartial investigation which led to the preference might well satisfy the unbiassed public, but as many influential individuals, from local predelictions or other causes, were induced at an early stage of the inquiry to advocate the superior pretensions of other lines, I respectfully request the indulgence of a place in your columns for a few observations on the subject, whilst I endeavour to reconcile the avowed objects of all parties, as expressed in the resolutions passed at their various meetings, with the decision of the Parliamentary Commissioners.

Amongst other resolutions passed at a great public meeting, held in Glasgow on the 8th March, 1839, it was resolved—

That the formation of a great trunk railway between England and Scotland, for the speedy conveyance of passengers and goods, is imperatively called for by the extensive intercourse which at present exists between the two countries—by the still more extensive intercourse which is certain to grow up if new facilities of communication are afforded—and by the disadvantageous position in which the northern part of the United Kingdom will be placed, if it were not fully to share in the recent improvements in internal intercourse now generally introduced into England.

That it appears to this meeting essentially necessary that the line of railway between England and Scotland should be laid out, so as to afford the most direct communication (having reference to local population and suitable levels) between the manufacturing and mercantile districts of Lancashire and Lanarkshire.

At a numerous meeting, held within the Hopetoun rooms, Edinburgh, on the 9th of July, 1839, for promoting the line by Galashiels, Melrose, &c., to Newcastle, it was resolved—

That this meeting are of opinion that Scotland cannot, for a long series of years, maintain more than one railway, in connection with the south, and that any line which is now to be executed ought, as far as practicable, to be made to suit the exigencies of Edinburgh and Glasgow, and of the kingdom generally; and also to form a means of communication with the west as well as with the east parts of England. They are therefore of opinion, that a railway passing through the interior of the country will command a greater amount of traffic, prove a better investment of capital, and be in all respects more beneficial for the interests of the country at large, than a railway along the sea-coast, &c. &c.

On the 22nd July, 1839, the promoters of the east coast line held a public meeting at the Royal Hotel, Edinburgh, and resolved—

That this meeting is deeply impressed with the necessity of connecting Scotland with England by railway. That such railway ought to be one which should be of the greatest advantage to Scotland generally, and to Edinburgh in particular—which will also secure the most rapid, sure, and uninterrupted communication at all seasons, and give the greatest accommodation to the largest body of the population; and that any line laid down on this principle deserves the support of all classes as a great national undertaking.

However zealous and sanguine the promoters of these competing projects may have been, up to the time when the Parliamentary Report laid bare their comparative pretensions, it does not appear that anything implying dissent from the Commissioners' decision has yet been done, if we accept the newspaper paragraphs emanating from the advocates of the east coast line. The sections of the lines by Galashiels and Kelso, as given in the Appendix to the Parliamentary Report, are certainly not of a character to induce railway speculators to embark in such a project; and when the formidable nature and extent of the engineering difficulties they exhibit, are taken in connection with the other disadvantages for a main trunk line which this route presents, we cannot, surely, be surprised that it was laid aside by the Commissioners.

The line from Glasgow by Cumnock and Dumfries is now abandoned by all parties, and indeed could never have been seriously thought of as an only line for connecting England and Scotland. An east coast line would still be indispensable; and even both would fail in realizing one of the greatest objects in view, inasmuch as the passengers from Edinburgh and the east coast of Scotland would still be unable to get to the great manufacturing district of Lancashire except by a very circuitous, and therefore expensive route. If the slightest pretence for competition still remains, it must be between the line from Carlisle by Beattock to Edinburgh and Glasgow on the one hand, and from Newcastle by Berwick to Glasgow through Edinburgh on the other. I shall, therefore, in the following remarks confine myself to these two.

At the very threshhold of this investigation, the question very naturally suggests itself, "Will the present or prospective traffic between England and Scotland justify the immense outlay of capital necessary for constructing an adequate line of railway? Many have, doubtless, conscientiously advocated such a project who never seriously entered into the consideration of this indispensable element of the question. On looking over the final estimates of the English lines already executed, it will be found that the average cost of their formation exceeds the enormous amount of 36,000*l.* per mile. It is true that several railways have been made at a less cost than this; and if the railway system is to be generally adopted as the medium of communication between distant parts of the country, it is necessary (and I firmly think it is probable) that means shall be discovered whereby a reduction to a very great extent shall be effected in the constructive department of them; but we must not conceal from ourselves that, from their very complicated nature, they must always involve an immense outlay of capital. As regards the line under consideration, we cannot safely calculate that the future constructive economy just alluded to will enable us to complete a railway between England and Scotland for a less sum than 15,000*l.* per mile; but I consider that there exist such favourable peculiarities in the line adopted by the Commissioners as may justify us in assuming that this sum will cover the expense of its construction; but in order to raise even this capital it will be necessary for the promoters of any line to prove, from the existing, or reasonably anticipated traffic, that a fair return for the outlay can be realised to the shareholders.

From London we have already an uninterrupted railway communication to Darlington on the east, and to Lancaster on the west. Several projects were submitted to the Commissioners for shortening the distances between London and each of these, but as the success or failure of such suggested improvements do not vitally affect our immediate object, the argument will be more intelligible by omitting them and confining ourselves strictly to the country north of Darlington and Lancaster; and here we find, from the Commissioners' Report, that to complete the communication, a line will have to be formed from

	M. C.		
Lancaster to Edinburgh by Carlisle	171 11		
Branch to Glasgow	34 60		
Total railway to complete this route	205 71	at 15,000*l.* per mile..	£3,037,637

EAST COAST LINE.

From Darlington to the Edinburgh terminus of the Edinburgh and Glasgow Railway	149 52	at 15,000*l.* per mile..	£2,244,750

Showing a difference in favour of the East Coast line, of £792,937

We thus see that if the engineering works constituted the only, or chief point of comparison, the fairness of the decision given by the Commissioners might well be questioned; I shall presently endeavour to show however, that the cost of construction does not constitute the chief element in this contrast. Let us suppose both lines completed, and the whole traffic between England and Scotland confined to each line for one year; it is sufficiently plain that the difference of the total receipts will be equal to the saving which would result to the travelling community by the adoption of the line showing the smallest amount of expense in travelling.

Before proceeding further with the comparison, it is necessary that we determine the towns and districts of England to which it is most desirable that Scotland should obtain cheap and easy access; and I think it will hardly be denied that these are, 1st, the great manufacturing and commercial districts of Lancashire and Staffordshire, with the towns of Manchester, Liverpool, &c., and 2nd, London. It is doubtless true that in the present state of communication between England and Scotland, a considerable amount of intercourse exists between Edinburgh and the east of England; but the proportion, when compared with that carried on to Lancashire and the west generally, is too inconsiderable to affect the present argument very materially.

The Commissioners have fixed upon Manchester as a centre for the Lancashire district; but as the great longitudinal and transverse trunk railways intersect each other at Newton on the line from Manchester to Liverpool, I consider the latter a more suitable point for diverging to the various places where business is likely to lead the traveller. A corresponding, and equally eligible point on the Eastern route is not so easily found, but we may assume York as the most convenient. Carlisle on the one side, and Newcastle on the other, may serve as the corresponding foci of their respective districts and London will be common to both.

Now, let two passengers start from Edinburgh for Newton (the assumed centre of Lancashire), one by Newcastle and the other by Carlisle. The former will have to travel from

		Time at 20 miles per hour	Rate per mile	Total expense for each passenger
	m. c.	hours		£ s. d.
Edinburgh by Newcastle, York and Manchester, to Newton...	281 30	14	2d.	2 6 10
And the latter from Edinburgh by Carlisle to Newton	210 0	10½	2d.	1 15 0
Making a difference in favour of the route by Carlisle of.....	71 30	3½		0 11 10

But let two passengers start from Glasgow for the same destination, and the comparison will stand

	Distance	Time at 20 miles per hour	Rate per mile	Total expense of journey
	m. c.	h. m.		£ s. d.
Glasgow by Edinburgh, Newcastle, York, and Manchester, to Newton.....	327 30	16 22	2d.	2 14 6
Glasgow by Carlisle to Newton	213 30	10 40	2d.	1 15 6
Saving by Carlisle route	114 0	5 42		0 19 0

Taking the passenger traffic, by land and water, between England and Scotland at 200,000 per annum, and equally divided between Edinburgh and Glasgow; the proportions given in the following tables may be considered a fair approximation of the respective numbers having occasion to visit the various destinations we have assumed; and on the supposition that the whole will travel for one year by each line, we shall have 100,000 passengers from

GLASGOW BY THE EAST COAST LINE.

As the population of Edinburgh and the east coast of Scotland bear less of a manufacturing character than that of Glasgow and the west coast, it is probable that the proportion having occasion to go to Newton will be less, and to York greater, than we have assumed for the Glasgow moiety; take therefore the passengers from

Excess of expenses in carrying on the traffic between England and Scotland by the Eastern line					102128 12 6	
From which deduct interest at 5 per cent. per annum on 791,857*l.* the amount of the difference in the cost of construction in favour of the Eastern line					39646 17 0	
Leaving an annual saving in favour the Western of					62481 15 6	

The saving here shown is deduced from the false assumption that *all* the passengers from Scotland would travel by the East Coast line in the event of its being made. I think it will hardly be denied that even this saving would justify the preference for which I contend; but I shall presently endeavour to prove that this sum, when more closely examined, will be found to fall far short of the actual benefit derivable from the West line—as may at a glance, be seen, when we consider that the present intercourse between Glasgow and England is carried on by sea to Liverpool, and thence by the existing railways to London, at a far less cost, in both cases, than could possibly be attained by an eastern route. It would therefore follow, that with the exception of the passengers going to Newcastle, the whole of the Glasgow traffic would still continue to flow through its present channel (viz. by water to Liverpool) even if the East Coast line *alone* were made.

I have hitherto argued this question on the assumption that *both* lines are attainable. This course was essential to the mode of comparison we have adopted, and I trust I have, even in this view, sufficiently demonstrated the superiority to be greatly in favour of the route by Carlisle; but if we take the more rational view of the matter, and assume that only *one* line can be made and maintained, we shall have little difficulty in showing that the advantage already proved, would increase to an overwhelming amount.

The distances from Edinburgh and Glasgow to the central points in England hitherto taken, will, by the respective routes, be as follow:—viz. from

Glasgow to.....	Newcastle.	Carlisle.	York.	Newton.	London.
	M. C.	M. C.	M. C.	M. C.	M. C.
By West line	162 64	100 74	237 4	213 30	408 10
East line	159 62	227 52	240 2	227 30	459 11
In favour of West line	+2 78	126 58	+2 78	+114 0	+51 0

Edinburgh to.....	Newcastle.	Carlisle.	York.	Newton.	London.
	M. C.	M. C.	M. C.	M. C.	M. C.
By West line	159 34	97 44	233 54	210 0	404 60
East line	119 62	181 52	194 2	281 30	413 11
In favour of or against the West line.....	39 52	+84 8	-39 52	+71 30	+8 31

The difference of distance here shown, are, with two exceptions, in favour of the west line, proving the comparative amount of accommodation they would afford to be—

The whole passenger traffic between England and Scotland	200,000	
Passengers from Edinburgh to Newcastle..	5,000	
Do. do. to York	10,000	
Total in favour of East Coast line....	15,000	15 000
Total in favour of the line by Carlisle and Lancaster	185,000	

For the verification of the distances given in the foregoing tables, I refer you to the Parliamentary Report; and although the number of passengers on which these calculations are founded has been arbitrarily assumed, for want of precise data on the subject, still, if the proportions into which I have divided the whole number is considered a fair approximation, the comparison I have attempted to draw will still hold good, even if the aggregate number should, on stricter investigation, be found to fall short of what I have taken.

After the able and impartial Report of the Commissioners, the arguments contained in the foregoing pages may seem a work of supererogation; but as I have reason to know that, notwithstanding all that has hitherto been said and written in confirmation of the conclusive reasoning of the Commissioners, there are not wanting individuals of considerable influence who still cling to the east coast line, I have been induced to place the subject before them in the present light, with the view of proving from the resolutions of all parties who have manifested any solicitude to promote the common object, that all the benefits which each of them professed to aim at can be realised by the route from Edinburgh and Glasgow, by Beattock and Carlisle, to Lancaster, *and by it alone*. If I have succeeded in demonstrating this to their satisfaction, it is surely not too unreasonable to expect that they will now come forward to co-operate with the promoters of the only line which the public have any chance of obtaining. Such a step will be perfectly consistent with the former resolutions (as I have attempted to show); and whilst the united efforts of all parties will go far to secure to the public so important and beneficial a measure, it will also follow that, even if Treasury aid should be found indispensable, a memorial supported by so numerous and influential a party will secure the favourable consideration of Government, when petitions emanating from a mere section of their number would have little chance of obtaining the object of their prayer. The recent meeting held at Liverpool on this subject, attended as it was by the Directors of the Grand Junction, Liverpool and Manchester, North Union, and Lancaster and Preston Railways, together with the representatives of the landowners in the south-west of Scotland, holds forth the cheering assurance that the benefits of the wealth, experience, and energy, which characterise these powerful bodies will not be withheld from the northern promoters of the undertaking under consideration, providing a corresponding degree of zeal is manifested by them.

Before concluding my observations, it may not be improper to direct the attention of the promoters of the intended communication, to the retarding influence of any hesitation on the part of proprietors or others who may be locally interested in the adoption of particular sections of the main route, where alternative lines are pointed out in the Reports or plans of the Engineers. A little reflection may serve to convince them of the unreasonableness of expecting, at this early stage of the inquiry, and until the country is more minutely examined, any positive assurance of the precise course, beyond a general indication of the route recommended. If the owners of property along any apparently eligible line of country are led to entertain opinions favourable to a particular course, let them convince the promoters of the general line of the superiority of that course over any other that may be brought into competition with it. This can only be done by means of surveys and statistical information; but to withhold their countenance from the chief object until these subordinate details are fixed, can only serve to retard the main project, without advancing the minor one.

I am, &c.,

F.

Edinburgh, August 30, 1841.

SOUTH-WESTERN RAILWAY EXCURSION.

On Monday (as announced in the *Railway Times* of last week) in consequence of an arrangement having been made with the Directors of the London and South-Western Railway, upwards of 300 persons proceeded by special train to Southampton, for the purpose of an excursion by water round the Isle of Wight, to return the same evening. Precisely at a quarter before seven o'clock in the morning the train, composed of upwards of twenty carriages, left the terminus at Nine Elms. At the Woking station they were joined by upwards of 100 more persons, who were anxious to embrace the opportunity thus afforded to visit that delightful island. The Leviathan train arrived at Southampton at nine o'clock, where crowds of persons were assembled, who loudly cheered them as they alighted from the carriages, and the voyagers immediately embarked on board the *Grand Turk*, steam vessel, which was waiting to receive them, and proceeded on their voyage. They passed through the Needles, and thence up the British Channel, and round St. Helen's to Spithead, returning to the pier at Southampton about five o'clock. The weather was most propitious, and enabled them to have a distinct view of the places most worthy of note in the island. An hour having been allowed to collect the party, they started on their return to London about six o'clock, and reached Nine Elms terminus at nine o'clock, having performed the journey of upwards of 220 miles by land and sea in the short space of fourteen hours. The whole of the company expressed themselves highly gratified with the excursion, which, by the liberality of the Directors, they had been enabled to do at a very trifling cost (20s.) to each person.

Railways in Russia.—A joint-stock company in England has obtained the Emperor's permission to make an iron railway from Moscow to St. Petersburgh, and will begin its operations perhaps this autumn, but certainly in the spring. Five years are allowed to complete the whole line, which will be thirty-three miles longer than the common road between Moscow and St. Petersburgh, because it is to pass through to Bybinsk, in the government of Yaroslaw, on the right bank of the Volga, that town carrying on the most extensive corn trade with St. Petersburgh. All the vessels laden with the produce of the south, which come up the Volga to the north, must stop here.—*Midland Counties' Herald.*

THE LATE ACCIDENT ON THE GREAT WESTERN RAILWAY.

A correspondent of the *Times* gives the following account of the late accident on the Great Western Railway:—"Having seen in the *Times* of this morning an account of the accident which happened to the up mail train from Bath on Wednesday morning, and which account is not in any particular correct, being one of the passengers by that train, I should not have intruded myself on your attention, but I feel that I am bound not to allow the public to be kept in the dark, which is apparently the wish of all persons concerned with railways. I do not confine my observation to this in particular, but whenever an accident happens, they strive to their utmost to keep it as secret as possible, and on this occasion I think there is considerable blame attachable to the Directors. I don't know whether it arises from parsimoniousness, or whether it is an oversight, but if the suggestion I am about to make had been adopted on this occasion, I have no doubt this accident would have been prevented, and those who have suffered and will suffer for the remainder of their lives, would have escaped unhurt. It is the practice during the day that a policeman is stationed at certain distances, who, before the train reaches him, and until it has passed him, holds out his hand in token all is right. Now, if that is necessary by day, how much more so is it by night? I noticed the whole way up there was no policeman until we arrived at Slough. In case anything should be wrong, you are not able to see it or know it, unless you are informed of it, wherever there is any embankment, there ought to be men employed to walk by the side of the rail, in order to ascertain whether any slip has taken place before the train passes, and also afterwards, in order that they may give information to the train which is coming, to stop, or not to proceed at a greater rate than four or five miles an hour—this only applies to embankments, and these men ought to be on duty day and night. Had this precaution been taken, this fearful accident would not have happened, by the slip in the embankment being discovered previously to the train coming up. Your informant says that we had two engines, and that there was one placed in front, and the other behind. He is right as far as to there being two engines, but they were both in front, or I cannot doubt there would have been very few, if any, left to tell the melancholy tale, for had that been the case all the carriages must of necessity have been smashed; it was owing to their both being in the front that prevented the carriage I was in sharing the same fate as the others. We arrived at Chippenham about ten minutes before two o'clock, and having put out some passengers, we had not proceeded more than three miles when I was awoke by being nearly knocked off my seat, and the sound of a most terrific crash. On looking out of the window, I shall never forget the sight I beheld—the other carriages, which were before us one within the other, like a telescope,; and what with the great monster roaring, the groaning of the poor sufferers, and the stillness of the night, it was a most dreadful and horrifying scene—the cries for help and the moans were terrific. It was fortunate the first engine remained on the line, or we must have all gone over the embankment. After being let out by the guard, we rendered all the assistance that we could in extricating our fellow-travellers from their perilous situations. One gentleman had both his legs broken and his hip dislocated. Another told me he thought some of his ribs were broken. So much was he injured he was obliged to be laid on a portion of one of the carriages. A third had his ancle dislocated; another his face dreadfully cut, and he informed me that he was fast asleep and knew nothing of it until he was awoke and found himself immured in wood and a portion forced into his mouth. The guards were all of them more or less injured, their legs cut and bruised; one was saved by the letter bags; another had a most narrow escape of his life; he was in the first carriage, and was dragged out of a small hole; the second carriage had run right into the first, and the wheels of the second were on the floor of the first, and had the carriage gone three or four inches further the wheel would have either taken his head off or smashed it. Fortunately there were but few passengers, or it might have been attended with considerable loss of life. After rendering every assistance in our power, the first engine was sent to Wootton Bassett for assistance, and the engine returned with two medical men, who paid every attention to the sufferers. The engine was then despatched to Swindon for some carriages, and after being detained for nearly three hours we started. The gentlemen whose legs were broken were taken out and left at Wootton Bassett, under the care of the surgeons who had come with the engine; the rest, at their own request, were taken on to London. When we left the place the engineer took the precaution to go very slowly over the embankment; we were therefore detained three hours, which would have been nothing had our fellow-travellers escaped. I observed, also, on my way up a luggage train, in which the passengers are placed next the engine—now, if any accident should happen to the engine, all who should have the misfortune to be there would for a certainty be killed by the tremendous weight which is following them. Why are not the passenger-trucks put behind instead of before the luggage-truck? I must remark that I never saw men who were suffering themselves behave better and kinder than the conductor and guards on the occasion.

LONDON AND BIRMINGHAM RAILWAY —THE BEECHWOOD TUNNEL.

[From the Proceedings of the Institution of Civil Engineers].

An Account of the Repairs done to the Beechwood Tunnel, upon the London and Birmingham Railway, September, 1840. *By Thomas M. Smith, Grad. Inst. C. E.*

THE tunnel is built of brick, is 302 yards long, and passes through strata consisting of alternate layers of rock and marle, abounding in springs of water; it was completed at the latter end of the year 1837; that winter being of unusual severity, many of the bricks were partially destroyed, owing to their containing lime, upon which the weather acted. Mr. Robert Stephenson first contemplated applying a coat of cement throughout the inside of the arch, but it was apprehended that it would not adhere, in consequence of the constant dripping of the water.

No positive steps were, however, taken until the effects of the winter of 1839-40 had so injured the brickwork as to render further delay dangerous; it was then resolved to line the whole length of the tunnel with an interior brick arch, 9 inches thick, so as to support and insure the stability of the old work.

For the purpose of executing the work with facility, all the trains of carriages were diverted upon the down-line through the tunnel, and for a quarter of a mile at each end; no up-train was allowed to pass upon the single line while a down-train was in sight: a hoarding was then erected between the lines of railway throughout the length of the tunnel, to protect the workmen, and to prevent the building materials from interfering with the trains.

The internal casing of brickwork, 9 inches thick, of English bond, was then carried up one side to the height of 4 feet 9 inches above the springing; a course of York paving, 4½ inches thick, was at this point bonded into the old work, and the new work was securely attached beneath the stone bond course by iron wedges, and regular half brick toothings were inserted, at intervals of 2 feet 3 inches apart, in chases cut into the old work; by these precautions the new work was secured from being detached, and from falling upon the passing trains.

One side being finished throughout its entire length, the trains were turned upon the up-line, and the same mode of proceeding followed with the other side. A series of bearers, 6 feet apart, were then placed over head, and a close flooring laid so as to serve for scaffolding for the workmen, and to prevent the building materials from falling upon the rails. A pair of ribs were then raised upon each bearer, and keyed with a strut, 7 inches below the crown of the arch; the supporting stays were fixed, the laggans laid upon the ribs, and the brickwork of the arch was constructed in English bond throughout the whole length, and on both sides of the tunnel, simultaneously, to within 2 feet of the crown; a moveable centre, 2 feet 3 inches long, was then introduced, and the arch was closed in with two half brick rings.

The whole of the work was done with blue hard burnt Staffordshire bricks, laid in cement and sand, in equal proportions, for the side walls; for the arch, up to within 15 inches of each side of the crown, two-thirds of cement, and one-third of sand; the two rings for keying up the centre or crown were laid entirely in cement, without any mixture of sand.

Previous to commencing the new work, a series of chases were made in the old wall, which, when closed in front by the lining arch, formed drains, 4½ inches square, terminating in the culvert beneath the centre of the railway, and conveying thither all the water, which would otherwise have separated the new from the old brickwork.

This work was finished, and the scaffolding removed, within the short space of forty days, by Messrs. Grissell and Peto, under the direction of Mr. Robert Stephenson, and the immediate superintendence of Mr. Dockray.

This communication was accompanied by a drawing showing the details of the scaffolding, and the mode of construction.

COACH ACCIDENTS.

As one of the mails was proceeding down Huckbrow, near High Barrow Bridge, about nine miles from Kendal, on Sunday last, the drag not being used, the coach over-ran the horses, and owing to the rapidity they were going at, two of them fell and were killed. The coach was also overthrown, but, we are happy to say, none of the passengers were seriously injured.—*Whitehaven Herald.*

A dreadful accident happened near Liege last week. It appears that the railway station is three miles from the town, and that the usual conveyance is an omnibus 20 feet high. In consequence of the shameful overloading of one of these vehicles, there being from 25 to 30 passengers, besides an unusual proportion of luggage, the gigantic vehicle was completely *renversé* in descending the hill one mile from its destination. There were 12 persons wounded, but the most severely injured was an English lady, the Hon. Mrs. Ives, who received a wound in the head, and whose courier is likely to be a cripple for life. A French gentleman had his leg broken. An action has been commenced against the proprietors, and the damages laid at 20,000 francs.—*Belgian Journal.*

On Monday last, as the Brighton and Winchester coach was passing through Storrington, the horses took fright at some bundles of wood near a feltmonger's yard, close to a stream, which caused the horses to start to the opposite side of the road, throwing the coach over. Two of the passengers were precipitated into the stream, but fortunately escaped with the ducking only. No other injury was sustained by the passengers beyond the wetting and the fright. The coachman was thrown off the box and fell on his back close to the wheel, but happily without being hurt.—*Sussex Agricultural Express.*

On Wednesday afternoon the Southend coach when turning the corner of Warley-lane, on its way from the railway station into Brentwood-street, was accidentally upset, owing, it is supposed, to the perch bolt having broken. Mr. Whale, the driver, was much cut in the face, Mr. Phillips, of Rochford, had his ribs broken, and a Mr. Harridane, of Wycombe, Bucks, sustained a fracture of the collar-bone. There were ten or twelve passengers outside, and a female inside, all of whom, with the above exceptions, escaped serious injury.—*Chelmsford Chronicle.*

EDINBURGH AND GLASGOW RAILWAY—THE SQUABBLES AT THE BOARD.

The following is the letter of Mr. Rathbone to which we alluded last week:—

To the English Proprietors of the Edinburgh and Glasgow Railway residing in Liverpool and the neighbourhood.

Gentlemen,—Having consented, when the Company was first incorporated, to act as a Director of the Edinburgh and Glasgow Railway, and thus to represent at the Board in some degree the interests of the numerous body of English shareholders residing in this part of Lancashire, it is right now to make known to you without delay that I cannot consent to remain much longer in that situation, for reasons which I will shortly state; and thus give you the earliest opportunity of either selecting some one in whom you may have confidence to recommend to the Board, or leaving the selection of a successor entirely to the Board, as you think best.

You will be so good as to bear in mind that it was my strong wish never to have undertaken this responsibility, and that I retired from the Provisional Committee, and sold my shares, purposely to avoid it, but having been elected, whilst absent from home, by the general meeting, and urged to act simply as a corresponding member of the Board, and with a clear understanding of the absence of all responsibility for *personal* attendances, I agreed to purchase a qualification, and make this experiment.

I have ever since, by means of numerous communications with the Secretary and Engineer, as well as the Chairman and other members of the Board, and by being regularly furnished with copies of all the minutes, had the opportunity of making known, what appeared to me the results of experience on the leading English railways, and my own views founded upon them as to the execution of this important undertaking; and although I have not had the opportunity of urging these personally, my letters have always received from the Board such friendly candid attention and consideration that this has been quite unnecessary, and I have found great interest and pleasure in every part of my connexion with this Company. The completion of all the works, and the opening of the railway, are now near at hand, and I think those who are competent to form an opinion will be satisfied that the plan of upper works, as to which so much discussion and difference of opinion has existed amongst engineers, is that exhibiting decidedly the best and most satisfactory results of any that has yet been tried; the other machinery, particularly the locomotive engines,* (a source of such enormous unnecessary expense and trouble on several of our principal lines) of the most perfect description yet produced; and the execution of everything, and proposed system of working the railway, highly creditable to Mr. Miller, the executive officer in both these departments, and to the activity and exertions of my colleagues in the direction.

The proprietors are however already aware that certain members of the Board contend that the majority of the Board and of the Court of Proprietors have not, under the Act of the Edinburgh and Glasgow Railway, that supreme unlimited authority over the minority, which it has always hitherto been considered essential to good management, consistency, and uniformity of proceeding on railways should exist; and that these individuals have resorted to legal proceedings to prevent the Board of Directors from carrying into effect the resolutions of the general meeting of proprietors. Unfortunately, the Court of Session appears to take the same view of the Act (which is copied from the original London and Birmingham, in the whole course of the proceedings of which Company no attempt of the kind was ever thought of) as these individuals, but whilst prohibiting the Board from appointing Committees, or performing acts, which may in any way infringe upon the functions and duties exclusively belonging to the Committees named in the Act, the judges of that Court are unable to point out in any way the nature and limits of these functions and duties, and it having been found equally impossible to have them settled by any mutual understanding amongst the Directors, the Board obviously cannot discharge its ordinary and urgent duties, without constant risk of infringing the interdict of the Court of Session, by interference with some of these undefined functions of the Committees thus named in the Act. The decision of the last general meeting to apply immediately for an amended Act of Parliament is therefore one of the propriety and urgent necessity of which it would scarcely seem possible to question, whatever view may be taken of the proper constitution of the Company, and it is earnestly to be desired that no time should be lost in having the Company placed, by the authority of Parliament, in the position in which all others have hitherto considered themselves, and, for the sake alike of the proprietors and the public, that a concentrated instead of a divided and conflicting management should be rendered practicable.

With the prospect however of opposition to this application, and a Parliamentary contest, in which the votes of the Scotch members of the Houses of Parliament being divided, it may be essential to have those of the English secured by active and possibly prolonged attention to the Bill in London, I cannot but feel that the time has arrived when I may fairly request the proprietors to appoint some one in my place, who may be willing to undertake duties (both in this respect, and in that of personal attendances at a Board, where something more than suggestions and written communications will, I fear, now be desirable,) for which I can no longer hold myself responsible.

I have for some years past done all in my power to promote the interests of the proprietors, without a selfish motive of any description, even that of being myself a large holder of stock, neither seeking nor having ever received *one farthing* compensation, either pecuniary, or in patronage or privilege of any description, for a good deal of time and trouble employed in their service, and I am sure they will at once feel that I am fully warranted in taking, and that it is due to them to take the above step; instead of allowing myself to remain responsible for duties involving the alternative of absence from home and unreasonable interruptions of other pursuits, or imperfect discharge of such duties at a time when the interests confided to me might suffer in consequence very serious detriment.

I had transmitted my resignation to the Chairman previous to the last general meeting, to which I wished it communicated, but at his request and that of the Board, I have consented to remain a member until the opening of the line at the end of this month, when I will endeavour to pay a final visit to it and to colleagues from whom I shall separate with warm feelings of regard and respect, and when my influence shall be used to induce the Board to comply with any suggestion you may have transmitted as to my successor.

Your proxies, you will bear in mind, will then remain entirely in the hands of the Chairman, to whom your undertaking owes much; and where, in my opinion, you will best consult your interests by continuing to deposit them.

I am, Gentlemen,
Your most obedient servant.
THEODORE W. RATHBONE.

Allerton Priory, 13th Sept., 1841.

The following letter on this subject has appeared in the Liverpool papers:—

To the Members of the Edinburgh Committee of the Edinburgh and Glasgow Railway.

Gentlemen,—In reply to your laboured statement respecting the unfortunate dispute now pending between you and the Directors of this respectable Company, I merely wish to put the following simple questions to you:—

By whom are the Directors appointed? I say, by the shareholders.

To whom are the Directors responsible for the due discharge of their duty? I say, to the shareholders.

By whom are the members of the Committees in Edinburgh and Glasgow appointed? I say, by the Directors.

To whom are these Committees, thus constituted, amenable? I say, to the Directors.

Thus, it appears you, as members of the Committee, have, under your Act of Parliament, only the power to act so far as the Board are sanctioned by the said Act, and no one thing can be done without the consent of a majority of the Directors in general Board assembled.

If, therefore, the English shareholders are to be subject to the caprice of any one or more member or members of these Committees, or even of one or more Director or Directors, acting in either capacity, appealing to the Court of Session of Scotland for redress on all occasions, when the majority of the Board, but, more particularly, a large majority of the shareholders in general public meeting, has decided against the opinions so expressed by the said individuals, the sooner such law is altered to assimilate to English practice the better.

In order, however, to put a stop to all this unfortunate, I may say unmeaning, cabal about trifles, which is, most decidedly, in direct opposition to the common practice in all our public institutions in this country, I would recommend every shareholder to be prepared to mark his disapprobation of the opinions of those individuals acting so hostilely to the true interests of this highly valuable concern, and, on the day of election for Directors, effectually prove to them how powerless are their arguments when put in opposition to common sense and universal custom.

A LANCASHIRE SHAREHOLDER.

Liverpool, September 25, 1841.

A FAREWELL TO THE ROAD.

We extract the following very clever piece of writing from the *Brighton Herald*, as a pleasing variety to the less imaginative matters of which our journal usually treats. It will doubtless awaken many a reminiscence in the breasts of not a few of our readers:—

"Ichabod! Ichabod! the mighty are fallen."

Alas! that ever the day should come when Castle-square should be cadless and coachless; when the stroke of twelve at noon should not be the signal for every soul who can see beauties in a perfect four-in-hand to transfer himself to its vicinity; when its ample space should no longer be filled with half-blood teams, covered with rich trappings, prancing and curvetting and showing their rounded limbs and glossy skins in the sun; when the far-reaching whip should cease to be flourished aloft in triumph or cracked in the full exuberant spirit of the road! Alas, that the day should come when four-in-hands should be reckoned amongst the things of the past, and take their place with the broad wheeled wains of our ancestors; when the *Age* and the *Times* should not be the fastest-going things on the road, but be as much out-stripped in the race of time as the laziest carrier's cart that ever crawled along the surface of the earth!

Yet all this is come to pass, and we are not old men. We have seen Castle-square a mere desert at twelve o'clock; we have beheld it stripped of that mighty corps of coachmen, porters, cads, and ostlers, that long exercised in it the sway of power; we have turned the corner of the Blue without having the breath squeezed out of our body; we have passed the narrow straits of the Red without having our corns trodden upon; we have doubled the Spread Eagle without breaking our shins over heaps of luggage. Nay, more; we have not heard one jest, not seen one practical joke played off, not smiled at one sally of humour or exhibition of character in that most fertile of all places for jests, comicalities, and practical jokes; all has been "dull, flat, and unprofitable."

What! and are we doomed never again to see a

* One half of these are on the plan of which I think quite the most favourable, the other on one which claims very high authority in its favour, or at least has done so, until very recently.

Digitized by Google

well-horsed coach drive up; never to go down to meet a friend, to shake him by the hand before he is yet off, seek after his luggage, and look on whilst he nods good bye to his fellow-passengers, or perhaps gets a gentle squeeze of the hand from some fair traveller who has beguiled the journey with pleasant looks and merry tongue? Shall we never again rescue him from that busy scene, and, amidst settlings, and salutations, and hurry and bustle, hurry him off home, to plague him ourselves with eager questions as to all the incidents of travel that have diversified his journey, when he started, whether he dined on the way, and what was the state of the roads and the character of his fellow-passengers?

Shall we never again do so? And shall we never ourselves mount at our own door with the importance of one about to encounter the perils and fatigues of 50 miles' travelling, take our seat amidst the nods of relatives and friends who crowd the window and the door-way to see us off? Shall we never more try to catch the glance of some eye, brighter than the rest, or watch to the last moment the motion of some hand which still beckons when all others have ceased? Shall we never again receive the admonition of some dear old lady to wrap ourselves well up, and mind not to go to sleep on the road, and be sure to write home our safe arrival?

And, when all this is over, shall we never again enjoy the luxury of a good start; see the bounding steeds once more put into their paces with a skill that seems marvellous; feel the quick motion of the coach as it lightly rolls along; hear the sharp sound of the horn, the chinkling of the harness, and look round us to see what friends are waiting to give us a parting nod, or what curious neighbours are taking a peep at us through their blinds? And when we have cautiously threaded the crowded streets, with many a shout to clear the way—when we have exchanged houses and shops, and smoke and noise, for the high road—when the free country opens upon us with its far spreading beauties—its hedgerows between which we roll—its trees beneath which we pass—its flowers that we smell—its many sweet sounds that strike with so welcome a note upon our town-attuned ears—when we are fairly *en route*, and our coachman pauses awhile to lift his hat, and wipe his brows, and pull on his gloves, and having taken an easier seat, flourishes his whip, and puts his horses into a smart gallop—when we are full in the enjoyment of all these pleasures, and are told its for the last time, who shall charge us with weakness if we allow a feeling of regret to pass through our mind, and pause before we join in the cry that "bygones are bygones?"

We cannot destroy the past, nor can we forget the many pleasant hours we have passed on the outside of a coach, the acquaintances we have formed, the civilities we have received, the snug *tête à têtes* we have had, the stories we have heard, and the jokes we have laughed at. Will all the books that were ever written supply us with the stores of knowledge we have acquired upon the coach box—the running comments upon men, things, and manners, that have flowed from the mouth of a good-natured coachman? Who could tell us so accurately to whom that mansion belonged, what kind of a man the owner is, how far his estate runs, his pedigree and whole family history? Who besides would take the trouble of informing us that the man who has just passed us is the best farmer in the neighbourhood, or the greatest rogue, or the most honest or most wealthy man? Who besides could enlighten us as to the merits of every house of entertainment on the road, and recommend such-a-one's ale, or warn us against another's brandy and water?

And then what become of the many pleasant scenes through which the stage-coach has borne us—the smiling country village, with its little garden-plots, and groups of young urchins playing before them, who suspend their game to shout at us as we pass and send forth a merry laugh as our friend the coachman, in the indulgence of his humour, makes a sharp cut at some young rascal who ventures too near his wheels? And what will the village and small country town do without its daily visitor, that so regularly drew up before it, bringing the parcel, the paper, the letter, or the little budget of news that was to set up the *quidnuncs* for the next twelve hours?

Who will offer to us the humble but sweet field-flower? What sturdy young rascals will follow us many a mile for the sake of a few halfpence? What way-side cottage will hold forth its temptation to us in the shape of some home-made wine or far-renowned cake? Shall we not miss all these accompaniments of travel, and with them the many rural sights and sounds with which they were mixed up—the singing of birds—the lowing of cattle—the distant shouts of the labourer as he pursues his labour, even the shrill crow of the dunghill cock, as with stately gait he "struts his dames before?"

What, above all, is to compensate us for the loss of the convivial cigar, whose warmth has cheered us—and fragrance lulled us through many a long mile?

In the progress of the world towards perfection, we are obliged to resign many pleasures; and we may be allowed to drop a passing regret over their departure even whilst we gratefully hail their successors. We have passed too many pleasant moments on a coach-box not to give up our seat without one word of farewell—we have too often admired the stirring sight of a well-horsed four-in-hand not to see it disappear without regret—we have too many reminiscences of old friends of the road, with their oddities and peculiarities—their dry sayings and queer stories, not to give them one shake of the hand at parting. We are entering on a new stage: let us part on good terms with the old actors, many of whom played their part well and took us safely and soundly over many a barren mile of road. We may be happy in our deliverance from the too importunate solicitations of porters, and cads, and mail-guards,—our pocket bleeds at the thought of them!—but to pass from the rich variety of Castle-square into the monotonous, cold, formal keeping of policemen and laced officials, who have no acquaintance, form no friendships—never think of nodding or looking knowing—don't know what a joke is—have high ideas about dignity of office, and would sacrifice all the kindly virtues at the shrine of "order." We shall never more have the privilege of selecting a favourite coach or boasting of getting in 20 minutes before our friend on the opposition—never more be talked of as "a jintlemun vot always vent by the crack coach"—nay we shall never hear the pleasant sound of a *v*, or catch the jolly outline of a coachman's rubicund visage. We shall not be able to jump into our favourite seat by right of custom—we shall have no welcome—never hear more the stirring sounds—"Now, Sir, we're off directly," "Tom, throw up the gentleman's coat," "fine morning, Sir, beautiful roads," "had some rain up at Clapham last night," and many other oft-repeated phrases. We shall never have the excitement of catching the coach up, of arriving just at the moment of starting, or of being whirled off whilst in the very act of thrusting our arm into our great coat. No—all the hurry and bustle at the coach office will be exchanged for the dull routine of the station-house. One is of no consequence in a railroad—every body is reduced to the same level—there is no forming a connection with a train—it has the same regard to a man who goes the first time as to one who has been all his life; there is no solicitation, no patronage, no thanks—every thing is done by rule, by mechanism. You feel you are dealing, not with flesh and blood, but with some new body into which humanity does not enter—a monster-creature of mighty power, but no heart—a company, that offers you greater advantages than could any individual, but does it out of no regard to your simple self, but for some other monster, called the Public, of which you are so insignificant an atom that whether you go with it or hold aloof from it is all the same—in the casting up of the great account, you will not be noticed.

Thus and therefore is it that, in bidding farewell to the stage, we do it with all kindness and no little sorrow.

BRISTOL AND EXETER RAILWAY.

We have read with some attention Mr. Gravatt's letter to the shareholders of the Bristol and Exeter Railway Company, to which we referred in our notices to correspondents last week, and without at present pronouncing any opinion upon the matters at issue between that gentleman and Mr. Brunel, we have no hesitation in saying that the statements made in the pamphlet are deserving of the serious and *instant* attention of Mr. Gravatt's co-proprietors, as will be seen from the extract which we subjoin. We presume, that some notice will be taken of Mr. Gravatt's letter by the Directors, in which case we may have occasion to enter more fully into the subject. It is right to state that the letter is written with moderation and good temper, virtues very rarely seen under such circumstances:—

Gentlemen,—The Report of the 2nd September, 1841, is now in your hands: you have the events of the last meeting full in your memory, and you have a tolerable account of what passed at that meeting in more than one of the Bristol newspapers; only the noise and confusion which prevented you from hearing me, prevented also the reporters from taking down the figures I gave.

You also witnessed the attempt I made to be heard, that I might expose the extraordinary misstatements put forth by Mr. Brunel, Mr. Fripp, and Mr. Badham, at that very meeting. Waiving all more personal matters (though gross injustice will never be, in this country, considered merely a personal matter between the injurer and the injured) I will repeat the statements made to the great body of the shareholders by Mr. Fripp, Mr. Brunel, and Mr. Badham.

Mr. Brunel, having premised that he should be careful in his answers, stated that the difference between 210,000*l.*, at which he admitted the contracts between Bristol and Bridgewater were *let*, and the 430,000*l.* which it was admitted they had cost, arose from the circumstance that at a time when it was, at all events, probable that Bridgewater would have been the terminus of the line, it was after mature deliberation determined *to reduce* the gradients; and that, as it had been mentioned that the Great Western Railway had saved 15 per cent. on the expense of working the line by flattening their gradients, he thought that a sufficient reason for the alteration which had been sanctioned by the Directors, who, before the alteration in the contracts, had had a report from him on the subject.

He also stated, that it had been found necessary to increase the slopes of some of the cuttings. He also remarked that, with regard to the general question of gradients, he had uniformly acted on the principle that unless it was palpable that the expense would be comparatively *trifling*, and the advantage *great*, he never recommended any alteration.

He also stated, that when the contracts from Bristol to Bridgewater were let, contractors were at a premium, and therefore they had obtained *very high prices for their work*.

Mr. Brunel also stated, that we were compelled, by the opposition of the Bath-road Trustees, to pass that road in a particular way, which obliged us to *cut deeper*.

He refused to give any estimate of the probable cost of the line between Bridgewater and Exeter, and said, that if he were compelled to give one, he would take care to make it *high enough*.

That if he estimated the cost of a line at two millions, people would immediately believe the work would cost three millions.

Mr. Fripp, the Inspecting Director, stated that the difference between 210,000*l.*, at which the contracts were actually let to responsible coutractors, and the 430,000*l.* they had cost up to the present time, arose from the circumstance of those contracts being taken at certain gradients, and the works *set out* at certain slopes; and that after the

Digitized by Google

contracts were taken, it was found expedient to make the gradients FLATTER, and that very greatly increased the cost of the earthwork. That it was not possible to include culverts and bridges, and things of that kind, in the first letting of a contract. That, in fact, the contracts had been commenced before these things were ascertained. And that when these circumstances were taken into consideration, he did not see any ground of complaint as to the increased expenditure. * * *

We have now, Gentlemen, the assertions before us. Let us see what they amount to, and let us also see what are the facts. * * * *

What a state we are in! Mr. Brunel refuses to give any estimate of the cost of the works beyond Bridgewater, and threatens, that if he is compelled to make one, he will take care to make it *high enough*. What does this threat imply? He complains that if he gave an estimate of 2,000,000*l.*, people would immediately say 3,000,000*l.* This may be so: I do not think they would stop at 3,000,000*l.*; but, at any rate, Mr. Brunel must, when called upon, do his duty, whatever people may say.

Our line has been opened for three months, and we cannot learn what are the gross receipts on any one week! when, be it remembered, the weekly receipts of every other line are published in the weekly newspapers. Nay, even the receipts of particular days are given. I find no fault with our tenants; I feel convinced that they are acting with proper motives as regards their own self-interest, which, in justice to themselves, they must attend to in the first instance, they would not otherwise raise a question of right: their courtesy would make them give us every information in their power; but I do lament that we should have been placed in such a situation. Who likes to have his money in a concern of which he neither is told the capital required nor the incomings?

I will tell you, Gentlemen, I have reason to believe that although we have only been open three months, yet our gross amount of traffic in a week is now not *very* far short of the rate of 100,000*l.* a year—and it has arrived at this in three months! It is doubtless the best time of the year, but on the other hand bear in mind how very short a time we have been open. * * * * *

How could—I ask how could, Mr. Brunel put forth statements so entirely at variance with the facts as those he made on the 2nd of this month? I affirm, and I can prove, that not one of the gradients has been improved since the letting the whole of the contracts to Bridgewater, or since the letting of any one of them; but on the contrary, some of the gradients have been doubled, and more than doubled, since the letting of the contracts; that one has been increased from 12 feet a mile (1 in 440) to 26 ft. 5 in. a mile (1 in 200); and another from 15 feet a mile (1 in 352) also to 26 ft. 5 in. a mile (or 1 in 200), and this, since the letting of the whole of the contracts, nay, since October, 1839.

That this was done after nearly the whole expense of making the original flatter gradients had been incurred, and that to do it, part of the Ashton cutting was actually filled up again. Certainly doubling the gradients is neither the way to improve them, nor can it account for *additional* expence incurred in making a line.

The agreement with the road trustees certainly did not make us cut deeper, for that agreement would have compelled us to go over the road; and Mr. Brunel, who chose that part of the line, only left five feet headway over the road, so that it was not possible to execute the line there according to the parliamentary plans; but we did not cut lower than the line in the contract.

Mr. Brunel goes on to say, that Mr. Bernard's own statement, that he believed the Great Western Railway Company had saved 15 per cent. in working their line, by flattening their gradients, fully justified him (Mr. Brunel) in flattening the gradients on the Bristol and Exeter.

Flattening the gradients! Why they were made more than twice as steep! one was increased from 12 feet a mile to 26 feet 5 inches a mile. And according to Mr. Brunel's own Report, dated December 13, 1838, an engine that could take 100 tons up an inclination of 12 feet a mile, would only take 20 tons up an inclination of 26 feet 5 inches a mile, so that this would not be the way to make a line work cheaply, but just the contrary.

Mr. Brunel also stated, that it had been found necessary to increase the slopes of some of the cuttings. This is a very mild way of speaking of an increase of 300 per cent. on the slopes throughout nearly the whole of the cuttings on the line. Mr. Brunel said, he never altered gradients, unless the advantages were great and the expense small. Advantage of doubling the gradient, and small expense of doing it! And a Report to the Directors, when it was at any rate probable that we should go no further than Bridgewater! and the Directors' sanction to the improvement!

I cannot trust myself to make any remarks on statements so entirely at variance with the facts, though the statements seemed to satisfy the shareholders, and were received with great applause.

But Mr. Fripp, who was to secure us such exact and timely knowledge of every part of the works—Mr. C. B. Fripp follows with a positiveness of manner and coolness of delivery calculated to convince everybody that he was thoroughly acquainted with his subject, and could check and control an engineer quite as easily as he could eat a gooseberry—and he, with some important additions, tells us the same story that Mr. Brunel does.

The difference between the 210,000*l.* at which the work was contracted for by contractors, who were at a premium, and therefore got very high prices, and the stated cost of those works at 430,000*l.* to be accounted for by FLATTENING the gradients! and after the contracts had been SET OUT at certain slopes, the slopes had to be increased! and culverts and bridges, and "things of that kind" not possible to be included in a contract, and the culverts and bridges, and the "things of that kind," were not in fact included in the contracts!

Why, Mr. Fripp was, I understand, the warmest advocate, not for flattening the gradients, but for making them TWICE AS STEEP, *after* the contracts were let.

Why, I set out the line myself, and I affirm, and I can prove that I set it out for slopes *four times* the slope that Mr. Brunel insisted upon putting in the contracts.

I set out the line, and had the property plans prepared, and the land purchased wide enough for the slopes that the cuttings now stand at, which is just four times that settled by Mr. Brunel.

Not possible to include culverts and bridges, and things of that kind in a contract!

Why—I drew up the contracts, and designed all the bridges and culverts, and "things of that kind," on the Bristol and Exeter Railway, as I had before done on the greater part of the Great Western, and I fixed the number and the situation of them, and saw to their execution: and I distinctly affirm that each and every contract included more culverts and bridges, and "things of that kind," than were ever built, and that I saved them: and that by contriving the peculiar sort of bridges, now known by the name of flying bridges, I very materially reduced (in some cases I halved) the quantity of masonry throughout the line. I shall make no remark on Mr. C. B. Fripp's statements, Gentlemen, you must make your own.

Really, Gentlemen, all this is very strange!

Mr. Brunel, the accuracy of whose calculations and estimates as to time and money, and everything else, is so bepraised in the Reports, accounting for the extra sum stated at 220,000*l.*, by the flattening gradients which were rendered twice as steep! thinking that the contractors had had too high prices for their work, and recommending the Directors to pay the contractor, in some instances, 10*l.* per cent. more than those high prices at which he was bound to execute his work.

The Board state the difficulty there is in making contractors do their duty, even under the *most binding* agreements; and, after the contract bonds are drawn out, and the expense of the stamps and everything else is incurred, Mr. Badham and Mr. Brunel forget to see them executed, the contractor snaps his fingers in your faces, and the contracts cost nearly double what they were let at.

* * * * *

I am not acting the part of an alarmist, I have too much at stake to do any such foolish and wicked thing; on the contrary, I feel that I have very materially benefiting the undertaking, and I trust I have no feelings for myself, that I do not share with you my co-partners in this undertaking; but I do feel that, after what we have seen of Mr. Brunel's estimates, opinions, and assertions on this railway, as well as elsewhere, and in particular, the extraordinary assertions he, seconded by Mr. C. B. Fripp, the Inspecting Director, made at our last meeting—that we cannot place confidence in him, and that we should not be acting fairly to ourselves if we allowed such things to pass without observation.

BRISTOL AND EXETER RAILWAY—THE LATE MEETING.

To the Editor of the Railway Times.

SIR,—You will, I am sure, excuse my offering a remark or two, on the Editorial note appended to the letter of "Amicus" in your last journal, as my wish is only to have the matter at issue set right before the public and my fellow proprietors. To those who, like myself, were present at that meeting, it must be unnecessary to say, that no reluctance was shown by the *Directors* to enter on an examination of "the serious charges" preferred by Mr. Gravatt against Mr. Brunel, and that in fact a resolution to that effect was proposed. It appeared, however, from the questions put by the mover of that resolution, and from Mr. Gravatt's subsequent explanations, that the apparently grave charges which he had brought against Mr. Brunel, were not intended by him (Mr. G.) to form the ground of inquiry, and in fact, that he was ready to ascribe these supposed delinquencies of his superior only to "a too sanguine disposition." When the charges were thus virtually abandoned, both the mover and seconder of the resolution felt that they had nothing to do but to withdraw it, but their doing so, I must in justice say, was no act of the Directors. I quite agree with you, Sir, that personal disputes of this kind "cannot be discussed with advantage, nor brought to a satisfactory issue, either in public newspapers or at public meetings," but it is but justice to Mr. Brunel (who was absent) to say, that after Mr. Gravatt had occupied the meeting with his statements for nearly two hours, the proprietors (who could have no inducement to deal unfairly with either party) almost unanimously affirmed a vote of confidence in Mr. Brunel, only *three* hands (of which I believe Mr. G.'s was one) being held up against it.

There are several points in the letter of "Amicus" from which I should dissent, but I have no inclination to indulge in controversy. It does however appear to me ungracious, as well as impolitic, to call in question the discretion of the Directors in appropriating the sum allotted for their remuneration, when they have voluntarily determined to apply a part of it in a manner certainly calculated (if the duties of the inspecting Director are rightly performed,) to be highly beneficial to the interests of the proprietors. I only wish that Railway Boards in general had followed their example; and we should not then have had to lament such extravagant expenditure, as in many cases has taken place, from the want of timely and intimate acquaintance with the progress and details of the works.

I am, Sir, your's, &c.,

H. V.

September 28, 1841.

PRESENT STATE AND FUTURE PROSPECTS OF RAILWAY PROPERTY.

To the Editor of the Railway Times.

SIR,—In glancing over the speculations and calculations of your various correspondents, I observe that the state and condition of the London and Birmingham Railway, as respects both the past and

Digitized by Google

the present, is referred to as a standard upon which to found their reasoning and support their arguments.

That a line comprising in itself all that can be alleged in favour of so stupendous and important an acquisition to the wants and convenience of mankind as railway transit, should be regarded with favour and quoted with approbation, is at once natural and correct; for it may safely be asserted, that it already nearly affords the *beau ideal* of all that has been alleged or even anticipated of railway perfection. That this state of things, whether as respects the progressive developement of its capabilities—its enlarging traffic—its growing receipts—and by parity of inference, its greater appliances to the comfort and convenience of the public, will not merely continue, but advance, may safely be predicated; and yet, in the face of a position which perhaps nobody has the hardihood to contest or deny, the shares of this triumphant speculation are and have been for a considerable time at a discount. There are those of your readers, Mr. Editor, who will, as a friend of mine did a few months back, either deny this *in toto*, or be induced to exclaim—Discount! How the deuce can 67 premium be called a discount? I, however, to his great satisfaction, and eventually to his great advantage, did convince him of the fact. Now, if he, as a man of singularly enlarged mind and general information, seeking for a profitable investment, could not at once understand the gist of my assertion, there may be others, not less talented, in the like predicament. Let us then to the proof.

Last June twelvemonth the Stock Exchange was shaken by the cheers of its assembled members when "Birminghams" were done at 100 premium. The dividend was then 8 per cent. It is now 8½ per cent., with a certainty from the increased receipts, of reaching 9 per cent. next spring. And yet, with all these existing and prospective advantages, the shares are now quoted at 67 premium, which, assuming 5 per cent. as a basis, is about 10*l.* below par., and therefore virtually at a discount to that amount. To the initiated this will appear, I am aware, little better than mere twaddle; but, Sir, it will hardly be credited how uninformed the masses of society are upon such points, and if I can convince only one solitary individual (as I did my friend) how greatly it might be to his advantage to secure such an investment, or what is quite as good, deter others from selling at an under value, I shall not have laboured in vain. Indeed, nothing can more effectually prove that the present depression of railway property is referrable to the state of the times, and not to the state of the several undertakings, when we thus observe the unnatural condition of the most promising undertaking upon earth. If the London and Birmingham cannot attain to high water mark under the present pressure, let the desponding proprietors of other lines derive consolation from such a fact, and, in an especial degree, those of the North Midland and Midland Counties, both of which contain within them the germ of future prosperity. Supposing the dividend of the North Midland not to exceed 4 per cent. already paid to the original holder, the present discount of 35 per cent. makes such dividend to a purchaser equal to 6 per cent., and with its steadily increasing traffic and undoubted capabilities, the shares are well worth 90 instead of 65. Again, the price of the Midland Counties, except from extraneous pressure, would be altogether inexplicable; for I hold that not a line in the kingdom can exceed it as an investment at 25 discount, and yet there the shares remain, proving either an excess of sellers or a paucity of buyers. Well indeed may such an anomalous state of things call forth the surprise and animadversion of some of your correspondents.

That many lines now finished or in progress may not be remunerative I believe, but as my sole object is to place matters in a just point of view I shall neither invidiously exalt nor disparage the property of others—particularly as there is much that is problematical about many. Before I conclude, I shall, however, notice a somewhat sanguine statement signed "F.," and dated at Bath, in number 200, page 1003, touching the forthcoming dividend upon the Great Western Railway. That this undertaking is a splendid and promising one cannot be denied—but making his deductions and drawing his comparisons from the London and Birmingham Railway, he makes it appear that with a greater outlay and less traffic, the Great Western is to declare a greater dividend! Admitting his data and his calculations founded upon them to be both correct, yet there is one momentous point he has completely kept out of view, and that is the capitalization of the loans, which has been accomplished by the London and Birmingham, and supplies in consequence an additional reason for unlimited confidence in that line. The great point in all undertakings is its ultimate condition. When, therefore, the vast amount of about four millions is to be transformed into shares—deriving a proportional amount of dividend with the original ones—what then becomes of the promised 10 per cent. at Christmas next? I have called the loans four millions; because from the experience of every line in the kingdom, the excess beyond the present amount of money borrowed will reach to that in spite of the opinion of Mr. Brunel. Heaven save us from going to an Engineer for an estimate! I thought we had all had enough of that! So much so, that I think 19 times out of 20 it would be the safest of speculations, and therefore the soundest wisdom, to act in direct opposition to their schedules.

Whosoever then ventures to invest in the Great Western may certainly lay his account, for an outlay of seven millions *bien compte*, and that nearly four millions have to be capitalized. After this he may allow his imagination to riot in such dreams and speculations of *future* profit, as to himself may best conduce to his *present* comfort and happiness.

I am, Mr. Editor,
Your old friend and correspondent,
JACK TAR.

September 21st, 1841.

PRESENT STATE AND FUTURE PROSPECTS OF RAILWAY PROPERTY.

To the Editor of the Railway Times.

SIR,—Can any of your correspondents give me a *good* reason why railway property should be so depressed? I have invested a little money in most of the undermentioned lines, calculating (perhaps unwisely) that they would not only pay me a better interest than most other investments, but that the property is quite as secure. I think, also, that all of these lines will pay much better eventually than they do now. Some that are not open, and others lately opened fully, such as Eastern Counties' and Great Western, perhaps, may be still more promising.

I am inclined to distrust my own judgment when I see the public prefer 3 per cent. consuls at 90 to railway shares, and want to be *convinced* I am wrong. I am, Sir, yours, &c.,

W.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—As you have shown, by your readiness to insert communications, and the remarks you have very appropriately made in some of your recent numbers, that you feel an interest in the unfortunates who have (to use rather an Irish expression) the pleasure of being the proprietors of the Edinburgh, Leith, and Newhaven Railway, I venture to solicit the use of a small portion of your columns while I make one or two remarks, and ask a question or two, with reference to that same undertaking.

In the original prospectus, under which this Company was formed, was presented to the proprietors a very different calculation of profit from the one with which they have recently been favoured by the Directors, or rather by Mr. Grainger. I cannot be positive, because I have not, at present, the means of reference, but I think this gentleman was one of those upon whose evidence of the traffic the Act for the formation of the railway was obtained; and upon that evidence the proprietors were taught to expect a dividend of 15 per cent., instead of 3 per cent. as now promised—and this too, be it remembered, without any reference to a landing place at Trinity, or a connection with the Edinburgh and Glasgow, or any other railway; it being distinctly stated in the Report of the Committee of the House of Commons, and subsequently repeated by the Directors in their Report of January, 1838, that the railway was "a complete and integral line between the termini specified, and that the calculations of the remuneration to the Company were made so as to be entirely independent of any other railroad;" "*that the calculated income was chiefly expected from passengers, which would be very little effected by a junction with the Edinburgh and Glasgow line, and that the whole income was calculated independent of that line.*" This last statement was made more than once, in a different form but in language equally strong, by the Directors, to dissipate "an idea," to use their own words, "which was understood to prevail amongst the proprietors at a distance, that this Company's railway was so dependent for success on a junction with the Edinburgh and Glasgow Railway, that it could not be expected to succeed without such junction, the Directors thought it proper to state that that was *quite a mistake.*" Mr. Grainger, it appears, or whoever gave evidence before the Parliamentary Committee (and I cannot divest myself of the idea that this gentleman was one of the witnesses on that occasion, as Messrs. Grainger and Miller were the engineers who surveyed the line and framed the estimates), did not hesitate to assume one-third of the gross number of passengers as likely to travel by the railway, and seemed to think that in so doing the limits of probability had by no means been reached, much less transgressed; and yet now, when the passenger traffic has avowedly increased, we are told by the same gentleman that *he considers* that only *one-ninth* of the passengers ought to be reckoned to go by the railway; and in the event of a good landing pier or harbour being built, and a connection formed with the Edinburgh and Glasgow Railway, (events not originally calculated upon,) Mr. Grainger is of opinion that the proportion of passengers may very safely be raised to one-sixth of the average; which, according to the estimate of the Directors, would yield less than one-half the dividend they originally promised us without any of these adjuncts; and this is the line we were so pompously told would not be essentially benefited by a junction with the Edinburgh and Glasgow Railway;

It has been stated that the portion of the line in hand, *i.e.* from Scotland-street to Trinity, would be completed for about 50,000*l.*; but now, it seems, it will require the whole of the capital of the Company, with the saving of 36,000*l.* by the alteration of the level into the bargain, leaving nothing for the formation of the tunnel; and this capital, which has been so expended on this small portion of line, was originally intended to form three lines, or rather one line to Leith and two branches to Newhaven and Trinity, but that the *engineering difficulties* rendered the formation of the line to Leith *impracticable*. It was also stated, in the Report of January last, that the Directors had advertised for tenders for executing the tunnel, the time for giving in which expired on the 1st February; but the last Report has not conveyed to us any information as to whether any tenders were sent in or not, but simply intimates that they had deferred the letting until after the completion of the Edinburgh and Glasgow Railway. The Directors also say, in their last Report, that they "expected to have been able

Digitized by Google

to state that the line from Scotland-street to Trinity had been completed," and that "the work remaining to be done from Scotland-street to the sea was small," but immediately afterwards we are met by the astounding statement that *this small portion of the work* will require 24,000*l.*, or nearly one-half of the sum they told us would be originally required for the formation of *the whole of that portion of the line!*

Perhaps the Directors will inform us out of what fund they propose to make the tunnel, which, when completed, is with other things to realise us the magnificent dividend of 4 per cent.; and what is the amount of the arrear in respect of the forfeited shares, independent of the general arrear (which is enormous, and I believe unprecedented in the history of railways), or in other words what was paid on these shares before they were transferred into the hands of insolvent parties, as no transfer could be made until the calls then due were discharged. And perchance they will not think I am trespassing too far upon their patience and good nature, when I venture to ask them how the Board and officers of the Company stand affected to the concern in a pecuniary point of view, or in plain English, whether they have paid their calls, and what is the nature of the arrangement between them and the gentleman who writes himself "Agent to the Company," and whose "scale of traffic extracted from Mr. Grainger's Report," certainly does credit to his ingenuity. Do the Directors authorise, or approve, the statements which are put forward by this gentleman? What *is* the amount of his interest in the undertaking? What *was* it? And what is the arrear now against him in the Company's books?

Are the proprietors to understand that the whole of the land necessary for the purposes of the Company has now been purchased, so that the compulsory powers of the act which expired on the 1st July last are no longer required; and that the clause in the last Report on this subject merely related to the small portion of Dr. Neill's property, which it was stated in the Report of January last had not been acquired?

I am sadly afraid I have trespassed so much that I am not likely to obtain a reply to the question I am now about to put; but put it I will nevertheless, and leave the gentlemen to their own discretion, whether they will answer it or not. Why was it stated in the Report of January last that the Directors "are now *authorised* to state that the Directors of the Edinburgh and Glasgow Railway Company *have determined* upon extending their line through the Princes-street gardens, and forming a junction with the Company's depot at Market-street," while Mr. Leadbetter, the Chairman of the former Company, stated distinctly, at a meeting held in Liverpool shortly afterwards, that "the resolution empowering the Company to go to Parliament to obtain the privilege of that extension *had never yet been come to by the Board*, and would not be adopted until the subject had been most maturely considered in the first instance?"

I am, Sir, yours, &c.,

A SUFFERER.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—The public generally, and this town in particular, are greatly dissatisfied with the arrangements made by the Brighton Railway Company, both as regards their charges and the manner of conveying their passengers and luggage.

The price for the first class carriage, as you are aware, is 14s. 6d., for the second 9s. 6d., and 6s. is to be charged for the third class. On the coach road the inside fare is 20s., and 8s. and 10s. for the outside. We have no objection to a reduction on the best carriages, but why should the man of business, who is compelled to travel, pay at a higher rate than the over-taxed conveyance on the common road, while those who possess an abundance are favoured by a reduction of 25 or 26 per cent.? If a less sum can be taken, it ought in common fairness to be equally divided. Greater consideration is shown, and an unfair proportion of luggage is given, to the first class passengers, while those of the second are not even permitted to take the weight allowed in merchandise. This is extremely arbitrary and unjust. A tradesman who may be desirous to lay out 10*l.* in the metropolis will have to pay 9s. 6d. each way, together with the charge for what he has purchased, which he is not allowed to carry, and which will make 7½ per cent. on the amount, to say nothing of the inconvenience and expense of being set down two or three miles from the spot where he intends to transact his business.

The charge, 6s., for the third class, or luggage-train, is highly objectionable. There are numbers of labouring men and their families constantly travelling to and from this place in search of employment, who with their baggage can make the journey by the vans at 2s. 6d. and 3s. 6d. per head. What is to become of them when this mode of conveyance is removed? They cannot pay at the rate of 6s., with an additional charge for luggage. Both the second and third class carriages are *higher* than on any *other line*, and more than the public, to any extent, can, or ever will consent to pay.

Excessive charges have greatly injured the summer business of this matchless town. The steam packet plying from hence to Dieppe, commenced by charging two guineas for cabin, and thirty shillings for deck passengers. They persisted in this course for years, monopolising the station and the right of embarkation at the chain pier, setting all competition at defiance, and reducing the number of passengers by this route from 2,000 weekly to 50 persons. When they had accomplished this feat, they made a reduction of *one*-half, but the public were not to be gulled a second time. Previous to this, notwithstanding the want of accommodation, there were *no fewer* than *twelve* sailing packets constantly employed; their charges were 7s. and 10s. 6d., and they performed the journey to Dieppe almost to a certainty in 12 hours. Since that period the summer business has gradually declined; the bazaars and public places of amusement have been annihilated, and numbers of deserving persons have been driven to severe destitution. It has been repeatedly shown that high prices are destructive to the interests of the parties who obtain them. Many will consent to part with small sums frequently, but very few with any considerable amount at one time.

If the Directors of this line fancy that the aristocracy alone can, or will, support them and this town, they labour under a very extraordinary delusion, and the sooner it is dispelled the better. Neither one nor the other can exist without summer visitors; it is by numbers only, and a straightforward liberal policy, that they can hope to make a return for their immense outlay. By this course they cannot fail to insure the success of this all-important undertaking, and of thousands in this place whose interests are so completely bound up and identified with their own.

I am, Sir, your obedient servant,

JOHN BRUCE.

Brighton, Sept. 26.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—I was somewhat surprised on reading in your last week's paper the Report of Mr. Harman's speech at the Brighton dinner, wherein he said "he never was connected with any set of men who were so anxious to do their duty; he had never met with a proprietary who had greater confidence in their Directors." Surely, Sir, Mr. Harman forgets, among other things, the quarrel with Mr. Goldsmid, the differences with Mr. Kemp, and the trustees of the Shoreham Road, the complaint about exclusive and expensive eating and drinking, and the discussion about taking the sole management of the Croydon line. It should be remembered with reference to this statement, what Mr. Waley said at the half-yearly meeting of the 27th January last, that it had been hoped all would unite in carrying out the line that had been selected, but certain parties had not adopted this course, and were now bespattering the undertaking, and instead of confessing their former error they were doing their best to damage the Company in public estimation. By Mr. Harman's statement, it would seem as if the Directors had had no difficulties to overcome except the engineering.

Is not Mr. Moreton Dyer, the late magistrate, a Director?

Now that the whole line from London to Brighton and Shoreham is open, is it not time to diminish the NUMBER of Directors? Yours, &c.,

ANTI-PALAVER.

27th September, 1841.

LONDON AND BRIGHTON RAILWAY.

THE traffic upon this line since the opening has been beyond all expectation. During the first week ending on Monday night, the receipts amounted to upwards of 3,400*l.*, exclusively of the receipts for the Shoreham branch. The largest number of passengers brought down in one day was on Saturday, and the largest up-trains were on Monday and Tuesday. On Monday morning the express up-train at half-past eight carried 142 passengers; but the largest train which has yet travelled on the line was that which left the Brighton terminus on Tuesday morning at a quarter to eleven. This train, propelled by two engines, consisted of 19 railway carriages, carrying 146 passengers, 5 private carriages, and 5 horses.

Since the opening of the entire line, Mr. Stevens, of the Blue Coach and Railway Office, Castle-square, has started several new omnibuses and flys, for the conveyance of passengers between the Brighton terminus and various parts of the town, including Kemp-town, Brunswick-square, and terrace, and the hotels. These vehicles ply to and from the station, on the arrival and departure of every train.

A coach has been started to bring passengers from Lewes to meet the express train; and an omnibus plys regularly between Worthing and the Shoreham branch of the railway for the express and other trains. A great number of the inhabitants of both these towns have already availed themselves of the conveniences which this arrangement affords.

The *Item* coach ceased running on Tuesday, the other coaches remain on the road at present.

We are indebted to the railway for an extraordinary influx of visitors. The town was literally overflowing last Saturday evening, and great difficulty was experienced in procuring beds. Since that time the trains have brought down an increased number, and if the weather should be favourable in the ensuing month, Brighton may expect an October of unexampled prosperity.—*Brighton Gazette.*

GLASGOW AND GREENOCK RAILWAY.—The passengers from Dunoon, by the Maid of Bute, on Thursday morning, for the half-past 10 o'clock up train, being unfortunately too late, William Campbell, Esq., of Tillichewan and Dunoon, Andrew Perston, Esq., Archd. Harvey, Esq., Wm. Low, Esq., Edinburgh, and other gentlemen so disappointed, on expressing to the manager their anxiety immediately to proceed, he, in the most handsome manner ordered a special train to be got ready, and in a few minutes the passengers were *en route* for Glasgow. Such liberal conduct on the part of the Company should be made known, as giving every assurance that the public accommodation is attended to, at whatever expense to the Company, there being always an engine at the stations to meet any exigency, or their own desire, as in this instance, to oblige and accommodate.—*Glasgow Courier.*

GLASGOW AND GREENOCK RAILWAY.—We understand that Wyndham Harding, Esq., formerly of the London and Birmingham, and now of the Leeds and Manchester Railway, was yesterday unanimously elected Secretary of the Glasgow, Paisley, and Greenock Railway. From the great experience which Mr. Harding has had in railway business, and the very high testimonials which he produced to the Directors, we feel persuaded the appointment will give universal satisfaction to the shareholders. Mr. Errington will continue in charge of the line for the present.—*Greenock Advertiser*, Sept. 24.

RAILWAY SHARE-LISTS.

The London Prices are taken from Mr. Wetenhall's List; those at Liverpool are furnished by Mr. C. J. Townley, Sharebroker, and are the closing prices on Thursday. The quotations marked * are the latest Edinburgh prices; those marked † the latest Glasgow prices. The former are supplied by Mr. Robert Allan, of St. Andrew-square; the latter by Mr. J. Watson, of Frederick-street.

2. Toll to London and Birmingham 160*l.* 0s. 11d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 24*l.* 17s. 10d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The div dend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 5,019*l.* 15s. 2d. are the receipts after deducting omnibus charges, and payments to other Companies.

25. The receipts for goods, &c. include, carriages, 49*l.* 17s. 0d.; horses, 30*l.* 15s. 0d.; dogs, 2*l.* 18s. 6d.; parcels, 216*l.* 13s. 11d.; cattle, 33*l.* 5s. 6d.; corn, 8*l.* 18s. 1d; heavy goods, 449*l.* 0s. 9d.; coal, 105*l.* 18s. 2d.—Total, 897*l.* 6s. 11d.

27. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

F. (Bath.)—We gave the return precisely as it reached us. We should be very glad indeed if the Company would separate the earnings on the several lines and judging from the numerous communications we receive on the subject, so would not a few of our correspondents, but if the Directors will not do so, how can we help it? We suppose the returns are open to the shareholders, and if any of them will take the trouble to forward us the different items we shall be most happy to insert them.

Spectator is somewhat late in commenting in October, upon a communication which appeared in our columns in January last. In fact, as a point of controversy, the matter has now lost all its interest, and for any other purpose, Spectator may more advantageously develope his views in another form. We shall be glad to be favoured with the communication hinted at in the concluding paragraph of his letter.

F. B. (Dorchester.)—Yes: the same party.

We have to acknowledge the receipt of Nos. 1 and 2, of "Lectures on Chemistry," by Mr. H. M. Noad, now in the course of periodical publication by Messrs. Scott and Co., of Charter House Square. From what we have read of the "Lectures," they promise to be extremely interesting, and we have little doubt will become popular.

The Hydraulic Railway.—In answer to a circular on this subject, we have only to say—

"The earth has bubbles as the water hath,
And this is of them."

R. P. (Camden Town.)—We do not know how our correspondent's object is to be attained, unless he have some personal acquaintance with, or an influential recommendation to, one or more of the Directors or the superior officers of the Company.

Mr G. (Birmingham.)—The explanation is quite satisfactory; we shall be glad to hear from him again.

Our Dumbarton friend, who proposes the construction of a railway from England to China, with sundry branches, and has gone to the expense of having a lithographic sketch of his plan prepared, should have completed his project by laying down a branch to the moon. It would have been but adding a few millions to the 50,000,000l. for which he thinks his magnificent scheme might be carried into effect.

A Subscriber (Newbury) is thanked for his attention. If he will take the trouble to reply in detail to the letter the accuracy of which he impugns, we shall be happy to give his communication a place in our columns.

A Liverpool correspondent will see that we have complied with his wish.

We hope X. is now satisfied.

A North Midland Shareholder.—The dividend will be payable at Messrs. Glyn and Co.'s, the Company's bankers, on the 15th inst.

An Old Workman. It was but saying, in other words, that not being in a position to publish all, preference would be given to that which came within the conditions referred to.

Share-lists and Traffic-tables.—We are always happy to receive correction of these lists, and suggestions for their improvement, but many of the hints are, from various reasons, wholly impracticable. This to two Liverpool correspondents and one at Edinburgh.

Many thanks to Mr. E. of Liverpool.

The communication respecting Sir William Burnett's Patent can appear only as an advertisement.

Equity.—We really cannot comprehend our correspondent's drift.

Enquirer (Dublin.)—The connection of the gentleman with the railway referred to has long since ceased.

**** It is requested that in future all communications intended for the Railway Times be addressed, "To the Editor," and not to any individual by name, now or recently connected with the establishment.*

THE RAILWAY TIMES.

SATURDAY, OCTOBER 2, 1841.

THE question of a railway route to Scotland continues, we are glad to find, to attract much attention in the north, on both sides of the Border. The Scotch people in particular, if we may judge from the unceasing agitation of the matter in the public journals, seem fully sensible of the advantages which would result from the early completion of one or the other of the proposed schemes, their views being of course considerably biassed for or against either plan according to their several localities. In the vicinity of Carlisle, too, the subject has been taken up with commendable spirit, and we trust that at no distant day it will be brought before the new Parliament, and the new administration, with such a weight of local influence to support it as shall induce (we are about to write *compel*) the legislature and the Ministry to help the scheme forward. It is not much that is asked at the hands of our rulers. No grant of public money is required to carry out the work, although few grants could be found less objectionable in principle, or more likely to be beneficial in their results. All that is sought for in the first instance at least, is that certain forms, useful and necessary, we admit, in most cases, should be dispensed with so as to enable the projectors to proceed without delay in bringing the matter fairly before the public. Other facilities might easily be afforded, but where is the use of soliciting these, if so trifling an indulgence as that referred to is refused? That it has been refused in a case of almost equal national importance, will be in the recollection of our readers. We allude to the proposed railway to Holyhead respecting which the late House of Commons determined by a large majority that it would be inexpedient to dispense with the March notices to owners and occupiers of land upon the contemplated line, and this notwithstanding that it was satisfactorily established that these owners and occupiers, almost to a man, were themselves willing to accede to the proposals of those who took an active part in promoting the success of the undertaking! We sincerely hope that the members of the new House are in this respect much more *liberal* than their predecessors, and that so humble a boon would not *now* be denied. The attempt should at any rate be made, and if it fail, the odium will rest on the right shoulders.

If, however, the inhabitants of the district through which the line recommended by the Parliamentary Commissioners is proposed to pass, be really and sincerely interested in the success of the scheme (as how can they be otherwise?), they must not forget that whatever facilities the legislature may grant for the prosecution of the enterprise, all will be unavailing, unless they themselves mark their sense of the undertaking, not merely by attending public meetings, or signing public petitions, in its support, but by subscribing for shares. The attractions which a line of railway to Scotland holds forth as a mere pecuniary investment are, perhaps, not sufficient to tempt the distant capitalist (although we are inclined to think that even in this respect the merits of the proposed railway have been under-rated); but once let the residents in the district prove by deeds as well as words, that they are determined to unite cordially and vigorously in carrying it out, and we venture to predict that they will speedily secure the assistance of public-spirited individuals in other parts of the empire. Many a shareholder, for example, in other lines would with the prospect of but a very moderate return, feel disposed to risk something for the success of a scheme which would tend so materially, and so directly, to increase the traffic upon the railways in which he might be more deeply involved, provided he saw proofs of an honest and zealous determination on the part of those more immediately interested in the project, to allow no difficulties to damp their ardour in prosecuting it to a successful issue. It is a pleasing feature in railway history, that undertakings which at one time were looked upon with distrust, and treated with secret hostility or open ridicule, are now beginning to be properly understood and duly valued. This gratifying fact was alluded to by the Chairman of the Eastern Counties' Company at the late general meeting, when he took occasion to inform the proprietors that the shares in that railway, which it is notorious were at one time held in all parts of the kingdom except the very counties through which the line was originally intended to pass, are rapidly extending themselves into Essex. Prejudices are slowly uprooted—in the Eastern Counties' case there was perhaps more than prejudice to overcome—but with railways, as with other grand improvements, the truth will hold, that sooner or later, their merits must be appreciated.

So important do we deem local support to the success of such a project as the proposed route to Scotland, that we trust no means will be left untried to secure it. Might not the plan to which we recently had occasion to allude, of splitting a certain number of shares into small holdings, as followed or proposed to be followed in the Dublin and Drogheda Company, be adopted in this case with excellent results? We are quite aware that shares of large amount are usually more desirable than any other, as tending to restrict the stock to the hands of parties able and willing to make good their instalments, and checking speculations in the market when the full sum has been paid; but in a case of this kind where the benefits to be derived from the formation of a railway are indirect rather than direct, it is highly important that an opportunity should be offered to persons of limited means to show their sense of the undertaking and to forward its success to the best of their ability. An arrangement of the kind referred to would, moreover, give many more individuals a personal interest in the scheme than can otherwise be expected, for however little pecuniary benefit they might look to reap from the speculation, the very circumstance of being connected with it as shareholders, would lead them to watch its progress, and promote its prosperity, and no more certain means of doing thus could be devised than by bringing the force of public opinion—the opinion of neighbours and friends—to bear upon the scandalous extortions to which Railway Companies are exposed by the owners of property required in the prosecution of their works. If A. B. and C. have a pecuniary interest in a particular railway, it is not likely that their neighbour D., being aware of that fact, will seek to drive so hard a bargain for his land as if the whole of the proprietary were entirely unknown to him. Shame, if no better motive, would prevent him from fleecing his friends; and even if it were not so, the inte-

Digitized by Google

rest which the other parties would naturally take in the line, would not allow them to look quietly on and see themselves and their co-proprietors robbed, when probably a few words as witnesses, or a resolute stand for the right as jurymen, might avert the evil. We throw out the hint for the consideration of the parties concerned, and shall be glad to find that it is likely to be carried into practice.

THE organs of the Opposition party announce that it is in contemplation speedily to double (some say to quadruple) the present inland postage rate. If such be really the intention of the new Government, we shall be very sorry for the circumstance, for we do not think that sufficient time has yet been allowed to test the existing plan. However impolitic, under all the circumstances of the case, so great an alteration as that recently introduced may have been, none but enthusiasts and visionaries could have looked for its immediate success, or have hoped for results less detrimental to the public revenue than have up to this time followed its adoption. We believe that ultimately the penny postage would prove even more productive to the State than the high charges which preceded it, while there can be no doubt that by the reduction a very considerable advantage has already been secured to the community at large.

Our reason, however, for adverting to the rumour, is to suggest the possibility of increasing the postage revenue, not by an augmentation of charge, but by multiplying the facilities for the transmission of correspondence—in other words, by tempting parties to write twice where at present they write but once. Why should there be but one despatch and one delivery of letters daily in most towns of the kingdom? The system of morning mails to several of the principal cities and towns is understood to answer well, and why should there not be a forenoon mail and an afternoon mail, as well as morning and evening mails? Why, for instance, might not a bag of letters be transmitted to Birmingham, or Brighton, or Bristol, by each of the trains which daily leave London for these populous places? In all of them, we believe, there are several deliveries of the local post, and there could be no difficulty in combining with these the same number of London deliveries. Does any one imagine that there would be one-twentieth part of the correspondence which now passes through what is called the Two-penny Post in London, if the deliveries were confined to the morning and evening? It is the frequency of the despatches which leads to so general a use in the metropolis of Post-office facilities; and we have no doubt whatever that were these deliveries hourly, instead of every two hours, as at present, the number of letters would be still further increased, and that to a very great extent. Now, what one part of London is to another part, railways have rendered distant districts of the country to each other. Brighton, thanks to the railway, is scarcely further removed from London, as regards the transmission of letters, than is Whitechapel from Chelsea, or Paddington from the southern suburbs; and if Paddington and Chelsea enjoy the advantage of four or five deliveries per day, why should Brighton be restricted to two? Why, except that the Post-office authorities are proverbially averse from innovation, and by no means anxious to encourage arrangements which might have a tendency to impose further labour upon themselves.

If such a scheme as is now suggested were brought forward in Parliament, we should of course hear a great deal about the enormous cost of conveying the mails by railway, and figures without end, would be dragged in to support the allegation; but whose fault is it that the conveyance of the mails is expensive? Not the fault of the Companies certainly, for most of them, we have reason to know, derive little, if any, pecuniary advantage from the service; it is the fault of the Post-office people themselves who usually fix the starting of the mail trains at hours so unseasonable that very few persons travel by them, and as a matter of course, the Companies are compelled to seek from the Post-office that remuneration which they cannot obtain from the public. But if the accommodation and convenience of passengers could be combined with the transmission of the mails, the result would be very different; and very easily might they be so combined. What need would there be for a special mail train when by any one, and every one, of the ordinary trains, the bags might be sent forward; not even a Post-office guard being required to accompany them?

We are satisfied that there is not one Railway Company in England or Scotland who would not do their utmost to secure a fair trial for such an experiment, even to the gratuitous carriage for some time of these intermediate despatches. Some little difficulties might possibly occur in reducing the plan to practice, but they would be easily surmountable, and surely no more legitimate mode of augmenting the public revenue could be devised than one which would add to the facilities already enjoyed, without enhancing their cost. It would contribute far more to the income of the State than an increase of charge, which, however reasonable in itself, is certain, like all other alterations from a low rate to a higher, to give rise to dissatisfaction and discontent.

AMONG the subjects brought forward at the late meeting of the Manchester and Leeds Railway Company, and to which we had not space to advert last week, the comparatively small expense of working the line ought not to pass unnoticed. Upon this point, however, we are spared the necessity of remark by the letter of an acute and well-informed correspondent which appears in another column. It gives us much pleasure to find that retrenchment in this most important branch of railway expenditure is making rapid progress; for to economy, more than to any extraordinary developement of traffic beyond what has already taken place, must many of the Companies look for a more satisfactory dividend. In most cases, we fear, the current expenses of railways were originally pitched at too high a rate, and although we are by means enamoured of that pseudo-economy which now-a-days strains at a gnat and swallows a camel, we are desirous to see every superfluous source of expense lopped off, and the business of the Companies conducted as cheaply as is consistent with a due regard to present efficiency and future advantage. The cost of locomotive power must at all times form a heavy item in the annual disbursements, and here more than in any other department is a saving to be looked for, provided vigilance, discretion, and science are brought fully to bear upon the every-day operations of the several lines. Upon this point we call attention to an article in a subsequent column, where a plan is suggested of inducing and encouraging a most beneficial rivalry, and which we have no doubt would, if fairly carried out, tend much to the practical improvement of that great triumph of modern skill, the locomotive engine. We regret to find that some Companies suddenly smitten with a mania for economy, have commenced at the wrong end—screwing down their subordinates to the lowest possible scale at which one can manage to exist, but apparently overlooking not merely the almost sinecure allowances of Directors and superior officers, but the wasteful extravagance which too frequently distinguishes the proceedings of those to whom the care of the locomotive department is entrusted. *Here* it is, we repeat, that the grand saving is to be effected, and we rejoice to find that the Directors of the Manchester and Leeds Company appear to have so commendably led the way.

Another matter touched upon in the Directors' Report, was the question of a depreciation fund—a question which, it will have been seen, gave rise to much discussion and many conflicting opinions at the recent half-yearly meetings. It is surprising to us how any misapprehension as to the real character and legitimate objects of such a fund can exist, after the very clear explanations elicited at the meeting of the London and Birmingham Company. All parties agree in this, that the earnings of every consecutive period should be charged with the expenses of such period, but the mode proposed for meeting this expenditure differs with different individuals. By some it is affirmed that an efficient stock of engines and carriages, having once been secured, the cost of maintaining them in proper working order, will fall pretty equally upon each succeeding half-year, so that no apportioning of any part of the current income to meet contingent expenses, either past or future, is required. Others maintain that it is impossible to ascertain accurately the exact amount of depreciation or waste during any particular period, so as to meet it in the current expenditure, and that unless some approximation be made to such depreciation, in the nature of a fixed per centage or fund, the proprietors are dividing profits from which no proper deduction has been made, and that the present shareholders are benefitting themselves at the expense of their successors. We confess that we hold with the latter class, and are of opinion that the stock of an establishment cannot be kept up efficiently and on equitable principles, more especially with a fluctuating body of shareholders, without some such arrangement. The more correct mode of ascertaining the precise amount of depreciation during any given period is unquestionably to value and revalue the Company's stock at the commencement and termination of such period—a plan which is adopted in some Companies—but a much more simple scheme, and one which in practice will probably prove equally correct, is that of setting apart a certain per centage upon the original value of the stock. Experience alone can of course determine what particular per centage should be so set apart, but such experience will be speedily secured, and in the meantime no great mischief can arise from an approximation to it. We can readily imagine why certain parties should be anxious at particular dates to divide every penny of income in hand, without any regard to the past, or provision for the future. They may have more shares than it is convenient for them to continue to hold, and of course will be desirous to secure a present dividend, and give their shares an impetus in the market. To those, however, who are perma-

Digitized by Google

nent proprietors, it matters little whether a small surplus remain from one half-year to be carried to the next, or whether the whole receipts are at once divided. If by any scheme of a depreciation fund, or of a "reserve," or "rest," or in any mode analogous to either of these, the market speculation in shares could be checked, we should hail it with approbation, in spite of any concomitant difficulty or disadvantage. Gambling in the share-market has been the greatest drawback which the Railway System has yet had to encounter—for *there*, as elsewhere, manœuvring not unfrequently outstrips merit in the race for success.

We are aware that objections—and objections of no trifling weight—may fairly be urged against the accumulation, in the hands of Directors, of any considerable amount of money such as a depreciation fund is alleged to produce, and which is to be applied at discretion; but this objection proceeds on the supposition that a conjectural sum is to be set apart, whereas the object of the parties who support such a measure—an object which they will soon have the means of attaining—is to appropriate just so much of a Company's earnings as shall be sufficient to retrieve the delapidation which the stock has received in any stated period, and no more. Supposing the amount of depreciation to be precisely ascertained, it is clear that no accumulation of funds, from which any danger is to be apprehended, could possibly take place. The exact sum necessary to replace the waste of the current year would be abstracted from the current year's income, and if at the end of the succeeding period it were found that the stock had not become deteriorated, no further amount would be set apart, or in any case only just such amount as would meet the further depreciation.

This question is of very great importance to all Railway Companies; and, being such, we are glad to find that it is attracting so much attention. Permanent, and not merely temporary prosperity, ought to be the aim of every Railway Board, in the arrangements into which they enter; and in consulting and promoting this, the probable effect of particular measures upon the share market must be more disregarded than under present circumstances is generally the case. It is very plausible to urge that present holders of shares ought not to suffer for the sake of those who may come after them—and certainly they ought not to suffer unjustly or capriciously—but if what we have said above be correct, they cannot possibly be injured by the establishment of a depreciation fund, conducted upon right principles; and, on the other hand, care is to be taken that existing proprietors are not allowed to derive an immediate profit, at the risk of entailing future injury on the undertaking.

We learn with much regret, that within the last few days Mr. Glyn has retired from the Chairmanship of the North Midland Railway Board. Mr. Glyn has, we understand, been induced to take this step from a long-settled conviction that the affairs of a railway in active operation cannot be satisfactorily attended to, save by parties resident on the spot; and indeed it has only been on the urgent entreaties of his colleagues, and of many of the principal proprietors, that the honourable gentleman has for some time past retained his seat.

The traffic of the North Midland Railway has hitherto not come up to the expectations which were at one time entertained; but if great ability, indefatigable zeal, and a most conscientious devotion to the true and permanent interests of his constituents on the part of a Chairman, could ensure success in a speculation of this kind, the North Midland line would assuredly surpass the most sanguine hopes of its promoters. We have no fear for the ultimate prosperity of the undertaking, and can only hope that Mr. Glyn's successor in the chair will equally merit, and equally receive, the confidence of the shareholders generally.

We take it for granted that the proprietors will adopt some mode of publicly testifying their sense of the obligations they are under to their late Chairman for his exertions, during times in their history as a Company, of considerable difficulty and doubt. What particular mode may be selected we presume not to conjecture, but sure we are, that never was acknowledgement of services rendered, more justly due.

The great perfection and economy in the use of steam for pumping water which the Cornish engineers of the present day have been enabled to attain, appears to have been mainly fostered by the publicity given to the duty of each individual engine, and the rivalry thereby induced of all engaged in their manufacture to produce a superior performance. This of course improves the economy of mining operations and enlarges the connexion of the successful parties.

We have often felt surprised that the Directors of our large Railway Companies have not devised some analogous means of directing the attention and competition of their engineers to produce locomotive engines of greater economy as regards fuel and repairs, than has hitherto been attained; and we are far from thinking improvement unattainable, if proper means were taken to publish the performance, consumption of fuel, and expenses of engines by different builders.

We believe that recent inquiries into the economy of this heavy item of railway expenses, have for the most part furnished individual Directions with a private knowledge of this nature, and it would give them but little additional trouble to publish monthly results, and thereby compare themselves at once with their neighbours, and conduce to the benefit of the whole body.

We are glad to hear, therefore, that the Directors of the North Union Railway have set on foot an approximation to the system we advocate, by contracting for engines on the same general plan from two eminent locomotive builders in their neighbourhood, with a determination to keep accurate accounts of their respective performances and economy. We hope they will not confine to themselves alone the advantages of such a plan, but render the information available to other Railway Companies, by commencing the publication of documents similar to the monthly reports of duty of Cornish engines, and which we conceive would not fail to conduce as much to the economy of locomotive power on railways, as they have done to the saving of coal in mining operations, where the value of a bushel of coal has been increased from 28,000,000 lbs. to 100,000,000 lbs since the time of Watt, which is equivalent to 350 per cent. We need scarcely add that we shall have great pleasure in giving publicity to any such documents.

—o—

Thursday week was the anniversary of the opening of the Chester and Birkenhead Railway. During the 12 months just expired the trains have travelled seventy thousand miles, being nearly equal to three times the circumference of the earth, and th number of passengers conveyed amounts to two hundred and eighty-seven thousand nine hundred and seventy-four, being upwards of 5,500 per week, without any accident whatever, consequently the Company have incurred no expense for surgeons' bills nor compensation. During this period there has been no life lost, nor a fractured nor dislocated limb of any of the workmen; nor has there been a broken or bent axle or wheel belonging either to the engines or carriages.

Accidents may arise which no human foresight or caution can prevent. Nevertheless, on the other hand the want of care and practical knowledge on the part of railway executives is sure to lead to disastrous results, and we question whether any other railway has been equally exempt from accident during the first year of its operations, especially when we consider the extent of the traffic, which appears to equal that of some of the principal trunk lines. Notwithstanding, however, this amount of traffic the shares of the Company are, like many others, suffering under great depression. We suspect this must arise from some other cause than a lack of traffic. Judging from the low rates of fares* charged, it is probably owing to some opposition on the part of existing rival conveyances, which can only be of a temporary nature.

The following statement with which we have been favoured by a gentleman thoroughly acquainted with the business of the line will be found interesting:—

Developement of traffic on the Chester and Birkenhead Railway, as per returns prepared for the payment of Government Duty.

Opened 23rd Sept., 1840, to	Passengers.	Reduced to one passenger in miles.	Duty paid. £	s.	d.
Oct. 5	4,231	54,455	28	7	3
Nov. 2	8,885	113,086	59	4	3
Dec. 7	7,375	92,902	48	7	9
1841 Jan. 4	13,890	170,014	88	10	11
Feb. 1	14,580	174,653	90	19	4
Mar. 1	16,061	194,140	101	2	3
Apr. 5	25,876	310,348	161	12	10
May 3	34,211	408,253	228	5	1
June 7	43,942*	563,456	293	9	4
July 5	28,221	347,886	181	3	11
Aug. 2	36,809	457,928	238	10	0
Sept. 6	46,853	(not made out.)			

* Chester races.

These dates are the first Monday in the month, as required by the collector.

—o—

The Preston and Wyre Railway has, as our readers are aware, called a new town into existence, namely, Fleetwood-on-Wyre, appropriately named after the able and enterprising Chairman of the Company, Sir Hesketh Fleetwood. In the Return of the census just taken, the number of inhabitants is stated to be 1,500. The enumerators significantly append the following remark:—"Five years ago there was not a soul abiding in the district, it being a rabbit warren!"

—o—

If railways interfere with the prosperity of particular towns by diverting traffic from its accustomed channels, they not unfrequently contribute to their advantage in other modes. We learn, from the *Northampton Mercury*, that the little town of Stoney Stratford, which, with others on the road between London and Liverpool, though not perhaps to so great an extent, has suffered materially from the

* Fares, including ferryage across the Mersey, between Liverpool and Birkenhead (about 16 miles.)

	s.	d.
First-class carriages	3	0
Second do. covered top and sides	2	6
Third do. no cover, but seats	1	6
Fourth do., or stand up, neither cover nor seats	1	0

These charges, especially the third and fourth class, are lower than on most, if not on any, English railways.

Digitized by Google

loss of the coaches, is likely from its being the nearest town to the central station (Wolverton) on the London and Birmingham Railway, the distance being two miles only, to become an influential mart for the sale of stock of all descriptions.

—o—

We are informed that the views so ably expressed by Mr. Moss, at the recent meeting of the Grand Junction Company, in favour of the reduction of the "short fares" on that line, have already been partially carried out.

—o—

The apportioning of the Birmingham and Gloucester new quarter shares took place last Saturday. We understand that 9,200 shares were allotted to proprietors, and up to that date about 8,200 were taken up, and 7*l.* 10s. per share paid on them as a second instalment.

—o—

The determination of the Commissioners of the metropolitan highways to discontinue lighting the roads near Kensington, in consequence of the abstraction by the Great Western Railway of the ancient traffic, has, it appears, been carried into effect. On Wednesday the roads in question were left in total darkness! The Comissioners have offered to the various parishes the gratuitous use of the lamps, lamp-posts, &c.; but some of the parochial functionaries, instead of availing themselves of this offer, are, it appears, speechifying on the matter as usual, and threatening to go to law!

—o—

We are happy to find that a railway is projected in Aberdeenshire, which, if carried into effect, will form the commencement (in connection with existing lines) of a grand northern line, connecting the five largest towns in Scotland, namely, Glasgow, Edinburgh, Aberdeen, Dundee, and Perth, and an immense number of places of less importance. We trust the scheme will be warmly taken up by the capitalists of the district.

—o—

The *Hampshire Advertiser* says, it is reported that the Brighton Railway "being now opened, the proprietors of that line contemplate lending their assistance to the formation of a junction to Portsmouth." Of course nothing will be done in such a matter as this (supposing it to be in contemplation) without the sanction of a general meeting of the shareholders.

—o—

A common-road steam coach has been making "experimental trips" at Windsor, but apparently with no great success, having broken down on the second or third journey.

—o—

The *Examiner* calls the attention of the officers of the Mint, to the toll gates in the neighbourhood of the several metropolitan railways where, it is said, in the hurry of passengers, counterfeit coin is passed off to them in change, with a frequency which is very suspicious.

—o—

A correspondent sends us the following statement:—

Goods traffic on Birmingham Railway for week ending August 31, 1839, open throughout for 11 months	£1,726	12	2
Ditto, Great Western, week ending September 19, 1841, open throughout 11 weeks	1,752	0	3
Balance in favour of Great Western.....	£25	81	

—o—

A new system of signals, the invention of Mr. Hall, the indefatigable Manager of the Company, has recently been introduced on the Eastern Counties' Railway. They are extremely simple and efficient, and have attracted much attention from the Managers of other lines. We hope to be able to give a description of them in an early number. We learnt, with much pleasure, the other day from a gentleman totally unconnected with the undertaking, and at one time by no means prepossessed in favour of the Management, that the present arrangements for conducting the traffic upon this railway are most admirable, and not to be surpassed upon any line in the kingdom. We are glad it is so, not only for the sake of this particular undertaking, but for the credit of the railway system at large. The works upon the unfinished portion of the line are proceeding vigorously. A Chelmsford paper says:—"We may report continued progress in the works at the various districts of the incomplete portion of this important line of railway, and should the weather during the ensuing winter season prove favourable so as to admit of their prosecution without much interruption, there appears little doubt but the expectations of the Engineer and Directors of having the undertaking throughout to Colchester finished by this period next year will be realised. In this neighbourhood all is activity. At Widford, the deep cuttings on either side of the main road are going on rapidly, and the bridge over New-street being completed, the timbers which mainly supported the centres have been removed, so that the road under it is again open to the public. The great strength of the district is, however, now concentrated upon the bridge across the river at Springfield, which, if we are rightly informed, is to be erected with all possible expedition, in order to the employment of locomotives in conveying the soil from the excavation between Springfield and Boreham for the completion of the embankment."

—o—

The *Leicester Chronicle*, in noticing the effects of railway facilities, states that not only are immense quantities of prime butcher's meat regularly sent to London on Saturdays, from that town, but potatoes, apples, pears, plums, &c., are now also sent weekly from Leicestershire to Hull, Sheffield, and other large towns, in great abundance, to supply the wants of the market gardeners of those places. "We last week heard (says our contemporary) of one gardener only who had a contract to supply upwards of two thousand strikes of apples, plums, &c."

RAILWAY OFFENCES AND OFFENDERS.

We had last week to notice a case of most wanton wickedness in an attempt to upset a railway train, and the same painful duty again devolves upon us. We learn from the *Dundee Courier*, that a few days ago, a diabolical attempt was made to overturn the mail train from Arbroath to Dundee. It appears that a wooden style or paling was placed on the rails on which the train runs, in the neighbourhood of Barry, and that two large stones were placed on the two rails to the northward. The day was extremely foggy, and on the train coming up the engine drivers did not discover the impediment until within so short a distance of the spot that it was found impossible to stop the engine. Most providentially, however, when the wheels of the engine came in contact with the obstruction, the gate was thrown in a slanting direction between the rails, and the train passed over in safety. "This (adds our contemporary very justly) does not in the slightest degree deduct from the guilt of the parties who exposed so many lives to extreme danger; and we, therefore, rejoice to hear that, by the activity of the county police, three persons have been apprehended, and are under examination." The *Dundee Advertiser* of a later date states that the guilty party is a boy, who has confessed, saying, "he did it to bring them up for *fleein'* [flying] about that way on Sunday!" This is a novel mode certainly of putting a stop to Sunday travelling. We trust the young *saint* will receive his deserts.

Of a somewhat similar character was the offence of a lad (aged 16) named Foxley, who on Monday week was taken before the Birmingham magistrates, charged with throwing a stone weighing 26 lbs. from Saltley Bridge, upon the line of the London and Birmingham Railway. Three plate-layers who were at work at the time narrowly escaped being struck by it, and a train had passed under the bridge only a few minutes before. The magistrates after hearing the evidence, very properly convicted the young scoundrel in the penalty of 5*l.* or two months imprisonment with hard labour.

Last week a man named Jonathan Duncan, of Gilligate Moor, tailor, was summonded before the magistrates, at the justice-room, in Durham, on Saturday last, for passing upon foot on the main line of the Durham and Sunderland Railway, from New Pittington Engine to Hetton-le-hole station, without the license of the Company, and convicted in the mitigated penalty of five shillings, and six shillings and sixpence for costs, the full penalty being ten pounds.

We must class among our "railway offenders" the parties on the Glasgow and Greenock line, whoever they may be, who, as we learn from the *Scotch Reformers' Gazette*, recently allowed a number of kegs of gunpowder to be conveyed on one of the trucks *along with a numerous train* of passengers! "Whoever, (says the journal named) has witnessed the large flakes of ignited matter that are continually alighting on the railway carriages, will easily comprehend the imminent danger that was thus criminally braved. And it certainly says much for the public spirit of a most respectable ship owner in Greenock, whose name we are authorised to give if this statement shall be attempted to be denied, that the moment he detected this dangerous arrival of gunpowder on the train from Glasgow, he immediately caused it to be seized by the sanction of a magistrate whose name we are also authorised to give, and had the gunpowder secured by the police." The London and Birmingham Directors have recently issued a special order against the carriage of this dangerous description of merchandise without due notice, under the penalty of 20*l.* imposed by the Company's Act. In reference to the Greenock case, our contemporary says:—"We trust the respectable Directors and Managers of this Railway Company will take care to institute an immediate and rigid inquiry into the truth of this statement, with the view of preventing such fearful responsibilities in future. But if not, and if such another transaction shall again occur, either on this railway or any other, it will be our bounden duty to warn the public in relation to it; for the lives of the lieges must not be put in peril, or exposed to imminent danger, by the transit of such combustibles in such places."

The Editor of the *Sheffield Patriot* makes the following statement from his own personal knowledge

Digitized by Google

of the facts. We trust that the matter has been, or will be, inquired into, for it is such exhibitions of the "insolence of office"—exhibitions, we are happy to say, that are far from common upon railways—which give the enemies of the system a colour for their misrepresentations:—

"We were going to Manchester the other day (says our contemporary), and at one of the stations, we think Sowerby bridge or Hebden bridge, a little boy who accompanied a female who was intending going by the train, about eight years of age, was standing near the door of the station, a tall one-eyed wretch, who appeared to be invested with some *brief authority*, came up to him saying, 'what are you doing here, you young rascal?' up with his fist, and boxed him soundly about the ears. The boy had no chance of getting out of the way. We got out of the carriage with the intention of stating this brutal conduct to the clerk, but just then the whistle sounded, and thus prevented us. For the sake of the Company, more caution should be exercised in the choice of these menials. We once saw one meet with his deserts on the same line. A gentleman got out at one of the stations. His luggage appeared bulky, and one of those strutting officials seized it, and was dragging it towards the weighs. The passenger civilly told him to let it alone, as it had been examined at the Manchester station, and allowed to pass. The fellow came out with some insolent expressions, and kept hold of the luggage. The omnibus was waiting, the owner of the luggage told the official that he did not want to cheat the Company, but, as it had passed the Manchester end, he would not be detained by this uncalled-for interference. 'Won't you,' said the official, 'if you speak two words here I'll lock you up,' and was hauling the luggage away. The choler of the passenger was excited—he raised his hand, saying, 'take that, you meddling vagabond,' and gave him a blow on the side of the head which laid him prostrate. This caused a tremendous row, but the passenger was a man of spirit, and set them at defiance. He gave his card, and said they might take their remedy, but he was not going to be made a liar, and insulted by their puppies. This was certainly a summary way of punishment, but one which we thought was demanded."

RAILWAYS IN BRAZIL.

We have been favoured with a copy of the Prospectus of the Imperial Brazilian Railway Company, established at Rio de Janeiro, from which it appears that the capital of the Company is 8,000 contos, equal to nearly 2,000,000*l.* sterling, divided into 16,000 shares, of 500 milreis each, or 120*l.*, payable at the rate of 24*l.* annually, subdivided into four quarterly payments of 6*l.* each. The Brazilian Directors are, Joaquim Jose Pereira de Faro, Jose Antonio d'Oliveira Silva, Antonio da Cunha Barboza Guimarães, Miguel Eugenio Monteiro de Banos, and Thomas Cochrane. The Treasurer is Joao Pedro da Veiga, and the Secretary, Carlos Pentland.

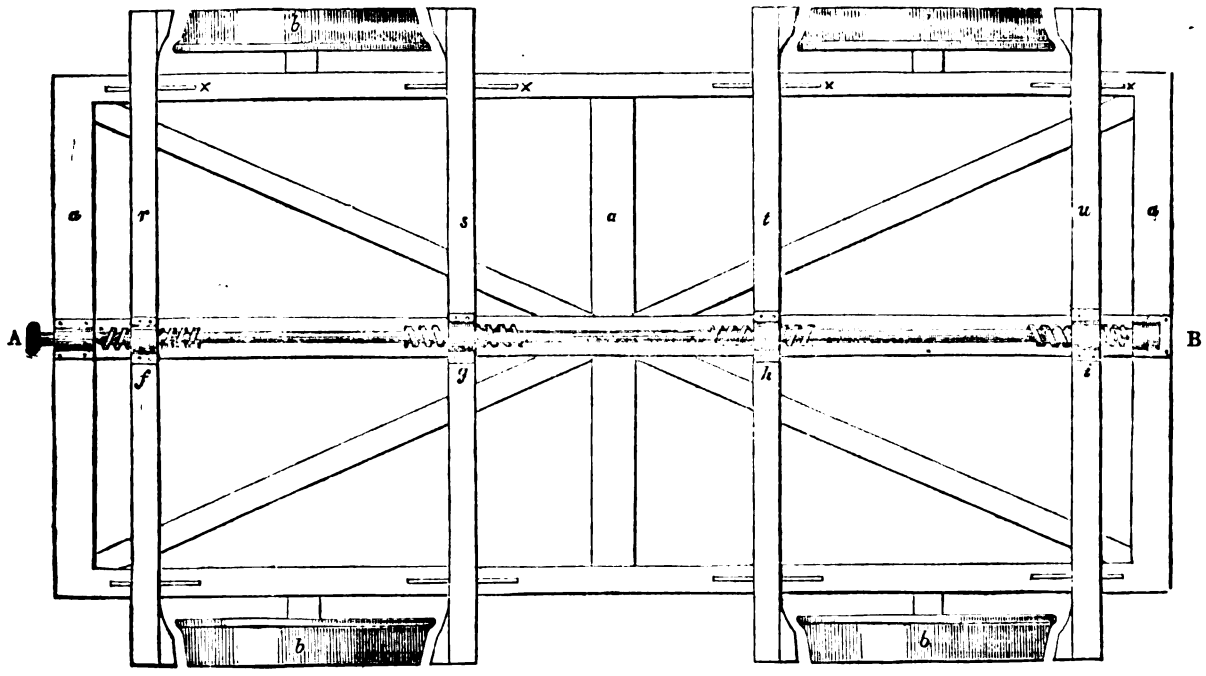
This Company is formed under an exclusive privilege, obtained by Thomas Cochrane, Esq., from His Imperial Majesty the Emperor of the Brazils, for the purpose of constructing a railway between Rio and the confines of the splendidly fertile provinces of Minas and St. Paulo, crossing the district of Iquassu, touching the Serra and the river Parahiba, proceeding through the districts of Pirahy, Barra Mansa, Resendo, and Campo Bello, and communicating with the main roads of traffic from the Minas Geraes, Saõ Paulo, Goiaz, and Matto Grosso.

The following is a calculation of the actual expenditure in the transport to Rio de Janeiro, of the produce of these fertile provinces:—

	Milreis.
Three million arrobas of coffee (as certified at the consulate at 3,500 milreis per arroba, equal to 10,500 contos: deduct 25 per cent. for transport	2,625,000
251,000 arrobas of fumo, at 3,500 milreis per arroba, equal to 878,500 milliers reis.—40 per cent. transport	351,400
500 arrobas of bacon, at 4,000 milreis each arroba, equal to 2,000 contos—40 per cent. transport	800,000
Three million of bruacas of salt at 1 milre for transport	3,000,000
Three million of various kinds, at 1 milre per arroba	3,000,000
100 passengers from the three provinces, going and coming, making yearly 35,500 at 10 milreis each	365,000
Cattle of various kinds, 81,604, at two milreis each	163,208
Total	Rs. 10 304,608

This sum of Rs. 10,304,608 is equal to about 2,500,000*l.* sterling, amounting to 500,000*l.* more than is required to complete the railway, and which colossal sum is annually lost to the industrious agriculturist in consequence of the wretched and expensive medium by which he is now compelled to convey his merchandize to market, on account of the truly miserable state of the public roads. The Brazilian Government have acted wisely in encouraging, in every possible manner, the accomplishment of this noble undertaking, and the disposition which they have displayed to become shareholders to the amount of 500,000*l.*, coupled with the readiness with which the native Brazilians have already purchased shares to a similar amount, not only tend to ensure success to the enterprise, but by the confidence so displayed, cannot fail to induce British capitalists to embark their money therein, to the relief of the native capitalists, and the very great advantage of the commercial community generally, throughout the empire. Thus, this patriotism on the part of the Brazilians which leads them boldly but prudently to advance their money in favour of similar national undertakings is attended with the beneficial result of obtaining a loan, free from usurious interest, and without the risk of the national credit being affected.

The foregoing project and statistics, appear to have obtained the marked approval of the merchants on the Exchange at Rio de Janeiro, and we have it in our power to testify to the very great respectability of the Directors, as they are considered as ranking amongst the most influential and wealthy men of the empire. Wherever foreign national undertakings are so creditably supported by the natives themselves, and are practicable in their execution, the proprietors may always rest assured of obtaining our most cordial sympathy and encouragement.



ACCIDENT ON THE BRIGHTON RAILWAY.

An accident, we regret to say, took place yesterday on the London and Brighton Railway, fortunately, however, unattended with loss of life. The facts as reported to us, appear to be these:—The first up train starts from Brighton at a quarter past 7, and had proceeded on its journey as far as the southern entrance of the tunnel at Hayward's Heath. The ground at this part of the line has a sandy bottom, and it is supposed that from the heavy rains it had given way and sunk under the rails. The consequence of this was, that when the train reached the tunnel, the pressure upon the line caused the iron to give way; the train was thrown off the rail and forced with great violence against the brickwork of the tunnel. It was found that the train had been forced against the sides of the tunnel, and the bricks were falling in all directions. The injury done to the brickwork is considerable, and the train was delayed upwards of two hours.

The Guarantee Society.—[*From a Correspondent.*]—We invite attention to the Advertisement in our columns of a society now more than twelve months in operation, originating in the most benevolent object of supplying security for those who cannot pretend to fill situations of trust but by the most painful, and too frequently impolitic, obligation of the bond of their relations, friends, or even needy connexions; and when we consider the vast increase of capital brought together for undertakings beyond the grasp of individuals, and which capital is necessarily placed more and more out of the controul of its immediate proprietor, we hail this new institution as a boon to all the parties concerned in security: nay, we look upon it as one of those concomitants of civilisation to which the last century has given birth. We are old enough to recollect not only the institution of Savings' Banks, but of Life Assurance (to which latter, the Guarantee Society is most analogous), and we know that in both instances the projectors were reviled and almost scoffed out of their benevolent but well digested designs, and what has been the result of both? The one has afforded to the working classes a perfect means for their minutest efforts at provision in old age, and the other has been made use of to such an extent as to form too frequently the only provision for the survivors of industrious but short-lived persons in the middle classes of life; and with these great advantages in their direct effect, must not there necessarily have followed great *moral* results? Indeed, the very foundation of men's ability to avail themselves of either, have been abstinence, self-controul, care, and economy; and is not this the very time for superadding to those institutions such a one as is here offered? By it the three contracting parties are essentially relieved; the capitalists, whose annually-increasing millions are, as we have before said, necessarily more and more exposed to the controul of secretaries, managers, superintendents, clerks, money-takers, &c., whose bondsmen (when put to the test by the occasional defalcation of the functionary) are found not to be equal to the security given, or to be so poor as to be excused by the sufferers. The relations or friends are also relieved from that risk against which they never provide a fund, but in incurring which they do injustice to their families and creditors; but the party who should hail the institution is he who having few or no relatives or friends in that intimate connection that warrants his command of security, may, if he can stand the necessary scrutiny of character (an ordeal conducted with becoming delicacy) obtain at a very low premium that which enables him to hold a place of trust and emolument, without exposing him to any, the slightest, obligation. He does more—he lays up, in the archives of this society, a reference for promotion or change, that will always avail him while he holds fast by the most valuable of all possessions, an unblemished character for integrity. It is not then surprising that, during the last fifteen months, the *empoyés* of the Bank of England, the principal bankers, metropolitan and provincial Joint-stock Banks, Railway Companies, Fire and Life Assurance, and other institutions, as well as numerous commercial firms, have availed themselves of the security thus offered.

NEW RAILWAY BREAK.

To the Editor of the Railway Times.

Sir,—May I take the liberty of requesting you to insert the above sketch, together with the description of a railway break lately invented by me, which I think you will consider superior to those at present in use. *a*, *a*, *a*, represents the under-side of the framing of a carriage; *b*, *b*, *b*, *b*, the wheels, (the axles not drawn, in order to make the sketch more simple.)

A, B, is a bar of round iron, extending the whole length of the carriage, and turning freely in the bearings attached to the framing at these points. This bar has alternately a right and a left-hand thread cut on it at *f*, *g*, *h*, *i*; *r*, *s*, *t*, *u*, are the arms of the break, to which the traversing nuts which work on the screws; *f*, *g*, *h*, *i*, are attached. There may also be *guide-bars* or *slots* at the parts marked x, x, x, x, &c. in the framing, through which the arms of the break might work in order to steady it in its movement. The action of the break may now be easily conceived when motion is communicated in the usual manner to the bar A, B, by means of the *bevel gear* at A, the arms of the break, *r t*, will move in one direction, whilst *s u* traverse an equal distance in the opposite direction. Mr. Davis's ingenious break, a description of which appeared in your journal of February 6, and in the *Mechanics' Magazine* of January 23, No. 911, pp. 58, 59, is the only one which will bear comparison; let, however, any person examine them together, and I think he will agree with me in saying that his is complexity and mine simplicity.

I remain, Sir, your obedient servant,
TERENCE FLANAGAN.

THIRD CLASS CARRIAGES.

To the Editor of the Railway Times.

Sir,—From the paramount, nay I might say, vital, importance of this question to the working and labouring poor and their families, I am induced to think that you will readily pardon my trespassing upon your valuable space again, and at some length. I admit the correctness of your correspondent "H.'s" logic; but it is not by such that either railways or the world in general is governed, and allow me *par parenthese* to state, that my object in addressing you has been truth and not victory—has been to benefit the public as far as the very humble means which I possess, can be made available thereto.

Your correspondent "H." has obtained his victory by addressing himself to the detail of my principle, rather than to the principle itself. The position, or principle as "H." calls it, which I enunciated, was "that inasmuch as the shareholders are induced to embark their capital in railways, not *pro bono publico*, but for their own individual advantage, the public are not bound either in their expectations or demands to consider the shareholder or his interest, but themselves exclusively." This he has left entirely uncombatted, and I think wisely so.

But it is to the dangerous consequences to the interests of the community at large, that may arise from such monopolies, that I would wish to direct the attention of the public.

It is true that at the present moment the fares are moderate; the comforts and conveniences of the first and second class carriages are in proper proportion to the fare that is paid, and *that fare* generally speaking is a moderate and an equitable charge.

But I do most strongly object to the *conveyance*, and the convenience (which is in infinitesimal proportions) that are provided for the poorer classes in the third class carriages. They are taken as pigs are; indeed I do not think that they have an equal accommodation with the porcine race. Now if the Railway Companies thus deal with the poor man, (only I believe because he has no remedy; the middling and upper classes not sympathising in his sufferings) what guarantee have we that, when by their monopoly they have *us* entirely in their power, they will not meet out the same measure towards us, as they do now to the poor?

It appears to be "a cunning device" on the part of Railway Directors, in order that they may compel all who can by any means manage it—no matter how detrimental this may be to the poor man's family—no matter how many days by this "device" of theirs the poor man's children may be deprived of their daily food, so long as the Railway Directers compel them to pay second class fares, and thereby as they imagine, add a miserable pittance to the dividend that is about to be declared.

But, as in the case of cunning people generally, I believe, that they overreach themselves; as the want of accommodation, nay rather the disgusting and revolting way in which people are confined in these pens or stalls, commonly called "Third Class Carriages," prevents many from travelling as frequently as they otherwise would, and altogether deters others from travelling at all.

It seems done from a desire to oppress the poor, to show them the impassable barrier that wealth has placed between them and their rich brethren; for in the first and second class carriages, not more than a fixed definite number are allowed to be at the same time, the overplus if there be any, being obliged to wait for the next train. Then why not have the same regulations with regard to the passengers by the third class? But they are poor people! Have they not the same "organs, dimensions, senses, affections, passions; fed with the same food, hurt with the same weapons, subject to the same diseases, healed by the same means, warmed and cooled by the same winter and summer?" Then why this unjust difference—a difference let me say, not having the same proportion in convenience and comfort to the second class, as the second class does to the first?

There be some who will answer these objections thus! if you like not the accommodation provided for you, go elsewhere! But this I take to be an answer that Railway Companies are not at liberty to give; for in most cases none other conveyance remains by which the poor man may seek the market from whence he perhaps obtains the means of his living. It is a matter of bread and cheese with many that go—*nolens volens* he must go—and by this conveyance, inasmuch as every other conveyance has been driven from the road.

"But the public good is advanced," I hear another exclaim, and private interests must give way to public good.

I for my own part cannot see wherein lies the advancement of public interest, if, after these railways are established, and by their superior capital have destroyed all competition, in fact have obtained a complete monopoly, I say, I cannot see how the public interests are advanced, if either by their exorbitant fares or want of proper accommodation, more than one half of the public are shut out from participating in it at all.

Your correspondent "H." seems to have a wonderful reverence for the decisions of Parliamentary Railway Committees. He seems to think that because a Parliamentary Committee may have overlooked, or even sanctioned such things, that therefore they are just and right, and that the public have no right or reason to complain; but I know not by

Digitized by Google

what law, the divisions of Parliamentary Committees are held to be infallible, and I have yet to learn that the laws laid down by Parliamentary Committees are to be like the laws of the "Medes and Persians," that "change not, neither do they alter." Nor unless "H." falls back upon one of these grounds, do I see any reason why the public should not endeavour to have that law which is unjust, altered, and that law which is harsh, amended.

If "H." falls back upon one of the two above stated grounds, I am not the daring person either to call in question their infallibility, or to put up my opinion against such ancient authority. But I have been induced to advocate the opinions which I have done, first, because it is no more than what is due to the lower classes of the public, than in fact what they have justly and legitimately a right to demand, and secondly, from a firm conviction that they will best advance the pecuniary interests of the shareholders; and instead of the Directors having to apologize to the shareholders for a quarter per cent. dividend less, as "H." fears, they would be enabled to meet them with, if not a declared certainty, a perspective quarter per cent. more.

I am Sir, yours obediently,

P. Z.

THIRD CLASS CARRIAGES—MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—I am glad to find that "third class" subjects continue to claim the attention of your correspondents. I hope the discussion of this subject will be continued in the columns of your useful journal. We are yet a long distance from the full apprehension of it in all its bearings, in its financial value to the Companies, and its boundless benefit to the public. But the consideration of general rules and principles will be only a poor guide to us in reference to any particular railway: and the motives which apply in reference to short distances will be wholly inapplicable to long journeys. And I think the *creation* of passenger traffic has been too much lost sight of. Take, for instance, the Manchester and Birmingham Railway, open to Stockport, 5¼ miles. Trains leave nearly every hour in the day with first, second, and third class, at 1s. 3d., 1s., and 6d. The passengers are principally third class "stand ups," "uprights," or to make an elegant word out of the Lancashire dialect, as some modern Chesterfield has done, the passengers generally travel in "stan'ups," which are not quite so elegant as "Stanhopes." And very wisely has it been arranged, that encouragement should be given to this class. It is the *sixpenny ride* that has created the traffic. Take this away, and the traffic goes with it. Does it therefore follow that a remunerating traffic at 1d. a mile would be found to Birmingham? Certainly not. But is it equitable to charge 1d. to Stockport and 1½d. to Birmingham? Undoubtedly, if the expense *per passenger* is proportionately greater: and if the lowering of the fare to Stockport from 6d. to 1d. would *create* double the present amount of passengers, I hope the Directors would not hesitate about the reduction without reference to Birmingham.

Yours respectfully,

TERTIUS.

COMPETITION BETWEEN THE GREAT WESTERN AND LONDON AND BIRMINGHAM RAILWAYS.

To the Editor of the Railway Times.

SIR,—I beg leave to inform your correspondent "J.," of Clifton, that it is *not* in the *immediate* power of the Great Western Company to make any such announcement as—

"London and Birmingham in 6¼ hours, *viâ* Great Western and Birmingham and Gloucester Railways.

NO TUNNEL THROUGHOUT"

They must first execute the line of railway between Cirencester and Cheltenham, which at present occupies three hours of tedious *coach* travelling over a hilly country. The comparative merits as to *time* from London to Birmingham therefore *now* stand thus:—

London and Birmingham Railway, direct....	5¼ hours.
Per Great Western to Cirencester	3¾ hours.
Cirencester to Cheltenham, per *coach*	3 "
Cheltenham and Birmingham, per Birmingham and Gloucester Railway	2¼ "
Total	9 hours.

Nor can they at present do more than barely compete with the London and Birmingham *even* to Cheltenham, the one way occupying 7¼, the other 6¾ hours, to say nothing of the inconvenience of change from railway to coach, and again from coach to railway; nor can they announce "*No* tunnel throughout," as there *is* a tunnel (although not a very long one) between the Lickey plane and Birmingham, on the Gloucester Railway.

No, Sir, the London and Birmingham (in which I have no interest) are acting judiciously in arranging to carry throughout the traffic to Worcester, Cheltenham, and Gloucester; and while the *hiatus* of railway exists between Cirencester and Cheltenham, they *will* carry it; when *that* is obviated, it will naturally revert to the Great Western; but whether its execution will prove a profitable speculation to the latter Company, is I think more than doubtful.

Whilst writing on the subject of this route, I cannot help making a remark on what I have before seen noticed in your journal, viz., the apparently unjust conduct of the Birmingham and Gloucester Company in excluding the coaches and omnibuses of Mr. Fleischmann from their yards, but which after all sometimes benefits that person in lieu of injuring him, as in my own case, for on arriving at Cirencester I was so disgusted with the impertinence and importunity of the numerous coach touters who surround you in the station, that seeing one smart coach *outside* the gates, I with others concluded it would start first, and immediately entered it. It did so; and we not only went by it, but remained at the house of the proprietor during our stay at Cheltenham, where every thing was good and comfortable, although not quite so dashing as some of his neighbours.

Before closing my letter, allow me to make one observation on the letter of "A Traveller," in your last number. I sincerely hope that no Railway Company will, in any shape, form, or fashion, permit the habit of smoking to be indulged in either in its carriages or stations. If *once* introduced in any way it will soon extend, to the annoyance as well as danger of the whole train—and with its usual accompaniaments of spitting and drinking, render railway travelling a perfect nuisance. Nothing can be more offensive than this habit to those who do *not* like it, and nothing more injurious (with very few exceptions) to those who *do*. It used to be the curse of continental and transatlantic travelling alone, but now we may boast of nearly equalling our neighbours in one of their worst customs.

I am, Sir, your obedient servant,

J. P.

London, September 27, 1841.

PAYMENT OF RAILWAY DIVIDENDS QUARTERLY.

To the Editor of the Railway Times.

SIR,—The suggestion of Mr. Moss (at the last meeting of the Grand Junction Railway Company) about paying dividends *quarterly*, should I think be urged upon their Directors by the proprietors of all railways, not only for the reason he gave, but as a matter of security. I have just seen your report of the conversation which occurred at the South-Western meeting. It appears that about 90,000*l.* of traffic receipts might, and probably would, have been in the hands of Messrs. Wright and Co., if the Directors had not luckily had means of employing it. Now on lines that are completed, the Directors have no alternative; the weekly receipts accumulate for six months in the banker's hands. Without casting any reflections on so respectable a body, we have unfortunately too many recent instances of their sharing the common lot of commercial men; they cannot therefore be offended at the measure I am advocating.

I am, Sir, your obedient servant,

A SHAREHOLDER IN MANY RAILWAYS.

London, September 25th, 1841.

SPEED ON RAILWAYS.—THE BRIGHTON, SOUTH-WESTERN, &c.

To the Editor of the Railway Times.

SIR,—In the last number of your journal a correspondent, under the signature of "F. J. B.," has some remarks on the "speed" attained by the "fast trains" on different railways, and he appends thereto a table (which I have here subjoined) professing to show the rate per hour on five of the principal lines:—

"*A Comparative Statement of the 'Fastest Speed attained' by the under-mentioned Railways (including stoppages.)*

	Length.	Time of journey. H. M.	Per hour.
"Brighton.....	50¼	1 45	28¾ miles.
"South-Western....	67¼	2 50	27 1-16 "
"Great Western	118¼	4 25	26¾ "
"Grand Junction ..	97¼	4 0	24¼ "
"Birmingham	112¼	4 45	23¾ ""

Now, this table is altogether incorrect, at least with regard to the three first-mentioned lines. In the comparison instituted between the Great Western and Brighton lines, (*including stoppages*, recollect) the express train has been selected, which stops only *once* in the entire distance to Brighton, or *once* in *one hour and three quarters*; whereas the train to Bristol stops *fourteen times*, or *once* in every *twenty minutes*; and one of these stoppages is for *ten minutes* at Swindon!

Besides, *this* is not the fastest train on the Great Western, though "F. J. B." asserts that it is. (See heading of table.)

With respect to the South-Western Railway, your correspondent, in his anxiety to rescue it from "the slanderous attacks on its fair fame," has fallen into several errors. 1st. The distance he has given in the table, is wrong. 2nd. The time, he states the journey to be done in, is wrong. 3rd. The rate per hour, in the table, calculated from these, is wrong. 4th. The assertion that the trip to Southampton is performed in the same time as the corresponding distance to Swindon, is untrue.

Let us now compare trains under similar circumstances, on the three lines I have referred to, and see how matters stand. (I have not at hand the means of ascertaining the accuracy of "F. J. B.'s" table, with respect to the Grand Junction and the Birmingham lines, and therefore I leave them out of the question).

The table will now stand thus:—

Comparative Statement of the speed attained by the "Fastest First Class *Trains" on the under-mentioned railways, including stoppages.*

	Length of line.	Time of journey. H. M.	Miles per hour.	Stop once in every hour.*
Great Western ..	118¼ ..	4 15 ..	27.82 ..	32 min.
South-Western ..	77 ..	3 0 ..	25.66 ..	30 min.
Brighton	50¼ ..	2 0 ..	25.25 ..	30 min.

But now let us compare the speed on the Great Western to Swindon, with that on the Southampton line, and the table will now stand as follows:—

Comparative Statement of the speed attained by the "Fastest Trains" *on the undermentioned railways, including stoppages.*

	Length.	Time of journey. H. M.	Miles per hour.	Stops once in every hour.
Great Western ..	77 ..	2 35 ..	29.84 ..	26 min.
Brighton†	50¼ ..	1 45 ..	28.85 ..	105 min.
South-Western ..	77 ..	3 0 ..	25.25 ..	30 min.

So much for the attempt of "F. J. B." to "put in a good word" for the South-Western. It may well say, "save me from my *friends*."

Referring to the superior speed kept up on the Great Western line, "F. J. B." makes the follow-

* Including a stoppage of 10 minutes at Swindon.
† Express train.

Digitized by Google

ing extraordinary statement: "still the actual advantage derivable to the public is, *not* the speed attained in the transit whereby one's life is jeopardised, so much as by one steady and sure progress arriving within the specified time, with but 'few and far between' delays at the intermediate stations." Why, a common stage waggon would accurately fulfil all these conditions! What *can* be the use of a railway then?

In the last paragraph of his letter, "F. J. B." says he inserts the table (already alluded to) "as an act of justice to those who have invariably condemned the adoption of the wider gauge on the ground of its so materially accelerating the transit on railways." Now, this is a class of persons whom I believe to exist only in the imagination of "F. J. B.;" or if there really be any such people, I fear they must derive but little comfort from this "act of justice," since its effect has been to prove the reverse of what was intended.

I am, Sir, your obedient servant,
A. T. G.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In your last number, your correspondent "F. S. B." in his statement of "fastest speed attained," has placed the maximum of the Great Western at 26¾ instead of 28 $\frac{86}{100}$ miles per hour, according to the regulated time of the night mail, viz.:—

To leave Paddington at 8.55 o'clock, p.m.
Arrive at Bristol..... 1. 5 o'clock, a.m.
Time, 4h. 10m., or 118¼ miles = 28 36-100 per mile per hour.

In your traffic returns you state, for the corresponding week of 1840, (20th September).

Receipts.... 5549*l.* on 56 miles.
Instead of.....5549*l.* on 63¼ = 87*l.* per mile.
Add Bristol and Bath 1123*l.* on 11¼.

6672 . 75¼ = 88*l.*

In comparison wherewith the latest results per mile per week are—

	Miles.	Per week.
Week ending Sept. 19, 1841.....	£14,725 .. 169¼	= £87
Or deducting for branches, estimated, in the absence of proper returns, at not exceeding	2,000 .. 51	
Leaving..	£12,725 .. 118¼	= 107

On the letter in your last number signed "L.," (which is no doubt well intended) I would beg leave to remark, that it is a most superfluous degree of caution to estimate the future working expenses so highly as he has done; such sums as 39 and 40 per cent. for 1842, are quite extravagant with reference to the information given by Mr. Saunders, at the recent general meeting (see *Railway Times*, 4th September, Part 2), that they would diminish below 40 and then below 35 per cent. (the same as the Birmingham). The York and North Midland estimate their working expenses at 32 per cent.—the North Union are below 30 per cent.—the Manchester and Leeds are estimated at 33½, and the Grand Junction, for the half-year ending 31st December last, were 36½ per cent.; and the remark of Mr. Saunders was, that he believed with the reduced price of coke, "the expenses of their locomotive power would be less than on any other line in the kingdom," diminishing "not only in proportion to increase of receipts but by an actual diminution."

Yours respectfully,
F.

Bath, September 29, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—A vast deal of space in your valuable paper has been devoted (chiefly I opine out of courtesy to the various writers,) to the problematical cost, expenses, and returns of the Great Western Railway. These speculations, no doubt, have hitherto been read with considerable interest, but now that the whole line is in full operation, general attention will be directed to the dividends—an early and regular payment of which is the object of this communication. Those parties who have for some years been anxiously looking for a return on their capital invested, and more particularly those who are mainly dependent on that return for their incomes, find a delay of three months before payment of the midsummer dividends, a very serious and unexpected inconvenience. The accounts are made up to the 30th June, the dividends declared in the month of August, but the day for payment is the 25th September. Now, Sir, this does appear to me a long and unnecessary delay, more especially when we take into account, that railway business is for the most part a ready money business. I do not presume to point out a remedy for this evil, by holding quarterly meetings as recommended in the last Report of the Grand Junction, but shall content myself with the attempt to draw the general attention of our Directors to the subject, assuring them that it is a matter of most essential importance to numbers of their proprietary.

PROMPTUS.

London, September 30, 1841.

SITUATIONS IN RAILWAY COMPANIES.

To the Editor of the Railway Times.

SIR,—In your paper of the 25th instant it is stated, you do not know to what cause the great number of applicants for railway situations is to be attributed—whether to a predilection for such employments, or the general depression of trade.

That either or both these causes may have some tendency to swell the numbers there can be little doubt, but the principal cause will be found in the facility afforded by an indiscriminate patronage for obtaining such situations. A note from a shareholder or two, or a Director, and not unfrequently a *douceur*, are too often the only requisites for obtaining a good berth on a railway, while many able hands who have been years employed in their construction, are thrust on one side to make room for more favoured guests, who become more numerous as the facility of entrance becomes more known. You state that for the situation of Station-Master at Birkenhead, the number of applicants was 4,000; were there four out of the whole properly qualified for the post? Certainly *doubtful*.

If a chemist or surgeon, a builder or mason, required an assistant, would patronage alone obtain 100*l.* a year from either trade or profession, the candidate having no previous insight of what would be required of him? Decidedly not! No, not 100 pence!

Yet this is done on railways; the successful candidate enjoys his salary first, and learns how to earn it afterwards, or becomes a railway servant by intuition. No wonder the name of railway situation hunters is "Legion."

Most respectfully your obedient servant,
AN OLD HAND.

Birmingham, 28th September, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—The accounts as published in your last number of the receipts and expenditure of the Manchester and Leeds Railway appear to have given great satisfaction to the proprietors, as indeed they ought, if the general economy in the management be equal to that stated to have been effected in the department of locomotive power, which is represented as costing only 11 $\frac{66}{100}$d. per mile, exclusive of depreciation, whilst on other lines it has been shown to cost 2s. and upwards, on some even as much as 2s. 4d.

I hope for the sake of the railway interest at large there has been no error in this statement, and if not, it would be extremely interesting (and highly creditable to the engineers) to publish the accounts in detail in the form done by the London and Birmingham Company, giving at the same time a short description of the engines used, and the names of the builders. It is true there is a considerable saving in the price of coke as compared with the Liverpool and Grand Junction lines; still as the entire cost of that article appears to constitute little more than one-fourth of the expense of locomotive power on those railways, there must have been other important sources of economy in the management of the Leeds and Manchester engines, besides the incidental one of fuel, which it is important to show.

From the statement of "statistics," which is also very interesting, there appear to have been 1,795,324 passengers carried since the opening of the line, an aggregate distance of 19,445,879 miles, which would yield a duty to the Government at 0½d. per mile of 10,128*l.*; but as I see only 3,196*l.* 8s. 10d. charged against the income for the past six months, which constitute the main source of the revenue, may there not be some error in these figures?

Perhaps the insertion of this letter in your widely circulating periodical, may obtain the required information from competent authority.

Your constant reader,
INVESTIGATOR.

27th September, 1841.

[We recommend to the attention of the Manchester and Leeds Management the suggestion thrown out by our intelligent correspondent, as to the publication of the accounts of "working" in detail. We shall be happy to make this journal the means of laying them before the railway world. With respect to our correspondent's inquiry as to the amount of Government duty, it is probable that the Manchester and Leeds Company are in the same position as the South-Western, as explained by Mr. Chaplin at the late meeting.—ED. R. T.]

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—In the last number of the *Railway Times*, you state, in reference to this Company, "We regret to find that the Company are again compelled to augment their capital." I beg to observe that this statement is not correct. The Directors are now only about to issue (in pursuance of an Act obtained in the last session of Parliament) the quarter shares alluded to in their Report of March last. This additional capital therefore forms a part, and is no augmentation, of the total capital of 3,172,000*l.*, therein mentioned as requisite to complete the undertaking, with its several branches.

The fact of this increase of capital, and the purposes for which it was required, were made public in March, and the particulars are fully detailed in the Directors' Report, which appeared in the *Railway Times* of the 13th March, 1841.

Besides, the Directors state distinctly in their last Report, that "they are fully satisfied of the sufficiency and correctness of the sum of 2,862,799*l.*, which was given in their Report of March last, as the estimated *ultimate* cost of the main line," &c. &c.

You will oblige me by correcting in your next paper the statement here referred to.

I am, Sir, your obedient servant,
JOHN JELLICORSE, Secretary.

Secretary's Office, Clowes' buildings, Hunt's Bank, September 28, 1841.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—The increase of traffic on this railway within the last three or four months, has been greater than under the depressed state of the manufacturing districts might reasonably have been anticipated.

The following is a comparative table of this and last year's traffic, viz.—

From 4th July, 1840, to 12th September, 1840. £. s. d.	From 3rd July, 1841, to 11th September, 1841. £. s. d.
2,323 15 11	4,406 9 10¼
2,258 5 9	4,513 15 5½
2,454 6 11¼	4 533 4 4½
2,761 3 1½	4,658 14 8½
3,608 3 1½	4 891 13 3
3,230 6 1½	4,896 5 11½
3,168 11 11½	4,856 0 7½
3,287 19 5½	4,895 15 3½
3,513 0 10½	4,896 4 10½
3,226 1 8½	5,072 10 11½

This shows an increase for the period of 10 weeks of about 18,000*l.*, which will give at the year's end

Digitized by Google

about 100,000*l.* over and above the amount received for the first year's working of this railway; and there can be little doubt that this increase will warrant a larger dividend upon the whole amount raised in shares, than 4*l.* per annum.

Should commercial affairs assume a more favourable aspect, a considerable increase in the passengers' traffic would immediately follow, but even in the present condition of the undertaking, it appears to me that the value of the shares is depressed beyond any reasonable limit, and totally out of proportion to the dividends that will accrue upon them.

I am, Sir, your most obedient servant,

A SUBSCRIBER.

22nd September, 1841.

LONDON AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—Various comparative statements have appeared from time to time in your journal relative to the London and Birmingham and Great Western Railways, and several of your correspondents have expressed a desire to ascertain what were the weekly receipts of the former Company on its first opening for the entire distance. Allow me to supply this information up to the end of 1838.

There can be no doubt that to the great majority of persons engaged in railways extreme disappointment has resulted from the events of the last few years. The magnificent expectations engendered by the success of the Liverpool and Manchester, Grand Junction, and London and Birmingham lines, led thousands to speculate far beyond their means in other similar undertakings, but connecting districts which did not possess the same elements of success. The pressure of the times occasioned by unprecedented commercial distress has added to the original fatal error, and hence railways, though destined to create both great individual as well as national wealth, have been the means of occasioning immense individual ruin and misery. Much of those unfortunate results might, however, be alleviated, were parties to pay the same attention to the working receipts of the various lines as they would to the results of their private occupations, whatever they may be. They would thus discover a gradual and steady process of improvement which cannot fail at no distant day to place even the most unfortunate undertakings in the position of well-paying investments even to original shareholders, whilst to parties investing at the present prices they almost ensure returns for capital seldom equalled by the most brilliant speculations. A comparison of the returns which I now send you with those which appear weekly in your publication, must convince the most sceptical of the truth of these remarks; and that railway proprietors who exercise calm discretion and patience will assuredly reap that reward to which their enterprise most justly entitles them.

H. H.

LIVERPOOL AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—As a proprietor deeply interested in this and other railways, and accustomed to compare the annual accounts of each, I am sensibly struck with the very heavy expense incurred on the Liverpool and Manchester Railway for the maintenance of way and fences, which for the last half year appears to be about 6,000*l.*, or nearly at the rate of 400*l.* per mile per annum,—and for some previous years it has been even higher,—whilst on some other railways it appears to be done for less than half; on the Grand Junction, I am told, it is done *by contract* for little more than half, and the contractor making a handsome profit by it.

I cannot also but observe, that the general expenses on this railway are greater in proportion to its revenues than on any other, whilst from the greater consolidation of the works, and longer experience in the management, one would have expected a contrary result. The charges for the last half year are very little less than 50 per cent. on the receipts, or equal to about 4,000*l.* per mile per annum, whereas on some of the metropolitan railways, where fuel and labour are much dearer, and the amount of traffic (taken per mile) much less, they do not exceed 35 to 40 per cent., or from 2,000*l.* to 2,500*l.* per lineal mile per annum.

I am aware that no exact comparison can be made between the expenses of any two lines, either taken as a per centage on the traffic or mileage cost, unless the rates charged and the gross amount of revenue per mile be the same; but still to a certain extent comparisons may be made, and when it is considered that the Liverpool and Manchester rates are not much below those of other lines, that its mileage traffic is greater than any other long line in the kingdom, and that it has the advantage of cheap fuel, and derives a considerable portion of its revenue from tolls paid by other Companies, on which the expenses must be very trifling, I am at a loss to account for the apparent extravagance of its management. I hope it is only *apparent*, and that some of your correspondents may be able to give a satisfactory reason for the cause, which is greatly desired by your's, &c.

DUBIO.

Dublin, 27th September, 1841.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—It would be doing the independent Shareholders in this Company a great service if you would put them on their guard, and arouse their vigilance as to what is going on. It has been the misfortune of this undertaking, that many of the Directors (and certainly all that have taken the lead in the arrangements) have had local interests to support, and the only salvation of the concern will be to get a Direction formed, composed of parties having no interest beyond that in which the Shareholders generally are affected.

It was manifest from the proceedings at the last General Meeting about six weeks ago, that some disclosures were only stopped by the general hope of the shareholders present, that the Board of Directors would reform themselves, and that the necessity of a Committee of Inquiry would be obviated. There is too much reason to fear that this is far from being about to be the case. On the contrary, symptoms are abroad of a contemplated juggle in the shape of some *family change* among the many of the same clique at present on the Board, the effect of which will be to revive to greater activity, that spirit in the Direction, which has acted so injuriously to the best interests of this railway, and has driven away in succession most of the right-minded persons from time to time connected with it, including their original noble Chairman; and one of the very earliest results of this change, if it is allowed to occur, will probably be to stop the works beyond that point which bounds the local interests of those now controlling all proceedings, although nearly the whole of the physical difficulties of this great undertaking have been practically surmounted, and what remains is comparatively easy of execution, only wanting the proper course to be taken, which will ensure the completion of the railway from Manchester to Sheffield in its entirety.

The shareholders are looking with much anxiety for the Report from Mr. Locke the Engineer in Chief, which was expected to have appeared before this time. It is hoped that it will be forthcoming when the line is opened for traffic in the course of a few weeks as far as ready, up to Godley and Mottram. With this Report, and by the election at the the General Meeting in February next of four new Directors of fresh blood, some hopes may be entertained of the concern, and if the really independant bulk of the shareholders will attend either in person or by proxy, this hope will be realized.

But the present danger is pressing, and if something be not done better than the replacement of a once discarded Director, in place of one who is believed to be sounder than some of the others, (as now talked of to be made next week) the whole concern will soon go to the dogs, and the Sheffield people will find that they have been led by the nose, and made the tools of parties, who having got other people's money to make a railway to their own doors will laugh in their sleeves at the *victims*.

I am Sir, your obedient servant,

A SHAREHOLDER.

October 1st, 1841.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—It is matter of great surprise to many well informed persons, and to the original shareholders who engaged in this concern as an investment, that the shares should be at so great a discount as 40 per cent.; and the only reason I can assign for it is the great scarcity of money.

Your readers will see by the following statement that the present income, taken from your published weekly returns, is more than 4 per cent., even if the whole additional capital were paid up, which will not be done before February next.

If you refer to your weekly returns of general traffic, it will be found that out of all the thirty-two railways now in operation, the Birmingham and Gloucester ranks ninth in point of weekly income, notwithstanding the numerous attempts to depreciate it, and with the merchandize traffic hardly commenced.

I am, Sir, your obedient servant,

AN ORIGINAL SHAREHOLDER.

Birmingham, September 23, 1841.

The whole paid up capital and borrowed will in February next amount to 1,500,000*l.*

The weekly returns for the last three months have averaged 2,100*l.* per week, and arrangements are nearly completed for merchandize traffic, therefore take the minimum at 2,000*l.* only per week for 52 weeks, which is	£104,000
Undivided profits June 30, 1841	10,000
	114,000
Deduct 40 per cent. on the returns of 2,000*l.* per week for locomotive power and general expenses, say	41,000
Net profit to June, 1842	73,000
Interest on the paid up and borrowed capital of 1,500,000*l.* at 5 per cent. is	£75,000
From which deducting	73,000
Leaves	£2,000

which is within this sum of paying 5 per cent, say a clear 4½ per cent. for the shareholders. Again, if a person were to purchase 10 shares at the present extraordinary discount of 40 per cent., he would pay only 600*l.* instead of 1,000*l.*, and 4½ per cent. on 1,000*l.* gives more than 6 per cent. on 600*l.* advanced.

N.B. This calculation is exclusive of the income arising from the tram railway between Gloucester and Cheltenham purchased out of the above capital, which has produced regularly 6 per cent for three and a half years, and not included in the weekly published returns, and the present capital paid up and borrowed is under 1,400,000*l.*, which also is in favour of this statement.

CONTINENTAL RAILWAYS.

IN the *Railway Times* of 18th Sept. it was stated that the 3rd section of the railway from Berlin to Frankfort on the Oder, passing through Dersau and Roslau to Roswig has been opened to the public. The writer of that article should attend somewhat more to the geography of the continent, for the towns mentioned are close to the Elbe and Berlin on the Spree, so that the Elbe must cross the Havel and Spree to bring these towns to the Oder. A. M. BIGOE, Railway Engineer.

THAMES HAVEN DOCK AND RAILWAY.

To the Editor of the Railway Times.

SIR,—Considering your paper the medium of information with the public on those matters relating to railways which cannot be promulgated by advertisement, I have to acquaint you that since my last letter, applications have been received at this office for more than a thousand shares, and others are daily coming in. Thus, when the full number shall have been demanded so as to give confidence that the works will be executed by the subscription of the required capital, the Directors will appropriate the shares remaining in the office. I was quite assured that once the merits of the undertaking were fairly gone into and understood, its intrinsic value would carry it through, despite adverse times. You will oblige me by the insertion of this letter.

I am, Sir, your obedient servant,

HENRY AMSINCK, Sec.

2, St. Mildred's-court, 30th Sept., 1841.

ULSTER RAILWAY—THE LATE MEETING.

To the Editor of the Railway Times.

SIR,—My attention has been drawn to a report of the general meeting of the Ulster Railway Company, as given in the *Railway Times* of 18th September last, in which my name is brought forward as having engaged as contractor with the Liverpool and Manchester Railway Company at the time I was a Director of that Company. So contrary is this to the fact, that as soon as I became a proprietor of works which were likely to be employed by the Railway Company, I resigned my situation of Director. I did the same by the Grand Junction Railway Company, for the same reasons; and since that period have not allowed my name to be put forward as a candidate for the Directorship, although solicited to do so. By inserting this letter in your next publication, you will much oblige,

Sir, your obedient servant,

C. TAYLEUR.

PROCEEDINGS OF THE INSTITUTION OF CIVIL ENGINEERS.

A LETTER was read from Mr. Edward Alfred Cooper, describing some experiments on the use of Maroons, as Signals on Railways.

The maroons are either small tin cases, or carcases of brown paper, charged with from half an ounce to two ounces of gunpowder, mingled with which are four of Jones's prometheans, which are small glass tubes, each containing a drop of sulphuric acid; the tubes are surrounded with chlorate (hyper-oxy-muriate) of potassa, and are each enveloped in a strip of paper.

In the event of an accident occurring, which renders it necessary to give notice that an approaching train should be stopped at a given point, two or more of these maroons are fastened upon the upper surface of the rail, by the strips of lead attached to them. The wheels of the engine, in passing over them, crush the glass tubes of the prometheans, the sulphuric acid inflames the chlorate of potassa, and causes an explosion of the gunpowder, which is distinctly heard by the engine driver, who immediately shuts off the steam, and puts down the break.

Mr. C. H. Gregory had permitted several trials to be made with these maroons on the Croydon Railway.

An engine was driven at full speed with a number of empty waggons attached to it, and with the steam blowing off to create as much noise as possible; yet the explosion of even half a drachm of gunpowder was distinctly perceived. He considered the invention to be practically useful.

On the Stationary Engines at the new Tunnel on the Liverpool and Manchester Railway: By John Grantham, Assoc. Inst. C. E.

This communication gives a description of two pair of stationary non-condensing engines, which were constructed by Messrs. Mather, Dixon, and Co., of Liverpool, from the designs and under the superintendance of the author.

The steam cylinders are 25 inches diameter, with a length of stroke of six feet; they have side levers like marine engines, but the connecting rods are reversed, and convey the power downwards to the machinery, which is placed in vaults cut out of the sandstone rock; upon which the beam pedestals are fixed without any framing. Cast iron slides are used, instead of the usual parallel motion, and after several years' constant use they exhibit no marks of deterioration.

The drum wheel is 21 feet diameter, and makes usually 22 revolutions per minute, when drawing up a train at the rate of 15 miles per hour; there is a groove in its periphery, at the bottom of which is wound a small cord to form a bed for the main rope to rest upon—this main rope encircles about two-thirds of the circumference; it is made of the best Russia hemp, in three strands, patent shroud laid, the inner strand being composed of 40 yarns of white hemp, overlaid by 40 yarns of hemp, tarred to the point of saturation; this arrangement is found most conducive to the lightness and durability of the rope; its circumference was 6 inches, and its length, when new, was 4,800 yards; in the first few weeks it stretched to the extent of 10 per cent. of its length, after which it remained unchanged under the tension imposed. The total weight is 8 tons 8 cwt., and the cost was 2*l.* 8s. per cwt. It is guided by 474 grooved pulleys, 14 inches diameter, and by 6 sheaves 5 feet diameter. A new rope will last well for three years, after which it is renewed by splicing in a short portion each time, so as to reduce the amount of stretching.

The length of the inclined plane is 2,370 yards, at varying gradients; giving an aggregate rise of 77 feet 1 inch, and a mean rise of 1 in 92. The tunnel is 2,220 yards long. The average weight of the trains drawn up is 55 tons—and the time occupied is six minutes. The pressure of steam is usually from 50 lbs. to 60 lbs. when the engines begin to wind, and sinks gradually to about 30 lbs. in the reservoir during the time it is working.

From some experiments made by Mr. Edward Woods, the details of which are given, it has been ascertained that each pound per square inch pressure of steam upon the pistons over and above the 7·56 lbs. necessary to overcome the friction of the machinery, is capable of drawing one carriage weighing 5 tons gross up the inclined plane.

On the first erection of these engines, in order to comply with the provisions of an Act of Parliament, it was necessary to work them with steam generated in boilers, at a distance of 448 yards, and conveyed through pipes 10 inches diameter, laid in a tunnel excavated through the rock. Several experiments were made to determine the relative amounts of pressure in the boiler and the steam reservoir, and the quantity of steam which was condensed in a certain time. The results were, that when the engine was standing still, the difference of pressure was about 3 lbs., and when working with a load it was as much as 13 lbs. The quantity of steam condensed was on an average about 156 gallons per hour.

Subsequently, a set of tubular boilers, similar to those of locomotive engines, were erected close to the engines, and are now constantly worked instead of those at the great distance, the economy of fuel has been considerable. The consumption of gas coke under the tubular boilers is about 15 tons per week, at ten shillings per ton. The larger boilers consumed about 30 tons in the same time.

Mr. Edward Woods gives his approval of the action of the engines, and of the employment of non-condensing engines generally for this class of work, on account of their great simplicity, and the readiness with which they may be brought into full action, so that the greatest power is always at hand to start the train; whilst during the intervals of working the steam may be suffered to accumulate. These advantages are rarely attainable with condensing engines, as unless a small engine be employed to keep up the vacuum, there is a difficulty in starting them with the train attached to the rope.

This communication is accompanied by four detailed drawings of the engines and machinery, and by a model of Mr. Grantham's apparatus for regulating the admission of steam to the valves.

Mr. Fairbairn bore testimony to the good quality of the engines and machinery described by Mr. Grantham, their performance had been very satisfactory.

The mode of keeping the rope in tension was an improvement upon the plan which Mr. Fairbairn had previously adopted at the Wapping tunnel, of the same railway. He would present drawings of that machinery to the Institution.

The loss by condensation in long steam pipes is so considerable, that it has been generally found more economical to transmit power by a line of shafts, than to convey steam to any great distance.

He had recently constructed some Cornish pumping engines of large size, with side levers and reversed connecting rods; they had answered extremely well. Drawings and descriptions of them would be presented to the Institution.

OPENING OF THE STRASBURG AND MULHAUSEN RAILWAY.

WE learn from Mulhausen that the Minister of Justice, after arriving there on Sunday by the railway from Strasburg, went on by the branch railway to Thann, to inspect the manufactories, and thence return to Mulhausen. Meanwhile M. Berger, Deputy and President of the Council of Directors, went to Basle to receive the authorities of that city and invite them to Mulhausen. On the return of this party, and after the presentation of the Swiss authorities to the Minister of Justice, the Bishop Coadjutor of Strasburg gave his solemn benediction to the railway, and pronounced an impressive discourse. A grand dinner given by the Directors then took place, at which all the personages of note who were present at Mulhausen were assembled. The Minister of Justice, on his health being drunk, took occasion to express his extreme satisfaction at witnessing the completion of so great an undertaking, and expressed his hope that it would tend to the promotion of a permanent good understanding between France and the neighbouring countries. The Minister, in concluding his speech, said, "Circumstances, to which I will not even allude, stopped for a moment the movement which has rendered peace so fruitful for us, and in ten years has changed the face of the country. Henceforth, under the shadow of an honourable peace, France is about to re-enter upon the career from which she has been momentarily diverted, and she will march in it with that rapid and sure step which suits the rank she occupies in the world. Her neighbours give her the example of this by their numerous works of public utility. But even on this point she cannot and she will not consent to remain on a footing of inferiority. This is the idea which will direct me in accomplishing the task which the King has deigned to entrust me with, and I do not hesitate to say that it is also the idea of the government." The room in which the dinner took place had been formed out of a large cotton warehouse, and was tastefully decorated. An inscription on one of the walls was very appropriate. It ran thus:—"In 1500 the journey from Mulhausen to Strasburg occupied eight days; in 1600, six days; in 1700, four days; in 1800, two days; in 1841, two hours." In the evening the town was brilliantly illuminated, as well as most of the country houses in the environs, and the effect thus produced was very striking. A grand ball concluded the festivities of the day, and on Monday morning a train conveyed the authorities of Basle back to Switzerland, while another train took the Minister of Justice, the Bishop, the Prefect, and the authorities of Strasburg back to that city. No accident occurred to interrupt the rejoicings of the occasion. On Monday the authorities and Directors of the railway of Strasburg gave a return fete to those of Mulhausen, and some of the notabilities of Basle,

Digitized by Google

for the hospitality they had received at Mulhausen. Trains arrived from that place gaily ornamented, and the greater part of the population of Strasburg were assembled on the ramparts or in the streets, to welcome the visitors. Salvos of artillery were fired, and bells were rung. A grand banquet was given in the Corn Market, where eleven tables, of fifty covers each, were laid out. During the dinner several toasts to the King, the Minister of Public Works, the Directors of the Railway, &c. were drunk. M. Forel, of the house of Nicholas Koechlin Brothers, proposed a toast to free trade, &c. in an eloquent speech, and the following remarkable words:—"Let us above all things keep in honour commercial probity, which has always been so much venerated in Alsace, for without it we shall never succeed in founding anything that will be durable. It is the absence of political probity which perpetuates our dissensions, and is the cause that in France there is much agitation without any progress. *Works, not words!* is the motto of our rivals in industry and commerce. *Des faits, pas de phrases!* May this motto, already adopted by Alsacian manufacturers, become that of all Frenchmen, and then free trade, which is now kept in the region of Utopian schemes, will soon become a truth in full practice." M. Minden, one of the principal inhabitants of Basle, proposed a toast to France and Alsace, and made an eloquent speech in German, at the end of which he apologised for not addressing the company in French. The Minister of Public Works immediately said, "We are highly gratified, Sir, at hearing toasts in honour of France proposed in German." A grand ball concluded the festivities of the day, and the town was brilliantly illuminated. The lofty spire of the cathedral was lighted with Bengal fires, and had a magical effect. On Tuesday the visitors from Mulhausen and Basle returned home.—*Galignani.*

ACCIDENT ON THE GLASGOW AND PAISLEY RAILWAY.—We regret to state that George Donaldson, a policeman in the service of the Glasgow and Paisley Joint Railway Company, whose beat was contiguous to the Arkleston tunnel, accidentally met his death on that line on Wednesday last. It appears, that the unfortunate man had been taking his dinner, which had been brought to him by his wife, upon the slope of the cutting within a few yards of the west face of the tunnel, and hearing the one o'clock train from Glasgow approaching, he ran down with the intention of crossing the line, for the purpose of displaying his signal. The rapidly advancing train, however, was upon him before he could pass over, and being struck down by the buffers of the engine, he was instantly deprived of life. This painful occurrence took place before the eyes of Donaldson's wife.—*Glasgow Herald.*

ACCIDENT ON THE GREAT WESTERN RAILWAY.—On Friday afternoon the railway train from this city to Bath, impelled by the *Star* engine, had proceeded a short distance beyond Keynsham, when a policeman made a signal, upon which the engineer slackened his pace. Good reason for so doing presently appeared, when it was found that a little further on, on the same line, the engine of a train which probably had started at half-past two had broken down, and the way was obstructed. If the engineer of the *Star* had not prudently slackened his pace on the signal of the policeman, the collision would probably have been of serious consequences.—*Bristol Times.*

KILMARNOCK BRANCH RAILWAY.—The operations on our branch are progressing at a satisfactory rate. The great body of the workers of Messrs. Macdonald, the contractors for a considerable part of the line in the vicinity of the town, have not yet got relieved from the Edinburgh line; still, the numbers employed have shown their handiwork to some purpose. Bridges are erecting over the bye roads near to Woodhall Quarry, where there is a pretty deep cut; and immediately adjoining Greenhill Quarry there is a short but very heavy embankment. In various parts along this section the embankments are made up to a considerable length.—*Glasgow Constitutional.*

LONDON AND BRIGHTON RAILWAY.—ALTERATION OF TRAINS.—OPEN THROUGH-OUT from London to Brighton, for passengers, parcels, private carriages, and horses.

Down trains from London daily, except Sundays, at *three-quarters past 9 a.m.; at ☞ three quarters past 10 a.m; *three-quarters past 1 p.m.; ; three quarters past 2 p.m.; *three-quarters past 3 p.m.; ☞ three-quarters past 4 p.m.; and to Croydon only at 7 p.m.

Sunday trains down from London.—Mixed trains at *8 a.m., *three-quarters past 10 a.m.; and *7 p.m.; and to Croydon only at 10 p.m.

Up trains from Brighton daily, except Sundays, at *three quarters past 6 a.m., half-past 8 a.m. (express; at three-quarters past 10 a.m.; at *three quarters past 11 a.m.; at a ☞ quarter past 2 p.m.; at *4 p.m.; and from Croydon only at three quarters past 2 p.m.

Sunday trains up from Brighton, at *three-quarters past 7 a.m., at *4 p.m., and at *7 p.m.; and from Croydon only at 7 a.m.

The Trains marked thus * are mixed, that is, consist of first and second-class carriages, and stop at all the Stations on the line, performing the journey in two hours and a half. The trains marked thus ☞ consist only of first-class carriages, and stop only at Croydon, Red hill, Three Bridges otherwise Crawley, and Hayward's heath, and perform the journey in two hours. The trains marked thus ‖ are mixed, but call only at Croydon, Red-hill, Three Bridges, and Hayward's-heath, and perform the journey in two hours. The Express Train stops at Croydon only, and performs the journey in an hour and three quarters.

Fares to and from London and Brighton:—First class carriages, 14s. 6d.; second class, 9s. 6d.; children in second class, 6s. 6d.

Fares to Croydon:—First class, 2s.; second class, 1s. 6d.

N B—No passengers will be conveyed from London to New-cross, or New-cross to London.

Children under 10 years of age in first class carriages will be charged second class fare. No charge made for infants in arms.

Bills containing all particulars as to the conveyance of carriages, horses, dogs, luggage, and parcels, together with information as to omnibuses, post horses, &c., may be had on application at the offices of the Company, 10, Angel court, Throgmorton-street; or at the following booking-offices:—Grifin's, and Green Man and Still, Oxford-street; Hatchett's, Piccadilly, 41, Regent-circus, Spread Eagle, ditto, Golden Cross, Charing-cross; George and Blue Boar, Holborn; Old Bull, Holborn; White Horse, Fetter-lane; Cross Keys, Wood-street, and the Spread Eagle, Gracechurch-street; also at the terminii, London-bridge, and Brighton; and all the stations on the line.

By Order,
THOMAS WOOD, Sec.

27th September.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half yearly at the Bank of Messrs. Gurn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

TO BE SOLD BY PRIVATE CONTRACT, in such Lots as shall be agreeable to the Parties, all the remainder of that excellent and valuable stock of Iron Machinery, Tools, &c., belonging to the late firm of MARSHALL ROGERS & Co., Lion Foundry, Wood-street North, Liverpool, consisting of

One Horizontal High Pressure Steam engine and Boiler, of 16 horse power.

One High Pressure Beam Engine and Boiler, of 18-horse power.

Several large Slide Lathes, suitable for turning railway wheels, shafting, and for general purposes.

Upwards of forty Screws, Machines of various kinds, most of which are valuable tools, some of them nearly new, and all in good working condition.

A number of Cast Iron Beds, suitable for Lathes or other Machines, some of which are planed.

Five large Punching Engines complete, a compound Self-acting Drilling Machine fitted up with eight drills, each to act separately or all at once, nearly new and in excellent condition.

A Foundry Fan, two Cupolas, and two good Foundry Cranes, a quantity of Railway Axles, and a variety of other railway work in a partly finished state, besides a number of other things suitable for Engineers, Founders, Smiths, and Boiler Makers, all of which will be sold very cheap, as the Assignees are desirous of clearing every thing away from the premises as soon as possible to avoid rent and other expenses.

Apply to Mr. John Finch, Jun., Sir Thomas's Buildings, or to Mr. Duncan Littlejohn, Lower Sparling street, Assignees.

N B. The goods may be seen at any time by applying at the Foundry.

Liverpool, 28th September, 1841.

TENDER FOR WROUGHT IRON RAILS.—The Directors of the Northern and Eastern Railway Company will meet on Thursday, the 14th day of October instant, to receive Tenders for the supply of 600 Tons of Wrought Iron Rails, to be delivered in the River Thames, at the mouth of the River Lea,—in all January next.

Pattern of the above may be seen at the Company's Office, Railway Station, Shoreditch. Parties tendering to specify their mode of manufacture and terms of payment.

WILLIAM BOURNE, Secretary.

Shoreditch, London, October 1, 1841.

TO RAILWAY CONTRACTORS.—The Chester and Birkenhead Railway Company are desirous of receiving PROPOSALS for maintaining in proper Repair for one or five years, the Railway and other works thereunto appertaining.

Mr. John Dixon, the Company's Engineer, will attend at the Birkenhead end of the line at 10 o'Clock on Friday, the 8th day of October next, in order to accompany persons desirous of inspecting the line, and to exhibit the specification. Tenders in conformity with the specifications, addressed to Mr. Dixon, at the Railway Office, Birkenhead, will be received on or before Saturday, the 16th day of October. Security for the due fulfilment of the contract will be required, and the Directors will not pledge themselves to accept the lowest Tenders.

SCHOOL OF ENGINEERING, TRINITY COLLEGE, DUBLIN.—This School WILL OPEN on the 2nd of November, 1841, and will embrace the following Curriculum of Study, which will extend over the Three University Terms of each Year:—

FIRST YEAR.

MATHEMATICS—By the Rev. Thomas Luby, D.D. F.T.C.D.

PRINCIPLES of MECHANICS and HYDROSTATICS—By Andrew Searle Hart, L.L.D., F.T.C.D.

CHEMISTRY and GEOLOGY—By James Apjohn, M.D.

SECOND YEAR.

PRACTICAL MECHANICS—Heat and Steam-Engine, by the Rev. H. Lloyd, D.D., F.T.C.D., Erasmus Smith's Professor of Natural Philosophy.

PRACTICAL ENGINEERING.—(Professor not yet elected.

For further particulars application to be made to the Rev. Joseph Henderson Singer, D.D., Registrar.

HALEY'S PATENT LIFTING JACK, Manufactured solely by Messrs. W. and J. GALLOWAY, Engineers, Manchester.

The attention of parties who employ Lifting Jacks, is respectfully requested to the superiority of the above over those hitherto in use. Having a claw the same as the "Rack Jack," it will lift either from the top or below, and is not more than half the weight and bulk. The handle may be let go with the lift on, and remains stationary, and quite safe.

Each working piece is Engine-cut and Case-hardened.

CIVIL ENGINEERING.—The LECTURES on CIVIL ENGINEERING of Professor VIGNOLES, for the ensuing Session, will COMMENCE on WEDNESDAY, November 3.

From the numerous subjects connected with Civil Engineering the following are selected for the Session 1841–42, and will be treated of in Two Courses, viz.:—

FIRST COURSE.—Ten Lectures:—On Foundations, Earth Work, Retaining Walls, &c.

SECOND COURSE.—Eighteen Lectures:—On the Construction of Railways, including the principles of Laying out, Lines, Works, Estimates, Applicable Powers, Economy, &c.

The Second Course will commence on the first Wednesday in February.

The other branches of Internal Communication will be the subject of Lectures in the Session 1842–3.

The Lectures will be on Wednesdays, from Seven to Eight, P.M., and may be attended by persons not intending to go through any other course of study in the College.

The fee to Matriculated Students, and to Students of the College, attending the Classes of Mathematics and Natural Philosophy, will be £4 for the two courses. To other persons £5.

The Class of Mathematics of Professor De Morgan, of Chemistry of Professor Graham, and of Drawing of Mr. G. B. Moore, will commence with the opening of the Session.

The Class of Natural Philosophy, the Professorship being now vacant, will open soon after the appointment of a new Professor, which will be made early in the session.

The Courses of Lectures on GEOLOGY of Professor Webster, one part of which will be devoted to the application of Mineralogy and Geology to the useful Arts, will commence in February.

A Course of Lessons on PRACTICAL CHEMISTRY will be given in the Spring by Professor Graham.

Further particulars may be had on application at the Office of the College.

P. F. MERLET, Dean of the Faculty of Arts.
CHAS. C. ATKINSON, Secretary to the Council.

University College, London, September 16, 1841.

THAMES HAVEN DOCK AND RAILWAY incorporated by Act of Parliament. The price of Coals delivered at the entrance of the Thames is Thirteen Shillings per Ton. One of the objects of the Thames Haven Railway is to bring Coals to London at a trifling increase upon that amount. Application for the remaining unappropriated Shares, Pamphlets and Plans, may be had at the office, No. 2, St. Mildred's-court, Poultry.

HENRY AMSINCK, Secretary.

EDINBURGH AND GLASGOW RAILWAY.—Tenth Call of £5 per Share.—Notice is hereby given, that in pursuance of a resolution of the Board of Directors, passed in terms of the Act of Incorporation, the Proprietors of Shares in this Company are hereby required to pay a further instalment of £5 per share (making £50 per share paid up), on or before Tuesday, the 19th day of October next, to any of the undermentioned bankers:—

Glasgow—The Glasgow Union Banking Company.
Edinburgh—The National Bank of Scotland.
Ditto—The Western Bank of Scotland.
Liverpool—The Bank of Liverpool.
Manchester—Messrs. Wm. Jones, Lloyds and Co.
London—Messrs. Glyn, Halifax, Mills & Co.

Interest at the rate of 5 per cent. per annum will be charged on all such sums as remain unpaid after the date above appointed.

By order of the Directors,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway, Head Office,
7, North Queen Street, Glasgow, Sept. 24, 1841.

IMPORTANT TUESDAY'S SALE OF FORTY VALUABLE YOUNG, SOUND CART HORSES.

TO BREWERS, DISTILLERS, FACTORS, CORN AND COAL MERCHANTS, CONTRACTORS AND WHARFINGERS, ALSO, THE NOBILITY AND GENTRY.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on TUESDAY, October 5, 1841, commencing at Twelve o'Clock, Forty fine-shaped, active, powerful, seasoned CART HORSES, being the genuine, valuable, extraordinary good stock of Messrs. Rennie and Co, that have been employed on the Bath Depot Contract of the Great Western Railway, sold in consequence of having completed it.

The above superior stock are about 15 hands 3 inches high, remarkable for symmetry, power, and activity, mostly young and sound, and really as fine a lot of Cart Horses as ever were submitted to public sale.

Colours—Bays, Greys, Chesnuts, Browns, and Blacks.
Comprising some very handsome match teams.
On view and catalogues had two days before the sale.

A great variety of new and second-hand Carriages of every description, always on private sale at this establishment remarkably cheap.

TUESDAY'S SALE.—TWENTY-FOUR VALUABLE YOUNG, SOUND, SEASONED CART HORSES.

TO BE SOLD BY AUCTION by Mr. DIXON, at his Repository, Barbican, on TUESDAY, October 12, 1841, commencing at 12 o'clock precisely, 24 remarkably fine-shaped, fresh, young, powerful Cart Horses, the genuine property of Messrs. J. and G. Thornton, sold in consequence of having completed their contracts on the London and Brighton Railway.

☞ The above lot of young seasoned Draught Horses, are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been purchased for the above contract, with great care and judgment, regardless of expense, and are now in fine working condition.

Colours,—Bays, Blacks, Browns, Greys, and Chesnuts.
On view, and Catalogues had, two days before the sale.

BY ORDER OF THE SHERIFF OF MIDDLESEX.

IMPORTANT SALE OF BREWERS' DRAY HORSES.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on TUESDAY, 5th October, 1841, commencing at Eleven for Twelve o'Clock, precisely, Twenty fine-shaped, seasoned, powerful CART HORSES, Superior Grey Buggy Horse, Capital Brown Chaise Mare and Bay Cabriolet Horse, the genuine Stock of Messrs. Lamont, Stewart, and Matravers, of Skinner street, Bishopsgate-street, Brewers, sold under an execution, by order of the Sheriff of Middlesex.

☞ The above Stock of seasoned Cart Horses are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, as they are just taken from constant employ, and are in good working condition.

On view two days before the sale, and catalogues may be had of Messrs. Willis and Son, 25, Cursitor-street, Chancery-lane, officers to the Sheriff of Middlesex, and of the Auctioneer as above.

TO ENGINEERS.—A STEAM LOCOMOTIVE CAR is required for dragging a load, not exceeding ten tons, a distance of 28 miles on a common road. The speed is not required to exceed five miles per hour. Manufacturers who may be desirous of constructing or disposing of a machine for this purpose, will please to direct their proposals to Messrs. J. R. TEMPLEMAN and Co., 2, St. Ellen's-place, Bishopsgate, by whom further information will be given.

PRESTON AND WYRE RAILWAY, HARBOUR, AND DOCK COMPANY; Incorporated by Act of Parliament.

The Directors of the Preston and Wyre Railway, Harbour, and Dock Company, hereby give NOTICE, that in compliance with the provisions of their Act, the Half-Yearly Meeting of the Proprietors of the said Company will be held at the Company's Offices, No. 11, King William-street, in the City of London, on Tuesday, the 12th October next, at One o'Clock precisely.

By Order,
JOHN POWER, Secretary.

Fleetwood-on-Wyre, September 30, 1841.

SIR WILLIAM BURNETT'S PATENT for the Preservation of Timber, Canvas, Cordage, Cotton, Woollen, &c. from Dry Rot, Mildew, Moth, and premature Decay.—The value of this discovery has been amply proved in Her Majesty's Dock Yards and elsewhere. Official reports and specimens of wood, canvas, and other articles, may be seen at the office. The process is simple, inexpensive, and perfectly innoxious in its use: as applied to ship building it purifies bilge water, and retards oxydation of metals. By the process, green wood may be rapidly seasoned.

The Patent Material may be purchased or licenses for tanks granted to noblemen, gentlemen, builders, upholsterers, pianoforte makers, sail makers, and others. When for the purposes of trade on very advantageous terms to the licensee. Timber of all dimensions, planking, canvas, cordage, ships' sails, awnings, rick cloths, tents, and all other articles of linen and woollen manufacture, are received for preparation at the proprietor's waterside premises, Copenhagen Wharf, Britannia Bridge, Limehouse.

Particulars and terms may be obtained on application at the Office, or by letters, post paid, addressed to the Secretary, 4, Castle court, Birchin-lane, Cornhill.

And at the Offices of Horne and Chaplin at the several Stations.

Parcels forwarded by every train; and if for 8½ p.m. Mail Train, are received at the above Offices until ¼ past 7 for the above places, and to all parts on the several lines of Railway, viz.:—

Bristol, Bath, Swindon, Farringdon, Reading, Windsor, Southampton, Winchester, Basingstoke, Farnham, Chertsey, Kingston, Brighton, Reigate, &c.

HORNE & CHAPLIN, Proprietors and Agents.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hambro' Wharf, Thames-street, to most parts of the south and western railways.

GUARANTEE SOCIETY.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this Society. To relieve Relatives and Friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its patrons the principal Bankers, Merchants, and Public Institutions in the metropolis, and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals.

DIRECTORS.

Thomas Attree, Esq.	G. Palmer, Esq.
David Cannan, Esq.	Major Prosser, F. G. S.
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R. E.	B. G. Windus, Esq.

STANDING COUNSEL—R. Ryder Dean, Esq.

SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.
2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.
3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.
4. All risks attending irresponsible sureties will be removed.
5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,
THOMAS DODGSON, Secretary.

RAILWAY BARS.—Wanted a considerable quantity of good second hand rails and chairs, price and particulars to be sent to R. Davison, Engineer, Truman's Brewery, Spitalfields.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Brides', Fleet-street, Middlesex.—Saturday, October 2, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 197. Vol. IV.—No. 41.] SATURDAY, OCTOBER 9, 1841. [Price, 6d.

GREAT NORTH OF ENGLAND RAILWAY. —TENDERS FOR LOANS ON DEBENTURE.—The Directors of the Great North of England Company, are prepared to receive Tenders for Loans of Money on Debenture Bonds in sums of not less than £100 each, for three, four, five, six, or seven years, for which interest at the rate of £5 per cent. per annum will be paid half yearly at Messrs. Dixon's and Fowlers, Bankers, London.

Tenders stating the amount offered, and the term of years for which the same may remain, to be addressed to the Secretary, at the Company's Office, Darlington.

By order,

W. O'BRIEN, Secretary.

Great North of England Railway Offices, Darlington; September 21, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £50 for terms of three, five, seven, or ten years, on interest at the rate of four per cent. per annum, payable half yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND EXETER RAILWAY COMPANY.—INTEREST ON PAID UP CALLS.—Notice is hereby given, that the Interest on Paid Up Calls, for the Half year ending on the 6th inst. may be Received at this Office, on Monday, the 18th of this Month, or on any following Monday, between the hours of twelve and three.

Shareholders resident in London may receive their cheques after the 18th inst., at the office in Prince's street, those at Manchester, from Mr. Francis Parker; those at Exeter, from Dr. Miller, and those at Plymouth, from Mr. Alfred Hingston.

To those resident in other places the Interest will be remitted.

By order of the Directors,

J. B. BADHAM, Secretary.

Bristol, Office 30, Broad-street,
1st October, 1841.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES, about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill-wall, Poplar; and also of the following Agents —

Robertson and Co., 12, Goree Piazzas	Liverpool.
Mathias Dunn	Newcastle upon Tyne
Joseph Bellamy	Plymouth.
John Thompson and Co.	Wemyss.
J. T. Treppliss	Troon.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kidstone and Co.	Glasgow.
James Gowan	Leith.
John M'Beath, 14, Clement's-lane, High-street,	Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the Kingdom, but reference is particularly made to the London and Blackwall Railway, where it has been in use upwards of twelve months.—"It gives entire satisfaction, and has never broken."—*Vide extract of the Trade Report, Thursday, 19th instant.*

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 3d, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by practical comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous assumption both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the part solar undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s 6d.; on rollers, 4s 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster-row; Hyde & Co. and G. Bell, Fleet-street; Mann, Cornhill; and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY FOR 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Maps, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Railway Times Office, and Hyde and Co., Fleet-street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122 Fleet-street, and sold by all booksellers.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,

PETER SINCLAIR, Secretary.

Bolton, 25th September, 1841.

Just published, price 7s. 6d.,

A LIST OF ALL THE PATENTS FOR INVENTIONS IN THE ARTS, MANUFACTURES, &c. &c. By ANDREW PRITCHARD.

To Inventors, Patentees, and Manufacturers, this work will be found of great utility, as by it they will be enabled to ascertain all the Patents taken out on any particular article, the names of the Inventors, the date of the Patent, and consequently the time it will remain in force. To Solicitors employed in making assignments, Licenses, &c of Patents, it will be valuable for reference. It contains 6,277 Patents.

Also, price 5os.,

A HISTORY OF INFUSORIA, Living and Fossil, with 500 coloured Engravings.

Also, price 1s.,

A LIST OF 2,000 MICROSCOPIC OBJECTS, with remarks, &c.

Whittaker & Co., Ave Maria-lane; Pritchard, 162, Fleet-street.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C.E.—The flattering testimonials which the author has received from various quarters, as to the utility of the first volume, which was produced at an expense of upwards of One Thousand Pounds, and Sixteen Months constant attention, induce him to propose to the railway public the production of a second volume, which, however, can only be done on the plan of subscription.

Railway proprietors, therefore, and others who would like to be in possession of much additional information on the important subject of railways, will be so kind as at once to forward to the author their names as subscribers to the Second Illustrated Volume which would be issued at the price of One Guinea.

THE RAILWAYS OF BELGIUM practically described and illustrated, in One Octavo Volume, price 10s. 6d., may also be produced in the same manner.

FRANCIS WHISHAW.

Gray's Inn, London, and Haverfordwest, Pembrokeshire, October 4th, 1841.

THE LONDON AND BRIGHTON RAILWAY GUIDE, illustrated by the Official Map and Section, and a full description of the Line and adjacent country; together with a Time and Fare Table, and a List of Hackney Coach and Cab Fares to the Stations, from all parts of London and Brighton.

London: Published by J. R. Jobbins, 3, Warwick-court, Holborn; R. Tyas, 8, Paternoster-row; Tilt and Bogue, Fleet-street; J. Weale, Architectural Library, Holborn; J. Cross, Holborn; Letts, Royal Exchange; H. S. King, Stationer and Bookseller to the Queen Dowager, 1, North-street, Brighton; and at the *Railway Times* Office, Fleet-street. Price One Shilling, bound in cloth.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page 1035*).

Mr. Chapman's Evidence—in continuation.

1111. The Lancaster train you think would be a positive difficulty, but an extra train would not?—With regard to an extra train, I might suppose an instance that the Judges might be so long delayed at Lancaster, that it might be late in the day upon which they must open the commission at Liverpool.

1112. But with regard to the extra trains, you do not consider that there would be that practical difficulty which there would be in the case of those trains from other railways which join on with yours?—Certainly not.

1113. Your railway is very peculiarly circumstanced because its traffic mainly depends upon what is brought to it from other railroads?—Precisely.

1114. What are your arrangements with regard to those railroads with which you are united. How have you effected your arrangements with them?—When we opened the line, we agreed upon a principle upon which the receipts were to be divided upon the proportion of the service that each party was to render.

1115. Is the agreement founded upon that principle binding for any period?—It is binding for four years; it is a positive agreement for four years; but we have also a lease, an instrument under the common seal of both Companies (I am speaking of the Liverpool and Manchester), and that lease can only be avoided by four years' notice, I think.

1116. Have you also an agreement with the Lancaster and Preston?—We have an agreement with the Lancaster and Preston.

1117. Is that something of the same sort?—No, our agreement with the Lancaster is for working the locomotive power.

1118. You take their locomotive power off their hands?—We take their locomotive power off their hands, and work it entirely.

1119. That is probably the best arrangement for both parties?—I think it is a very good one for them; at present I think it is a very indifferent one for us.

1120. Is that to endure till four years' notice is given?—No, it is voidable, I think, at six months' notice.

1121. Supposing that those Railway Companies should vacate those agreements, the one after four years, and the other after six months, how should you be situated, supposing they did not like your terms? If the Liverpool and Manchester Company were to bring their carriages to Parkside, which they must do, and which they naturally would do, we could take them on to Preston, as we now do; and in like manner the Liverpool and Manchester Company would take ours on to Liverpool and Manchester; in fact, our agreement with the Liverpool and Manchester Company is simply to do that which we are both bound to perform.

1122. Do you go into the Liverpool and Manchester line, or is there any space between the termination of your railroad and the property of the Liverpool and Manchester Company?—No, our rails run into theirs.

1123. Supposing you quarrel, what powers are there now existing to force the two Companies to come to an agreement to convey the traffic;—I apprehend we are both bound to convey the traffic.

1124. But supposing they took up their rails for 10 or 12 yards, and in that way made an interval between the two lines, how could that be remedied?—I think they could not legally do so.

1125. Nor you either?—Nor we either.

1126. Would the same thing be illegal as between you and the Lancaster Company, supposing the Lancaster Company chose to stop short of your terminus?—I think they could not do so.

1127. Nor you either?—Nor we either.

1128. You consider that the Preston and the Lancaster on the one side, and the Liverpool and Manchester on the other side, must unite with your terminus?—I think they must.

1129. So that however you might squabble among yourselves, so far the passengers would not be inconvenienced?—I think not.

1130. You have no means by your Act of preventing their carriages communicating with your railway, and they have no means of preventing your carriages communicating with their railway?—I think not.

1131. Have you ever turned your attention to the advantages of some Board of Arbitration being in existence, as to matters of this sort?—I have heard such incidentally discussed, but I never thought myself seriously about it.

1132. Do not you think that, more especially as the number of railways connecting with each other is becoming larger, it might be advantageous to have something of that sort?—I think their own interest will be better.

1133. Does every man always take a correct view of his own interest or every Company?—I think they come to do so at last; they may not in the first instance.

1134. You admit that it is a very important point that, for the safety and convenience of the public, squabbles of that sort should be as soon as possible settled?—There cannot be a doubt about it.

1135. Even supposing your objection to the general provisions of this 11th clause to be very strong, would you see any objection to giving the Board of Trade, as representing the Government, power upon points connected with the union of railroads?—It is a very difficult question, and I have not thought much about it, but I think we are better left to ourselves.

1136. Lord Sandon—If not to the Board of Trade, should you object to its being left to the decision of any equitable tribunal?—I think that if there was any dispute between two Railway Companies, they would attend very readily to any suggestion that might be made by the Board of Trade; and I believe I have already stated, that so long as our present relations continue, their suggestions will be attended to with the utmost respect; but if they issue orders, we shall then attend to them, as we should be bound to do, and carry them out implicitly, but we should divest ourselves of all responsibility.

1137. Lord Granville Somerset—Were you not at one time very much inconvenienced by the resistance which the Grand Junction Company made to carry on the passengers in the same carriages?—I do not think we were inconvenienced further than this, that the public, such few as were then using the line, made a complaint, and of course we said, "We can do no more for you; we will do our best; we will try and get the Grand Junction Company to do this and to do the other;" the Grand Junction always said, "If you bring us a sufficient number of passengers we are quite ready to take them on in the same carriage, but if you send a carriage with only one or two passengers, we think they ought to leave the carriage at Parkside and get into one of ours that has got room for them;" and I confess I myself thought there was so much reason in that, that I was not very urgent with the Grand Junction to get them to run the carriages through.

1138. Then, perhaps, your opinions have been modified since you were examined before the Committee in 1839?—I saw our through-carriage from London to Lancaster go by the other day, just before I came here, with one passenger in it;" the morning before I came here, we turned the through-carriage off the line altogether and put it on a siding, because there was nobody to go to London.

1139. Were you not examined before a Committee of this House in the year 1839?—I was.

1140. Was there not some investigation then made into the very point now inquired into?—There was.

1141. Were you not present when Mr. Rathbone gave an answer on this subject, in reply to question 4862, upon the 2nd of July, 1839, the question being this: after stating the inconvenience of not taking places, and so forth, "Has there not been much inconvenience suffered by the public in consequence of their not being able to do so?" and the answer being, "I think there has; great complaints have been made"?—By those few that went.

1142. Is there not a possibility that the same sort of reasoning which you now apply upon this point might be applied upon other points of great importance to the public, where an union of two distinct railroads takes place?—I think it might be done; but the moment a case is made out, I do not believe that any railway ever continues to act long against what appears to be palpable public convenience; it would be against their interest to do so.

1143. You feel it rather a hardship at this moment sending one passenger in a large coach by himself?—We would rather not do so; but if we do not send a coach, of course we cannot have one back.

1144. It is rather expensive to you?—No doubt it is.

1145. If that was the case continually, should you be willing to send one of your coaches half filled?—I we were to find that only one person went in our through-carriage to London, that that was continually the case, I have no doubt we should drop it.

1146. Supposing you only found the carriage half filled?—I think the public are entitled to it then.

1147. Would not the expense be the thing to look at?—We do not look to expense so nicely as that comes to.

1148. Your general proposition is, that all the Companies would consider the convenience of the public to so great an extent, irrespectively of their own individual advantage, as to render anything like a supervising authority upon this subject unnecessary?—I think so, decidedly.

1149. You say all your carriages have buffer springs?—All.

1150. And breaks?—I think every other one has a break.

1151. Are buffer springs expensive?—Yes, they are expensive in the first cost, I have some doubt whether they are really expensive, inasmuch as the carriage lasts a great deal longer with them.

1152. Then your opinion is, that buffer springs are a considerable element of safety?—I have not said that, but I think a train safer with buffer springs than without.

1153. The reason of their being not positively expensive is, that they prevent those violent jars and so forth to which carriages must be liable, even without a serious collision?—No doubt of it.

1154. But those jars must be much more serious when there is a serious collision?—Yes.

1155. Consequently, if they prevent small jars, they must have a little effect in preventing large ones having serious effects?—That they have some effect in a collision I have no doubt; but I have never been among those who have attached any great importance to them, because the spring the moment it is run up, of course begins then to re-act.

1156. But at all events there is that deadening of the collision?—There is.

1157. In short, with a view to your own safety, and thinking of your own comfort, and the probability of a collision, would you not rather be in a carriage with buffer springs, and in a train where every carriage had buffer springs, than in one where there were no buffer springs?—Undoubtedly I would; and if I had my will, I would have all the carriages in a passenger train with buffers.

1158. Have you ever thought of the system of putting breaks upon your engines, not upon your carriages?—Yes, I have thought of that.

1159. What is your opinion upon that?—I think there would be some additional safety in that, under some circumstances.

1160. Do you think breaks upon carriages conduce to safety, or not?—No doubt, as far as helping to stop the train goes; there may be some doubt as to the equality of the progressive motion of the carriage which the application of the break occasions, but I think it is not very important.

1161. But you are of opinion that upon the whole breaks upon carriages are an element of safety?—I think they are, provided they be not too many.

1162. How are the gradients upon your line?—There are many of 1 in 100.

1163. Does that prevail to much extent in the line?—I am sorry to say that it does.

1164. Then yours is a line upon which buffer springs and breaks may be very important?—Very important.

1165. How are the curves?—The line is nearly straight.

1166. That of course diminishes the disadvantage of your gradients?—Very much.

1167. What do you say about six wheels or four, as applied to either engines or carriages?—With regard to the application of six wheels to engines, it is a very moot point. I have no objection to a four-wheeled engine at all.

1168. Which have you upon your railway?—Ours are nearly all four-wheeled engines. With regard to carriages, I think that there is very little additional safety, if any, by putting them on six wheels; I think the axles ought to be all tested and ascertained to be of the requisite strength, and if they are, I believe the carriages are as safe with four wheels as with six.

1169. With regard to the examination of carriages upon your line previously to their being used, what is your habit?—Every carriage upon our line is examined before it goes out; in fact, it is examined directly it comes in. The carriages that are in transit to Lancaster during the five minutes' stop, are all fresh greased and examined.

1170. There is a person appointed for that special service?—Precisely, and he notes down the number of every carriage.

1171. If anything happens to the carriages which either is serious, or which might have been serious, you call upon him to answer for it?—We do.

1172. In short, you consider him responsible?—Yes.

Digitized by Google

1173. Do you feel that a very onerous mode of proceeding?—I do not know what the parties themselves feel upon the subject, but I do not consider that the examiners think it so, because it is so easily performed.

1174. You think that there may be a fair practical examination conducted in the manner you have described, without any severe and serious loss of time of any very serious expense to the Company?—No, it the question applies to a very minute examination, it is obvious that it cannot be done.

1175. An useful practical examination?—An useful practical examination, I think, can be had.

1176. And in point of fact is had?—Yes; if it is not, the servants neglect their duty.

1177. You do not find that there is any very serious consumption of time, nor that consequently any very serious amount of expense is increased by that?—No.

1178. At all events, you consider that both with reference to the safety of the passengers, and with reference to your own interest, any expense which that investigation may cost is very well incurred in that investigation?—We should be happy to double our safety expenses, if we thought we could secure positive safety.

1179. Looking at the great cost which every accident upon a railroad must occasion to the Company, you naturally are very anxious to avoid accidents, and therefore you consider that every expense of that sort is very well laid out?—Very well laid out.

John Entwisle, Esq. called in, and examined.

1180. Chairman—What railway are you connected with?—The Brighton and the Greenwich Railways.

1181. In what way are you connected with them?—I am a Director of each of those railways.

1182. You are not an engineer?—Not at all.

1183. Will you state, as regards those railways, what your feelings are with respect to the discretionary power proposed to be given to the Board of Trade in the 11th clause of the Bill?—I think there are objections both general and special. The general objections I think are principally these, that you cannot make any number of regulations generally applicable to all railroads; you must enter more or less into detail, and the entering into detail requires a knowledge which I think is only attainable by those who are daily conversant with the working of railways: and it is liable to this objection, which has been mentioned in Sir Frederic Smith's Report, that the moment you enter into detail you more or less take the management of the railroads out of the hands of the present responsible parties, the Directors and Managers. I think that would have the effect more or less of counteracting the main object of the Bill, which is ensuring the public safety. Sir Frederic Smith in his Report says, "The Government should not attempt to regulate matters of detail so as to take the management of the railways out of the hands of the parties immediately responsible, viz., the Directors and their officers." This, it appears to me, would be the case were they to interfere in matters of detail, as they must do in order to make any regulations which would be at all serviceable. I think it would diminish the responsibility of the Railway Directors, which would be attended with risk to the public. That is the first general objection I have to make.

1184. Mr. Labouchere—You think it would not be possible for the Board of Trade to insist upon all Railway Companies making regulations for themselves, according to some general principles, without the Board of Trade undertaking the task of interfering minutely with regard to those regulations?—I think that very few general regulations could be made, except such as are already in force on almost every railway. There is a great similarity of system in most of the railways, although the details are very different.

1185. Was your railway represented at the Railway Conference at Birmingham in January?—It was.

1186. Did you concur in the recommendations then made?—I did.

1187. Did not one of the resolutions then come to contemplate an uniform general system of regulations applicable to all railways?—The origin of the resolution referred to, I think, was this. It was mentioned at the meeting that the signals on one railway, were almost the converse of those on others; that what would be a signal of safety on that railway would be a signal of danger on another; and that was thought undesirable, as persons who had been employed as servants on one railway might go to another, and have to use the same signal for contrary purposes.

1188. And it was thought desirable, in order to prevent the danger and inconvenience of this variety of practice on different railways, that some uniform system of regulation should be adopted by all?—No doubt of it.

1189. Of course, this Railway Conference had only the power of recommending the adoption of those general regulations?—Yes.

1190. Do you think there would be any evil in there being somewhere a power of enforcing the adoption of some simple and general system of regulations of the nature contemplated by the Railway Conference, in case any one or more railways should refuse to accede to what that conference declared to be a desirable object?—I think there would be great danger.

1191. Why so?—In the first place, it would require a very great knowledge of detail. Those very regulations that have been sent to the different Companies have not, as far as I have heard, led to any material modification upon any of the railways; no doubt because they found that their own details were so different, that they could not adopt them; they were thrown out as suggestions to be adopted as far as they could be.

1192. You said that those resolutions were come to from an impression on the part of the meeting that there were variations of practice upon the different railways which were dangerous to the public safety?—Upon one point I mentioned; I do not think there was any variety generally.

1193. Do you know whether the recommendations of that conference have been so far attended to that the evil to which you have alluded has been obviated, and that a more uniform practice has been adopted on the different railways?—I do not know, for I am not aware what Company was referred to as having this material difference from the others.

1194. You are not able accurately to state whether or not the resolutions have been a mere dead letter, in the way in which you first stated they were?—I said that I was not aware of any modifications having been introduced; I do not know that they have not been introduced.

1195. Lord Sandon—You think the general object of uniformity is very important in itself?—Uniformity, as far as it can be obtained.

1196. But you think there are so many differences of detail connected with particular railways as would make it necessary to vary in some degree from that general rule, and you think that it is more desirable that that uniformity should be attained, as far as possible, by recommendations, rather than by absolute control?—Certainly I do.

1197. Do you believe that recommendations, especially if made by a public body constituted by the Board of Trade, would have great influence in inducing any Company to accede to the alterations suggested, unless there were some very considerable objection to them?—I think they would have great effect; and it appears from Sir Frederic Smith's evidence, that the suggestions which have been made without any power of enforcing them, have been conformed to in many cases, where it was possible to do so.

1198. Mr. Labouchere.—Do you think that the recommendations of the Board of Trade would have more effect than the recommendations of a general railway conference?—Perhaps they might; I cannot say that they certainly would.

1199. If it should appear that the recommendations of the general railway conference have produced no effect, do you think the Railway Companies would attend more to recommendations from the Board of Trade?—I did not say that they had produced no effect; I said that I was not aware of any modifications having been introduced into the regulations of the Companies.

1200. Chairman.—Have you any other general objections to state with respect to the discretionary power?—As regards public safety, it appears to me that considerable safety has already been attained upon the different railways, but I think it cannot be attributed to anything inherent in the locomotive system as applied to railways, but rather to the care which has been taken, and the expense which the Companies have incurred to ensure good arrangements and trustworthy servants. I remember that when railways were first opened, there was great alarm about railway travelling; that has gradually subsided, and people now think it safer than any other mode of travelling; which shows to my mind that there was something obviously more dangerous in it in the outset, but which has been removed by care and watchfulness. It is also to be observed that the railways that have been the longest opened, seem to be the most free from accidents, which shows that the system is of itself tending to perfection, without any interference on the part of a Government Board; the regulations issued by the Companies and the training of the officers of the Companies, have already produced that effect to a considerable extent. In reference to the railway that I am more immediately appearing for, the Greenwich Railway, I may mention as an instance of it, that since the opening we have performed 170,000 distinct journies along the railway, and we have carried 6,800,000 passengers, without the loss of life or limb to any one.

1201. Along how many miles?—Three miles and three quarters. I quote this rather in reply to a question which has been put to one or two witnesses, whether they did not think that railways whose circumstances were impoverished might be disposed to dispense with their staff to such an extent as to make travelling dangerous. Now, it is notorious that from the beginning the Greenwich railway has been embarrassed as regards money matters. If we had reduced our staff materially, I think it would have had the effect contemplated; but the facts I have stated will show that that certainly has not been the case, although if any Railway Company had inducements to be economical, it was ourselves; but our strong anxiety to take every possible precaution for the prevention of accidents was greater than any desire to economise. If the profits of the Railway Companies mainly depended upon the carriage of goods, as was at first expected, the case might have been different, because it might have been supposed that in the carriage of passengers they might be neglectful of anything which was not an important item of their own receipts. But on all the railways the main profits arise from carrying passengers; upon short lines such as the Greenwich, they arise exclusively from that; so that their interest is intimately bound up with the question of safety. Then again with regard to the discretionary power proposed to be given to the Board of Trade to issue regulations for different Railway Companies, as regards the expense it might entail upon the different railways, Sir Frederic Smith has stated in his evidence that he thought that the electric telegraph might be ordered for any railway, upon the principle of its having been sufficiently tried to be no longer an experiment.

1202. Mr. Labouchere.—Did you understand Sir Frederic Smith to mean by that answer that the Board of Trade would have the legal power of ordering that—or to say that it was a power which it would be reasonable or fair that the Board of Trade should exercise?—I am not aware that he said anything as to its being fair or reasonable, or whether the question was put.

1203. Are you not aware that the following question was put to Sir Frederic Smith, and the following answer given: "Do you suppose that telegraph communication being established on that line to be of an experimental nature or not? I should think it utterly impossible for any Government to force any Company to adopt a regulation of that kind?"—I am not aware of that; I heard his answer, and took a note of it, which is what I have stated to the Committee. I did not understand it in that sense.

1204. Do you remember it is question being put to Sir Frederic Smith, and this answer being given: "You think a telegraphic communication might be ordered on any railway? We are now looking at the matter of power, not the application of that power, and as the clause stands, perhaps the President of the Board of Trade might have power to issue such a regulation, but one can hardly conceive the possibility of anything so absurd." Did you hear that question put, and that answer given?—I conceive the first part of the answer is what I have taken down, but I do not remember the last part.

To be continued.

The following accident is related by the *Memorial Bordelais* to have taken place on Tuesday last:—"The branch leading from the Bordeaux and Teste road to St. Medard had not been closed, through negligence, and the five o'clock train consequently deviated into it, and came in contact with four waggons, two of which were laden with earth. The shock was so violent, that these last two were broken into fragments, and the others thrown upwards of 300 yards along the rails. Through a wonderful piece of good fortune, not a single passenger was hurt, and the men on the engine escaped as by a miracle. Signals being made, another locomotive was brought and drew the train back into the right line, and then on as far as Gazinet. Here, however, the axletree of the tender broke, and the whole of the passengers were obliged to pass the night on the road, and did not reach Teste till five o'clock the next morning. The same fate befel those who took their departure from Teste for Bordeaux at the same hour, and who did not arrive at their destination till seven in the morning."

DURHAM AND SUNDERLAND RAILWAY COMPANY—GENERAL MEETING.

[From the *Northern Times*, October 1.]

THE annual general meeting of the proprietors in the Durham and Sunderland Railway Company was held in the Athenæum, at Sunderland, on Tuesday last; CHRISTOPHER BRAMWELL, Esq., in the chair.

The CHAIRMAN said, that in opening the affairs of the Company at the present annual general meeting, probably the best course would be to read first the report of the Directors, and also that of the Engineer, by which the shareholders would see what were the state and prospects of the Company; and he was happy at being able to inform them, that now the Company's affairs had taken a turn for the better, and he hoped that from this time forward they would go on satisfactory.

MR. TIPLADY, one of the clerks to the Directors, then read the following reports:—

DIRECTORS' REPORT.

In submitting the accounts for the last half-year, which are now presented, the Directors have great satisfaction in stating that the improvements in the revenue of the Company since the last annual meeting have been very considerable, and they beg to draw the attention of the proprietors to the increase of receipts in every department of their operations, for on comparing the accounts for the year ending on the 31st August, 1840, with those for the year concluding on the 31st ultimo, it appears that there is an increase of 4,455*l.* 18s. 4d. during the last twelve months, although the additional charges for the leading and shipment of coals have not been paid for more than half of that period. Notwithstanding the increase in the revenue has been large, the Directors are confident it would have been much greater but for many accidental and temporary circumstances which have occurred within the past year.

The proprietors will perceive by the statements now laid before them, that not only has the revenue increased, but that the expenditure has been greatly diminished, to the extent of no less than 2,335*l.* 4s. 2d. in the course of the last half-year, and that from these combined results, there is a clear net profit to the Company for that period of 2,658*l.* 0s. 10d. after defraying all working charges and expenses, including all the way-leave and other rents interests, discounts, and the bonus on the scrip certificates up to the 31st ultimo.

The Directors have pleasure in again adverting to the passenger department, and beg to state, that during the last six months, 11,266 persons have been conveyed on this Company's railway, more than for the corresponding period of last year, at a saving of upwards of 1,200*l.* in the expenses of carrying on that portion of the Company's works.

The Directors being most anxious that every shareholder should be in full possession of the exact state of the financial affairs of the Company, have caused to be prepared the Formation Account (in order to show the whole cost of the works up to the 31st ultimo), and a general statement of the receipts, disbursements, liabilities, and assets, which are accordingly furnished with this report, and the Directors trust they will be satisfactory to the proprietors.

Regarding the works of the Company, the Directors are of opinion that they will best convey information on that subject to the shareholders, by reading to them the Engineer's Report, addressed to their Board, with which the Directors are much gratified.

The Directors cannot conclude without expressing their acknowledgments to the Special Committee (David Jonassohn and Joseph John Wright, Esq.) for the manner in which they have continued their services, and tendering to those gentlemen their thanks for the valuable assistance which they have afforded since the last annual meeting of the Company.

ENGINEER'S REPORT.

To the Directors of the Durham and Sunderland Railway.

GENTLEMEN,—In compliance with your request, I present you my half-yearly report of the state of the works on the railway.

The extra expenses during the last half-year have been incurred by improving the shipping berths, repairing the jetties on the sea-beach opposite the engine, and the Company's works on Sunderland Moor, doubling part of the way between Sunderland and Ryhope, putting an additional cylinder to the Seaton engine, and fencing for the protection of the Moor Station, all which improvements were absolutely necessary.

The drops are all in good order, and if the shipping berth, No. 4, was completed, which is now in a forward state, the Company would then have 9 good berths, with a depth at low water from 5 to 8 feet during spring tides, and 8 to 11 feet during neap tides; and it would be very desirable to have the berth next the coble slip excavated, and a spout erected for the shipment of small coals; and every other possible accommodation made, as the quantity of coals on the line is gradually increasing.

Every effort has been made to expedite the passenger traffic. The doubling of part of the way between Sunderland and Ryhope, together with the division of power made at the Seaton engine, have in a great measure prevented the stoppages between Sunderland and the Murton Junction so often complained of; and as soon as the affairs of the Company are in a more prosperous condition, it would be advisable to have more of the line made double, which would afford greater facility and regularity to the traffic upon the line.

The stationary engines are all in a perfect state of repair, and in good working order, and are capable of leading 200,000 chaldrons of coals per annum, without any material increase in the working expenditure; and I am happy to add, that they have been free from accidents for the last half-year.

The main line and branch railways are all in excellent condition, and the rails perfectly good, with the exception of a very few, which have failed in consequence of their imperfect manufacture. Those parts of the line which are laid with four feet cast iron rails, have been complained of for jolting the carriages; but as soon as any are required for bye-ways or sidings, they can be removed and replaced with long wrought iron rails. The rails on this line are likely to prove durable in consequence of not having such massive weights passing over them as on locomotive lines.

All that is now necessary to complete the preparations for leading coals from Hough hall Colliery will be a few rope sheaves, and an additional length of rope to the Sherburn engine; after which the leading of these coals will add but very little to the present working expense.

The Thornhill Ballast Wharf being now in connection with the Company's Railway, will more fully employ the engine at the Staiths, and will, I trust, considerably add to the revenue.

The cuts at the west end of the line, in consequence of the slippery nature of the clay, require to be cleaned out, and some of the retaining walls repaired.

My attention has been again directed to the expenses of the working establishment, and I have made every possible reduction which could be done with safety, and have carried the work on in the most economical manner.

I am, gentlemen, your obedient servant,
JOHN BLENKINSOPP.

Sunderland, September 13th, 1841.

Examined and found correct this 23rd Sept. 1841,
A. G. RAHN, Auditor.

The CHAIRMAN then said in reading the lengthy details of figures which they had just read, it was

Digitized by Google

perhaps difficult to catch the sums, but the result was this. There was a net profit of 2,658*l.*, after paying all expenses. They were aware that up to this period, the railway had not been completed, and that instead of the interest being charged upon the working department, it had been charged to the formation account; but now, he was happy to tell them, the working department had paid the whole of the charge upon it, and left them this profit. They had now, he trusted, surmounted their greatest difficulties, and in a few years would be enabled to to pay a fair dividend.

Mr. CALEB WILSON could not but congratulate the proprietors on their brightening prospects as set forth in the report which they had just read; but he thought there was one omission in that report. It had not mentioned two individuals to whom the Company were much indebted for the active and valuable assistance they afforded to the Directors, especially in the coaching department, and to whom the Directors had voted a 100*l.* a year each. He considered that the Company was some thousands in their debt.

The CHAIRMAN quite agreed with Mr. Wilson that the shareholders were much indebted to Mr. Robson for his active superintendance of the coaching department. At a late general meeting 100*l.* a year was voted to these two gentlemen; but, in consideration of the impoverished position of the Company, they had refused to accept it, and had continued to give their services without any compensation whatever.

Mr. HEW SINGERS then rose to call attention to a circular which had been issued among the proprietors, signed by Mr. Price, Mr. Atkinson, Mr. Morland, and himself, who were all shareholders residing at Newcastle. In moving that the resolutions suggested in that circular be adopted, he would not detain the meeting with many observations. It would probably be as well to move the resolutions separately, so that the meeting would adopt or reject as many as it thought proper. In addition to the reasons stated in the letter, he would briefly name one or two others, In the first place the finances of the Company, instead of being better, were in as a deplorable a state as could be imagined. They had been led to imagine from Messrs. Jonassohn and Wright's report, about a year ago, that, "reckoning on the other side of the account, the expenses of working the line, including all the charges, would be about 28,000*l.*, which would leave a net profit of 17,355*l.* for the ensuing year. In making this calculation, your committee have not indulged in doubtful speculation." The sum of 3,500*l.*, as stated in the report just read, was a miserable falling off from that calculation; and for ought he knew, if he had been in possesion of that report before the meeting took place, he might have discovered many items, which if properly examined into and corrected, would have turned the account the other way.

The CHAIRMAN said, Mr. Singers should speak to facts, and not on supposition.

Mr. SINGERS said he was alluding to the fact of 3,500 being so small in comparison with the large sum mentioned by Mr. Jonassohn's report. He (Mr. S.) did not anticipate that they should, by the means they were now adopting, have a farthing dividend for many years to come. There were three ways by which their finances could be improved. The first was by increasing the traffic upon the line; the next was by economising the expenditure; and the third by economising the rates of charge. With respect to the first, namely, increasing the traffic; he thought they would agree with him that it was highly desirable; but at the same time care should be taken to economise the expenditure.

The CHAIRMAN remarked that there had been a decrease of expenditure, as well as an increase in the receipts.

Mr. R. PENWICK complained of Mr. Singers being so frequently interrupted.

Mr. LONGRIDGE thought that the resolutions proposed by Mr. Singers had nothing to do with the subject before the meeting. He therefore proposed that the report just read be adopted.

Mr. CARR seconded the motion, and it was unanimously carried.

Mr. SINGERS would now move that these resolutions be adopted. The first was, "That in future not more than four parties who are Contractors with the Railway Company be allowed to sit in the Court of Directors, and that no one be elected a Director at the meeting of proprietors, without his consent." The reason for this was, that he objected to those persons on principle, and not because he knew of anything with which to charge those contractors who were now sitting in the Court of Directors. He thought, however, that more economy might have been displayed, especially as regarded the contracts with the collieries, if such parties had not been eligible as Directors.

A discussion ensued, in which Mr. Jonassohn replied at some length to Mr. Singers; and as it seemed to be the almost unanimous impression of the meeting, that Mr. Singers' resolution would operate as an expression of want of confidence in the Directors, and consequently would not be entertained by the meeting, he consented to withdraw it.

Mr. H. PANTON then moved that the report be printed, and circulated among the shareholders, which was seconded by Mr. Thompson, and unanimously carried.

Mr. Singers would ask Mr. Jonassohn one question, namely, how or when they were to expect a dividend?

Mr. JONASSON replied that they might expect a dividend as soon as their debts were honestly paid off. They could not expect a dividend out of the capital stock.

Mr. J. J. WRIGHT was glad Mr. Singers had asked the question. It was one upon which they all naturally felt considerable anxiety; and he was glad it had been asked, because it afforded him the opportunity of explaining the real state of the case. As regarded a dividend, he should state in addition to what Mr. Jonassohn had said, that according to the last half years profit, and gentlemen would bear in mind, that it was only during the last half-year that the changes recommended by himself and Mr. Jonassohn in their report had had an opportunity of being tried—according to the last half-year's profit, they were now realising a yearly profit of upwards of 12,000*l.* The 17,000*l.* which the report stated would be the profit, included 5,000*l.* which it was expected would be obtained by the leading of coals from Houghall Colliery, which had not yet come into operation. This 12,000*l.* profit would go annually to liquidate the debt on the undertaking, and when that was paid, they would be able to make a dividend. They were in this situation. They had made a railway which cost 250,000*l.*, and had only 156,000*l.* to pay it with. If they would wait till the making of the line was paid for, they would then have 17,000*l.* to divide among them annually. It had been suggested by Mr. William Bell that it would be extremely desirable if some plan could be devised by which the debt could be paid off, and a dividend obtained at an earlier period than at the expiration of three or four years, the time which under present circumstances, it would require to clear off the debt. Mr. Bell had suggested that this might be done by selling the shares on hand, and paying an advance upon those already held by the shareholders. This was a good plan in itself, and he (Mr. Wright) would be willing to accede to any plan by which the debt could be immediately paid off; but he doubted that in the difficulties which at present beset all commercial affairs, the money could not be raised, and the suggestion of Mr. Bell might occupy the attention of the next half-yearly meeting. With respect to the resolution of Mr. Singers, he did not find fault with him for bringing it forward, because he believed the object of it was to advance the interests of the Company; neither did he object to the principle of the resolution, but such a one would be injurious to the interests of that Company; because the coalowners had come forward in the most handsome manner, at the recommendation of the special committee's report, and advanced the price for conveying their coals to 3d. per chaldron,—and that in the face of a direct engagement, which tied the Company for ten years to lead them at the previous price. (Cheers.) These coalowners had also incurred large personal obligations. They were parties to a bond for the payment of 25,000*l.*, which had been borrowed for the Company. For these reasons he was obliged to vote against Mr. Singers. He could not doubt but that when Houghall Colliery came into operation, it would produce 5,000*l.* a year, which, added to the present revenue of 12,000*l.*, would make 17,000*l.* as anticipated by the report. He should also like Mr. Singers to know that the profit of 12,000*l.* had been obtained in a great measure, by reducing the expenditure from 28,000*l.*, which Mr. Jonassohn and himself expected it would be to 22,000*l.* They reckoned that the revenue would be larger, but they also expected that the expenditure would be greater; but it came to the same result, namely, a net revenue of 17,000*l.*

Mr. ATKINSON said, there had been a dividend made for the last two or three half years; and that was the reason which had induced him, and others at a distance, to become shareholders. They had seen a dividend declared in the public papers, and concluded that the Company was prospering. That dividend then had been made out of the capital stock, which was contrary to an express provision of the Act of Parliament.

Mr. WRIGHT said, these dividends took place at a time when he took no active part in the affairs of the Company, and knew as little about them as Mr. Atkinson. Besides, a dividend could only be declared by the shareholders; and therefore neither the Directors, nor Mr. Jonassohn and himself, were responsible.

Mr. JONASSOHN said, that when the last dividend was declared, he had the satisfaction of being in the glorious minority of one. He had endeavoured to make it clear that there was no *bona fide* profit; but the shareholders were all of a contrary opinion, and if Mr. Atkinson had been there he would most probably have coincided with them.

Mr. FORSTER said, it struck him very forcibly that Mr. Atkinson was present on that occasion.

Mr. ATKINSON did not recollect that he was.

Mr. SINGERS then, after having withdrawn his former motion, proposed successively, the following resolutions, upon which some discussion took place, but which were all ultimately either negatived or withdrawn:—

2nd. That the Directors be instructed to increase the rate of charge on small coals and those shipped foreign to 3½d. per chaldron per mile, as soon as their present agreements with the coal owners will admit of it, and also to obtain a reasonable allowance for haulage upon each inclined plane for all coals and goods conveyed upon the line.

3rd. That the half yearly accounts be printed and circulated among the shareholders one week at least before each general meeting.

4th. That the Company's servants do make a report to the Directors at their first meeting each month, of the net weight of five waggons of coals from each colliery intended for foreign shipment.

5th. That the Chairman, with two Directors, be empowered to enter into agreements and contracts, on behalf of the Company, for leading coals or supply of goods, but that the same be not for a longer period than six months, without the consent of the half-yearly general meeting.

6th. That application be made to the Commissioners of the River Wear, on behalf of the Railway Company, to repay two-thirds of the expense incurred in making and improving the shipping places.

7th. That the Directors do not expend more than 1,000*l.* annually in making additions or improvements to the railway and shipping places, without the consent of the half-yearly general meeting.

The Rev. B. KENNICOTT complained of the want of courtesy which had been shown by the meeting towards Mr. Singers. When any gentleman had a resolution to propose, although it might be objected to by the majority, he thought it ought to be listened to with deference and respect. Sitting there as an impartial person, he did not mean to say that he agreed with the resolutions, but he was happy to see them brought forward, as they provoked a discussion which enlightened the shareholders as to the affairs of the Company. With respect to the conduct of the Directors and the operations of the Company, he did not hesitate to acknowledge that he had a much clearer view than when he came into

Digitized by Google

that room, and if such were the case, it was evident that these discussions tended to bring about that unanimity which was recommended by Mr. Jonassohn.

Mr. BACKHOUSE excused the conduct of the shareholders, on account of their having been constantly opposed by the same parties, one of whom was in the direction, and annoyed the Directors from one end of the year to the other, at the same time standing aloof from incurring any responsibility.

Hereupon an angry personal discussion took place, Mr. Price, the gentleman alluded to by Mr. Backhouse, denying that he had refused to sign the 25,000*l.* bond. It was never offered to him to sign.

Mr. JONASSHON said, that Mr. Price refused to advance the 15*l.* per share on scrip certificates, after having promised to give his acceptance at six months for the amount of his shares.

Mr. PRICE (much agitated). I told them candidly that I had nothing to pay it with.

Several gentlemen rose together and attempted to address the meeting, in the midst of which

The CHAIRMAN rose and said, he must insist on order. The meeting must support the chair, or he would leave the room.

M. PRICE—I say, gentlemen, from the very first we have been deceived by the Directors. Bad land has been bought at twice its value by the Directors—

The CHAIRMAN—Does Mr. Price allude to me?

Mr. PRICE—No, Sir, I do not.

Mr. Price then evidently labouring under great excitement, attempted to address the meeting, but finally desisted.

The CHAIRMAN—The next business is to fill up the vacancy caused by the retirement of three gentlemen, by rotation, from the Directory; and if no gentleman proposes any other person, I beg to propose Mr. Turner Thompson (applause) as a most honourable and upright man.

The motion being seconded, was unanimously agreed to.

Mr. CALER WILSON, who, it was stated by the Chairman, had not attended any of the meetings of the Directors during the last twelve months, being asked if he objected to being re-elected, replied, that having signed the 25,000*l.* bond, and having incurred heavy responsibilities, he wished to remain in the Direction.

Mr. Wilson was then unanimously re-elected.

Mr. MORLEY proposed Mr. Hew Singers, and

Mr. JONASSOHN seconded the motion; but

Mr. PARKER, the retiring Director, though not present, having intimated to Mr. Wilson his desire to remain in the Direction from similar motives to Mr. Wilson's, that gentleman was re-elected.

A vote of thanks was then passed to the Chairman for his very able and impartial conduct in the chair, and the meeting adjourned.

TROON BRANCH RAILWAY.—On Monday, Mr. Johnston, Chief Engineer of the Glasgow and Ayr Railway, opened the Troon branch with a locomotive engine, and inspected the line, accompanied by J. F. King, Esq., of Troon. These gentlemen were highly satisfied with the smoothness of the rails, and the easy motion of the locomotive; and there can be no doubt that this part of the undertaking will maintain the high character for efficiency obtained by the main line. From the considerable number of ships now going from Troon to foreign ports, an extensive traffic may reasonably be expected, to which the operations carrying on at the harbour and docks of this port are calculated to give great facilities.—*Kilmarnock Journal*, September 30.

KILMARNOCK AND GLASGOW BRANCH.—At the middle sections of this branch of the Ayrshire Railway the progress made by the contractors is very satisfactory. Several deep cuts have been effected, and the piers of the bridges over the Annick and the Lugton have been built. The latter is of considerable height, being at least 50 feet, and going along the gangway by which it is now crossed requires steady nerves.—*Kilmarnock Journal.*

FATAL ACCIDENT ON THE LONDON AND BRIGHTON RAILWAY.

ON Saturday last, a melancholy accident occurred to one of the down trains on the London and Brighton Railway, near Hayward's Heath. Two of the Company's servants and two passengers were killed. The circumstances connected with the sad occurrence will be gathered from the following evidence adduced at the inquest, which was held on Monday before F. H. Gell, Esq., Coroner for the Eastern Division of the county of Sussex, and a highly respectable Jury, of whom Thomas Jones Bellamy, Esq., a magistrate of Cuckfield, was foreman. The Jury proceeded to view the bodies, at a little house near the place where the accident took place. The bodies exhibited a most frightful spectacle. Henry Palmer's in particular was most ghastly. The wheel appeared to have passed over him just above the eyes, and the whole of the upper part of the head was smashed. The female Jane Watson (both Dr. Carpue's servants) had received a dreadful wound, nearly separating her body at the belly.

The Coroner and Jury then proceeded to the bedroom of a beer-shop in the neighbourhood to examine Charles Goldsmith. He was in bed and had his head bound-up, and appeared to have received very serious injury. He stated that on the day of the occurrence he was on the first engine, and came from Horley. There were two engines attached one a large one and one small. Witness was in the smaller one, and went with the train to assist it, in consequence of its being heavily laden and behind time. Witness did not perceive any motion until they reached Copyhold cutting, though they were going at the rate of about thirty miles an hour. Witness was rendered insensible by being thrown off, and was picked out of a ditch, under the tender, covered with sand and water. Witness examined the engine previous to starting, and all appeared quite safe.

By the Jury—The other engine-man shut his steam off, and witness did the same within half an inch. The large engine was not pulling at all; the whole of the work was done by witness's engine. The heavy engine, if not stopped very carefully, would cause a jumping motion, and give the smaller one a jerk. Witness never knew of an engine being thrown off by such means. Witness is between 20 and 21 years of age, and been occupied on trains about five years, but never drove one until the last month. Witness let the steam off, as he thought he saw some person holding up his hand. Witness had written orders from Mr. Hunt, but they said nothing about the speed, except on the Greenwich and Croydon lines.

By Mr. Faithfull, (Solicitor to the Railway Company)—Before the accident happened, witness was aware of the state of the engine behind. Did not think think the accident was caused by his slackening his speed. The engine might have got out of order on the journey.

By the Jury—Do not think a four-wheeled carriage so safe as a six. A four-wheeled carriage would be liable to accident if one of the wheels got strained, which would not be case with a six wheeled one.

The Jury having returned to the beer-shop, the first witness called was

John Holland, a retired officer in the army, who identified the bodies of Henry Palmer and Jane Watson, the former as the footman, the latter as the housemaid, of Mr. Joseph Constantine Carpue, surgeon, of Upper Charlotte-street, Fitzroy-square, whose family he had been in the habit of visiting. Henry Palmer was about 23 years of age, and Jane Watson about the same age.

James Jackson—I am an engine-driver in the employment of the London and Brighton Railway Company. On Saturday last I left Horley at five minutes after 12 o'clock. I was to proceed from Horley to Brighton. I had brought the engine from Horley in the morning and was to return with it. I examined the engine at Horley, and it was in complete working order. A pilot-engine was attached to the train at Horley, because we had a heavy train, and to help us up the hill. We came from Horley to the Copyhold cutting at the average rate of about from twenty-six to thirty miles an hour. About half-a-mile before coming to the Copyhold cutting we were running at the rate of about thirty miles an hour. On entering the cutting by the bridge we did not exceed twenty-three miles an hour. I believe it to have been twenty or twenty-one. Nothing occurred here to induce me to slacken my pace. I had shut off my steam half a mile before I came to the cutting, because my engine was getting slack of steam; and, as we were going down hill, and the other engine was going to leave me at Hayward's-heath, I wished to reserve my steam, that I might keep a good supply with which to get to Brighton. I did not observe any signal before entering the cutting. After we entered it, just before the accident took place, I observed a man amongst a number of men, standing with one arm up, that is a signal to slacken speed. The instant we passed the man I observed the first engine rocking very much, and, directly after, she capsized right over to the left-hand side. I immediately leaped behind the fire-box, and laid hold of the hand of the regulator, till I was thrown back by my engine coming into contact with the end of the other engine. If the other engine had rolled a foot further, I think we might have avoided her altogether. I did not perceive the slightest movement in my engine till she struck the other. I was thrown back on the carriage of the tender, and continued holding the chain till the carriage stopped. It was all over in half a minute. We had no warning nor any thoughts of the accident. Directly I got off my engine, I saw one of the guards lying on the ground on his back close by my engine. I lifted him up, and then went back, and the next person I saw was Charles Goldsmith, covered with sand and mud, and under the frame of the tender in a gutter by the side of the road. We pulled him out of the hole, and the next person I saw was Robert Marshall, a stoker to the first engine, lying dead on the ground on his back, he lying lengthwise to the railway, with his head towards London. Seeing no other person, I got through the carriages, and then found Field, my stoker, about three yards from the carriages, between the out-rail and the gutter. He was almost lifeless; the phlegm was gurgling in his mouth. I told him to spit it out, and he did so. Directly I left him, I proceeded to my engine, and saw a female lying across the railway, with a carriage wheel resting on her. She was with her face downwards, quite dead. At this time some men were getting Henry Palmer from under some carriages, within a couple yards of the female. He was quite dead. The earth in the cutting is of a greasy nature, and a number of men, who are employed there, are in the habit of walking over the rails with their boots, leaving a portion of earth on them, which in my opinion, was the cause of the accident.

CORONER—How would that affect the engine?—The engine being on four wheels, and sliding about, and being top-heavy, the gushing about of the water on the top of the fire-box would almost force her over. That is my firm opinion. As to the state of the cutting, I have run 30 and 35 miles an hour through it many a time. The earth has not given way at this part at all. All I saw was the rocking motion, which I conjecture was owing to the slippery state of the rails. You do not feel this with a six-wheeled engine. I have been over there at 30 miles an hour, and never have had any cause to slacken speed.

CORONER—If there had been no pilot-engine, would the danger have been less?—I do not think my engine would have gone off on account of its weight, and having six wheels. Only three carriages, those next to the tender, were thrown off the line. The others were not affected. There were 11 or twelve carriages in the train. I do not know how many passengers; but there seemed to be a considerable number, and a good deal of luggage.

Mr. Barwell (a juror)—Do you consider the construction of the pilot engines safe or unsafe?—I consider them unsafe. There is a difference of opinion among Engineers; but I don't like four-wheeled ones. This was as safe as other four-

Digitized by Google

wheeled engines, but I prefer six-wheeled ones. I think a four-wheeled and six-wheeled can act in unison together, if the stroke be the same. If a six-wheeled and a four-wheeled were stopped at the same time, the six-wheeled engine would stop sooner than the four-wheeled, because there would be less friction. Goldsmith took no notice of me, but shut off a part of his steam shortly after me.

Cross-examined by the Rev. Mr. Fearon (a juror). —I don't think there is more danger in having two engines than one. If we had had two four-wheeled engines on Saturday the consequences would have been still worse. I am quite sure that my speed between the viaduct and the Copyhold cutting, about three-quarters of a mile, was not above 30 miles an hour. We were behind time a little at Horley, but did not go above our ordinary speed. The pilot-engine was put on because we had a heavy train. The accident happened about half-past 12.

By Mr. Barwell—A foreman is kept at Horley and Brighton to examine the engines. I saw Mr. Hurst go round mine at Horley, and believe he looked over both.

By Mr. Allen (a juror).—I am quite certain, from experience, that the slippery state of the rails would cause, and not prevent, oscillation. It is the same in chalk cuttings. I have been a driver four years and a half. Goldsmith was perfectly sober; and I always knew him to be so. I can suggest no other cause for the accident but that I have described.

By the Coroner—The weight of the carriages behind did not cause any movement in the engine; it would make it go steadier. I saw a policeman at the viaduct give the signal "all right," but saw no other. The man who gave the signal was the foreman of the works there. I never had a signal there before. The engines went off immediately we had passed him. All the engines are new ones. The pilot-engine was in good working order.

Mr. Barwell—Did you ever state your opinion of four-wheeled engines to any of the Company?—No, not before yesterday.

Foreman—Have the engines ever run off the line before?—Yes, on Friday last I saw an engine, a four-wheeled one, run off the rail at the Hayward's heath tunnel. I did not know the cause. I have never seen any other case.

By Mr. Faithfull—When I saw the signal I pulled the retard lever, but it could not stop the other engine.

By Mr. Barwell—I never knew a six-wheel engine go off the rails unless there was some obstruction, or the points were wrong. The London and Birmingham Railway uses four-wheeled engines, but they are not so high as these, and therefore require less heavy cylinders, and are consequently less top-heavy. I knew a similar case to this occurring on the London and Birmingham. They are made on the same principle, except that our boilers are larger. I should not like to drive a four-wheeled engine.

By the Foreman—Neither of the boilers exploded. That of the pilot was burst from falling over. I observed the state of the rail after the accident. It was bent a little, a very little indeed, owing to the carriages running against it. The rail was in the same state as that in which I had gone over it at 30 miles, and believed it perfectly safe.

James Copley—I am a labourer employed on the railway. I recollect being in Copyhold cutting, about a quarter past 12 o'clock on Saturday last. I saw the down train coming at about its usual rate. I made a signal to it to come steady just before they came to the bridge. We have done it for the last three or four days on account of the wet, and for fear they should come light. There was no reason more than the usual one. I did not see the accident. As soon as the train passed I went away.

Mr. Barwell—Were the rails greasy?—No, Sir. In that part the soil is sandy. There is some black clay at the top. I had been told to make the signal by a policeman. There are veins of black soil running down the cutting. I had not observed in particular the clay from the labourers' boots on the rails.

Juryman—What do you mean by the road being light?—Why, the wet pushes the rails up, and makes them uneven; but that was not the case with the rail on Saturday.

Mr. Faithfull then called,

Mr. John Hardy—I reside at No. 3, Portland-place, and am Member for Bradford, in Yorkshire. I was a passenger by the quarter before 11 o'clock train from London, on Saturday. I was in the middle part of the carriage next to the engine, with an open *coupee* on each side. The first thing I experienced was a great shock and dreadful screams. I was in the middle of the carriage, with my face to Brighton; and by the shock a lady, who was sitting in the corner opposite to me, was thrown on my knee. There was immediately great crashing. I and my son-in-law, Mr. Wood, spoke to the ladies, when we were suddenly lifted up and turned round, and, in the course of a few seconds, instead of being with my face towards Brighton, my face was towards London, and the carriage leaning against a sand bank. Just as we were first struck a quantity of steam and water came into the carriage, but there was no escape for it. As soon as we were still, Mr. Wood, who was next to the window, got out, and assisted me in doing so. I immediately jumped across the ditch, and found the carriage had been completely turned round. I went round the engine, which was in the road, and the first thing I saw was the guard, very much disfigured. I spoke to him, found he was alive, and called for a surgeon. Mr. Elliott came. A little further on I observed the first engine lying in the ditch, on the left hand side. A little beyond it was one of the stokers lying apparently dead. I have travelled a great deal by railway. I have been eleven times by this railway, and, to the best of my judgment, we were proceeding at the rate of from 20 to 24 miles an hour. Just before I had been complaining to my companions of the slowness of the speed, and said we should be half an hour behind our time at Hayward's Heath.

By the Foreman—I thought this was a very long train. I had taken my place in the *coupee*, but my son-in-law persuaded me, just before starting, to leave it. Had I remained, most probably your inquest would have been upon me.

By Mr. Faithfull—I cannot give a scientific opinion upon the point, but from experience I should say, the heavier the train the steadier the motion.

Mr. John Wood, of Thaddon-grange, Alton, Hampshire, corroborated the evidence of Mr. Hardy. In going through the cutting, I should suppose the speed to be from 20 to 25 miles. I frequently travel on railways.

William Beedham—I am a builder and surveyor residing in North-street, Brighton. At the time of the accident I was near the railway, about half a mile from the place where it occurred. I heard the train coming. I took my watch out, and also the railway table, to see what train it was. It was just half-past 12. According to my judgment, it was going about 25 miles an hour. I had a full view of it across the viaduct, about half a mile from the accident. I could not say whether it slackened before I lost sight of it.

Richard Hodges—I am a labourer on the railway and live at Copyhold. I saw the train on Saturday in the cutting. It was coming along at the usual rate. I saw the first engine jump up and down as it came along—it might be about half a minute, and then I saw it drop right off the rail. I then turned and ran away; and either the tender or the engine caught me, and one of the stokers fell across me and knocked me into the ditch. When it jumped the fore wheels rose up and down. I did not see any oscillating motion.

Matthew Hall, assistant engineer—It is my duty to inspect that portion of the railway on which the accident occurred, and to see that it is in a proper state. I had inspected it just previous to the accident. I was a little in advance of the train, in the cutting, at the time. The road was in a fit state for travelling at 25 miles. It was in as good a state of repair as it has been in since the line was opened. I am of opinion that a heavy train is steadier than a light one. I am stationed on the line for 16 miles to St. John's-common, and it is in a perfectly fit state for travelling. I did not observe anything on the rail to make it slippery. The soil is sandy.

Mr. Elliot, of the Brompton Lunatic Asylum, who had been a passenger by the train, and had attended on the wounded engine-driver and guard, had been superaaed, and was present during the investigation; but, as he was not able to give any additional evidence, he was not called.

The jury expressed a wish to have the policeman who was on duty at the Ouse Valley viaduct, a mile north of the Copyhold cutting, when the train passed, examined as to the speed at that time; and a messenger was despatched to summon him before the Coroner.

In the meantime, the jury having expressed an opinion that the cause of the accident was the use of four-wheeled engines—

Mr. Faithfull said, that Mr. Rastrick, the chief engineer, and Mr. Statham, one of the resident engineers, were present, and ready to explain any matters which the evidence might have left in doubt.

The jury, however, did not ask them any questions.

Jackson, the engine driver, re-examined.—I think that the water and the top-heaviness of the pilot engine, coupled with the slippery state of the rails, was the cause of the accident. I have known four-wheel engines run off on the Eastern Counties' line, but I never knew six-wheeled engines to do so.

John Hinge examined—I am a police-constable, No. 37, on the line of the London and Brighton Railway, and reside at Cuckfield. On Saturday last, between twelve and one o'clock, I was on duty at the Ouse Viaduct. I saw the down train coming towards me, and held up my hand to give the "All right" signal; and as it neared me I gave a signal to go steady, as I observed that it was going rather faster than usual. I did not at that time observe any particular motion of the engine or train. Shortly after I heard a great noise in the direction of the Copyhold-cutting, and as I thought the bursting of a steam-boiler. I ran in that direction as I could, and some labourers ran also. As soon as I got into the cutting, which is about three-quarters of a mile, I observed that an accident had happened, and I got up to the spot and rendered assistance to the sufferers. I do not know how it happened. I had no apprehension of an accident occurring when I saw the train pass along the viaduct. I did not say my heart came into my mouth when I saw the train coming along, they were going at such a rate. The road where the accident happened has been out of order lately in consequence of the bad state of the weather.

The Court was here cleared of strangers, and at half-past six o'clock the Jury returned a verdict of "Accidental death, with a deodand of one shilling on the engines; and the Jury are of opinion that the four-wheeled engines used on this line are not of a safe construction, and they recommend their discontinuance."

SPEED ON RAILWAYS.—THE BRIGHTON ACCIDENT.

To the Editor of the Railway Times.

Sir,—As a frequent traveller by the Great Western and South-Western Railways, I have long felt the necessity of that which the melancholy accident that has just occurred on the Brighton line will, I trust, make manifest to those who have the power to remedy the evil. I mean some efficient check upon the uncontrolled and "*ad libitum*" speed which the managers and engineers of railways seem to have in running their engines with heavy trains of passengers, at the risk of life and limb, and contrary in most cases, to the wish or comfort of the public—possibly for the mere gratification of the engineer who has got some new invention in mechanics which he wishes to make appear superior to all others, or from the "dare-devil" spirit of running faster than his neighbours or predecessors.

To this uncontrolled spirit alone do I attribute the lamentable catastrophe above alluded to, for can

Digitized by Google

any thing be more imprudent or unjustifiable on the opening of a new line, barely completed, with such heavy works as the Brighton, embankments in which subsidence will be going on for months to come, and deep cuttings in which slips and other obstructions may be continually looked for, than to *commence* with an average speed of 30 miles an hour for the whole journey, which deducting stoppages at stations, and the delay in ascending some of the steeper inclines, may render even a speed of 40 or 50 miles an hour necessary over some parts of the line?

Surely the Board of Trade or Sir Frederick Smith, on authorising the opening of the line, ought also to have seen and approved the time table, and a speed consistent with the condition and liabilities of new works, looking to the safety rather than the speed of the conveyance, should have been insisted upon, and not one permitted merely to gratify the vanity of engineers by outstripping all others.

On the opening of the Liverpool and Manchester line, the speed was at first limited to 15 miles an hour, and for the first year on the Birmingham, I believe it did not exceed 17 or 18. Why were such wise and prudent examples not followed by the Brighton?

If Sir F. Smith had not the power to require it, then the responsibility must rest upon the Directors, and much of the discredit with the Manager or Engineer. Far be it from me to aggravate by those observations the painful feelings they must now endure, but my own safety as well as that of the public, demands that the occasion should not be passed over in silence. Before the commencement of winter, if some stringent regulations are not enforced upon the drivers of engines on the road already mentioned, catastrophes still more frightful than the one that has just occurred, will, I fear, happen on some of them ere the foggy month of November be passed.

The public are not generally aware that the liability to accidents increases with the speed, and the consequences when they do occur are multiplied fearfully! An irregularity in the rails which, at 15 or 20 miles an hour, would scarcely be felt, might, at 40 miles throw the train off the line, and we see by the concussion on the Brighton line, what the effects at such a speed are. But the Board of Trade and Sir F. Smith must know this, and if they have not the power of control, they ought strongly to urge upon Directors a more prudent course, and as speedily as possible seek that additional and necessary power from Parliament.

The speed of the Great Western trains is at times most frightful and unjustifiable, and attended with a danger the public have no idea of. At sixty miles an hour the train is no longer under reasonable control, and an unexpected impediment on the line, a flaw in the machinery, or the negligence of a servant, may precipitate the whole of the passengers into eternity. It matters not whether the gauge be 5 or 7 feet, the engines on 4 or 6 wheels, the effect of concussion upon the passengers must be the same, and if the accident occur on an embankment, who will live to tell the tale?

I believe the safety of railway travelling to exceed all other means with ordinary prudence, but unless the public are more effectually protected against the experiments of mechanics, the vanity of engineers, and the rash spirit of their drivers, I for one shall eschew them, and prefer the "slow and sure" stage; and unless those in the responsible direction of these great national works take warning in time, I will venture to say, that they will receive an early and future warning through their pockets—alias their dividends.

I trust, Sir, you will participate in these sentiments, and as well for the benefit of the public as for the interest of those concerned in railways enforce them upon those in authority, by your powerful pen and widely circulating journal.

I am, Sir, your obedient servant,

VERAX.

London, 5th October, 1841.

SPEED ON RAILWAYS—THE BRIGHTON, SOUTH-WESTERN, &c.

To the Editor of the Railway Times.

SIR,—I addressed a letter to you a short time since, annexing a table showing that the fast trains on the Brighton Railway perform the *trip* at a greater speed than any other railway in this kingdom, and that the *journey* to Southampton by the South-Western Railway, is accomplished by the fast trains at a rate second only to the above-mentioned line.

An admirer of the Great Western under the signature of "A. T. G.," has been exerting himself to prove that my statements are altogether erroneous, and the calculations fallacious; and having succeeded in discovering that the distance to Southampton is incorrectly stated as 67¾ instead of 76¾ miles, deludes himself into the belief that all the observations he may hereafter advance will obtain credence, but fortunately the credit of this *discovery* could not have been claimed but for one of those "natural ills which *printing* is heir to." Had the optics of "A. T. G." been more profitably engaged in attentively perusing the document in question, than in discovering a misprint, he would have perceived that the words *trip* and *journey* are respectively employed in reference to the comparison; and I submit that in a question of this nature, the delays occasioned by the longer and more frequent stoppages can operate no more on the "advantages derivable to the public," than could the *greater length* of train, or the more *heavy gradients*, influence a question of this character.

As a general answer to the various questions propounded by "A. T. G.," and as a "gentle sedative" to this discussion, I beg to prescribe for him a small dose of "Bradshaw's Railway List" for the month of August, from which all my information was gleaned, and on which the various calculations are grounded. Should, however, the above antidote produce too powerful an effect, an application of Mr. Æsop's Fable, "The Hare and Tortoise," might serve to allay his irritation, as reminding him that while the former was quietly reposing on the road, confiding on its quicker speed, the latter walks to the goal in safety.

I am, Sir, your obedient servant,

F. J. B.

THE CLARENCE AND WEST DURHAM RAILWAYS.

To the Editor of the Railway Times.

SIR,—I thank you for your kindly greeting on my re-appearance in the field.

The characteristic of a popular journal being to convey to the public and individuals the earliest and surest information on any point relating to their interest, upon which it professedly treats, whether it be in the shape of reproof, remonstrance, admonition, or advice, I think a renewal of my correspondence cannot be marked by a higher order of usefulness, nor a page in your journal devoted to a more beneficial purpose, than in giving publicity to what may be truly designated *a supplement* to those enormous frauds, which have within the last three or four years been perpetrated upon many hundred unsuspecting persons, by the concoctors of the Durham County and Northern Coal Mining Companies, an exposition of which has recently appeared in the *Mining Journal*, and local papers of the counties of York and Durham.

Your pages, I am aware, are devoted only to matters directly or incidentally connected with railway interests, but as the forthcoming statement has reference to such, I shall, without further preface, observe, that certain parties implicated as the concoctors and promoters of the above-named speculations, are also connected with the Clarence and West Durham Railways; and that these adroit fishers in troubled and turbid waters are now angling for gudgeons in and around the British metropolis, with the following tempting and glittering bait, of which a sample was a few days since transmitted to me by a friend who had been nibbling, but had the sagacity to consult me before he attempted to swallow it:—

STATEMENT.

The Clarence Company was incorporated by Act of Parliament in 1828. Port Clarence is on the Tees, and joins the Stockton and Darlington Railway; the length of the line is fourteen miles and upwards. Three branches run out of it—the city of Durham branch which is ten miles—the Byers Green branch (which connects the line with that of the West Durham Railway), length upwards of five miles—and the Stockton branch; the total length belonging to the Company is thirty-five miles and seventy-two chains.

The Clarence is one of the great railways for coals, and conveys 400,000 tons annually.

The revenue has risen with the opening of the coal fields. Last year it was 19,000*l.* The eight months of this year has reached 14,900*l.*, thus making an increase on the year of 3,350*l.* It will further increase by the opening of the Hartlepool and West Durham Railways, and is expected in 1842 to be 50,000*l.* per annum.

The sum expended is 235,000*l.* raised by shares, received from the Exchequer Commissioners 111,000*l.*, and by bonds under the provisions of the Act of Parliament, 89,000*l.*

In September, 1837, the Clarence Company granted under deed to the West Durham Railway Company, the following bonds, to enable the latter Company to construct the Byers Green branch—

1.	Bond for	£9,510,	payable in September, 1842.
2.	„	£3,750,	„ December, 1842.
3.	„	£3,020,	„ December, 1842.

Total ..... £16,280, upon which interest is due from September, 1837, payable to the purchaser.

The West Durham Railway Company want to sell these bonds, at such a price as will yield a handsome return to the purchaser.

This Company was incorporated by Act of Parliament in 1839. They have expended on their rail 64,000*l.*, exclusive of the price of the land. It conveys the produce of six or seven collieries to Stockton and Hartlepool, and other collieries will soon be at work, and the revenue will be about 9,700*l.* per annum.

The West Durham Railway Company will grant their guarantee to the purchaser under their seal, as far as the Act will allow them.

The Directors rank amongst them (that is, of the Clarence Company) men of character and wealth in London. One is a Bank of England Director.

£12,000 in ready money, is the price required for the above valuable consideration!

So then, here is the sum of 19,750*l.* to accrue a *year hence*, to the fortunate buyer of these bonds, for the moderate consideration of 12,600!! Prodigious! as Domine Sampson would say. But when such uncommon—such enormous—advantages are held out as a temptation to invest money, how comes it that none of the "Directors of wealth and character in London," are found either to profit by such a glorious chance, or even to recommend it to their friends, and thereby supersede the necessity of their being hawked about, like filthy wares that come under the denomination of cheap and nasty?

Hitherto we have been dealing with presumptions. Let us now recur to facts.

In the above-quoted statement, 435,000*l.* appears to be the cost of constructing the Clarence Railway, whereas, will any of the interested parties attempt to deny that it has exceeded 600,000? and to make the line capable of working a traffic of 50,000*l.*, (which it never will do,) that an additional outlay of at least 100,000*l.* will be required?

The money borrowed of the Loan Commissioners is understood in the county of Durham to be 150,000*l.*, instead of only 111,000*l.*, and as the right of pre-emption attaches by law to every Government lien, what will become of the unfortunate bondholders, when a reclamation is made on behalf of the Government, by the said Loan Commissioners?

What the traffic *may* be, is deducible from the fact, that they have for years been holding the same vague convictions of its growing receipts; and what it is, the very fact of their issuing these bonds without even the payment of interest, for so long a period, is a standing proof. It may be pronounced comparatively in a state of abeyance; for its embarrassments are so great, and its prospects so unpromising, that if the Company cannot succeed in cajoling the Quakers into an equitable bargain (a profitable one is out of the question), they must in all likelihood either sell or let their line, or surrender it into the safe custody of the Government.

The West Durham Railway has been constructed in direct violation of the Act which directs that at every intersection of the highroad, the tram way shall be carried either above or below, whereas it is everywhere upon the level. The Directors have conse-

Digitized by Google

quently laid themselves open to a prosecution by any party at any time—an ordeal they will infallibly undergo should the concern assume even an appearance of prosperity, and which it can never attain but at the expense of conflicting interests, and therefore will be pounced upon, sooner or later, a helpless and unpitied prey.

But before this sad consummation, the Company "will grant their guarantee to the purchaser under their seal, as far as the Act will allow." Mark the condition! *as far as the Act will allow*. Aye, there's the rub! But what if the Act does not allow it? and if it does, why make the engagement conditional? Will any of these so vaunted men of "*wealth and character in London*" or elsewhere, come forward and voluntarily saddle themselves with an individual responsibility in support of the Act—be it valid or invalid? I trow not.

I need not expatiate further upon this renewed attempt to cajole the ignorant and entrap the unwary and confiding. But when I consider, that it may be the most helpless and unprotected of our species, that are destined to be made victims—that the widow's mite, and the orphan's pittance, may be in jeopardy, I adjure you, Mr. Editor, in the name of pity, justice, and humanity, to aid me by giving immediate publicity to this transaction, for the loss of a day may be fatal.

My motive in addressing you is now explained, and properly speaking, my task is ended. But it may not be irrelevant, and may be amusing and instructive, to give an example of the adroitness with which these speculators proceed in the accomplishment of their purposes.

Having consummated a splendid labour in the formation of the "Durham County Coal Company," which, with a paid up capital of 260,000*l*., is working at a loss! they set to work with a band of well trained emissaries to create another, called, *par excellence*, "the Northern Coal Mining Company." And as publicity would have rendered their attempt abortive, the leading feature in the plan was, after imbuing the minds of the subscribers with inflated notions of untold and immediate wealth, to enjoin the *most profound* secrecy, upon the plea that the project was so fraught with advantages, that if known, it would certainly tempt a rush of competitors, and end in the destruction of all their hopes. But to test their veracity, they earnestly besought that a deputation of some of the most intelligent and influential of the chosen body might wend their way to the north to view the land of promise. Accordingly, the deputies, fluttering with hope and buoyant with expectation, repaired to the appointed rendezvous, and being conducted by the initiated to the top of a central eminence in the county of Durham, they were directed from this Pisgah of the Northern Coal Mining Company to gloat their eager vision on the scene beneath and around them. There lay the promised land in wide and beautiful amphitheatrical expanse, with heaven's own canopy alone for a boundary. Yes, every inch of royalty within the verge of the sensible horizon was theirs, with its illimitable coal seams, which had been fructifying long antecedent to the time when Adam was a boy, and which being all of the quality of the far-famed Hetton Wall's-end, would more than rival the glories of Golconda or Potosi. But to this there were important adjuncts elsewhere, any of which might well attract the cupidity of a miser, and which for *present* purposes would suffice to pay the trifling dividend of 10 per cent., until time, which was not distant, enabled them to extract enough, both as to quantity and quality, to suffice the wants of half the habitable globe. Need the sequel be told? Shaft after shaft was opened, till the working property reached no fewer than 13 collieries upon paper, but being *no where else!* The dividends being withheld, the dreaded inquiry at length took place, when it was discovered that 11 out of the 13 collieries must either be closed, or had only a nominal existence, and that 300,000*l*. was as good as lost; and when I add, that sage senators, grave lawyers, learned doctors, and able magistrates—the representatives of army, navy, law, physic, and divinity—with little or no alloy of tag-rag proprietors, comprised the party who were thus disappointed, it may fairly be said, the triumph of "speculation" was complete.

I am, Sir, yours faithfully,

JACK TAR.

October 4, 1841.

[We are always glad to be able to have it in our power to expose unsound speculations; but our intelligent correspondent is aware that there is such a law as the law of libel, against the operation of which the *truth* is no bar. He will excuse us, therefore, for having expunged a few of his epithets and softened others. From what has reached us from other quarters we have no doubt they are richly deserved.—Ed. R. T.]

THE HULL AND SELBY LOCOMOTIVES.

To the Editor of the Railway Times.

Sir,—I perceive an article in your excellent journal, No. 199, requesting information, and though your correspondent manifests the greatest "anxiety" as to its importance, if we are to believe his own representations, he has, notwithstanding that anxiety, allowed "six months" at least to elapse without taking the trouble of seeing for himself whether the objects of his inquiries had a real or merely a reported existence. I am aware from my own observation that the interests of Railway Companies have in many instances suffered severely, but not so much from want of information as to what was doing on other lines, as from unbelief, coupled, as in the case before us, with the most palpable indifference and indisposition to adopt what may appear the plans of other parties. I have no inclination to be stringent with your correspondent, but his employers would more likely promote their own interest by sending a party to the Hull and Selby line for evidence, who should be known to entertain the sounder view, that railway engineers best promote their own reputation by being lowest in a comparison of expenses, instead of which the opposite policy is not unfrequently persisted in for years. There was as much lap put into the valves of one of the Lancashire engines in 1834, as there now is in the altered engines of the Hull line, but the former was almost immediately after her alteration in the valves transferred to other hands, *and without delay re-altered back to her former state.* Wakefield was the name of the engine-driver. From that time things appear to have gone on as formerly until 1838, when a new arrangement of gearing was discovered, by which any charge of steam required can be readily admitted either to start or run with. For this invention, and other improvements, a patent was taken out and put to work in August, 1839. Prior to that time the consumption of fuel appears generally to have been from 40 to 50lbs. per mile, but such was the effect of that application with the competition and emulation created, that it led to the re-adoption of the means used in 1834, and from which the parties concerned were relieved of the savings during the years 1835, 1836, 1837, 1838 and 1839.

About the latter end of 1839 and beginning of 1840, different Railway Companies commenced putting lap valves into their engines, and many more are now making similar changes, from a general knowledge of the fact that the savings by expansive action in locomotives, are from one to two-thirds of the fuel formerly required, although the means used in 1834, and the subsequent improvements appear, from their simplicity and effect, to be the only ones that have succeeded in locomotives. I have clearly ascertained that Mr. Gray was not the first to try the expansive system in those engines, but that Mr. Stephenson previously tried it in the "Lancashire Witch" and in the "Twin Sisters," Mr. Bury in the "Dreadnought," and Mr. Roberts in some of his engines, but all these were laid aside for some years before the successful application of the system in 1839, which publicly demonstrated its real value in locomotives. As the means tried in 1834, are now being so extensively used, together with other improvements, the request of "A Railway Engineer," for information is very amusing.

There appears to be a mistake, Mr. Editor, in your reporter's putting Mr. Gray instead of the Resident Engineer, Mr. Bray, as the author of the report commented upon.

Your obedient servant,

EQUITY.

September 30, 1841.

[The above is the principal part of the letter to which we referred in our notices to correspondents last week, as being unable to comprehend its drift. The writer has since informed us that it refers to a letter published by us a few weeks ago under the signature of "A Railway Engineer," and as he seems to think that we are indisposed to hear both sides, we give his communication with a few omissions and verbal alterations, although we must again repeat that we do not precisely comprehend what it is our correspondent is driving at.—Ed. R. T.]

RAILWAYS IN BRAZIL.

To the Editor of the Railway Times.

Sir,—I perceive in the *Railway Times* of the 2nd inst., an article on a projected railway in Brazil, extending from the neighbourhood of the capital to the confines of the Mines, and St. Paul's, and I am glad that the attention of the public has been called to it through the medium of your columns. There is, however, an inaccuracy in computing the amounts in sterling money, which I must take the liberty of pointing out, as it might interfere with the success of the undertaking itself, by deterring parties in this country, from embarking in a concern of such apparent magnitude. The capital required is stated to be 8,000 contos, equal to nearly 2,000,000*l*. sterling, &c. in which, and in all the subsequent calculations, the milrea has been estimated at nearly 5s., whereas the exchange during the last four years has averaged about 30d., or 2s. 6d. per milrea, and during the last ten years has fluctuated between 40d. and 20d., or thereabouts. Taking the milrea, therefore, at 2s. 6d., the capital will be 1,000,000*l*., and the shares, (at 500 milreas) 62*l*. 10s. each, and payable quarterly at the rate of 12*l*. 10s. per annum. A party taking shares might even remit his money on more favourable terms, as good bills on Rio could be procured in London at 28d. or 29d. per milrea. As I have resided in Brazil several years, and take a warm interest in its prosperity, I have thought it right to point out this error; and may in another letter, communicate some further information, bearing on the subject, if acceptable.

WM. JORDAN.

11, Richmond Terrace, Clifton, 6th October, 1841.

[We shall be happy to hear again from our correspondent.—Ed. R. T.]

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—A paragraph has appeared in several London papers, stating that there have been upwards of 200 railway patients in the Brighton hospital, and that the Company have made no contribution to the funds. First, let me state that the patients did not arise from the trains, but were labourers injured in working, as they might have been had they been employed on buildings; secondly, the Directors have made to the hospital funds three donations of 50*l*. each, and an additional donation this year of 100*l*.; thirdly, these donations were gratefully and publicly acknowledged by Mr. Seymour, one of the Governors, when moving the resolution for the inhabitants to invite the Directors to a dinner.

VERUS.

Brighton, October 6, 1841.

The railroads have some vexatious annoyances, and among others is that of charging for extra luggage for short stages the same price as for the whole distance. Such a glaring anomaly as charging for ten or twenty miles the same as for 150 for luggage ought to be remedied.—*Examiner.*

CHAIRMEN OF RAILWAY MEETINGS.

To the Editor of the Railway Times.

SIR,—In a recent number of the *Railway Times* appeared a letter containing many just remarks on the duties of a *Chairman*, and on the impropriety of his taking any active or *one-sided* part in the business of meetings where he presides. The true principle in these matters is unhappily overlooked, and the resulting practice is anything but what it should be. In railway affairs the Directors and the officials generally may, in a certain sense, be regarded as on one side, the body of shareholders on the other. The former at the general meetings bring forward their *case*—viz. Reports, proposals, &c.; shareholders attend for the purpose of receiving an account of the state of their affairs; to ask questions; to support or oppose measures. It is clear that in order to enable him to conduct the proceedings with order and authority, the Chairman of the day should take no side on any question (beyond voting), that he should act as moderator between all parties. Neither his eloquence nor his science should recommend him for the Chair, but his ascertained qualities as such Moderator. If he be a Director very difficult will it be for him to maintain the character of an impartial and attentive President. He will be so much occupied with his speechifying and favourite motions, as to be unable to direct his attention to the government of the assembly over which he is supposed to preside. A Chairman should never speak beyond putting motions and maintaining order. He has something else to do than to talk, and should enable others to be heard—not himself. If the Chairman confines his functions to regulating the proceedings, it is plain that business will be very much better and more speedily dispatched, than if he himself descends into the arena of discussion, and often of strife. To hear a Chairman say that he will not put a certain motion—as for the appointment of auditors—why, Sir, no man ought ever to be placed in a position which could induce him to utter such words! The rules by which the Speaker of the House of Commons is governed may be regarded as the true code of Chairmen everywhere. He is employed exclusively in looking after the business of the assembly, *i. e.* in looking after people who make speeches there. He maintains order, and urges forward the march of the proceedings—liable without such a watchman to become sluggish, or to degenerate into mere talk or personalities. His not being permitted to address the House is a remarkable proof of the wise and reflecting character of our nation, and it is surprising that he is not taken as a model by every assembly within it. Mr. A. or Mr. B., the Chairman, makes a fine speech. Very well; but meanwhile you have lost your president. Perhaps it might be worth while to encourage a class of professional Chairmen—men who should study the duties of the office, and be unconnected with the business of any meeting where they preside.

I am, Sir, your obedient servant,

C. D.

29th September, 1841.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.

To the Editor of the Railway Times.

SIR,—After the exposures which have already been made of the delusions practised on those who have been induced to embark their money on the faith of representations which now turn out to be utterly false, it may perhaps be deemed a work of supererogation to say another syllable on the subject; but a statement so extraordinary has just now been issued and circulated under the signature of "Richard Dawson," who terms himself the authorised "agent" of the Company, that in justice to those who may be unacquainted with the real facts of the case, I cannot permit it to pass altogether unnoticed.

With respect to the *nature* of Mr. Richard Dawson's connection with the Company (about which your correspondent of last week, who signs himself "A Sufferer," makes inquiry), *that* is a matter of notoriety; and if your correspondent will refer to a previous number of your publication during the present year, he will there find it rather broadly set forth.

The following is a specimen of the reckless manner in which this "agent" presumes upon the credulity of the shareholders, according as it may answer his varying purposes. The extracts set forth in the left-hand column are from Mr. Dawson's letter of the 1st October instant—those in the right-hand column are from Mr. Dawson's printed Report of the 27th February, 1839:—

From Mr. Dawson's printed circular letter of 1st October, 1841:—	From Mr. Dawson's printed Report of 27th February, 1839:—
Our little but valuable concern will be completed, notwithstanding all the difficulties we have had to encounter, for the estimate, as laid before Parliament. *This circumstance is almost unparalleled in railway concerns.*	One part of the plan is all but impracticable, and the estimate for land and houses does not amount to *one third the actual cost of the land alone.* The original estimate for the railroad was 100,000*l.*, which was to complete the ENTIRE LINE from Edinburgh to Leith, *via* Trinity or Newhaven, and though 40,000*l.* will be saved in the NEW line by the tunnels and excavations, the sum of 100,000*l.* will still be required to carry the line to TRINITY ALONE.
The bold and manly declarations made by the Directors, *who are all men of high honour and probity.*	The original Chairman of the Company held 50 shares, *but never paid even the Parliamentary deposit!* The Vice-Chairman holds 25 shares, *but not having latterly paid his calls!* the Directors are proceeding against him for the same.
On a careful examination of the scale of traffic, which has been prepared by that respectable and experienced Engineer, Mr. Grainger, *and may with confidence be relied on.*	The Company were *very unfortunate* in the plans of their Engineers—[Messrs. Grainger and Miller]—and also in the estimates of the property required to be bought. The great difference in the estimates is understood to be in the valuation of the land, and *in consequence of the Engineers having adopted some erroneous data.*

I leave it to Mr. Dawson, and those for whom he acts in this "little but valuable concern," to reconcile these descrepancies. So far as the shareholders are concerned, they regard the whole project from the commencement as a systematic means of imposing upon them, and after investigating the working of the project, it is difficult to arrive at any other conclusion.

I am, Sir, yours, &c.,

ANOTHER VICTIM.

October 5, 1841.

The following is the circular above referred to:—

My Dear Sir,—In justice to the Board of Directors, I consider it right to make this communication to you, feeling satisfied, if the proposal of the Board is carried out, the whole concern may be saved from destruction. Only those who have paid up their calls can be benefitted by the arrangements proposed, for it is not likely the Directors will accept the names of those parties for any portion of the forfeited stock, who have not paid up on their original shares. It does appear to me a very unaccountable thing, that so much money should be subscribed in support of various other railways in fractional shares, (even this year, since the month of January,) to the amount of five millions sterling, and in every case, these Companies required an increase to their capital, owing to the extravagance of their Engineers, or the mismanagement of their Directors; *whereas, our little (but valuable) concern will be completed, notwithstanding all the difficulties we have had to encounter, for the estimate as laid before Parliament.*

£100,000 is the Capital	
Allowed to borrow one-third	33,333
	£133,333 6 8
And the whole will be completed for ..	105,000 at 110,000

*This circumstance is almost unparalleled in railway concerns.** Still the shareholders do not value the services of the Directors, and when they call upon them for their united energies and support under present difficulties, that assistance is denied them.

I have been most anxious to communicate, calmly and considerately, every information I have received from the Board, and even these, my earnest efforts, have been ineffectual, for I have been deprived the power of making these announcements, by (I regret to say) the almost total indifference of the shareholders withholding their attendance from the general public meetings called, for this express purpose, and therefore, the false and fraudulent misrepresentations of our enemies, have been permitted to sway them in their judgment, in direct opposition to the bold and manly declarations made by the Directors, who are all gentlemen of high honour and probity, and have shown themselves anxious to promote the interest of the concern, by frequently placing themselves under heavy responsibilities to their bankers, in order to consult the convenience of the shareholders. Thus have they been exposed to much unjust calumny; but they have always been anxious to court inquiry; and one of the propositions I had to submit for your serious consideration, was the appointment of a gentleman of considerable practical experience in railway undertakings, and totally unconnected with the Board to come down to Liverpool to give the necessary information.

I have not ventured to encourage such a measure, finding the neglect shown even to the Secretary, who lately made his appearance in this town for the express purpose. The trouble and expense of Mr. C. F. Davidson coming from Edinburgh to Liverpool would be useless, unless I could be assured that the shareholders would really consult their own interest, and attend the meeting to hear from him the truth.

The proposal made by the Board for re-issuing these 1615 forfeited shares, certainly is most advantageous to the original shareholders, for by taking up these shares, on which 20*l.* has been paid, at 10*l.*—would thus reduce their original stock of 20*l.* to 15*l.*, but they would receive the dividend on the larger amount, say 20*l.* per share. On a careful examination of the scale of traffic, which has been prepared by that respectable and experienced Engineer Mr. Grainger, and may with confidence be relied upon, he has taken the very *lowest* rate of traffic, which, (if no more was realized,) would yield a dividend of 10 per cent. per annum—where is there a concern offering better returns?

The debenture plan, as an alternative under these circumstances, is most assuredly as safe an investment, as the most anxious could wish for. Long before the debentures are redeemable in cash, being a period of four years, the whole of the plans at present under consideration for making the communication between London and Edinburgh effectual, would be completed, and the increased traffic, thus thrown upon our important line of communication *with the Sea coast*, would tend to increase the amount of our dividends, advance the value of our shares, and thus place the Directors in a position to sell the forfeited stock, so as to repay the advance of 10*l.* per share, carrying over the profits to the credit of the Company, or transfer the shares to the holders of the debentures; and thus secure to them, a very large profit. I hope I may not be considered too importunate in pressing these points upon you: they are well worthy your serious consideration; the amount required is so trifling, that I merely ask this simple question? whether with a prospect of greater future gain, it would not be for the interest of the shareholders to increase their relative proportion, in taking up this stock, and thereby protect their interest; than to allow the concern to be abandoned into the hands of those, who would thereby gain all the advantages the sum of 60,000*l.* expended, would secure to them by completing the works, for their own benefit, which

* Not correct. The *present* line is here confounded with the *original* lines to Leith and Newhaven. The *present* line goes to neither of *those* places.—ED. R. T.

the sum of 16,000*l.*, divided amongst the proprietors of the present day, would secure to themselves?

A share list will be left at my office, and any proprietor expressing his wish to take up shares or debentures, shall have his notice inserted therein, either by personal application, or by note, addressed to

Dear Sir, yours, truly,
RICHARD DAWSON, Agent.

10, Exchange Alley, Liverpool, Oct. 1st, 1841.

RAILWAY BILLS IN THE HOUSE OF COMMONS.

In the House of Commons on Monday, several alterations were made in the regulations affecting what are called Private Bills. The following are the principal changes as affecting railways:—

Standing order No. 1, read, as follows:

"Resolved, That a Committee be appointed at the commencement of every Session, consisting of forty-two members, of whom five shall be a quorum in opposed cases, and three a quorum in unopposed cases, to which shall be referred all petitions for Private Bills, and such Committee shall be denominated 'The Select Committee on Petitions for Private Bills.'"

Standing order repealed.

Resolved, That a Committee be appointed at the commencement of every Session, consisting of forty-two members, of whom five shall be a quorum in opposed cases, and three a quorum in unopposed cases, to which shall be referred all petitions for Private Bills, with their annexed Bills; and such Committee shall be denominated "The Select Committee on Petitions for Private Bills."

Standing order, No. 119, read, as follows:—

"Resolved, That no Private Bill be brought into this House, but upon a petition first presented, truly stating the case: And that such petition be signed by the parties, or some of them, who are suitors for the Bill."

Standing order repealed.

Resolved, That no Private Bill be brought into this House but upon a petition first presented, with a printed copy of the proposed Bill annexed; and that such petition be signed by the parties, or some of them, who are suitors for the Bill.

Standing order, No. 120, read, as follows:—

"Resolved, That all petitions for Private Bills be presented within fourteen days after the first Friday in every Session of Parliament."

Standing order repealed.

Resolved, That all petitions for Private Bills be presented within twenty-one days after the first Friday in every Session of Parliament.

Resolved, That, in the case of any application for a Private Bill relating to England, the Committee may admit proof of the compliance with the standing orders which refer to the affixing to the church doors the requisite notices on the production of affidavits sworn before any justices in petty sessions assembled for the division within which the churches on which the notices have been affixed, shall be respectively situated.

Ordered, That the said resolutions be standing orders of this House.

Standing order, No. 14, read, as follows:—

"Resolved, That notices shall be given in all cases where application is intended to be made for leave to bring in a Bill included in any of the following classes:—[Three classes are then enumerated, railways being in class 3.]

Standing order repealed.

Resolved, That notices shall be given in all cases where application is intended to be made for leave to bring in a Bill relating to the subjects included in any of the following classe: [The classes are then somewhat varied, railways being placed in Class 2.]

Standing order No. 15, read, as follows:

"Resolved, That notices shall also be given in all cases of Estate Bills relating to crown, church, corporation or charity property, held in trust for public or charitable purposes, whether it be intended that such Bills shall originate in this or in the other House of Parliament."

Standing order repealed.

Standing order No. 17, read, as follows:

"Resolved, That if it be the intention of the parties applying for leave to bring in a Bill, to levy any tolls, rates, or duties, or to alter any existing tolls, rates, or duties, the notices shall specify such intention."

Standing order repealed.

Resolved, That if it be the intention of the parties applying for leave to bring in a Bill to levy any tolls, rates, or duties, or to alter any existing tolls, rates, or duties, or to confer, vary, or extinguish any exemptions from payment of tolls, rates, or duties, or any other rights or privileges, the notices shall specify such intention.

Standing order No. 22, read, as follows:

"Resolved That in cases of Bills included in the 2nd Class, all notices shall contain the names of the parishes, townships, and extra-parochial places from, in, through, or into which the work is intended to be made, maintained, varied, extended, or enlarged, and shall state the time and place of deposit of the plans, sections, and books of reference respectively, with the clerks of the peace, parish clerks, schoolmasters, town clerks and postmasters, as the case may be. (See Nos. 25 and 27.)"

Standing order repealed.

Resolved, That in cases of Bills included in the Second Class all notices shall contain the names of the parishes, townships, townlands, and extra-parochial places from, in, through, or into which the work is intended to be made, maintained, varied, extended, or enlarged, and shall state the time and place of deposit of the plans, sections, and books of reference respectively with the clerks of the peace, parish clerks, schoolmasters, town clerks, and postmasters, as the case may be. (See Nos. 25 and 27.)

Standing order No. 38, read, as follows:

"Resolved, That in all cases where it is proposed to make, vary, extend or enlarge any turnpike road or railway, the plan shall exhibit thereon the height of the several embankments, and the depth of the several cuttings respectively, on a scale specified thereon.

Standing order repealed.

Resolved, That in all cases where it is proposed to make, vary, extend, or enlarge any railway, the plan shall exhibit thereon the height of the several embankments, and the depth of the several cuttings, respectively, on a scale specified thereon.

Standing order No. 161, read, as follows:

"Resolved, That a filled-up Bill, signed by the agent for the Bill, as proposed to be submitted to the Committee, be deposited in the Private Bill office at the time of giving notice of the meeting of the Committee; and in the case of a re-committed Bill, a filled-up Bill, as proposed to be submitted to the Committee on re-committal, shall be deposited in the Private Bill office on the day that the order for such re-committal shall be made; and that all parties shall be entitled to a copy thereof, upon payment of the charges for making out amendments of such Bill."

Standing order repealed.

Resolved, That a filled up Bill, signed by the agent for the Bill, as proposed to be submitted to the Committee on the Bill, be deposited in the Private Bill office at the time of giving notice of the meeting of the Committee on the Bill, and in the case of a re-committed Bill, a filled-up Bill, as proposed to be submitted to the Committee on re-committal, shall be deposited in the Private Bill office three clear days before the day appointed for the meeting of such Committee; and that all parties shall be entitled to a copy thereof upon payment of the charges for making out amendments of such Bill.

Ordered, That the said resolutions be standing orders of this House.

Schedule to Appendix A. of standing orders, p. 74, amended as follows:—"After word "parish," be inserted 'township, townlands, or extra parochial place:' Again, after the word 'parish,' be inserted 'township, townlands, or extra-parochial place.'"

LEVEL CROSSINGS.

[From the *Railroad Monthly Journal* for October.]

We understand that a case relative to the Clarence and Hartlepool Railways, concerning a dangerous level crossing of a public road, is about to be laid before the Board of Trade, the facts of which are as follows, first premising that it appears to us to be a case of substituting one line for another, and not one of widening the railway, and we think that the trains would run much safer after the alteration, particularly if some of them are stopped at the junction. The Stockton and Hartlepool Company, it must be borne in mind, run their trains over about 13 miles of the Clarence Railway. Their own line is about 8¼ miles long, and was not made under an Act of Parliament. Their gradients are better than those of the Clarence, and the line is in good working order. It has pirated rails, 63 lbs. to the yard, exactly laid on sleepers with 3 feet bearers.

The Clarence Railway, by a second Act of Parliament, undertook to make a branch from the main line to Stockton. This branch leaves the main line in the parish of Norton, and within about 150 yards of it so doing, crosses the turnpike road from Durham to Norton. By their Act, their rails are here 8 feet 3 inches below the surface of the ground, and the road was sloped on each side down to that depth. It was considered a dangerous place, owing to the high banks on either side preventing the persons using the road from seeing engines on the railway. Under the Act gates were put up. The adjoining land here belongs to some persons who have built a public house, and laid a short line for coals and lime for the use of the inhabitants of Norton, which line is much used.

A year ago another Company formed a line, the Stockton and Hartlepool Railway to Hartlepool, which joins the main line of the Clarence about two miles lower down than the branch to Stockton. For this line there is no Act of Parliament; it is done by leave of the proprietors of land through which it passes. Coach trains run several times a day between Stockton and Hartlepool, and in order to avoid the necessity of stopping at the junction of the main line with the Stockton branch, a plan as follows was resorted to.

The Clarence Company bought a piece of land, and proceeded to lay down a single line of rails; to do which they had to lower the surface of the coach road, and cross it with another line of rails at some distance from the Stockton branch, and as this was very dangerous to the public, great objections were made, and a parish meeting called, at which it was determined that the danger was so great that the new line ought not to be allowed to cross in the manner proposed. Early in February, however, they had laid down their rails up to the public road, on either side, the surveyor of the highways often cautioning the men at work not to touch the road. However, they commenced at midnight on the 8th of February, and although, from the frost, they had to blow up the coach road with gunpowder, they completed the job before morning, by putting on a large number of men. As soon as the Surveyor found this out, however, he removed the rails, and restored the road as before.

The Company then took the opinion of Sir F. Pollock, who, looking at it as an improvement, whereas it is a new branch, gave his opinion that as the Company had once the right of making it, they still have so, and in consequence, within these few days, they have again laid their rails across the public road, although their original right to make it is doubtful. So the matter rests till the line is inspected prior to opening. This new line certainly gets rid of several objectionable crossings from one line to the other which was the case before, and also running the tender first, which had to be done.

South-Eastern Railway.—Great activity prevails on the line of the South-Eastern Railway, near this town (Tonbridge), the workmen are employed night and day, and it is expected that the road will be opened as far as Tonbridge in March next.—*Canterbury Journal.*

RAILWAY SHARE-LISTS.

The London Prices are taken from Mr. Wetenhall's List; those at Liverpool are furnished by Mr. C. J. Townley, Sharebroker, and are the closing prices on Thursday. The quotations marked * are the latest Edinburgh prices; those marked † the latest Glasgow prices. The former are supplied by Mr. Robert Allan, of St. Andrew-square; the latter by Mr. J. Watson, of Frederick-street.

2. Toll to London and Birmingham 180*l.* 0s. 3d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 26*l.* 4s. 9d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table. The Shoreham branch traffic, from some unexplained cause, has not been sent to us this week. The amount in the Table is from the main line only.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,884*l.* 0s. 10d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

25. The receipts for goods, &c. include, carriages, 561*l.* 7s. 0d.; horses, 48*l.* 4s. 6d.; dogs, 4*l.* 4s. 0d.; parcels, 223*l.* 16s. 0d.; cattle, 76*l.* 0s. 0d.; corn, 19*l.* 13s. 1d.; heavy goods, 433*l.* 1s. 4d.; coal, 140*l.* 8s. 6d.—Total, 1001*l.* 14s. 5d. The dividend is from the time opening.

27. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

J. M. F.—*We do not know the address of Mr. W. M'Kenzie, the contractor. Write to the secretary of the Company named.*

A Lover of Truth *has our best thanks. He will see that his suggestions have been attended to.*

A Subscriber.—*The useful little work of Mr. C. H. Gregory respecting which our correspondent inquires, is published by Weale of Holborn. The price is a shilling. The postage would be sixpence.*

London and Brighton Railway.—*We have to acknowledge the receipt of a very neat and well-executed lithographic print of the Brighton station of the London and Brighton Railway. It is from an original drawing by David Mocatta, Esq., F.R.S., the eminent architect of the Company. The building appears to be worthy of Mr. Mocatta's well known talent. The print ought to be in the portfolio of every shareholder.*

A Subscriber to the *Railway Times*.—*The course referred to is not, we believe, "usual;" assuredly it is not "proper." It sometimes happens that parties take up shares in lieu of paid cash for services rendered, but these cannot justly be called "free shares."*

A Frequent Traveller (*Chippenham.*)—*The letter is inadmissible unless our correspondent can show that he has represented to the Secretary the man's insolence, and been refused redress, which from that gentlemen's well known attention and courtesy cannot, we are sure, have been the case. We are always ready to protect the public as far as we can, but it is neither reasonable nor just that the whole management of a Railway Company should be denounced merely because of the misconduct of some ill-mannered subordinate, especially when the parties aggrieved will not take the trouble to lay the matter before the offender's superiors. It is just as easy to write to the Secretary or Manager of a Company as to the Editor of a public journal, and we venture to say that not only will Directors in general take steps to punish a delinquent, but feel greatly obliged to the party who makes the complaint.*

Edinburgh, Leith, and Newhaven Railway.—*No fewer than three copies of the extraordinary circular of Mr. Richard Dawson, of Liverpool, "agent" to this concern, have reached us from different quarters. We shall ourselves probably have something to say hereafter of this production; mean time we give the circular itself, and the letter of a valued correspondent in reference to it.*

A Contractor (*Birmingham.*)—*The gentleman referred to is resident in London. A note addressed to him at our office in Fleet street shall be forwarded.*

J. F. (*Brighton.*)—*The Company receive the whole of the receipts after deducting the toll. The line therefore virtually commences at London.*

A. Z. (*Exeter.*)—*We will endeavour to obtain the information our correspondent requests, but we doubt our ability.*

An Enemy of Jobbing.—*We are as determined enemies of jobbing as our correspondent can possibly be, but it is indispensable that when serious charges are brought against individuals we should have the name and address of our informant, if not for publication, at least for our own private satisfaction.*

Railway Communication with Scotland.—*We have received from Edinburgh a pamphlet entitled "Remarks on the Proposed Railway between England and Scotland," in which the superiority of the hast over the West Coast line, is strenuously and with very considerable ingenuity advocated. We should be glad to see either line in a fair way of being carried out.*

Speed on Railways.—*Our correspondent of last week, (A. T. G.) wishes us to correct the following errata in his letter:—In the heading of the fourth column of the second and third tables omit the word "hour." In the last line of the third column of the third table, instead of "25 2" read "25.66."*

The matter mentioned in the letter from Cirencester had been attended to before our correspondent's favour arrived. We thank him nevertheless.

North Midland Railway.—*The memorial of "the clerks and others employed on the North Midland Railway" reached us at too late an hour to be noticed this week. It shall not, however, escape our attention.*

*** It is requested that in future all communications intended for the *Railway Times* be addressed, "To the *Editor*," and not to any individual by name, now or recently connected with the establishment.

THE RAILWAY TIMES.

SATURDAY, OCTOBER 9, 1841.

SCARCELY had our number of last Saturday, containing a notice of a mishap which took place on the London and Brighton Railway on the previous day, been issued, when a much more serious catastrophe occurred upon that line, occasioning, we regret to say, the death of two of the Company's servants, and of two other persons, passengers by the train. The details of the melancholy casualty will be found in another part of our present number.

Deeply to be deplored as must be the sudden deprivation of life under any circumstances, but more especially under such circumstances as the investigation before the Coroner's court exhibited, it is not right that inquiries into casualties of this kind should be in any way slurred over. And here we cannot but censure what appears to us to have been the indecent haste with which the Coroner's investigation was in this case pressed forward. The accident occurred about mid-day on Saturday, but intelligence of the catastrophe did not reach London till a late hour in the afternoon. Now the Railways' Regulation Act requires that notice of such occurrences shall be given to the Board of Trade within forty-eight hours after they have taken place, and as Sunday is a *dies non*, it follows that the jury must have been convened, and the investigation commenced, before the Government authorities could well have been informed of the circumstance! The object in requiring immediate information of these accidents was doubtless to enable the Board of Trade to send down competent persons to watch the proceedings before the Coroner's jury (and a very proper regulation it is), yet in such case the object appears to have been defeated, we will not say, defeated purposely, but for any thing that appears to the contrary, defeated it certainly was. Why, the jury must have been summoned on the Sunday! We can readily suppose that the Directors were anxious to get rid as soon as possible of all traces of the distressing scene, but this apparent hurrying over of an important inquiry is not at all calculated to appease the public mind, again painfully excited by the recurrence of these railway calamities.

The principal point, however, to be determined is the *cause* of the accident, and here, as may be supposed, there is great diversity of opinion One of the witnesses ascribed the accident to the greasy and slippery state of the rails, occasioned by the soil adhering to them from the boots of the labourers; but it was proved by other witnesses, that at the time in question the rails were quite clear from any obstruction of the kind; and, indeed, the witness himself subsequently qualified his opinion by coupling with the presumed slipperiness of the rails the so-called top-heaviness of the pilot engine. The alleged cause is moreover inadequate to the effect produced, for the same slipperiness and top-heaviness must have equally existed on previous journeys.

The jury, it will be seen, had no hesitation in ascribing the accident to the use of a four wheel engine. With all respect for Coroner's juries, we cannot look upon them as by any means qualified to decide upon a question of this kind, which has so long divided, and still continues to divide, the sentiments of scientific men. We say this with the more freedom, because we are strongly prepossessed in favour of six-wheel engines, the superior merits of which have repeatedly been insisted upon in our columns; but, at the same time, we must deprecate the plan pursued by the jury, of jumping to a conclusion upon the evidence principally of a mere youth, and without taking the trouble to examine Mr. RASTRICK and other thoroughly competent judges, who were in attendance. It is clear that the Directors of the Company coincide in the opinion of the jury, if we may place any reliance upon the semi-official notification which has since been issued, that they have interdicted the use of any of these four-wheeled engines in the conveyance of the passenger traffic.

To what then, it will be asked, do we ascribe the melancholy occurrence? We regret to say that to the "greenness" of the line, and to over-driving in this particular instance, we are compelled to attribute it. The evidence of the parties employed upon the engines at the time of the accident would appear to negative the supposition that any great speed had been acquired, but it is to be remembered that such parties would naturally be anxious to shift the blame from themselves, and we think it may reasonably be taken for granted, that if, *under such circumstances*, THEY acknowledge to a speed of from 20 to 25 miles an hour, the actual speed may fairly be taken at 30 miles at least. If there had not been something imperfect in the line, why should the foreman of the labourers employed at the spot have given the signal of "caution?" *He* must have been well acquainted with the real condition of the railway, and his unprompted notice to the drivers outweighs, in our opinion, the statements of a dozen officials who after the event depose to the perfection of the works. Then as to speed—we have the authority of a passenger by this very train for stating, that a delay took place not only in the start from the London terminus, but at one or more stations on the line; and moreover, that in consequence of one of the accidents of the previous day (for it appears that *two* occurred), the train was compelled to pass from the down line to the up line, and again to return—of course not without the loss of some minutes—which, added to the extreme heaviness of the train, supplies an easy explanation why the drivers should at this particular part of the line attempt, by over-speed, to make up for lost time. In reference to the usual (the *advertised*) rate of travelling upon this railway, we beg to direct special attention to the letter of an intelligent correspondent, which appears in another column, and which is but a sample of many similar communications which have reached us upon this subject, in the course of the week. Our correspondent very justly remarks, that the speed upon the Liverpool and Manchester and London and Birmingham Railways during the first year of their operations was much less than that put forth on the Brighton line, and it is to be regretted, as he says, that so prudent an example was not in this instance followed. We have no doubt that the high rate of speed (high, we mean for a new line) decided upon by the Brighton Directors, was intended to be set against the charges which, it is well known, are not much lower than, if so low as, those of the common-road coaches. There appears, moreover, to be no regulation as to the rate of driving in the intermediate stages of the

Digitized by Google

journey. The London and Birmingham Company—and we refer so repeatedly to the management of that line, because in most things it is a pattern for all other lines—the Birmingham Company place their drivers under the most stringent regulations, timing them between every station, and fining them if they exceed the regulated speed *on any part of the line*, which is the only efficient means of preventing furious driving, whereas in some Companies no regard is had to the manner in which a driver accomplishes his journey, provided he arrive at the terminus in time—whether by a steady, uniform speed, or by galloping over one portion of the line and loitering on another. In this respect we think the arrangements of the Brighton Company might be greatly improved.

The opinion of a coroner's jury can form no valid ground of objection to the use of four-wheel engines, and it is quite evident that the inquiry which this lamentable occurrence has originated cannot rest where it is. Whatever opinion may be formed upon the general question of four-wheel and six-wheel engines, we cannot but think that the placing of a lighter engine before a heavier, and these engines of different construction, was a most unfortunate arrangement. More unfortunate still was the employment of two engines upon one train. We have frequently in this journal urged upon Railway Managements how undesirable it is under any circumstances to have two engines attached to a train. The preferable course, in every case, is to divide the train; nor need this occasion any delay, as a five or ten minutes' start would be quite sufficient to keep the two divisions clear of each other, especially when each driver was fully aware how closely he was preceded or followed. We trust that in future this will be carried into effect. The dangerous practice of attaching an engine to the rear of a train is now, we are glad to say, almost entirely discontinued.

The Brighton accident will, we repeat, doubtless lead to further investigation into the merits of the two descriptions of locomotive, by parties better qualified to arrive at sound conclusions than can be expected of coroners' juries, and we shall be glad if our columns can be rendered at all conducive to so desirable a result. It will require more than mere *assertion* to show that four-wheel engines are dangerous in practice, when the experience of the London and Birmingham, the Midland Counties', and many other lines testify to their safe and efficient working. It was stated at the inquest that the Brighton four-wheel engines differ somewhat from the Birmingham. If less safe whose fault was *that? Who* was it that prepared the specification, and who was the Engineer who required the cylinders to be of *fourteen inches* diameter? It is not by petitions to the House of Commons (as we see one was presented by Mr. WAKLEY on Tuesday night) "calling the attention of the House to the accident on the Brighton Railway, and complaining of the inefficient state of the engines," that such questions are to be determined. A far different tribunal must decide.

We regret to find that on Thursday another accident occurred on this railway, by the falling in of a portion of the south front of the Patcham tunnel. Fortunately, no person was injured, although a train had passed through only a short time previously. The passengers were conveyed to Brighton in omnibuses, and yesterday the trains were resumed. The accident is attributed to the late heavy rains.

There can be no doubt that these repeated calamities will interfere very seriously with the present prosperity of the line. The common road coaches, some of which it had been intended to remove on Monday, have been running during the week with full loads. Nor is the alarm confined to the ignorant many. In the course of the week we have received letters from two different gentlemen, personally known to us, and both of them deeply interested in every sense in railways, each of whom states that having gone down by rail, he cannot venture to return except by coach, such is the condition of the works, caused, we should suppose, mainly by the excessive rains now prevalent. We are far from being alarmists, but it is right that the extent of the evil should be ascertained and manfully met.

We understand that Professor BARLOW has been deputed by the Board of Trade to inquire into the circumstances connected with the late fatal occurrence, and that that gentleman is now pursuing his investigations. From Professor BARLOW's justly acknowledged ability, we may look for a very interesting report.

After we had written the preceding remarks, we received a communication on this melancholy subject from an able correspondent, in which a different view is taken of the cause of the accident from that which is given above. As our only object is to elicit the truth, we have much pleasure in extracting from our friend's letter the following passages:—

"The scene of this disaster was in a cutting, in a strong and unyielding sandy soil, with, I believe, a stratum of rock immediately under the permanent way. All the evidence given agrees to show that the road was in a good state of repair; and the rails of a very strong section being fixed to transverse sleepers could not be thrown out of gauge. There appears to have been no reckless driving, no neglect of signals; the steam of the second engine was shut off, and the train apparently running by its own acquired velocity, aided by a descending gradient, merely sufficient steam being used in the leading engine "to keep the chain tight," and the velocity by the highest account not more than 30 miles per hour.

"The leading engine was suddenly thrown from the rails, and overturned by running against the rocky side of the cutting, and as a natural consequence the second engine and the three leading carriages were thrown off and stopped after running for several yards in a different direction.

"In the absence of any mismanagement or neglect on the part of the officers of the railway, or of any impediment arising from local obstruction or derangement of the rails, we must look for the cause of the accident, to the train itself, and I cannot but think that it exists too obviously in the action of the four-wheeled engine which was at the head of the train.

"If your readers will refer to your journal of August 22, 1840, and several following numbers, they will find the comparative action of the six-wheeled and four-wheeled engine so fully treated, that I consider it unnecessary, at the present time, to enter at any length into the statement of their principles. The general conclusion of your correspondents, and the Editorial strictures which were then passed upon the use of the four-wheeled engine, have in this case received all the confirmation which fact can give.

"Previously to the train being thrown off, a double motion was observed in the leading engine. One witness remarked a rocking or *lateral* motion, and another a jumping or *vertical* motion, and to the combined and *simultaneous* effect of these motions, I am inclined to attribute the circumstance of the engine leaving the rails in the direction of a tangent to the curve of the rails. This cannot have arisen from the four-wheeled engine being over-run by the six-wheeled engine behind it, as the evidence proves that the leading engine had sufficient steam to avoid being bumped by the second. Neither could the motion have been owing to any previously defective state of the road, or it must have been shared in some degree by the second engine; but it is the same action which has long been pointed out in the columns of the *Railway Times*, as resulting naturally from the form of construction of the four-wheeled engine, and which I should have thought it required little argument to show, would be corrected by the addition of a third pair of wheels.

"But it is needless to prove by argument a fact which practice cannot contradict. The experience of all practical men with whom I have conversed on the subject, excepting the determined adherents of an imperfect machine, shows that the action exists to a much greater extent in a four-wheeled engine; and that at any but a slow speed it may frequently, as now, (without any assignable cause but some trifling irregularity which would not be felt by a six-wheeled engine,) be increased to such an extent as to throw the four-wheeled engine from the rails.

"I am fully aware that in the four-wheeled engines in use on the Brighton Railway, the vertical pitching is increased by the greater height of the centre of gravity, arising from the increased size of the boilers; and to this may perhaps be ascribed the circumstance of their having run off the rails on two separate occasions within one week.

"The facts of the case are now before the public, and I trust they may draw the attention of railway authorities very seriously to the subject, or I fear that other instances may occur in which good management will be rendered nugatory.

IN noticing, in a recent number, the proceedings at the Ulster Railway meeting, where it will be recollected the question of Contractor-Directors was discussed, we took occasion to express our disbelief in a statement made by one of the speakers to the effect that the system reprobated was very generally followed in the English Companies. We thought then, and we think still, that the charge was far too sweeping, although further inquiries have satisfied us that the practice is more prevalent than we had supposed, or than is at all desirable. Assuredly if it were carried, in many Companies, to the extent which it appears to have reached in one Company, whose proceedings we this day record, the comprehensive accusation of the speaker at the Ulster meeting would be well deserved.

The Company to which we refer is the Durham and Sunderland, whose annual meeting was held last week, at Sunderland, and is noticed elsewhere in our present number. On that occasion, it would appear from the Report of a local journal, one of the proprietors, named SINGERS, proposed a resolution, "*that, in future,* NOT MORE THAN FOUR *parties who are contractors with the Railway Company, be allowed to sit in the Court of Directors,*" from which we gather that, as matters are now managed, five or six at least, probably more, of these Contractor-Directors, preside over the affairs of that undertaking! Need we wonder

Digitized by Google

that so far as the shareholders at large are concerned, the result should be so very unsatisfactory that at present a dividend is a thing rather to be hoped for than expected! We know nothing whatever of the gentlemen composing the Durham and Sunderland Board—except in connection with their very harsh and arbitrary treatment of an individual named SUMNERS, upon which we felt it our duty to comment somewhat sharply in the early part of last year—but it is easy to see that their interests as Contractors may far outweigh their interests as shareholders, and that as there is probably a majority of Contractors at the Board, profits as tradesmen may be more studied than dividends as proprietors, and means adopted to secure the one at the sacrifice of the other. It is not necessary to suspect the Durham Directors of gross and wilful dereliction of their duty to their constituents; they may conscientiously believe that they are acting towards themselves not a whit more favourably than they would act towards others under similar circumstances, but in a case where self-interest is so closely concerned, it is next to impossible not to be biassed towards personal advantage as against public duty. One such party at a Board may have his views and feelings controlled by the views and feelings of his non contracting colleagues, who are supposed to be impartial and disinterested arbiters between the contractor and the Company; but when, as in the instance of the Durham and Sunderland Railway, a large number of individuals are so circumstanced, it is not judging them too harshly to suspect that the vote of each, in particular cases where the interests of a colleague and the interests of the Company are brought into collision, will be regulated by a desire that when his own turn shall come, his colleagues may not too narrowly scrutinise his pretensions. To-day *A.* takes what is called a *liberal* view of the terms of *B.'s* contract; and to-morrow *B.* is equally liberal towards *A.*, while in the meantime the interests of the great body of those from whose pockets the payment of both contractors comes, are totally overlooked.

Our readers will naturally suppose that the very reasonable proposition of Mr. SINGERS' was at once adopted by the Durham and Sunderland meeting. By no means! *More* than four Contractor-Directors were, it seems, not thought sufficient to detract from the impartiality, or cast a suspicion on the purity, of this northern Board, and lo! the old proportion is retained! We wonder what the Durham and Sunderland Company's Act of Incorporation says upon this subject. If it do not differ very considerably from most other Railway Acts that have come under our notice, we would not hazard much upon the legality of the proceedings of a Board of Management constituted as theirs appear to be. We recommend this inquiry to the attention of Mr. SINGERS, and of those other Newcastle proprietors, who it was stated hold the same sentiments as himself respecting the affairs of the line.

The reason for refusing to carry out the restrictive resolution as to contractors, is, we were going to say, very novel, but unfortunately it is not so; it is, however, very noticeable. "As it seemed (says the local journal already referred to) to be the almost unanimous impression of the meeting that Mr. SINGERS' *resolution would operate as an expression of want of confidence in the Directors*, and, consequently, would not be entertained by the meeting, he consented to withdraw it!" Really, this is carrying complaisance somewhat too far. We had hoped that the clap-trap of "confidence in Directors" had by this time become exploded, and that shareholders would not be turned aside on any such childish pretence, from an inquiry into the management of their own property, and when necessary, a correction of official abuses. Directors themselves had, we thought, repeated the threat of resignation somewhat too frequently to be any longer effective. We thought they had begun to fear lest they should be taken at their word, instead of being entreated to continue their invaluable services, on the understanding that henceforth no impertinent shareholder should presume to pry into their acts, or call in question the absolute wisdom of their proceedings! We had thought that "confidence in Directors" was best promoted, and its continuance most firmly secured, by full investigation into whatever might appear to have a tendency to destroy it, and that to condemn and correct what was wrong in principle and mischievous in practice, was to take the surest and the speediest, and the most satisfactory means of attaining that object. We had thought, too, that sentiments similar to these were entertained by railway proprietaries generally, and that hope we will still indulge, notwithstanding that the Durham and Sunderland shareholders seem to view the subject in a different light—forgetting that there is no abuse so gross, no practice of corruption or jobbing so flagrant that, once introduced into the management of a railway, might not be justified and perpetuated on the plea which is now advanced.

We would remark in passing, that this practice of "withdrawing" resolutions is greatly to be deprecated, and is becoming far too common. A few honeyed words from a Chairman are sufficient to appease the apparently unquenchable zeal of many a railway reformer, and his obnoxious motion is, after some coquetting, "withdrawn," of course amid the tumultuous applause of Directors and their friends. Now this is not as it ought to be. We would not have Boards of Management annoyed and embarrassed by proprietors pressing frivolous resolutions to a division, nor the time of public meetings wasted in their discussion, to the neglect of more serious business. On the contrary, we would earnestly recommend to these motion-makers to "begin nothing of which they have not well considered the end," and not for the mere purpose of making a speech, or of obtaining a short-lived fame for generous forbearance, stand forward with propositions in which they do not mean to persist; but having once clearly ascertained that an abuse has crept into the conduct of their affairs, or that an improvement might advantageously be introduced, and having found that by no other mode than an appeal to the proprietors in public meeting assembled can such abuse be removed or such improvement carried into effect, we would have them stand firmly to their purpose, and not suffer themselves to be bullied out of it on the one hand, or cajolled out of it on the other; we would have "the sense of the meeting" taken upon the point at issue, even should the mover and seconder stand alone. One or two examples of firmness would have a good effect. By discouraging frivolous discussions, and insisting upon the legitimate decision of really important questions, shareholders would soon begin to learn that resolutions of public assemblies were of somewhat more moment, and deserved far more serious consideration, than those periodical displays of compliment and flattery with which the meetings of Railway Companies usually close, or those formal votes to which a part of their proceedings is too frequently confined.

We have said that the result of the management of the Durham and Sunderland Board must be anything but satisfactory to the shareholders. One member of the Board openly charges his colleagues with deceit, and had he not been very cunningly stopped in his exposition, by having his charges twisted into a personal allusion, there appears little doubt that more would have been forthcoming. Without any great lack of charity in our estimate of these Directors, we confess we should not be slow to believe that their conduct has been anything but what it ought to be, when it is not attempted to be denied that for two or three half-years they declared a dividend out of capital, at a time the undertaking was deeply involved in debt—not only in express violation of the provisions of their Act, but to the victimising (for we can call it by no milder term) of such of the public as expected straightforward, upright dealing from the Directors of a public Company. One of the proprietors present at the meeting, complained, not without cause, of these fictitious dividends. It was, he said, the declaration of a dividend "which had induced him and others at a distance to become shareholders. They had seen a dividend declared in the public papers, and concluded that the Company was prospering." The conclusion was natural enough. And these are the Directors of whom one must not venture to hint that they are undeserving of "confidence;" nay, who will not suffer their official conduct to be reformed, lest forsooth the public should imagine that the "confidence" of those whom they have so creditably treated, has been withdrawn! Immaculate Directors! kind, considerate, generous shareholders! It were a thousand pities to attempt to disturb a connection between parties so deserving on the one side, and so confiding on the other; but for the sake of the community at large, we beg to ask are there no means of punishing the parties who have been guilty of so wilful a misrepresentation? If no other means exist, they shall not, while we can help it, escape exposure. This is due no less to the Companies who conduct their business with honour and good faith, than to the protection of the public, against whose pockets such trickery is directed.

ONE or two letters have recently appeared in our pages with reference to an alleged competition between the London and Birmingham and Great Western Railway Companies, for the Cheltenham and other western traffic. It is seldom that we interfere in discussions carried on by our correspondents, but as there appears to be some misapprehension in regard to this matter, we have thought it desirable in a very few words to clear it up.

The London and Birmingham Company, then, are only carrying out a principle to which they have pledged themselves, namely, that *for the accommodation of the public* they will "book through" on all lines connected with theirs. Thus, in their very last Report, the Directors, after alluding to the arrangements entered into with the Gloucester Company, to "give additional facilities to the traffic on the respective lines," add, that they "are equally anxious on all occasions to promote the free transit of passengers and merchandise between the London and Birmingham and connecting lines, being satisfied that in no way are railway interests more effectually promoted than by a due regard to the accommodation of the public."

We must say, that if the London and

Digitized by Google

Birmingham Company "booked through" to their own prejudice on the lines branching from Rugby, although they received a greater pecuniary advantage from the Hampton traffic, it would have been with a very bad grace indeed that they could have refused, at the request of the Gloucester Company, to "book through" for *them*. We do not imagine that this arrangement will in any sensible degree affect the London and Birmingham receipts, but its refusal would had tended to increase the inconvenience of travelling to those who prefer the route *via* Birmingham, and at any rate would have been in direct opposition to the recorded pledges of the Directors.

A REPORT of the proceedings of the Chester and Birkenhead Railway Company held on Thursday last in Liverpool, will be found in another page, from which it will be seen that although the results of the last half-year's working do not justify the declaration of a dividend, the prospects of the Company are on the whole pretty favourable. A short article which appeared in our columns of last week spares us the necessity of adverting to some interesting points connected with the traffic which are alluded to in the Directors' Report.

This Company has, in our opinion, been hampered in their operations by their connection with certain ferries, which, it will be recollected, caused some rather sharp discussion at a meeting held a few months ago. It appears that they may now be relieved from the responsibility and expense of their bargain upon equitable terms, and as far as we can judge of the matter, this course seems far preferable to the proposed application to Parliament for power to raise further capital. We observe from the Liverpool papers that certain recent alterations in the Company's arrangements in regard to these ferries have caused considerable stir, and given rise to numerous complaints in that town and its neighbourhood. It is very reasonable for the public to look for facilities at the hands of railway proprietors, but then these proprietors must in the first instance be just to themselves before they are generous to others.

The opposition of the authorities of the town of Birkenhead to the Directors' design of constructing a tunnel for the convenience of the passengers using the line, supplies another illustration of the blind and bigotted hostility with which Railway Companies have too frequently to contend. When will these "petty tyrants" learn wisdom? When will they have sense enough to see that in attempting to annoy and inconvenience others, they are seriously, and perhaps irretrievably, injuring themselves?

THE following facts will, we think, fully satisfy the public that a frequent and extensive railway traffic can be accomplished without danger, and that where proper vigilance is used, safety to passengers may always be insured. During the Croydon fair, viz. from the 2nd to the 5th October, (four days) upwards of 700 trains passed either in or out of the London Bridge station of the Brighton, Croydon, and Greenwich Railways, conveying 40,322 passengers, without danger or inconvenience of any kind. Upon ordinary occasions 14 Brighton, 24 Croydon, and 112 Greenwich trains pass in or out of the London terminus daily.

THE *Morning Post*, the accredited organ of the new Ministry, says, "it is not true, as seems to be the guess of many newspaper writers, that any scheme for the increase of the existing rate of postage is at present under the consideration of the Government." This does not at all affect our argument of last week, namely, that the revenue might be benefitted, and the convenience and accommodation of the public much promoted, if the Post-office authorities were to avail themselves of the transit of railway trains for the more frequent dispatch of letters.

—o—

THE day mail to Brighton was conveyed by the railway for the first time on Wednesday last.

—o—

SIR FREDERICK TRENCH has given a notice of motion for "next session" for the appointment of "a Select Committee, to consider the practicability and expediency of a plan for improving the navigation of the River Thames between Vauxhall Bridge and London Bridge, for embellishing its banks, and for removing that accumulation of fœtid mud which pollutes the water, offends the senses, and injures the health of the inhabitants of this crowded metropolis: and further, to examine the practicability of a plan for erecting a railroad upon the embankment proposed on the north side of the river."

—o—

IT will be seen from an advertisement in our first page, that Mr. Francis Whishaw has it in contemplation to publish a work upon the Belgian railways. The able manner in which Mr. Whishaw completed his first volume on "The Railways of Great Britain and Ireland," leaves no doubt that the second volume of that work which is likewise announced will meet with adequate patronage. The plan of publication is by subscription, and we cordially recommend the scheme to the attention of our readers.

—o—

WE announced last week, that Mr. Glyn had resigned the Chairmanship of the North Midland Railway Company, and we understand he retires altogether from the Direction from the same reason that induced him to give up his presidency, namely, a conviction that the affairs of a railway in active operation can be efficiently managed by resident Directors alone. We are informed that another London Director (Mr. Hodgson) retires from the Board on the same ground.

—o—

A CORRESPONDENT, under the signature of "A Traveller," sends us the following:—

Distance from London to Brighton by railway..	50¼ miles.
" from Brighton to Havre by steamer ..	94
Total	144
Distance from London to Southampton by railway	76¾ miles.
" from Southampton to Havre by steamer	122
Total	198¾

The above shows a shorter distance to Havre, the principal landing place for Paris, of 54¼ miles.

October 1, 1841.

AN attempt is now making in Scotland to prevent the mails being carried on Sunday on the Edinburgh and Glasgow Railway, which is shortly to be opened, and various public meetings have been held, at which memorials to the Postmaster-General have been agreed to. The *Scotch Reformers' Gazette* states, that Mr. Leadbetter, the Chairman of the Company, is one of the most active of the advocates for prohibition; and yet (says our contemporary) "the other day—this very week—not later than *Sabbath last*—we have ascertained, beyond the possibility of denial, that he himself travelled from Liverpool to Dunoon on Sunday, on boar the *Achilles* steamer; that he actually ordered the captain of that steamer to land him at Dunoon, with his bag and baggage, which was done during the hours of *Divine service* last Sabbath Day, to the amazement of many of the natives of that place, two or three of whom were actually *hired* for the express purpose." If this be so, it says little for Mr. Leadbetter's consistency.

—o—

A PETITION was presented to the House of Commons on Monday, from "Robert Thomas Webb, for inquiry into the best means of preventing accidents on railways." It was ordered to lie on the table. We should imagine that Mr. Webb would not have far to search for "the best means," namely, unceasing care and attention on the part of those employed in the conduct of the traffic. On the following evening, a petition was presented from "George Walker, [query, Walter], for the adoption of measures to prevent Railway Companies from using carriages and engines whose centre of gravity is not abased below their axles." This would indeed be putting a stop to improvement! The petition was ordered to lie on the table. The same evening Colonel Sibthorp gave notice of the following motion for "early next session." How admirably qualified the gallant senator is to take this matter in hand all the world knows:—"To call the attention of the legislature to the number of most serious casualties that have occurred on the railroads, with a view of adopting some measures of preventing, as far as can be, the recurrence, and also of attaching a great degree of responsibility to the Companies connected therewith. Also to call the attention of the legislature to similar serious casualties with regard to steam vessels."

—o—

A BELFAST paper states, that in a recent election of police for the Ulster Railway, an order issued from the Board declaring that *married men were ineligible for the office!* We cannot see the necessity for this "system of exclusive dealing," as our Irish contemporary terms it. We should imagine that, other qualifications being equal, the married man would be the steadier, and consequently more valuable, servant of the two.

—o—

THE overland mail from India, which has just arrived, brings intelligence of the death of Sir H. Le Fleming Senhouse, senior naval officer in China. It will be remembered that Sir Humphry took a very active part in bringing forward the magnificent project of crossing Morecambe Bay, in connection with a railway route to Scotland. The gallant veteran's death took place on board of H. M. S. *Blenheim*, on the 14th of June last, off Macao. The immediate malady was a violent fever, brought on by great physical and mental exertions during an action which had taken place a few days before.

—o—

WE direct particular attention to a letter which appears in another column on the subject of the arrangements of the Grand Junction Railway Company in connection with the mail packets to Ireland. We regret to find an influential Company like the Grand Junction descending to such reprehensible conduct as is there described. It is such proceedings as these which arm the enemies of the system with their most formidable weapons, and which, if not denounced and corrected in time, will assuredly subject the Companies to a legislative visitation.

—o—

RAILWAY OFFENCES AND OFFENDERS.

On Monday, a man named Burdon was brought before the magistrates of the Marylebone police office, charged with being found drunk upon the line of the Great Western Railway, near the Paddington station, and with threatening the life of Mr. Andrews, superintendent of the locomotive department. It appeared that the prisoner had been discharged from the Company's service, as an inefficient workman. He had a very narrow escape with his life, a luggage train having a few minutes before passed the spot where he was found. He was fined 40s. for his drunkenness, and ordered to enter into his own recognizances to keep the peace for twelve months.

On the following day another drunken trespasser was brought under magisterial discipline. It appears that about dusk on Monday a labourer named Harber was seen by the driver of one of the Brighton down trains lying completely across the up-line of rails near Purley. He slackened his speed, and reported the circumstance to the driver of the up-train, whom he shortly afterwards met, and who on coming to the spot found the man to be very drunk. He was put into one of the carriages, and given into custody at the nearest station. On being brought before Messrs. Adams and Sutherland, magistrates of Croydon, the fellow said he had been to Croydon fair, and he could not tell how he came upon the line. The punishment inflicted by the Bench was a very salutary one. He was fined 5*l.*, and in default of payment *sent to prison for two months!*

James Rigby, a day watchman, in the service of the Manchester and Bolton Railway Company, was brought up at the Borough Court, Bolton, a few days ago, charged with robbery. It appeared, that the prisoner had been watchman three years at the Bolton terminus; and, several things having been stolen of late, the Manager, Mr. James Baxter, kept a careful watch upon all the servants. On Thursday week, he observed the prisoner going towards home with a basket, which he had noticed was empty a short time before. The basket was examined, and found to contain 14lb. of flour, which had no doubt been stolen from the warehouse. The prisoner's house was then searched, and they there found four cart sheets, all of which had been stolen from the warehouse. A sack containing a quantity of flour, and also supposed to have been stolen, was found in the house. The prisoner was fully committed to Salford gaol for trial.

An instance of the most heartless fraud was brought before the Chelmsford bench of magistrates yesterday week. It appears that Mr. Duckett has contracted for the execution of a certain part of the works of the Eastern Counties Railway, near Ingatestone, and had sub-let a portion of his contract to a "ganger," named Douce. This Douce accordingly hired 98 labourers, and having on Saturday night received money to pay them their wages, he decamped with the amount. The consequence was that the labourers and their families were reduced to such a state of distress, that some of them were compelled to apply for parochial relief. Their distress was aggravated by the bad weather, as they are paid only for the time they can carry on operations. The magistrates regretted they could not interfere. Mr. Duckett appears to have behaved with kindness and liberality to the poor men, but we are of opinion, that in every case of sub-letting, the original contractor should take care that the workmen are paid, and that the Company should hold him responsible for such payment. We regret to say that this system of swindling by sub-contractors is far from uncommon. We trust that the fellow Douce will be apprehended and meet with the punishment which his roguery so richly merits.

The following official explanation has been given of the circumstances connected with the carriage of gunpowder on the Glasgow and Greenock Railway, to which we adverted last week:—

"The packages containing the powder were taken to the railway station at Glasgow, and left to be forwarded without any intimation of what they contained; and it was only on a gentleman who came by the train mentioning their contents to one of the clerks, in the railway office at Greenock, that the slightest suspicion was excited. They were instantly carried down to a place of security, and within a few minutes afterwards the same gentleman, having given notice to the police of the circumstance, the packages were seized, and taken to the magazine. The attention of the Directors was called to this very flagrant breach of the Company's Act of Parliament; but as the magistrates had seized the powder and taken up the case, they consider it would be improper in them to subject the offenders to a double prosecution, the more particularly as the highly respectable house to whom the powder belonged, assured the Directors of their entire ignorance of the transaction, and their determination to punish the young man in their employment who had fallen upon this mode of transmitting the powder in order to screen his own disobedience of orders. Had the magistrates not seized the powder, the Directors would assuredly have prosecuted the parties; but, as they had every reason to believe that such a fine would be inflicted upon the offenders s would deter from a repetition of this very dangerous offence, and which by the Police Act the magistrates are fully authorised to inflict, they considered themselves justified in leaving the matter in their hands."

It is added that no consideration will induce the Directors to refrain from a prosecution under their own Act, should gunpowder, or any other article of a dangerous quality, be again transmitted or attempted to be sent by the railway. This is a very proper determination. The gunpowder, we have since learned, was forfeited by the magistrates, and very properly so.

Another case of stone-throwing is noticed by the *Dundee Courier*, as having been brought before the local magistrates on Monday last. The offence occurred on the Dundee and Arbroath Railway, and the culprit was a boy named Butter. He was fined two guineas, or to be imprisoned in Bridewell for 40 days.

RAILWAY EXCURSION FROM BIRMINGHAM TO LIVERPOOL.—We understand that the arrangements for the final trip to Liverpool, on Tuesday next, in connection with the Mechanics' Institution and Athenæum, proceeds very satisfactorily. It is intended that the train should stop at the Walsall and Wolverhampton stations, to take up parties from those towns. The engagement of steam vessels to take the party a voyage to the delightful watering place of Rhyl, in North Wales, will doubtless prove attractive to such as are desirous of enjoying the picturesque and beautiful scenery of the Welsh coast.—*Midland Counties' Herald.*

NORTHERN AND EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL General Meeting of the proprietors of the Northern and Eastern Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, WILLIAM CRAWSHAY, Esq., in the Chair, for the purpose of confirming the forfeiture of certain shares which had previously been declared by the Directors.

The SECRETARY (Wm. Bourne, Esq.) having read the advertisement calling the meeting,

The CHAIRMAN said, he was happy to state that the number of shares, the forfeiture of which it had been intended to propose for confirmation at the present meeting, had that morning been considerably reduced. Of the shares thus redeemed, forty-five were held under circumstances which required the warranty of the proprietors to take them from the forfeited list. They belonged to a widow, whose affairs were at present in the Court of Chancery; and the representatives of the widow had offered to pay the outstanding calls by a bill at three months. He had no doubt the bill was a good bill, and would be met when it became due, and under these circumstances, it was for the meeting to say whether the Directors ought to accept it or not.

Several proprietors having expressed an opinion that there could be no objection to such a course,

The CHAIRMAN said, he would in that case withdraw the forty-five shares from the list. The honourable gentleman then moved a resolution confirming the forfeiture of 335 shares (the numbers of which were read), such forfeiture having been declared by the Directors on the 3rd and 16th of June, and 1st July last. It was explained that due notice in writing had been given to the parties in whose names they stood.

Mr. MERCIER seconded the motion.

In answer to questions, the Chairman explained that of these 335 shares, there were 160 upon which the 10th and 11th calls had not been paid, and 175 upon which the 11th call only was due. This was exclusive of the 45 shares already referred to.

The CHAIRMAN explained, that with respect to 145 of the last-named shares, they had received notice of a remittance, but from some cause or other it had not been advised by the bankers. Their only course, therefore, was to confirm the forfeiture, but should the remittance be duly advised, the Directors would cancel the forfeiture. If that were done there would remain only 30 shares upon which the 11th call had not been paid. There would not be many of these forfeited shares to dispose of, as the sale of 1 in 10 would make up to the Company the deficiency occasioned by the arrears of calls.

A PROPRIETOR hoped that the remittance referred to included interest from the date of the call.

The CHAIRMAN said, they never accepted arrears without charging interest.

The resolution for the confirmation of forfeiture was then carried unanimously.

The CHAIRMAN said, it was necessary that the Directors should be empowered to dispose of the shares thus forfeited, although he had hopes that the whole of them would be redeemed. In any case the number to be sold could not, he would repeat, exceed 1 in 10.

Mr. WEDGWOOD thereupon moved a resolution, to the effect that the Directors be authorised to

Digitized by Google

dispose of these shares in such manner as is directed by the several Acts of the Company.

The motion having been seconded by Mr. Bentley, was carried unanimously.

The CHAIRMAN said, a calculation of the average gross traffic upon the line since its opening had been put into his hands by Mr. Bentley. It appeared from that statement, that for the first six months after the opening, the receipts amounted to 349*l.* per week; for the next three months to 680*l.* per week; for the next three to 929*l.* per week; and for the last three weeks to 1,007*l.* per week.

Mr. BENTLEY thought they had the promise of a much larger traffic when the line should be further opened.

The CHAIRMAN hoped and believed so, although they had now to face the winter months.

Mr. S. N. BARBER, jun., inquired what the whole cost of the line to Spelbrook (30 miles from London) would be.

The CHAIRMAN said, it would not exceed 23,000*l.* per mile.

Mr. BARBER—To finish the line properly?

The CHAIRMAN—To finish it entirely, including a proper supply of carriages.

Mr. WEDGWOOD asked if any day had been fixed for the opening to Spelbrook.

The CHAIRMAN replied in the negative. They might, however, look for the opening immediately after the first 14 days of fine weather. In the present state of the weather it was absolutely impossible to go forward with the works.

Mr. BIDDER (Engineer) confirmed this statement, observing, in answer to a question, that 10 days of fine weather would not suffice to finish the line to Spelbrook, but it could be effected in a fortnight.

Mr. BENTLEY thought it would he very undesirable to open any further portion of the line prematurely, or hastily, in such weather as the present.

The CHAIRMAN said, the opening to Spelbrook would take place earlier than had been originally intimated.

Mr. BAGSHAW (Director) said, there were no tunnels, or other difficult works, upon which any unexpected delay could arise.

The CHAIRMAN was happy to state, that since the commencement of the meeting 30 more of the forfeited shares had been redeemed.

Mr. ROSKELL (Director) remarked, that under these circumstances there could not be more than 60 shares to dispose of under the authority granted to the Directors that day.

The meeting, which was but thinly attended, then separated.

The praise of railway travelling was rather originally advocated by a companion of ours, whose admiration was chiefly excited by its putting an end to highway robberies. "Sir," said he, "it has extinguished one of the most extensive, dangerous, and worst species of crime. A foot-pad, sir, cannot put a pistol to the boiler, and stop the train by threatening to blow its brains out, so that the passengers may be plundered secure.—*Literary Gazette.*

HUNTING BY STEAM.—On Monday, as the Shoreham branch of the London and Brighton Railway was proceeding to Shoreham, a hare ran on the rail for some distance, but eventually poor puss was overtaken, and cut in half by the train.—*Daily papers.* [This is by no means an unusual occurrence.]

CHESTER AND BIRKENHEAD RAILWAY COMPANY—GENERAL MEETING.

[From the *Liverpool Standard* of yesterday.]

THE Half-yearly General Meeting of the Proprietors in the Chester and Birkenhead Railway Company was held yesterday, in the Clarenden-rooms, South John-street; the Chairman of the Directors, WILLIAM DIXON, Esq., presided. There was a full attendance of proprietors.

The Chairman having opened the meeting—

Mr. MALLABY, law-clerk, read the Report of the Directors for the past year, of which the following is a copy:—

REPORT.

Since the last meeting of the proprietors, many circumstances have arisen which render it imperative on the part of the Directors to lay before the proprietors on the present occasion an ample statement of their proceedings, and more detailed account of the Company's transactions than have hitherto been either practicable or expedient.

In the arrangement of the accounts they have adopted the 30th day of June and the 31st day of December, in each year, as the periods to which the accounts of the Company will in future be made up, as being better calculated to equalise the results of each half-year's working of the line, than any other division of the year that could be fixed upon.

The accounts to be laid before this meeting commence with the opening of the line on the 23rd of September, 1840, and close with the 30th June, 1841, a period of rather more than nine months. The various items of which they consist will be read to the meeting in detail. The following abstract will show the gross receipts, expenditure, and net proceeds during that period.

The total amount received for the carriage of 191,402 passengers, and for the carriage of parcels and a small quantity of merchandise, from 23rd September, 1840, to 30th June, 1841, is		£15,209 0 5
For casual passengers, per Monks' Ferry		133 5 6
		£15,342 5 11
Expended during the same period in the working of the line and Monk's Ferry	£9,180 17 11	
Interest on loans £2876 8 4		
Deduct interest received	30 0 0	
	2,846 8 4	
		12,027 6 3
Surplus on traffic account to 30th June		£3,314 19 8

As three months have elapsed since the period to which the preceding statement refers, and as the proprietors may be desirous of knowing the actual state of the funds of the Company at a later period, the Directors have caused an additional statement to be prepared, and laid before the meeting, which will show the entire receipts and expenditure of the Company, from the 30th June to the 30th September last.

The amount received for the carriage of 111,811 passengers, and for the carriage of parcels, &c., from the 30th of June to the 30th September, is		£9,081 6 5
The amount expended, and paid, in the same space of time is	£,3314 19 8	
The amount expended, but not yet paid, less materials &c., on hand is	107 15	
		3,422 14 8
Leaving a surplus, on three months, of		£5,658 11 9

The expenditure, though great in proportion to the receipts, does not arise from an extravagant expenditure in the working of the line, but from a variety of causes which the Directors will endeavour to explain. The following comparison between the expense incurred in working this line and that of other railways, which has been prepared and laid before the Directors by the Company's chief Engineer, Mr. J. Dixon, proves that many lines of railway whose expenditure in proportion to their gross receipts appear much less per cent., is actually greater if viewed in the light of a charge for the actual performance of work.

Mr. Dixon states that "the average rate of fare received by the London and Birmingham Railway, as appears from their last half-year's Report, is 2¼d. per passenger per mile.

"The Birmingham and Gloucester is stated to be 2¼d.

"The York and North Midland, as far as I can ascertain from their Report, about 3d.

"The Manchester, Bolton, and Bury, about 2d.

"I cannot obtain the necessary information respecting the Liverpool and Manchester, nor the Grand Junction Railways, but it is a matter of public notoriety that their fares are (if a little) not much lower than those lines before mentioned, therefore, instead of carrying passengers on our line during the last twelve months at an average rate of fare not exceeding 1¼d. per passenger per mile, we had obtained the same remuneration as the London and Birmingham Railway, viz., 2¼d. per passenger per mile, our receipts (provided we had had the same traffic that we have had) would have increased 15,906*l.*, making our gross income 39,769*l.*, without being obliged to incur any additional expense, as it costs nearly the same sum to convey a passenger along a railway, whether he pays 1¼d., or 2¼d. per mile."

It thus appears that one cause of the excessive expenditure, in proportion to the receipts on the Chester and Birkenhead line, arises from the extreme lowness of the fares. Under present circumstances nothing more can be done to obviate this evil than what the Directors have already accomplished. There is one heavy item of expenditure to which the Chester and Birkenhead Railway is at present liable, which no other line in England is subject to, that is the expense incurred in carrying the passengers from Liverpool to the terminus in Grange-lane, and from thence to Liverpool.

Besides the interest of money expended in the purchase of Monk's Ferry, which ferry is devoted almost exclusively to the conveyance of railway passengers, and the cost and deterioration of the boats, the enormous sum of 2,890*l.* per annum has been paid for wages, coal, and other expenses in working the ferry and in the hire of omnibuses. The Directors wish to draw the attention of the proprietors to this matter, because they consider it a subject for grave consideration, whether such an incubus upon the income of the railway (borne down as it is by low fares) should be suffered to exist.

The Directors had indulged a hope that a portion of this evil would have been obviated by the construction of a tunnel from the station at Grange-lane to the Monks' Ferry, and they were induced to believe that the Commissioners of Birkenhead would readily give the Company their permission to break the surface of one of their streets, for the purpose of commencing the tunnel, the Directors therefore purchased the land necessary for this purpose, and opened a negotiation with the Commissioners of Birkenhead on the subject, never doubting but that their proposal would be acceded to; but, to their surprise and regret, their propositions, which were fair and liberal in the extreme, and calculated to have proved beneficial to all parties, were met on the part of the Commissioners, by demands of so irrelevant and extraordinary a nature, as compelled the Directors to abandon the negociation they had commenced, and with it, their hopes of being able to construct a tunnel, until a time should arrive when a more rational view of the matter would be taken by the Birkenhead Commissioners, and when the funds of the Company would be in a state more equal to so great an undertaking than they are at the present moment.

The maintenance of the railway, which hitherto has been borne by the contractors in performance of their several contracts, is now about to fall upon the funds of the Company. The Directors have therefore caused a survey to be made of the whole line by their Engineer, and they have also availed themselves of the opinion and great practical experience of George Stephenson, Esq., relative to the present state of the line, and from the high character given of the complete order and stability of all parts of the works, the Directors hope they will be able to contract for the maintenance of the way on favourable terms.

It is not the intention of the Directors to propose a dividend out of the surplus on the traffic account at present. They are aware that should the proprietors insist upon it, the Act of Incorporation gives them a right to enforce the division of that surplus, but the Directors feel assured that a careful inspection of the accounts will convince each proprietor of the inexpediency of any dividend being made until the time of next meeting, when the present surplus along with the profits which may accrue during the present half year will be available. The Directors hope that the trifling delay will be the last sacrifice the proprietors will be called upon to make towards the future well-being of the undertaking.

The strong opinion expressed by the proprietors at the last meeting relative to the management of their ferry property, together with the large capital which the Company has invested in the ferries, and the hitherto unprofitable nature of that investment, have made them a subject of deep interest to the Directors; they have carried into effect the wishes of the proprietors by placing the management of them in the hands of members selected from the Board of Directors to the exclusion of all parties not elected by, and therefore not responsible to, the proprietors, and having found that the rate charged to persons contracting for ferryage by the year was so low that it would not pay the expenditure which it caused; that the system of contracts opened a wide door to fraud, and deprived the Board of all check upon the management of the funds derived from the ferries, the Directors resolved to decline entering into any further contracts with the public, and to put up check gates, each person passing through to pay his ferry fare, which being only twopence ought not to be complained of. This alteration, although it has proved obnoxious to a few respectable individuals, will not affect the great mass of the passengers; and it appears to the Directors the only effectual mode they could adopt that would enable them to discharge their duty to the public, with a due regard to the interests of the proprietors.

The Directors have obtained from Mr. Price a renewal of his previous offer of the sale of his ferry right in perpetuity, and which offer they have formally accepted. It has therefore become necessary to make application to Parliament for permission to make such addition to the capital of the Company as will enable the Company to pay Mr. Price, and discharge other liabilities which press upon the establishment. The Directors have instructed the law clerk to take the usual steps for having this matter effected, in the mode agreed upon at the last meeting of the proprietors.

The Directors have devoted a large portion of their attention to the details of the several departments of the establishment, with a view to the effecting a diminution in the expenditure wherever that could be done, without prejudice to the efficient working of the line—the savings yet made are trifling: a proposal has, however, been made to the Board by one of the sub-Committees for permission to place the whole responsibility of the establishment (under the Directors) upon the chief Engineer, Mr. Dixon and to dispense with the services of a paid Treasurer. It was urged that, by the adoption of this plan, a more vigorous, efficient, and economical system of management would be introduced, a considerable expense avoided, and the evils attending a divided responsibility got rid of. This proposition was the subject of discussion at several meetings of the Board Ordinary and special; the consideration of the subject was post-

Digitized by Google

poned till the 23rd October. Since this decision took place the resignation of the Treasurer has forced the matter again on the Directors, who will give it their serious consideration.

Since the last meeting of the proprietors, the Postmaster General has ordered the London mail for Dublin to be forwarded by the Crewe and Birkenhead Railways to the packet station off Birkenhead, this arrangement, though likely to be an unprofitable one to the Company has proved a boon to those who travel between London and Dublin, the journey having been more rapidly performed than it could have been done by any other route, and with much less inconvenience to the traveller. The Directors have made it a point to arrange the arrivals and departures of their several trains, so as to harmonise with the arrangements made by the Grand Junction Company on the Chester and Crewe line, and believing as they do that it is the interest of both Companies to act in perfect harmony with each other, they will at all times endeavour to co-operate with the Grand Junction Company as far as in their power.

It is with feelings of gratitude and thankfulness that the Directors are enable to inform the proprietors that although the passenger traffic has increased, that it has on the average of the last three months reached to 1 240 persons per day, no accident has occurred either to passengers, contractors, or workmen on the line, nor has there been any injury sustained by the engines or carriages from any collision, although many of the persons employed as assistants were inexperienced hands, the arrangements in many instances imperfect, and the rate of travelling on the line equal on the average to any line in kingdom.

In conclusion, the Directors consider that they are justifiable even in the midst of the many difficulties which still exist, in congratulating the proprietors that so much has been accomplished, and that the prospects for the future are so encouraging. They feel the most perfect assurance that the elements of prosperity exist abundantly in this undertaking, and that firmness and zeal in the management, coupled with the support and confidence of the proprietors, will, ere long, enable them to surmount all difficulties, and bring the affairs of the Company to a prosperous issue.

WILLIAM DIXON

Mr. MALLABY then said he was prepared to make a communication at the request of the Directors, which was that negociations had to a certain extent been resumed upon the subject of the ferries; but they took place at so late a hour yesterday, that they could not properly be incorporated in the Report just read. They were, however, still under the consideration of the Directors. (Hear, hear.)

The accounts were then read by Mr. Mallaby. The first was the general statement of the receipts and disbursements of the Company up to the 31st August; another was a statement of accounts from the 23rd September, 1840, to the 30th June, 1841; and the third a statement of accounts from the 30th June to the 30th September, inclusive, the leading features of which are detailed in the Directors' Report.

Mr. JAMES MULLENEUX said, he rose to express his satisfaction at the Report just read, and his entire approval of all the measures adopted by the Directors, as far as that Report had put the proprietors in possession of them, carrying out as he conceived they had, the views and intentions of the last special meeting. He begged to congratulate the Chairman and the meeting upon the improved prospects now held out, that, by attention, the Chester and Birkenhead Railway would yield something like a fair remuneration for the capital invested in it; but to obtain that object would require no ordinary degree of judgment and decision in their future operations, and he trusted that that meeting, and the proprietors generally, would accede to them their decided support. It appeared to him that upon the two points alluded to in that Report would depend the prosperity of the concern —he meant the management of ferries, and the abandonment of the system of conveying passengers from the ferry to Grange-lane. With regard to the ferries he was aware that much unpleasant feeling was created in the minds of many interested parties; but he did not hesitate to say, even though it might draw upon him a part of the odium which attached to this measure, that he trusted the Directors would not allow any consideration of abuse or cajolery to cause them to deviate from the equitable principle they had adopted of making every individual pay the same for his passage across the water. This appeared to him only just and equitable; to those who objected and found fault with it, he would say "we have purchased a property, and the change we are about to make is to give us a reasonable remuneration for the capital we have expended." (Hear, hear.) What right had the proprietors of land or houses in Birkenhead to call upon the Company to make a sacrifice for the sake of promoting their interest? (Hear.) He thought it quite unreasonable. If the Company must consent to it as a boon to one part of the community, let them not give it to the opulent owners of land or magnificent mansions, but to the squalid inhabitants of courts and cellars. Let them have a passage across the river at least upon equal terms with the rich. Besides, it appeared from the statements made, that there were between 9,000 and 10,000 inhabitants at Birkenhead and Woodside, whilst there were only 800 who contracted. So, these 800 were to be on a very different footing to those who could not, he supposed, afford to pay a large account at once! Therefore they gave an advantage to the rich which the poor were deprived of. With these observations he begged to move the adoption of the Report, and the statement of accounts.

Mr. GERARD seconded the motion.

Mr. HUDSON complained that the average charge per mile for carrying passengers on the York and North Midland line, stated in the Report, on the authority of the Engineer, at 3d., was fallacious.

Mr. DIXON, the engineer, explained the mode by which he had arrived at that result; and a long conversation of no interest ensued upon the subject. A motion was made by Mr. HUDSON, seconded by Mr. JONES, that the passage be expunged altogether, but on a division it was lost. The report was then confirmed, and ordered to be printed.

A resolution was next passed, on the motion of Mr. HUDSON, seconded by Mr. JONES, requesting the directors hereafter to have the report and a statement of the accounts printed and ready for delivery at the offices of the company one day before the general meeting.

Another resolution was passed, on the motion of Mr. HEALING, seconded by Mr. LAW, to the effect that when Directors were to be appointed a list of those shareholders, who were eligible for the office, should accompany the circular convening the meeting.

Mr. MALLABY, in answer to a question from Mr. MARTINDALE, said there had been a report prepared by the Woodside Ferry directors, to the board of directors, but it was not now in the room; but, if it were the wish of the meeting, it could be printed along with the report. The accounts, however, were in his hands, and they could of course, be read.—He then read the accounts for the year ending the 5th of August, from which it appeared there was a balance of profit, in the year, of 2,539*l.* 19s. 1d.

Sir J. WALMSLEY said this statement should not be allowed to go before the public without some observation. The statement showed so much profit, whilst there was a considerable loss by the working of the ferry. In that account there was no notice taken of the interest upon 25,000*l.* the purchase money, nor was there any account taken of the depreciation of stock, which had been very considerable, for when taken it was valued at 26,000*l.* and, according to a valuation made yesterday, it was worth only 12,000*l.* These and several other items would reduce the 2,500*l.* profit to 100*l.* This he considered was sufficient to justify the directors in no longer contracting to ferry passengers over the water.

Mr. SOWERBY said he had a few questions to ask the directors concerning this Woodside Ferry. The first was, when were the directors of the Chester and Birkenhead Railway Company authorized to purchase the lease of the ferry?

Mr. MALLABY read a resolution of the directors on this subject, which was moved by the Rev. Mr. Follett, and seconded by Mr. James Marshall, and the proprietors were informed of it on the 10th of April, 1839.

Mr. LAWRENCE said Mr. Sanders spoke strongly in favour of the proposition at the time, and he himself opposed it as strongly.

Mr. SOWERBY inquired what amount the directors had invested in the concern?

Mr. MALLABY said 24,850*l.* The arrangement was that one railway share of 50*l.* should be given for two 25*l.* shares in the ferry company, which were to be taken up at par. There were 1,000 shares in the ferry company, all of which were taken except six, and the 994 came to 24,850*l.*

Mr. SOWERBY asked whether the Woodside company were not in debt very largely at the time of that transaction?

Mr. MALLABY replied that they were, but he did not know the amount.

Mr. SOWERBY said that the concern was insolvent, and he asked the treasurer (Mr. James) if he knew how much they owed?

Mr. JAMES was understood to reply in the negative.

Mr. Mallaby said the purchase of the ferry by this company was made exactly as it stood, giving the proprietors the amount of their shares at par, which was 25*l.* Whatever debts the ferry company had, of course the railway company purchased them.

Mr. SOWERBY had always thought as much.

Mr. MAY said, the statement of debts ought to have been furnished to the proprietors at the time of purchase.

Mr. LAWRENCE said, it was most desirable the proprietors should know the amount of debt, otherwise they could not tell what they had actually paid for the concern.

Mr. MAY said, that at a meeting subsequent to that which confirmed the purchase of this property, Mr. Mallaby eulogised it. To eulogise it, and be instrumental in the purchase, without having a statement of all the liabilities of the concern, was most extraordinary and strange.

Mr. MALLABY called upon the meeting to hear him. Every proprietor at all conversant with the proceedings of that day, would know he had abstained from every thing that was not legitimately his duty as clerk.

Mr. MAY said, he alluded to an occasion subsequent to the purchase, when Mr. Mallaby was better acquainted with all the circumstances. Mr. May then quoted a passage from a speech of Mr. Mallaby, in which he spoke of the purchase of this ferry being likely to yield a handsome per centage of profit.

Mr. MALLABY said, if that were language of his, he maintained it was correct, as he understood the matter; and he maintained, at this hour, that the purchase was likely to be most beneficial to the railway. That was what he said then, and now repeated.

Sir J. WALMSLEY said, that in consequence of the recent proceedings of the Directors in doing away with the contracts, or of something else which he knew not, the Directors last night, at four o'clock, received an offer from a gentleman now present, who informed the Directors that he was prepared to carry it out, by himself and others, to purchase the Woodside Ferry—to give to the Company the whole amount of their purchase money of the ferry 25,000*l.*, 6,000*l.* for their boats, which would make 31,000*l.*, and 42,000*l.* the whole amount to Mr. Price for the fee simple of the ferry, paying back to the proprietors of the railway the whole amount they had expended, including the sum to be paid to Mr. Price, and giving them the Monks' Ferry right in perpetuity, to carry railway passengers only to and from Liverpool. Going a step further, they said that, if necessary, they would carry the whole of the railway passengers across the river at a rate to be agreed upon, which rate he (Sir J. Walmsley) believed would be a very moderate one, and make the condition of the purchase dependent entirely upon their power to make the tunnel, which was requisite to make the railway perfect, and complete it to the water's edge. The offer was not now in a very formal state; but Mr. Jackson, one of the Directors, had made it to the Directors, and it would be for consideration of the Directors, and then of the proprietors, whether they would sanction such a sale of their property. Some of the Directors objected to the sale on this ground, and he did so too, that they would not obtain the right of perpetuity of carrying all passengers, whether railway or otherwise, by Monks' Ferry. This, then, was the present bone of contention. If the proprietors thought fit to accept the offer, and to sanc-

Digitized by Google

tion the sale, it would give them full and entire means either of carrying railway passengers themselves, or to have them carried at a low price, and it would ensure to them a tunnel, and a proper terminus to the railway. These considerations would obviate some of the difficulties raised by Mr. Sowerby, inasmuch as it would show there were other objects and views in purchasing these ferries than at the moment met the eye of those unacquainted with the details. If this offer was carried out fully, then the proprietors would have all they could desire.

Mr. JACKSON took the credit, if any there was, and also the blame, if there was, for having been the originator and the suggestor to his co-directors of the propriety of purchasing first of all the lease of Woodside ferry, and secondly, the fee simple from Mr. Price. The first time the measure was brought before the proprietors, he stated, very fully, the necessity of having in their own hands full power and control over a ferry, otherwise they would be just as subject to the caprice of a body of owners as the inhabitants of Birkenhead had, within the last three weeks, been subject to theirs. He had proved, and he was borne out by the facts, that the cost of transporting their passengers and merchandize from Liverpool to the railway and back, taking them at 1100 a day, would be as much as the receipts of the ferry; and he stated that unless they could get a better communication, the railway was not complete. To attain that object was his desire. The Directors entertain these views; they purchased the lease of Woodside Ferry Company, and afterwards agreed with Mr. Price for the fee simple, without which Monk's Ferry could not be used, as the whole right of ferry between Birkenhead and Woodside was vested in Mr. Price. He felt proud in having accomplished all that the railway required. A great deal of suspicion had been cast upon him, because he was interested in property at Birkenhead, but he hoped and trusted that time would show he had his duty to the proprietors in this Company. (Hear, hear.) He was prepared to offer, and would stand to the offer, even if deserted by those who had undertaken to assist him, to put the Company in the same position as if they had never bought the ferry—with one exception, that they should have besides the consent of the Commissioners of Birkenhead to give them the tunnel, and for ever have the right of carrying passengers of their own, as they liked and when they liked. (Hear, hear.) This if they accepted it, would prevent the necessity of their going to Parliament; and the money they would receive would enable them to discharge all their debts and make the tunnel. He would ask them, whether it was not better to limit their capital—whether they were railway proprietors or ferry proprietors? His meaning was, that Monks' Ferry should be used for the express purposes of the railway, but not as a competing ferry with Woodside, for passengers. This offer he was prepared to carry out.

A long conversation followed upon the several points involved in this offer, at the end of which

Mr. HUDSON moved, and Mr. HARDMAN seconded, a resolution to the effect that the Directors be authorised to treat with Mr. Jackson and others, for the sale of the Woodside Ferry, subject to the confirmation of their proceedings by a special general meeting of the proprietors.

A vote of thanks to the chairman and directors was then passed, on the motion of Mr. HUDSON, and the meeting separated.

EASTERN COUNTIES RAILWAY.—On Wednesday the Eastern Counties' Railway Company commenced preparation for diverting the road in Duke Street, (Chelmsford), whilst the viaduct is in the course of erection over it. A number of men were employed in clearing the ground, now occupied as gardens, facing the Friends' Meeting House. The temporary road will commence on the upper side of the entrance to the town field, and crossing a portion of the town field will terminate in its junction with the Broomfield road, by Railway Square.—*Essex Standard.*

NEW RAILWAY BREAK.

To the Editor of the Railway Times.

SIR,—In your last number was inserted an account (with engraving) of a new railway break, which, however new in London, is of some standing here—a *working* plan having been shown by myself some months since—I say working plan, because no provision is made by Mr. Terence Flanagan to put the apparatus together or to take it to pieces. For instance, how can a nut with *right hand* thread pass over a *left hand* screw, or *vice versa*? No joint of the rod is represented in the engraving, consequently "Mr. Terence Flanagan" did not intend to employ any. With regret for his *Irish* oversight,

I am, Sir, yours, &c.

JNO. FRANCIS.

5, Charles-street, Brighton, Oct. 7, 1841.

PARIS AND ROUEN RAILWAY.

To the Editor of the Railway Times.

SIR,—Having seen an article in a recent number of your journal, which contained some inaccuracies in reference to the Paris and Rouen Railway, I beg to lay before you the following brief statement of facts:—

The capital of the Paris and Rouen Railway Company is 2,000,000*l.* sterling, or 50,000,000 francs. In England the law would prescribe that this sum of 2,000,000*l.* should be fully subscribed for in shares, and the Act of Parliament would give power to raise in addition thereto, by way of loan 666,000*l.* According to the experience of most railways in England, lucky would that set of proprietors be, who ultimately expended no more than this additional 666,000*l.* and have not the addenda also of new shares, new halves, new quarters, new fifths, or some other denomination of new, and of course good things. Besides this power to raise 666,000*l.*, there is generally given in English Acts of Parliament the privilege of borrowing money on security of the remaining calls, when one half of the subscribed capital is paid up. None of these powers or privileges are given by the French law, and it perhaps is fortunate for the proprietors, not of the Paris and Rouen Railway in particular, but of French railways in general, that it is so: because it renders it more incumbent on those whose duty it is to conduct the works to their completion, to purchase the land, and to furnish the line, to be careful in their estimates and their expenditure.

The 2,000,000*l.* for the Paris and Rouen Railway is raised thus:—

72,000 shares at 20*l.* each	£1,440,000
Lent by the French Government....	560,000
	£2,000,000

The terms of the loan by the French Government are, that the Company are to pay 3 per cent. interest, and return the capital in 20 annual payments, the first payment to be made three years after the time allowed for the completion of the railway. But none of this 560,000*l.* is to be advanced to the Company until they shall have expended the whole of their subscribed capital of 1,440,000*l.* Considerations arising out of the mode of completing the capital influenced the decision of the meeting of the proprietors, and the Directors were compelled to acknowledge that the progress which had been made in the principal works since they propounded the scheme for postponing the calls rendered their own proposition very untenable. As a shareholder (English) I was present at the meeting, and it was very ably shown by a French proprietor that although the funds in hand at the present time were larger than necessary, yet the future expenditure would be much faster than the means of calling money, and that the great desideratum of all railway proprietors, viz., an early opening of the line and the realization of a dividend, would be jeopardised by any present delay. A few figures will, I think, show that this proprietor was right. As the law now stands, the last call, to make up the 20*l.* per share, will be due on the 12th October, 1842. Now this and all preceding calls must not only be made but paid up in full and expended before the French government advance any part of their 560,000*l.* Suppose it to take two months to collect and refund the last call and all arrears; for arrears there will be more or less, in all Railway Companies. This would take us into December, say the end of the year 1843. *Eh bien*, it came out in the course of the meeting, though I forget whether it is stated in the report, that the Directors and their engineer fully contemplated opening the whole line early in the spring of 1843, so that there remains but some four months in which to obtain from Government and to expend this 560,000*l.*, whereas if the calls had been postponed for six months, it would have been impossible from want of money, to finish and open the line at the time now fully relied upon for that desirable event. It was also found that the difficulties in obtaining the land were merely delays consequent upon required legal forms; that these were at an end, and that money would be wanted for the purpose of paying for the land. Indeed, I am told, in answer to recent inquiries, that the Company expect to have the whole of the land in their possession in a short time.

Under these circumstances I, for one am glad that the calls were not postponed, but that a plentiful supply of money, expended with judgment and energy, will put us shortly in possession of a working line and a dividend.

I am Sir, your obedient servant,

AN ENGLISH SHAREHOLDER.

RAISING RAILWAY CAPITAL BY ANNUITIES.

To the Editor of the Railway Times.

SIR,—Is it in the power of Railway Directors to raise money in the shape of annuities for life on the security of the proceeds of a given railway?

If it be, I think many individuals, in common with myself, would gladly avail themselves of such an investment. I am in my 52nd year; I have a strong suspicion with reference to most annuity offices and agents; I am not satisfied with the terms of the government tables; my money is worth more; but if a Railway Direction were competent to make an offer, I would take it into serious consideration.

QUESTOR.

Wareham, Oct. 5th, 1841.

[We do not think the Companies have power to raise money in the mode proposed, unless indeed some of them might do so under their amended Acts, which empower them to raise further capital "by the issue of new shares, bonds, debentures, or in any other way which may be deemed expedient." The scheme is, nevertheless deserving of attention, and should any of the Companies have power, and be disposed, to treat with our correspondent, a letter addressed to him at our office, will be forwarded.—ED. R. T.]

TRAVELLING TO DUBLIN—THE GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—Having occasion lately to travel from London to Dublin, I was desirous of proceeding all the journey with the mail, so as to perform it with all possible expedition. On arriving at Birmingham I accordingly took my ticket for Chester, being aware from an article I had read in your valuable paper, that it was not possible to reach the mail steam-boat if, as formerly, passengers proceeded to Liverpool. At Chester we had the trouble and annoyance of changing our luggage and carriages, and taking a ticket to Birkenhead. Between Crewe and Chester we had lost time, and the Birkenhead people did all they could to make up for it, travelling their 14 miles in 21 minutes, being at the rate of 40 miles per hour. An omnibus was in waiting to convey us to the water side, and a steamer thence to the mail boat, both in the Railway Company's establishment, and for which no charge was made.

Digitized by Google

The mail packet started immediately, and we perceived a small open boat from the Liverpool side making signals, and upon nearing them I recognised some of my fellow-passengers, who had gone by Liverpool. The Captain acting under positive orders, refused to stop, and they had the mortification and expense of waiting in Liverpool that whole day. I was informed that a similar scene takes place every morning, and many remarks were made to the disadvantage of the Grand Junction Company, who, in their rivalry with the Birkenhead Railway, sacrifice the convenience of passengers, as nothing would be easier than to make it publicly known, by a notice at the booking-office at Birmingham. It was even said that the delay from Crewe to Chester was winked at to allow passengers to be in time at Liverpool, which does not at all take away from the injustice of the whole proceeding, nor excuse the needless trouble of changing carriages at Chester. Having often observed articles in your paper in which the cause of passengers on railways was advocated, I feel excused in troubling you with this statement.

And remain, Sir, your obedient servant,

S. D.

October 4, 1841.

GREAT WESTERN RAILWAY—VARIATION OF TIME.

To the Editor of the Railway Times.

Sir,—I beg to call the attention of your readers, who are interested in the prosperity of the Great Western Railway, to the very great inaccuracy with which the variation of time at the several stations is stated. I am ignorant of the person who has adjusted the time, but as far as I can judge, the matter has not been referred to the Astronomer Royal or other competent party. It is, however, of importance, for the errors might easily deprive persons of their places, and detain them at Bridgewater, Bristol, &c., at very great inconvenience and expense. There are errors in all the statements, but it will be sufficient to call the attention of your readers to what is said of Bristol and Bridgewater. The variation is said to be exactly the same at Bristol as at Bath, though Bristol is to the west of Bath, and the variation is more than half a minute, a portion of time long enough to allow the train to have passed and the doors to be shut. Persons coming according to the exact variation of the time would thus be frequently disappointed. The precise London time is carried down the line every Thursday, and to those who see the time-pieces at the stations the error is of no consequence, but this is not the case with the generality of passengers, and if their time should be adjusted by a dial, or some more accurate instrument, they would, if they regulated their movements by the real variation, often be too late when they ought to have found the door open, and the trains in waiting. The word "about," is understood with each of the numbers, and this alone is very indeterminate, and may mean, as far as we know, half a minute more or less. Bridgewater time is stated to be about fourteen minutes different from the London time, but in reality it is not more than twelve minutes, if I may judge from the common maps. The errors, though unnoticed, have probably been the cause of much delay, and consequent inconvenience, and therefore as a friend of the Great Western Railway, I should wish to see them rectified, and the variation of time at each station accurately marked in minutes and seconds.

I am, Sir, your obedient servant,

F. B.

Draycot, 5th October, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—In a letter signed "Jack Tar," in your number of 2nd instant, allusion is made to my letter in your number of 18th ult., relative to the dividends of the Great Western Railway. In one respect he has had recourse to misrepresentation (unintentional no doubt,) in saying "what will become of the promised 10 per cent. dividend at Christmas next?" On reference to my letter it will be seen that instead of a promised dividend of 10 per cent. at that date, I calculated only for the current half-year on a dividend at the rate of 6 per cent. per annum, and I have now the satisfaction to add that this has been more than justified by events since, as the traffic during the last five weeks, ending 26th ult., has yielded 504*l.* more than was estimated for that period; and the traffic for a moiety of the half-year being now ascertained, there is little room for apprehension of my estimate for these six months, not being fully realised. As predicted, the goods traffic has rapidly increased, is increasing, and on good grounds may be expected to continue to do so.

However inconsistent it may appear to your correspondent, that in comparison with the Birmingham, "with a greater outlay and less traffic, the Great Western is to declare a greater dividend," it is nevertheless only the strict truth, and this is fully accounted for by the fact of the Great Western having raised a larger proportion of their funds by loans at 5 per cent., and consequently a smaller proportion by calls entitled to participate in dividends, and of the Birmingham being burthened with a disproportionate dividend on their quarter shares, which though they have paid up only one-6th of their nominal amount, share in the dividends as if the other four-fifths had been paid up. I draw no invidious comparisons between the two, and my object now is not to disparage the Birmingham, but merely to defend my calculations from the criticisms of your correspondent.

With respect to the capitalisation, the reason why the effect on the dividends of capitalisation of the loans has been for the present kept out of view, is that the necessity for it by the maturity of the debentures is so far distant and so gradual, being spread over a series of years extending from 1843 to 1849, as to afford ample time for an adequate increase of traffic and profits at cotemporaneous dates, according to the augmentation which invariably is experienced by the effect of time, and improvements on all lines of high character. So far as regards the capitalisation of that part of the loans which does not consist of deferred calls, it is not too much to anticipate that by the time their capitalisation need be effected, the absolute and regular payments of dividends of 10 per cent. per annum, and upwards, will enable new shares to be created at a very high premium, so that the addition of stock entitled to participate in the dividends, putting this for instance at 100 per cent. premium, will not exceed one-half of the nominal amount of such loans to be then liquidated.

In this way, on the datum of 6,300,000*l.* expenditure (which is still contended for until some better reason and authority are adduced than have yet been advanced against it) there will finally result a capital of 5,400,000*l.*, on which it will require 540,000*l.* net income to yield a dividend of 10 per cent. per annum, and this would be equal to a gross income of nearly 16,000*l.* per week, 832,000*l.* per annum, or 135$\frac{3}{10}$*l.* per mile per week, or 118$\frac{1}{2}$ miles, amounts which may be confidently expected, according to all experience, long before the dates at which capitalisation to a large extent will become necessary.

In estimating the future traffic of the Great Western it should be kept in view that it will be materially augmented both on the main and the branch lines, and in regard to passengers as well as goods, as the Bristol and Exeter becomes extended beyond Bridgewater, and the Cheltenham Union beyond Cirencester, and as the projected extensions beyond Exeter into West Devon and Cornwall, are carried into effect—whilst there is another probable source of augmentation in the anticipated establishment in the Bristol Channel of stations for the steam packets for America, West Indies, and other destinations. Railway communication between London and such important localities as Plymouth and its vicinity, and Falmouth, is an object of too much national importance to be postponed for many years. In addition to all which, there is the power of increasing the traffic and total profits by a judicious reduction of the present high fares—a power which, in the opinion of many persons conversant with the subject, may be exercised to the great increase of their net revenue, especially as regards the branches, to the proprietors of which it is in justice due, in consideration of the excessively low rents at which the leases of them were obtained.

For no reason whatever but a "because," which amounts to neither more nor less than an obnoxious vituperation of Civil Engineers generally, your correspondent has advanced an assertion and conjecture, that the final cost of this railway will be seven millions. Until he can give some reason for it I take leave to prefer the authority and knowledge of facts possessed by Mr. Brunel, to the unsupported and arrogant dictum of "Jack Tar," whatever may be his sources of information.

The concluding part of your correspondent's letter contains no argument, and requires no answer.

For the sake of brevity I do not send the details of my calculations in support of the results above stated, but they are ready if required.

Yours, respectfully,

F.

Bath, October 6, 1841.

RAILWAY SALARIES.

To the Editor of the Railway Times.

Sir,—The subject of railway salaries has been so seldom mentioned in your paper, and knowing the kind manner in which you are always willing to insert any thing which is likely to prove beneficial, I take the liberty of introducing this most important subject to the public notice. I find upon inquiry on most of the principal lines in the kingdom, that the clerks, or such officers, in every department are most illiberally treated by the Directors. Men who are holding the most trustworthy situations, where large sums of money are constantly passing through their hands, and whose hours of attendance are frequently from ten to thirteen hours a day, exposed to every species of insult from the passengers, and the constant annoyance of their superior officers—these men are only in the receipt of from 80*l.* to 120*l.* per annum; but more particularly is this crying evil evinced in the junior department of the engineering establishment, where their whole time is engaged on the works, exposed to all weathers, and with a vast deal of responsibility attached to them. The average amount of salary received by this class of persons, does not average more than from 150*l.* to 180*l.* per annum, and that, be it remembered, only so long as the works continue. They are then thrown upon the world, without a home and without a shilling; never having had an opportunity of saving any thing from their income, it being but barely sufficient to support them. Most of this class are gentlemen, and men of good education—without which they are not capable of fulfilling the situation. Could the Directors be surprised at hearing that the Company's money had been misappropriated by these two classes of persons, provided they had a fair opportunity? What is easier than for clerks at the different stations to be in league with the different conductors, and plunder the Company to a considerable amount? What is easier than for a sub-Engineer to be in league with the contractor, and plunder them in a much greater degree? It is a most grievous complaint, more particularly when it is well known that enormous sums are useleasly squandered upon the works; and to counteract those evils the poor subs. are made to suffer. Directors and Secretaries think to cover their faults by producing a statement of low salaries at the half yearly meetings of the shareholders. I believe the Railway Companies, many of them that I have seen, have been fortunate in having in their employment gentlemen, and men of honour; if they wish to retain such people, ere it be too late they must increase their present amount of wages. I have travelled upon many lines, and have heard railway clerks, conductors, and others, discussing their various amounts of pay, in the hearing of the passengers, and making remarks sufficient to show strong symptoms of dissatisfaction. I should advise the

Digitized by Google

Directors to inquire into this, and judge for themselves, whether it would not be better to have trustworthy people about them, than to hold out a bait for dishonesty.

I am, Sir, yours, &c.,
A FRIEND TO THE SUBS.

London, October 6, 1841.

LOCOMOTIVE EXPENSES—YORK AND NORTH MIDLAND AND MANCHESTER AND LEEDS LINES.

To the Editor of the Railway Times.

SIR,—Would you, or some of your correspondents, be so good as to inform me how it is that there should be so essential a difference in the expense of locomotive power as appears, by their respective Reports, to exist on the York and North Midland and Manchester and Leeds Railways? On the former the expense is about 9d. per mile—coke being 28s. per ton, and on the latter the expense is 1s.—although the cost of coke is exactly one-half (14s.) per ton.

I am, Sir, yours, &c.,
JACOB.

BIRMINGHAM AND GLOUCESTER AND YORK AND NORTH MIDLAND RAILWAYS.

To the Editor of the Railway Times.

SIR,—I shall be much obliged if any of your readers can solve one question for me, which, simple as it appears, I am not able to comprehend, namely, why the York and North Midland shares last year should have commanded a premium of 30 per cent. (according to the *Railway Times*), when their takings were about 39*l.* per mile per week, while the shares of the Birmingham and Gloucester Company, who at the present time are taking about the same sum per mile, are at 43 discount—the cost of of that line being only 2,000*l.* per mile more.

I am, &c.,
A RAILWAY SHAREHOLDER.

October 1, 1841.

MONOPOLY IN CARRYING.—THE GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

SIR,—I well recollect when the canals were the only means of conveying the principal traffic from Liverpool to Manchester: and the proprietors, in their silver slippers, would not listen to the repeated solicitations of the carriers for more liberal terms. This caused some intelligent and influential gentlemen to consider whether no means could be devised to break down a system of monopoly; and hence the concocting and execution of the Liverpool and Manchester Railway. The proprietors of the canals to Birmingham, London, &c., were also possessed of this intolerant spirit of monopoly, and repeatedly refused the request of the carriers, and this produced the Birmingham and Liverpool Junction Canal, which, with its connecting lines, formed a strong opponent to the old line, and soon obtained a great share of the heavy loading from Birmingham and neighbourhood to Liverpool. What is more surprising is, that the Directors of the Grand Junction Railway should follow up this monopolising spirit, and persist in doing so, after they know that their traffic on the line is not equal to what it ought to be, and would be, providing they were equally liberal with other lines of railway in admitting any carriers on their line; and it is rather remarkable that some of these supporters of monopoly were the most vehement against the old canal monopoly, and the most strenuous for adopting means to put it down, and which they ultimately accomplished. Let these gentlemen beware lest their reign of monopoly be short, for it is well known that their conduct is narrowly watched, and unless more liberality be shown to the carriers, their line will at some future day meet with such opposition as will cause them to repent of their conduct. Their trade from Manchester is comparatively small, and even from Liverpool not what it might be, and this notwithstanding the great exertions they make to increase their business. The Directors say they will have their share of business by some means, and are trying to get iron from Wolverhampton at 11s. 6d. per ton, (it has been said that they can afford to convey it for 6s. per ton,) and as they have not convenience at Liverpool for such business, and cannot deliver it to vessels in the Docks, they wish to employ the Docks flats to convey it from Preston Brook to Liverpool for them, and thus make a convenience of the Docks for a time. This is all very well, in *merely* increasing their weight—return and paying a better commission to their sub agent, but as regards any profit accruing therefrom to the shareholders, it is out of the question.

If the Company wish to increase their business let them open their line to the carriers, and then, and not until then, will they obtain their proportion of the carriage of goods, and stop the many and merited complaints of the public.

OBSERVER S.

Liverpool, October, 1841.

MONOPOLY IN CARRYING.—THE GRAND JUNCTION COMPANY.

To the Editor of the Railway Times.

SIR,—The Report of the Manchester and Leeds Company, in your number of the 25th September, having added another string to my bow, in opposition to the system followed by the Grand Junction Company, has induced me to make a comparative statement of the progress of these two companies, including also the London and Birmingham, to which I will add a few comments, and then leave the matter in your hands.

About this time last year, I showed through your valuable Journal, that the Grand Junction Company's receipts for six weeks ending 7th March, 1840, amounted to 9,512*l.* and I now proceed to state those of the three Companies as follows:

	Six weeks ending 25th Sept. 1840.	Six weeks ending 25th Sept. 1841.
Grand Junction.....	£9,633	£9,891
London and Birmingham ..	13,586	18,063
Manchester and Leeds.....	not opened throughout.	11,243

To make the comparison strictly correct, the Grand Junction receipts should be reduced about one-fourth for *carriers* expenses, to which the other two Companies are not subject.

So that, notwithstanding the usual paragraph, in the half-yearly reports of the Grand Junction Directors, of "their having made arrangements (or measures in progress) whereby they hope to increase the traffic in goods, &c." it will be seen, by the above statement, that the result is not very encouraging to the shareholders, whilst the other two Companies, who pursue a different system, namely admit the carriers on their lines, and receive a toll for finding waggons and locomotive power only, have progressed considerably.

Contrast the receipts of the Grand Junction Company, with its termini of Liverpool and Manchester in the north, and Birmingham at the other end, and having been open several years, with those of the Manchester and Leeds, a line very recently opened throughout, and only half its length, but following a liberal course! Great credit is due to the active and intelligent officers of this concern, who have not failed to employ the advantages which presented themselves, arising out of the monopolising system of the Grand Junction Company, which Company, I firmly believe, is at this time losing more than 100*l.* per day, by the *business being driven* off their line in the attempt to drive Messrs. Pickford and Co. from it. In this affair, their proceedings reminded me very forcibly of the fable of the "Dog and the Shadow," which seems to have been fully verified by the results.

I might enumerate, the North Midland, the Midland Counties', and other lines lately opened, who are pursuing the liberal or open system in the goods traffic, with great success, but I trust, sufficient has been stated to show that the gripe-all policy is not always the most prosperous.

I am, Sir, your most obedient servant,
AN OBSERVER.

London, Oct. 5th, 1841.

RAILWAY TRAINS ON SUNDAY.

A rumour that it is intended to remove the Sunday mails between Edinburgh and Glasgow from the common road to the railway, about to be opened, has given rise to great alarm among a portion of the religious public. We confess that we do not participate in their fears, as we think the amount of necessary desecration—if we may be allowed the phrase—will be considerably lessened by the change. A railway train employs greatly fewer hands, in proportion to the number it conveys, than an ordinary coach; and in consequence of the rapidity with which it performs the journey, a much smaller encroachment on the sanctity of the Sabbath is required. Looking at the question, therefore, as one of degree, we think the advantages are on the side of the railway; and if mails are to be run on Sunday at all, we should certainly pronounce this mode of conveyance decidedly preferable to the other. At a meeting, however, held at Glasgow on the subject, there seemed to be a disposition to prevent the running of Sunday mails altogether. With every respect for the motives by which the various speakers were actuated, we cannot but think that they viewed the question in a narrow and unfair light. The admirable report to the American Congress on the subject of Sunday mails, appeared to us quite conclusive against their total suspension. In that document it was argued that the delay of the mails one whole day out of seven "would give occasion to the employment of private expresses to such an amount, that probably ten riders would be employed where one mail stage is now running." In hundreds of cases too, the delay of a letter would be attended with great hardship and even suffering; and we therefore regard the conveyance of the regular mails on Sunday as a work of necessity sanctioned by religion itself, and as by far the most economical mode in which the necessary communication can be effected. We repeat that we have great respect for the motives of those engaged in the present movement; but at the same time we cannot but think that they exaggerate the evils likely to result from the running of mail trains on Sunday, while they wholly overlook its advantages.—*Scotsman.*

COACH ACCIDENTS.

ON Thursday morning, as the Tunbridge and Lewes mail was proceeding to the latter place, shortly after leaving Tunbridge, it broke down, severely injuring the driver. Assistance was procured, and the bags forwarded on horseback. In consequence of the heavy rain during the night the letters and papers were so completely saturated with the wet and damaged with the friction that, on reaching Brighton, they were obliged to be dried before they could be sorted, and even then some of the Directions were so obliterated that it was impossible to make them out.—*Sussex Express.* On Monday morning last, soon after the *Railway Times* coach, heavily loaded, had left Worksop, to proceed towards the Eckington station, the axle-tree broke, by which the coach was overturned; but we are happy to state that none of the passengers were hurt, and the driver escaped with a slight bruise on the knee. Great praise is due to Mr. Durham, of Worksop Mill, for the kind manner in which he accommodated the passengers, till a fresh vehicle was procured.—*Derbyshire Chronicle.* The up-mail from Portsmouth to London met with a two-fold accident on Monday night last, a few miles above Petersfield. In the first place one of the wheelers fell, at a place called Scrubb's Corner, and was so hurt that he was obliged to be left behind, and the coachman was proceeding to do the rest of the stage with a "unicorn" team, but had not get more than a mile, when, on descending the hill near the Flying Bull, at Rake, the horses, from some cause, started off, and becoming unmanageable, ran the coach with great force against the bank, by which it was upset, and the horses furiously dragged the coach on its side for several yards. The passengers all escaped unhurt, with the exception of one gentleman, who had his ankle dislocated.—*Hampshire Telegraph.*

Digitized by Google

BLACKWALL RAILWAY.—On Sunday afternoon, soon after two o'clock, while the down train was on its way to Blackwall, the rope broke, about a quarter of a mile from the station in the Minories. The carriages soon stopped, and the whole train, passengers and all, were conveyed back to the station. After a delay of upwards of half an hour the train was drawn along the south line of the railway to Blackwall, the north line remaining idle until the rope was mended. A delay in the departure of the next trains, both from London and Blackwall, took place in consequence of the breaking of the rope. —*Daily Papers.*

NEW LOCOMOTIVE.—M. de Ridder has completed a new locomotive, in which he has found means to turn to account the quantity of steam which is suffered to escape in other locomotives. The result of this improvement is a great saving of fuel, besides diminishing the weight. The dimensions of these new locomotives are such as to hinder the use of them on iron railways. Perhaps M. de Ridder had in view the realization of his projected railway by St. Nicholas. However that may be, we have examined attentively this machinery in all its parts, and it appears to us to be one of the most satisfactory of the kind hitherto made in Belgium. —*Brussels Paper.*

EDINBURGH AND GLASGOW RAILWAY.—Tenth Call of £5 per Share.—Notice is hereby given, that in pursuance of a resolution of the Board of Directors, passed in terms of the Act of Incorporation, the Proprietors of Shares in this Company are hereby required to pay a further instalment of £5 per share making £10 per share paid up; on or before Tuesday, the 19th day of October next, to any of the undermentioned bankers —

Glasgow—The Glasgow Union Banking Company.
Edinburgh—The National Bank of Scotland.
Ditto—The Western Bank of Scotland.
Liverpool—The Bank of Liverpool.
Manchester—Messrs. Wm. Jones, Lloyds and Co.
London—Messrs. Glyn, Halifax, Mills & Co.

Interest at the rate of 5 per cent. per annum will be charged on all such sums as remain unpaid after the date above appointed.

By order of the Directors,
JOHN LEADBITTER, Chairman.

Edinburgh and Glasgow Railway, Head Office,
7, North Queen Street, Glasgow, Sept. 4, 1841.

GUARANTEE SOCIETY.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the first object of this Society. To relieve Relatives and Friends from painful obligations and responsibilities the second.

The experience of the first year during which the Society has been eminently successful already numbers among its patrons the principal Bankers, Merchants, and Public Institutions in the metropolis, numerous districts, and by providing Guarantee for their interests, has secured a competency for several hundred individuals.

DIRECTORS.

Thomas Attree, Esq.	G. Palmer, Esq.
David Cantar, Esq.	Major Prosser, F.G.S.
James Colquhoun, Esq.	James Rew, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Mosely, R.E.	B. G. Winnus, Esq.

STANDING COUNSEL—R. Ryder Dean, Esq.

SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public and particularly to Bondsmen the following advantages

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.

2. Individuals who are already sureties for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.

3. The expensive and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.

4. All risks attending irresponsible sureties will be removed.

5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are sureties, will be prevented.

Also to Agents, Travellers, and Clerks having, or being desirous of having, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,
THOMAS DODGSON, Secretary.

SIR WILLIAM BURNETT'S PATENT for the Preservation of Timber, Canvas, Cordage, Cotton, Woollen, &c. from Dry Rot, Mildew, Moth, and premature Decay.—The value of this discovery has been amply proved in Her Majesty's Dock Yards and elsewhere. Official reports and specimens of wood, canvas, and other articles, may be seen at the office. The process is simple, inexpensive, and perfectly innoxious in its use, as applied to ship building it purifies bilge water, and retards oxydation of metals. By the process, green wood may be rapidly seasoned.

The Patent Material may be purchased or licenses for tanks granted to noblemen, gentlemen, builders, upholsterers, pianoforte makers, sail makers, and others. When for the purposes of trade on very advantageous terms to the licensee. Timber of all dimensions, planking, canvas, cordage, ships' sails, awnings, rick cloths, tents, and all other articles of linen and woollen manufacture, are received for preparation at the proprietor's waterside premises, Copenhagen Wharf, Britannia Bridge, Limehouse.

Particulars and terms may be obtained on application at the Office, or by letters, post paid, addressed to the Secretary, 4, Castle court, Birchin-lane, Cornhill.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, an extensive and Valuable MANUFACTORY for the construction of Steam-engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam-ships have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron works, and belonging to the same Proprietors, is an extensive rope, sail, and felt work, which will also be disposed of, either with or without the Iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam engines, Sugar mills, and General Machinery, these Works, from their local situation and pecuniar facilities within themselves, will be found particularly well adapted.

The whole of the Buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the mean time, the work will continue to be carried on in all its branches, and orders executed as usual.

A plan and specification of the premises have been printed, which may, with all particulars and further information upon the subject be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W.S., Edinburgh, or Messrs. Jopp and Smith, Advocates, Aberdeen, in whose hands the title deeds of the property are.

TO HARD-STONE MASONS.—WANTED at the new Houses of Parliament, London, 150 good MASONS. The Masons at this great national work having thought proper to strike against their Foreman, because "he required more work to be done than they the Masons considered a fair day's work," Messrs Grissell and Peto, the Contractors, beg to inform the Masons, that there is no reason whatever for the objection of the men towards the Foreman, and any good workman who can do a fair day's work, will find one of the best jobs in the kingdom, and that their comforts are better considered than they can possibly imagine, the whole of the men work under cover, and there is no lost time—wages for good men 5s. per day. Apply at the works immediately.

GRAND JUNCTION RAILWAY.—Reduction of Fares and Additional trains, between Birmingham, Walsall, Wolverhampton, and Stafford.—The public are respectfully informed, that on and after Monday, the 27th of September, the fares between Birmingham, Stafford, Wolverhampton, and Walsall, will be reduced. And in order to increase the public accommodation, mixed trains will leave Birmingham and Stafford, at the following hours, until further notice.

FROM BIRMINGHAM.		FROM STAFFORD.	
H. M.		H. M.	
6 0	A.M.	9 45	A.M.
9 0	A.M.	*11 22	A.M.
*11 30	A.M.	*1 45	P.M.
3 30	P.M.	5 0	P.M.
*5 0	P.M.	7 45	P.M.

*Mixed trains between Birmingham, Wolverhampton and Watsall only; and those marked thus † do not stop at Walsall.

N.B. Passengers are requested to take notice, that they should be at the Second Class Station, ten minutes before the time stated in the table, and that no person can be booked after the arrival of the train at the respective stations. Further information, and a scale of fares, may be had on application at the Company's stations.

By order,
MARK HUISH, Secretary.

OFFICE OF THE GOVERNOR AND COMPANY OF COPPER MINERS IN ENGLAND, OLD BROAD-STREET, LONDON, August 12, 1841.—The Court of Assistants of the Governor and Company of Copper Miners in England, hereby give notice, that they will sell on Thursday, the 14th day of October, now next ensuing, at their offices in Old Broad Street, 1000 tons of British tin, the property of British Mining Adventurers, and lying at the Miner's Smelting Works, at Trerelle House, near Penzance, and at Truro House, in Truro.

				Deposit per Lot.
Best Granulated Tin	20 tons,	in lots of	1 ton each	£10 0 0
Tin Plate Grain....	90	"	10 blocks ea.	20 0 0
Refined.....	370	"	10 "	20 0 0
Common	370	"	10 "	20 0 0
Ingots, assorted sizes	50	"	2 tons each	20 0 0
Bar, in brls. of 4 cwt	100	"	10 barrels ea.	20 0 0

Prompt 14th January, 1842. No interest or discount. Deposits to be paid on Saturday, the 16th of October. The Sale to commence at 12 o'clock precisely.

Catalogues, containing particulars and conditions of sale, will be delivered either at this office, or by the Company's Brokers, Messrs. Short and Mahony, No. 1, Newman's-court, Cornhill.

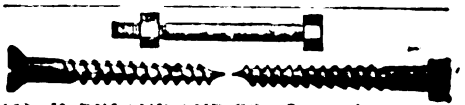
The Public Sales of Tin by the Company will henceforth be held quarterly—viz., in January, April, July, and October, and the quantity put up will be regulated by the average quarterly consumption.

N.B.—The Company binds itself not to make sales of tin during the quarter beyond the quantity advertised.

DRAWING IN ALL ITS BRANCHES.—Mr. G. B. MOORE'S CLASSES for INSTRUCTION in Geometrical and Isometrical Projection, including the Delineation of Shadows applicable to Architecture, Engineering, and Machinery, Architecture, perspective, landscape, and the figure, illustrated by outline or form, light, shade, and colour, will be as follows:—

First course, from 15th October to Christmas; second, from Christmas to Easter; third, from Easter to end of June.

Morning Class—Tuesday, Thursday, and Saturday, from 2 to 4 p.m.



Evening Class—Monday and Friday, from 6 to half-past 8.

Fee for each course, £2 2s.

These classes may be attended by persons not intending to go through any other course of study in the College.

P. F. MERLET, Dean of the Faculty of Arts.
WM. SHARPEY, Dean of the Faculty of Medicine.
CHAS. C. ATKINSON, Secretary to the Council.

University College, London, October 5, 1841.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

TO BE SOLD BY PRIVATE CONTRACT, In such Lots as shall be agreeable to the Parties, all the remainder of that excellent and valuable stock of Iron Machinery, Tools, &c., belonging to the late firm of MARSHALL ROBERTS & Co., Lion Foundry, Wood-street North, Liverpool, consisting of

One Horizontal High Pressure Steam engine and Boiler, of 16 horse power.

One High Pressure Beam Engine and Boiler, of 18-horse power.

Several large Slide Lathes, suitable for turning railway wheels, shafting, and for general purposes.

Upwards of forty Screws, Machines of various kinds, most of which are valuable tools, some of them nearly new, and all in good working condition.

A number of Cast Iron Beds, suitable for Lathes or other Machines, some of which are planed.

Five large Punching Engines complete, a compound Self-acting Drilling Machine fitted up with eight drills, each to act separately or all at once, nearly new and in excellent condition.

A Foundry Fan, two Cupolas, and two good Foundry Cranes, a quantity of Railway Axles, and a variety of other railway work in a partly finished state, besides a number of other things suitable for Engineers, Founders, Smiths, and Boiler Makers, all of which will be sold very cheap, as the Assignees are desirous of clearing every thing away from the premises as soon as possible to avoid rent and other expenses.

Apply to Mr. John Finch, Jun., Sir Thomas's Buildings, or to Mr. Duncan Littlejohn, Lower Sparling street, Assignees.

N.B. The goods may be seen at any time by applying at the Foundry.

Liverpool, 28th September, 1841.

The trains marked thus ☞ consist only of first-class carriages, and stop only at Croydon, Red-hill, Three Bridges otherwise Crawley, and Hayward's heath, and perform the journey in two hours. The trains marked thus ‖ are mixed, but call only at Croydon, Red-hill, Three Bridges, and Hayward's-heath, and perform the journey in two hours. The Express Train stops at Croydon only, and performs the journey in an hour and three quarters.

Fares to and from London and Brighton:—First class carriages, 14s. 6d.; second class, 9s. 6d.; children in second class, 6s. 6d.

Fares to Croydon:—First class, 2s.; second class, 1s. 6d.

N.B.—No passengers will be conveyed from London to New-cross, or New-cross to London.

Children under 10 years of age in first class carriages will be charged second class fare. No charge made for infants in arms.

Bills containing all particulars as to the conveyance of carriages, horses, dogs, luggage, and parcels, together with information as to omnibuses, post horses, &c., may be had on application at the offices of the Company, 10, Angel-court, Throgmorton-street; or at the following booking-offices:—Griffin's, and Green Man and Still, Oxford-street; Hatchett's, Piccadilly; 41, Regent-circus; Spread Eagle, ditto; Golden Cross, Charing-cross; George and Blue Boar, Holborn; Old Bull, Holborn; White Horse, Fetter-lane; Cross Keys, Wood-street; and the Spread Eagle, Gracechurch-street; also at the terminal, London-bridge, and Brighton; and all the stations on the line.

By Order,
THOMAS WOOD, Sec.

27th September.

LONDON AND BRIGHTON RAILWAY COMPANY.—CONTRACT FOR COALS.—Notice is hereby given, that the Directors of this Company are ready to receive tenders in writing from such persons as may be willing to contract for supplying them with 500 tons of coals monthly, for the manufacture of coke for 8 calendar months, commencing the first day of November next, such coals to be delivered at Kingston Wharf, Shoreham Harbour; and also for 50 tons of coke weekly, made from Tanfield-moor's or Windsor Pontop coals, deliverable at New Cross for the ensuing 3 months, subject to approval.

The tenders for coals must express in words, the lowest price per ton at which they will be supplied, including wharfage, weighing, cartage into the Company's pens at Kingston, and trimming. And those for coke, must state the lowest price per ton, and must be sent addressed to the Company's Secretary, at their offices in Angel Court, Throgmorton-street, London, marked in the lower left hand corner "tender for coals and coke," on or before Tuesday the 12th inst., after which day, no tenders will be received. Further particulars respecting coals, may be had by applying to Mr. Dean at the Railway Station, Brighton, or at Kingston Wharf, Shoreham Harbour.

By order,
THOMAS WOOD, Secretary.

10, Angel Court, Throgmorton Street,
October 1st, 1841.

LONDON AND BRIGHTON RAILWAY.—NOTICE.—On and after Monday next, the 11th instant, the Express Train from Brighton will leave the Station at a quarter past 8 o'Clock a.m. instead of half-past 8, calling at First Class Stations, viz., Hayward's Heath, Three Bridges, Red Hill and Croydon, arriving in London at a quarter past 10.

In deference to the recommendation of the jury at Hayward's Heath, on the 4th instant, the Directors have issued orders that no four-wheeled Engines be used on the line; and they have also ordered that a LUGGAGE VAN be placed between the Tender and the First Passenger Carriage in every Train.

By Order,
THOS. WOOD, Secretary.

10, Angel-court, Oct. 6, 1841.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—RAILWAY BARS.—Wanted about 20 Tons of good secondhand Rails, about 25 lbs., flat bottomed, to be delivered at Stayley Bridge Wharf, or at the Summit Tunnel, Woodhead. Price and particulars to be sent to

JOHN PLATFORD, Secretary.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

TUESDAY'S SALE.

VALUABLE, YOUNG, SOUND, SEASONED CART HORSES.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on TUESDAY, October 12, 1841, commencing at Twelve o'Clock precisely, Twenty-four remarkably fine-shaped, young, powerful, CART HORSES, the genuine property of Messrs. J. and G. THORNTON, sold in consequence of having completed their contracts on the London and Brighton Railway. Also, a powerful bay mare, 6 years old, 16 hands high, a good hunter, the property of one of the Engineers of the railway, who has no further use for her.

Twenty valuable, active, short legged, seasoned CART HORSES, the property of Messrs. B. and N. SHERWOOD, of Belvidere-road, Lambeth, that have been employed on the Eastern Counties Railway, sold in consequence of the contract being partly completed.

The above superior young seasoned powerful Draught Horses, are worthy the attention of Brewers, Distillers, Wharfingers, Wholesale Warehousemen, Corn and Coal Merchants, Contractors, and all persons wanting them for immediate work, having been selected with great care and judgment, regardless of expence, and being now in fine working condition.

Colours—Bays, Blacks, Browns, Greys, and Chesnuts.

On view and catalogues had two days before the sale.

ON SALE.—TWO NEWLY-FINISHED SIX WHEELED LOCOMOTIVE ENGINES, with 12 inch cylinders, copper fire boxes, 5 feet driving wheels, and of the usual gauge.

The engines embody all the latest improvements in their valve gearing and motions.

Canal-street Works, Manchester.

James Kibble and Co. ..... Glasgow.
James Gunn ..... Leith.
John M. Beattie, 14, Clement's-lane, High street, Dundee.

This Rope has been in use for standing rigging in her Majesty's navy, and a great number of merchant vessels for upwards of six years, and is giving the highest satisfaction. It is also employed in various mines and railways in different parts of the kingdom, but reference is particularly made to the London and Blackwall Railway, where it has been in use upwards of twelve months.—"It gives entire satisfaction, and has never broken."—*Vide extract of the Tenth Report, Thursday, 15th instant.*

DUBLIN AND DROGHEDA RAILWAY.—CONTRACT for WORKS postponed 14 days.—Notice is hereby given, That the letting of Contract No 4 on this Line of Railway, extending over a distance of about 7¼ miles, is postponed from the 14th to the 28th inst when the same will be let according to the form and conditions previously advertised.

GEORGE ALEX. HAMILTON, Chairman.

Office, 27, Marlboro'-street, Dublin,
October 5, 1841.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This Invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 2, Regent street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-Alley, and R. Tyas, Paternoster row, Hyde & Co. and G. Bell, Fleet-street, Mann, Cornhill, and by all booksellers and Newsmen.

ROBINSON'S RAILWAY DIRECTORY FOR 1841, containing the Names of the Directors and principal Officers of most of the Railways in Great Britain, derived from authentic sources, price 1s. *Railway Times* Office, Fleet-street.

Just published, a new Edition of ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth *Railway Times* Office, and Hyde and Co., Fleet street.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122 Fleet-Street, and sold by all booksellers.

BOLTON AND PRESTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, in sums of not less than £200, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent per annum, to be paid half-yearly at the Company's Office. The Tenders are to express the sums and the term of years for which the same are proposed to be lent, and to be addressed to the Secretary at the Company's Office, Bolton.

By order of the Board of Directors,
PETER SINCLAIR, Secretary.

Bolton, 25th September, 1841.

Just published, price 7s. 6d.,

A LIST OF ALL THE PATENTS FOR INVENTIONS IN THE ARTS, MANUFACTURES, &c. &c. By ANDREW PRITCHARD.

To Inventors, Patentees, and Manufacturers, this work will be found of great utility, as by it they will be enabled to ascertain all the Patents taken out on any particular article, the names of the Inventors, the date of the Patent, and consequently the time it will remain in force. To Solicitors engaged in making assignments, licenses, &c of Patents, it will be valuable for reference. It contains 6,277 Patents.

Also, price 30s.,

A HISTORY OF INFUSORIA, Living and Fossil, with 500 coloured Engravings.

Also, price 1s.,

A LIST OF 2,000 MICROSCOPIC OBJECTS, with remarks, &c.

Whittaker & Co., Ave Maria-lane; Pritchard, 162, Fleet-street.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated By FRANCIS WHISHAW, Civil Engineer, M. INST., C. E.—The flattering testimonials which the author has received from various quarters, as to the utility of the first volume, which was produced at an expense of upwards of One Thousand Pounds, and Sixteen Months constant attention, induce him to propose to the railway public the production of a second volume, which, however, can only be done on the plan of subscription.

Railway proprietors, therefore, and others who would like to be in possession of much additional information on the important subject of railways, will be so kind as at once to forward to the author their names as subscribers to the Second Illustrated Volume which would be issued at the price of One Guinea.

THE RAILWAYS OF BELGIUM practically described and illustrated, in One Octavo Volume, price 10s. 6d., may also be produced in the same manner.

FRANCIS WHISHAW.

Gray's Inn, London, and Haverfordwest, Pembrokeshire, October 4th, 1841.

THE LONDON AND BRIGHTON RAILWAY GUIDE, illustrated by the Official Map and Section, and a full description of the Line and adjacent country, together with a Time and Fare Table, and a List of Hackney Coach and Cab Fares to the Stations, from all parts of London and Brighton.

London: Published by J. R. Jobbins, 3, Warwick-court, Holborn; R. Tyas, 8, Paternoster-row; Tilt and Bogue, Fleet-street; J. Weale, Architectural Library, Holborn; J. Cross, Holborn; Letts, Royal Exchange; H. S. King, Stationer and Bookseller to the Queen Dowager, 1, North-street, Brighton; and at the *Railway Times* Office, Fleet-street. Price One Shilling, bound in cloth.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

PRESTON AND WYRE RAILWAY, HARBOUR AND DOCK COMPANY—GENERAL MEETING.

The Half-yearly General Meeting of the Proprietors of the Preston and Wyre Railway, Harbour and Dock Company, was held on Tuesday, at the Company's offices, King William-street, City, Sir P. Hesketh Fleetwood, Bart., M.P., in the Chair.

The advertisement convening the meeting having been read,

The Secretary (John Power, Esq.) read the following Reports:—

DIRECTORS' REPORT.

11, King William-street, London,
7th October, 1841.

The Directors, in laying the Report of their proceedings since the last half-yearly meeting before the proprietors, have the satisfaction to state, that notwithstanding the depressed condition of the manufacturing districts, the unfavourable state of the weather during the past summer, and other local causes—such as the want of lodging houses for visitors, the non-completion of the baths until a late period, &c.—the traffic on the railway has been very considerable, namely, 107,920 passengers, from the 1st of April to the 1st of October last. It is equally satisfactory to find, that during the two months and a half which have elapsed since the termination of the first year, from the opening of the line, the traffic has steadily increased comparatively with that of the corresponding period of last year, the number of passengers having been 49,320, and the receipts 4,214*l.*, from the 15th July to the 1st October, 1840, while the same period in 1841 gives a result of 57,524 passengers, and receipts to the amount of 5,410*l.*

The *Express* steamer has plied daily, as during the preceding season, across the Bay to the Lakes, and other steamboats have run between Fleetwood and the isle of Man, Whitehaven, Belfast, and Ardrossan, for Glasgow. The result of this trial clearly shows that Fleetwood will be unrivalled as a packet station so soon as the route shall have become more generally known and the harbour improvements have been entirely completed. The traffic with Belfast is rapidly increasing, and bids fair to give employment for additional steamers next year, as being by far the quickest and cheapest conveyance to and from the large manufacturing districts of North and East Lancashire and Yorkshire. The importation of provisions, flax, and linen, from Belfast, for the supply of Manchester, Leeds, Bradford, Blackburn, Bolton, Preston, and other large towns, and the return from thence to Belfast of their manufactured goods, are already become considerable and daily augmenting—a description of traffic which the Directors consider as most important. The commerce of the port this season having increased as fast as the present accommodation would permit, points out the immediate necessity of a dock for the large vessels, so as to prevent the entrance to the harbour from being blocked up, as well as to leave the free use of the quay for steamers and coasters. The import tonnage alone of the vessels which have come into the port during the last year amounts to 57,051 tons; and the last six months show an increase of 23,327 tons (or nearly double) as compared with the corresponding period of 1840.

The extensive iron-faced wharf at Fleetwood is now entirely completed, as is also the inclined pier connected with the north of it, for landing cattle on the level of the vessel's deck in every state of the tide. Since the last half-yearly Report it has been lighted with gas, paved, and provided with additional cranes, powerful capstans to "bring to" the steamers, and with pens (capable of containing 600 head of cattle) for the numerous cattle, horses, pigs, &c. imported from Ireland. A considerable extension of the wharf is rapidly proceeding, and will be completed in a few weeks, for the accommodation of coasters and sailing traders; the previously finished part of the wharf being now found only sufficient for the steamers which regularly ply to and from the port. Indeed it was thought advisable to give them additional accommodation by erecting a new jetty at the entrance of the harbour for landing or embarking their passengers, which has accordingly been effected by the construction of a landing-place on piles, presenting a frontage of 250 feet in extent along the deep water of the Channel.

In connection with the railway, an extensive siding off the main line of the railway has been made and a powerful crane erected for loading timber direct from the timber dock into the railway waggons, by means of which a large quantity of timber imported into Fleetwood has already been conveyed to Preston. At the Fleetwood station, a ladies' waiting-room has been made; the engine-house and carriage-repairing shop have been doubled in size; smiths' and painters' shops and store-rooms have been constructed, and other improvements effected. The Kirkham and Poulton stations have been similarly improved by the erection of waiting-rooms, sheds for luggage, new fencing and gates, &c. An excellent stone engine house and coke-shed have been built at the Preston station, where also a considerable addition has been made to the goods' warehouse and carriage-shed, and a new sliding constructed for coal waggons and stone and general goods, provided with a weighing machine. The railway itself stands well in every part. Weeton cutting has been completely ballasted with sea-gravel from Fleetwood; two extensive slidings have been made three miles from Fleetwood, for the accommodation of the new brick fields which have arisen there; and new gates have been put up at the crossings of the railway by the public roads.

The net profit arising from the railway up to the 1st September last, after defraying all the current expenses of the year, is 8,577*l.* 16*s.* 5*d.*, and the comparison of the traffic returns this year with those of the year preceding affords a most satisfactory proof of the increasing prosperity of the Company's affairs, and every prospect that the augmentation of the traffic will be steadily progressive. The Directors therefore feel themselves justified in recommending to proprietors that, so soon as arrangements can be made for that purpose, of which due notice will be given, the above amount be made applicable to the payment of a dividend of 1*l.* 5*s.* per share on the capital stock of the Company, being 5 per cent. on the 25*l.* shares, and amounting to 7,387*l.* 10*s.* on the total of the shares issued, which are 5,910 in number. This net profit is now due to the shareholders, and might have been applied by the Directors to the payment of the dividend now declared. But as they considered it to be more to the interest of the proprietors to borrow that sum from them, in order to insure the progress of the works, the said dividend will be paid as soon as the Directors are in a situation to do so. The payment of this dividend will leave a balance of 1,190*l.* 6*s.* 5*d.* to the credit of the next half-year's amount, although the hire from the North Union Railway of the engines and carriages for the passenger traffic, renders unnecessary the reserve fund kept by many Railway Companies to provide for the deterioration of that stock. As the amount of the expenditure may appear rather high in proportion to the receipts from the railway to persons who are not acquainted with the local circumstances of the undertaking, it may be necessary to remark that this arises from the several and somewhat extensive establishments which, notwithstanding every possible study of economy, the Company is obliged to keep up at their various stations, and especially at their two termini, on account of having had to become carriers of goods upon their line, from the novelty and peculiarity of this traffic. This expense is of course heavily felt at present, falling as it does upon a new and comparatively small business; but these establishments, as indeed all those of the Company, will suffice, with little or no increase of charge, for the much larger traffic which everything indicates, will continue to extend in all the branches of the undertaking, and the expenditure will then bear a smaller proportion to the receipts than that of other railways.

The Directors regret to say, that in consequence of the monetary pressure of the times, it has been found impossible to issue a sufficient amount of new shares, on the terms proposed at the last half-yearly meeting—namely, at par, and bearing interest at 5 per cent., with the option of taking the dividend in lieu when the latter exceeded it. They have in consequence thoroughly considered the question in all its bearings, and after taking the opinions of the most experienced persons, they have arrived at the conviction that, it being above all necessary to avoid giving any check to the progress of Fleetwood to the important position which they are confident it must ere long attain, and the accommodation required being, from the very prosperity of the undertaking, greater than they have, by their most strenuous efforts, been able to supply, it will be advisable rather to issue the new shares at a rate below their real than to run any risk of not being able to insure the taking up of all the shares, in order to push forward rapidly to completion their remaining works, until which the almost unbounded resources of the place can be but very partially developed. The Directors beg, therefore, to recommend to the shareholders that the capital of the Company should be increased forthwith to the extent authorised by their Acts of Parliament, by means of additional issue of shares at 25*l.*, entitled to the same advantages as those which were issued previously at the same rate, and that the proceeds of these shares be applied to the completion of the harbour improvements and dock with the utmost practicable dispatch, and to the repayment of the advances made to them for carrying on the works.

The town of Fleetwood has steadily progressed. The handsome buildings, which form the North Euston Hotel and its adjoining establishment of Baths, have been entirely completed and opened for public accommodation, and although this could only be effected late in the season, yet the very large number of travellers and visitors who have frequented them shows what may be expected next year, when in addition to those (five in number) already in full activity, there will be the farther advantage of another large hotel now being erected and of many private houses recently finished. The Church has likewise been consecrated and been some time in use, and the general improvement of the whole town has kept pace with its steady increase.

P. HESKETH FLEETWOOD, Chairman.

MARINE SURVEYOR'S REPORT.

Gentlemen,—Having submitted weekly details of the actual progress and expenditure in harbour works since last March, I may be permitted to confine myself, and limit your attention on this occasion, to a summary of the last half-year's results. Your resolutions at, and subsequent to, the commencement of the season, apportioned the following operations in furtherance of the final stage of harbour improvements, viz.:—dredging and excavating the low water approaches to wharf; cutting the Knot-spit down to the level of the "New Cut," so as to ease the turning point into, and out of, the "Canshe Hole" anchorage; erecting the Necking's Tide Weir to conduct the stream of ebb fairly down the channel, and to check the transit of flood-tide, silt, and gravel hitherto swept from North Wharf into the Channel; works which have proceeded accordingly, keeping up to the stipulated time, and within the estimated expense, until the end of July, when all operations involving weekly disbursements (except the excavation of approach to the wharf) had to be suspended. Anxiously waiting that renewal of the works which shall prove the soundness of the undertaking, as well as to do justice to my plans, energies and reputation, I proceed to state that the cessation of operations has been availed of to minutely test the stability of what has been done, and the effects on the original state of the navigation. The two shore lighthouses, as beacons by day, and brilliantly lighted lanterns by night, exhibit with every desir[ed] effect during sixteen hours out of every twenty-four, an[d] will extend throughout the twenty-four hours as the straig[ht] channel is deepened. The Screw-pile Lighthouse at the e[n]trance of the Wyre maintains its character of stability, r[e]fulgence and utility, throughout the whole Bay. The Tid[al] Dam (gulf embankment) sustains the tidal pressure an[d] friction which it opposes and directs to the increasing [of] scouring power, and desired change of flood as well as eb[b] course, whereby the "Canshe Hole" anchorage has bee[n] widened and deepened by tidal action alone, whilst th[e] "New Cut" so attracts and participates in this passing co[l]umn of backwater, as to manifest a self-widening of th[e] tidal strait between Steep Breast and Knott Bank, by th[e] fretting away, dissolving, and dispersing of the marl, whic[h] constitutes the margin of the latter. The "Knott Spit" marl is proportionally affected by the new direction of th[e] stream, and by rapidly dispersing (which it does, as we re[-]lieve it of the coating of shingle) the now attained and de[-]sirable velocity of the tide will gradually subside to its for[-]mer rate. Also as the Necking's Weir rises up toward[s] half-tide level, the present under-scour, which manifest[s] remarkable deepening effects down as far as the Great Ford[,] will impart permanent effects right down to the entrance o[f] the river. The arrangement of moorings in "Canshe Hole" has not only berthed in perfect security, during the heat o[f] spring tides and north west gales, as many as eleven and thirteen ships of 16 and 18 feet draft at a time, whilst dis[-]charging their cargoes, but the harbour has been availed o[f] as a refuge even to foreign vessels bound to Lancaster; an[d] it has happened that as many as eight steamers have e[n]barked or landed their passengers and goods in a day at th[e] Iron Wharf and the landing stage at Steep Breast, at whic[h] latter place the former depths of 8 and 10 feet at low wate[r] are retained. In a word, the Company's harbour and chan[-]nel capacity have improved, and are self-improving; the strength of tide is accomplishing much, and in proportion as it works will adjust its velocity. In fact, as the periodical surveys and inspection on the spot testify, the whole of the operations hitherto more than realise all our former anticipations.

I subscribe myself, Gentlemen,
Your faithful Marine Surveyor,
H. M. DENHAM.

In referring your Board to the enclosed estimates for the harbour works during the ensuing twelve months and final completion, I may revert to our prospective and advantageous connection with the West Cumberland and Ulverstone projects, the Pile Harbour arrangements for which I am now preparing for Parliamentary cognizance.

H. M. DENHAM.

Railway and Dock Account, from the commencement to the 31st August, 1841.

RECEIPTS.

Received on account of shares		£207,888 17 8
Loans received from Sir Hesketh Fleetwood, Bart., and others		108,073 3 3
Receipts from traffic on railway		19,383 1
Debts due to sundries, for cash received		2,472 1 5
Interest and sale of sundries		83 10
Total		£337,920 13 4

EXPENDITURE.

Expended on railway, including stations, fitments, &c.		£307,068 7 5
Engines, carriages, and waggons		10,631 16
Expenses of railway traffic		10,891 6 4
Expended by Dock Company		2,256 8 7
Debts due to the Company		2,747 8
Cottages, offices, and other buildings erected at Fleetwood for Company's service		2,020 8 4
Subscription to the North Lancashire Junction Railway		180 0
		335,825 15 4
Balance and Bankers, and in hand	£1,536 9 4	
Ditto paid for harbour works, beyond amount of Exchequer Bills' loan	558 8 5	
		2,094 17 8
Total		£337,920 13 0

Audited by me,

Statement of the Railway and Harbour Receipts and Expenditure from 1st March to 31st August, 1841.

RECEIPTS.

Balance in hand as per last audit of 28th February, 1841, applicable to harbour improvements	£13,731 6 1	
Balance at bankers per ditto	78 10 3	
Cash in hand	289 0 11	
		£14,118 17 3
Received from shareholders for calls on shares		2,730 0 0
Interest on calls overdue	2 15 10	
Ditto, allowed by bankers	491 16 2	
		494 12 0
Traffic on railway		11,181 18 5
Harbour dues	206 10 6	
Light dues	70 7 11	
		276 18 5
Rent of cottages for Company's servants at Fleetwood		34 15 0
Sale of sundries		21 0 9
Sundry loans		54,099 10 7
Amount received on account of sundry debts due to the Company		60 0 0
Balances due to sundry railways for fares received on their account		1,538 6 0
Balance of Preston Banker's account		1,590 18 8
Total		£85,186 16 4

PAYMENTS.

Railway contracts		4,732 7 6
Land and compensation		4,849 9 5
Rails and chairs		1,152 9 1
Completing and keeping up the railway to the 14th July		6,480 12 4
Bankers' commission and interest		208 2 0
Law expenses		300 0 0
Completion of railway stations		4,815 2 8
Houses, cottages, offices, &c., built at Fleetwood, for the Company's service		1,257 4 9
Engines, carriages, and waggons		4,497 19 11
Payment of sundry loans		34,471 3 4
Sundry charges, subscription to Fleetwood church, maps, plans, &c.		304 4 11
Travelling expenses, petty cash, and small accounts		205 0 0
Office expenses at Fleetwood and London—		
Rent	12 10 0	
Charges	36 17 6	
		49 7 4
Expenses in respect of railway traffic		5,743 6 4
Balances paid to sundry railways for fares received		1,077 4 6
Harbour works		14,576 12 11

Audited by me,
(Signed) ALEX. WILSON, Accountant.

In the original draft of the Report as read to the meeting, it was stated in reference to the net profits of the Company, that "the Directors feel themselves justified in recommending to the proprietors that, *so soon as arrangements can be made for that purpose* (of which due notice will be given), the above amount of 8,609*l.* 4s. 9d. be made applicable to the payment of a dividend."

Mr. PHILLPOTS inquired what was meant by the expression which we have printed in *italics*.

The CHAIRMAN said, the amount stated in the Report as applicable to the purposes of a dividend was the absolute and net profits of the undertaking, for the Directors were anxious and determined that no dividend should be declared save upon the sure and sound foundation of actual earnings. At the same time seeing that extensive works were going forward in connection with the undertaking, they had deemed it desirable that the current revenue of the Company should not lie idle and unproductive, especially as they had ample scope for the profitable employment of more funds than they could command, and therefore they had applied the produce of the working of the line to the prosecution of the further works. Strictly speaking, perhaps, the earnings ought to have been received, but the Directors considered it more beneficial to borrow, as it were, the amount for the more speedy prosecution of the works.

Mr. PHILLPOTS thought it very injudicious to propose raising new shares, and at the same time tell the parties who were to advance the money upon such shares that part of the amount was to be applied to the payment of a dividend upon the old stock. He thought such a declaration would check the subscription for the new shares, and that it would be better if the Directors said nothing whatever respecting a dividend until they had the money in hand wherewith to pay it.

The CHAIRMAN thought the holders of the old shares had an unquestionable right to have the earnings of the year divided among them.

Mr. PHILLPOTS could not but think it was somewhat like a delusion to declare a dividend when it was admitted that it could not be paid except out of the produce of the new shares about to be issued. It was not likely that it could be paid before the next half-yearly meeting, and in that case he would repeat that it would be better to say nothing about it at present. He had the fullest confidence in the Directors, and was satisfied that they would do what was perfectly right and equitable to all parties, but at the same time he thought it was holding out undue hopes to talk of a dividend until the money with which to pay it was in the bankers' hands. This was his view of the transaction as between man and man.

The CHAIRMAN presumed therefore that the honourable proprietor did not wish a dividend to be declared out of the profits of the year during which the railway had been in operation?

Mr. PHILLPOTS did not say so, but they were told that a dividend could not be paid until the necessary funds were raised.

The CHAIRMAN—Not till the money actually earned is replaced.

Mr. PHILLPOTS thought it would look strange to the public that a dividend should be paid while the Company were under the necessity of borrowing money.

The CHAIRMAN believed it was the invariable practice in other Companies to pay a dividend upon the old shares, even when they were raising further capital by the creation of new stock.

Mr. PHILLPOTS was not acquainted with the custom of other Companies, but still he did not think the principle upon which they proposed to proceed was a sound one. If he were deriving a certain revenue from a portion of an estate, and applied the proceeds to the improvement of another portion, he did not think he could be said to be reaping a profit from the estate—such a profit as he could legitimately apply to any other branch of his outgoings.

Mr. L. HONOR said, the 8,609*l.* had been earned from the application of the capital already invested in the undertaking, and was therefore fairly to be looked upon as belonging to the parties who had advanced such capital—in other words applicable, as the Directors proposed, to the purposes of a dividend.

Mr. PHILLPOTS said, if they were about to receive 50*l.* per share upon the new shares now about to be issued, instead of only 25*l.* upon a nominal value of double that amount, then the 8,609*l.* might fairly be set aside as a debt due to the original proprietors; but he thought the new shareholders would object to advance further funds if they found that a portion of them was to be appropriated to the payment of a dividend to their predecessors. He would repeat, that in his opinion the declaration of a dividend under such circumstances was—he would not say a delusion but—holding out hopes that did not really exist.

The CHAIRMAN said, it was proposed to declare a dividend, for the purpose of showing that the traffic of the railway, after paying every expense contingent upon the working of it, was realising a *bona fide* available surplus.

Mr. PHILLPOTS did not doubt that the undertaking was realising such surplus; but as it appeared that the Directors had applied the present surplus so as to diminish future expense, he thought it best to leave it as it was.

Mr. BOUCHER thought the Directors were perfectly justified in borrowing the profits of the railway, and then re-imbursing the parties to whom such profits belonged. They would be guilty of injustice to those whose money had created the railway, if they were to apply their legitimate returns from such money to the purposes of capital. (Hear, hear, hear.)

The SECRETARY said, it did not fall within his province to pronounce any opinion as to whether it was desirable in the present instance to declare a dividend or not, but as a matter of finance he might be allowed to explain precisely how the accounts stood. It was the practice of all Railway Companies, immediately that their several undertakings came into operation, to keep the "capital" and "revenue" accounts separate and distinct, and it would be seen from the balance-sheet now in the hands of the proprietors that this had been done in the present instance. The 8,609*l.* had merely been borrowed from the one account for the purposes of

Digitized by Google

the other, to be repaid out of that other as soon as practicable, namely, out of the produce of the new shares. It was, in fact, borrowing with one hand and paying with the other; the principle of the two accounts was not in the smallest degree altered or affected. The money had been wanted, immediately wanted, and they had only borrowed from themselves, to obviate the necessity and difficulty of borrowing from others. (Hear, hear.)

Mr. OWEN ALGER (Solicitor to the Company), said, it should not be forgotten that the money thus borrowed from the revenue account took the place of loans, upon which the Company would have had to pay at least 5 per cent.

Mr. BOUCHER—And in that case the amount earned would have been lying wholly idle. Precisely the same course was followed in the North Midland, South-Western, and other Companies.

The SECRETARY said, there could be no doubt the money already earned belonged to the shareholders of the time, who would have just cause to complain if their profits were transferred to the account of capital. A similar course was followed in all other Companies. It amounted in fact to this, that the capital account borrowed from the revenue account, subsequently paying back the amount so borrowed.

Mr. BOUCHER said, according to the principle contended for by the honourable proprietor (Mr. Phillpots), a railway might be completed for half the capital the Company were authorised to raise, if the profits were to be applied from year to year to the cost of construction. This, however, would not be satisfactory to parties who had advanced their money in hope of receiving a speedy return, and would moreover introduce the utmost confusion into the Company's accounts.

After some further conversation to the same effect,

Mr. PHILLPOTS said, he observed in the accounts an item of 1,538*l.* under the head of "Balances due to sundry railways for fares received on their account." What did that mean?

The SECRETARY said, the Preston and Wyre Company were in the habit of "booking through" from Fleetwood for other Companies, and receiving the full fare. It would be noticed that on the other side of the account there was an item of 1,077*l.*, under the head of "Balances paid to sundry railways for fares received," so that the amount actually due under this head was only about 500*l.*

Mr. PHILLPOTS understood and fully approved of such an arrangement, but he wished to know if any portion of this 500*l.* was included in the statement of the Company's income.

The SECRETARY said, it was not.

Mr. PHILLPOTS—Then the debt of 8,000*l.* and upwards is actually due to the old shareholders?

The SECRETARY—Precisely so; and having been borrowed temporarily by the capital account, will be repaid out of that account.

The CHAIRMAN said, some Companies would probably have kept their revenue account in their coffers, and at once have borrowed further capital, but such a course he thought was not so satisfactory nor so beneficial as that which they had adopted.

Mr. PHILLPOTS had merely thrown out the suggestion. He would not press his opinion in opposition to that of the Directors, who had doubtless given the matter their best consideration. He still thought, however, that no dividend ought to be declared until the money wherewith to pay it had been actually earned, and in the bankers' hands.

Mr. ALGER—It *has been* earned.

The CHAIRMAN—And would have been in the bankers' hands but that we thought we could use it more profitably. (Hear, hear.)

The SECRETARY said, the parties who might take up the new shares had had work to the amount of the 8,609*l.* paid for out of the revenue account, which they would now have had to meet out of the produce of the new shares, if the earnings of the Company had not been thus applied, besides saving the injurious delay of postponing the works.

Ultimately Mr. Phillpots suggested a verbal alteration in the Report, which was at once agreed to by the Directors and the meeting.

The CHAIRMAN took occasion to state, that Mr. Wilson had carefully audited the accounts.

Mr. PHILLPOTS remarked, that that circumstance fully guaranteed their accurary, for a more respectable and honourable man than the gentleman named did not exist.

The SECRETARY said, Mr. Wilson had devoted three days to going over the accounts and examining the vouchers in company with the book-keeper.

Mr. PHILLPOTS inquired what further sum the Marine Surveyor considered necessary to complete the works.

The SECRETARY said, the amount estimated as requisite during the next twelve months was 13,001*l.* 13s. 4d., and at a subsequent period 18,390*l.* 1s. 6d., making altogether a sum of 31,391*l.* 14s. 10d. If it were thought desirable to expedite the works, it would be necessary to purchase two more dredges, and the requisite pontoons, &c. to work them, which would involve an additional outlay of 12,000*l.*

The CHAIRMAN said, if this extra expenditure were incurred, the works would be finished in less than half the time that otherwise could be expected; and this saving of time, and the value of the dredges, &c. would more than repay the additional outlay. It was right to add, that the harbour works would in the aggregate come under the amount originally considered by Captain Denham to be necessary.

The SECRETARY observed, that as the extra outlay of 12,000*l.* would entirely be expended in the purchase of implements, it would only be the amount of wear and tear that would ultimately fall upon the Company, as these implements could afterwards be re-sold.

A motion that the Report be received, adopted, and printed for circulation among the proprietors, was then carried unanimously.

A second resolution was also passed unanimously, for the adoption of the Directors' recommendation as to the amount of dividend.

The CHAIRMAN then brought forward a resolution authorising the Directors to issue the new shares in the mode stated in the Report, or to raise the necessary funds in any other way that they might deem most beneficial to the interests of the shareholders.

A conversation (originated by Mr. Boucher) ensued, relative to the apportioning of the new shares, Mr. Boucher suggesting that as some of the original proprietors had been unable to take up the shares previously issued at a discount, these parties should have a priority in this instance so as to enable them if possible to place themselves upon the same footing as their co-proprietors, the holders of the last issue. It was understood that every facility would be given with this view.

The SECRETARY stated, that some of the proprietors had taken up their proportion of new shares upon the terms proposed at the last meeting (and alluded to in the present Report), namely, at *par*, and bearing interest at 5 per cent., with the option of taking the dividend in lieu when the latter should exceed it. He presumed that these parties would now have the option of adopting the new arrangement if so disposed?

The CHAIRMAN thought this was but fair. (Hear, hear, hear.)

The resolution was then passed unanimously.

The CHAIRMAN said, two vacancies had occurred at the Board, and the Directors were anxious to have the authority of the proprietors for filling them up. They would take care not to appoint any gentlemen who could not assist the undertaking by wealth, influence, local knowledge, or in some other way.

A resolution, giving the Board such power, was then carried unanimously.

The CHAIRMAN said, they had had, since their last meeting, one half-year's practical development of the resources of the great undertaking in which they were embarked, and in the prosperity of which they were all more or less interested. Steamers had been put on between various places and Fleetwood, and when they saw how eagerly these vessels were sought after—when they saw how peculiarly adapted the port of Fleetwood was to become a packet-station for Scotland and the north of Ireland—when they heard the opinion of strangers, and the testimony daily paid to the beauty and salubrity of the town—when they reflected upon the comparatively small cost at which their operations were carried on, and knew that their revenue from the navigation exceeded their most sanguine anticipations—when they considered these things, they felt that, although in common with other Companies they had suffered from the depression and difficulties of the times, their prospects of ultimate and not far distant success were most promising. (Hear, hear.) The great point which the Directors were anxious to impress upon the shareholders was this, that if with unfinished works and the difficulties interposed by the monetary distress of the last few months, the undertaking had proved so flourishing, what would it not become if the works were fully completed, and the finances of the Company placed in a more prosperous condition? (Hear, hear.) He was anxious therefore to impress upon every proprietor, how small soever his stake might be in that which all now agreed in looking upon as a great national work, that he should strive by his own means, and by bringing the undertaking under the notice of his friends, to forward its success. The honourable gentleman concluded by expressing his readiness to listen to any remarks, and give any further explanations in reference to the business of the day.

No one availing himself of this opportunity,

Mr. PHILLPOTS moved the cordial thanks of the proprietors to the Chairman and Directors, for their valuable services throughout the whole of the Company's proceedings. They were all aware that these services had been gratuitous, but he hoped the time would soon arrive when they would be able to give the Directors some more substantial token of their confidence and regard.

Mr. PHILLIPS seconded the motion, which was then carried by acclamation.

The CHAIRMAN, in returning thanks for himself and colleagues, expressed their determination to continue to carry out the undertaking in the way which had thus far secured for them the co-operation and confidence of the proprietors.

The meeting then separated.

ICE RAILWAY.—Yes, the *Ice* Railway. The honourable senator from South Carolina, Mr. Preston, after visiting us a few years ago, went home and told his constituents that we had no products of our own soil to export, but granite and ice. If so, why should we not make a business of exporting *them?* The city government of Calcutta, some years since, passed a resolution of thanks to one of our citizens, for his successful efforts to furnish that melting metropolis with ice; and gave a lot of land, and I believe something more, towards preparing an ice-house to preserve it in. Every year immense quantities are sent to the West Indies, to New Orleans, and wherever the people are so unfortunate as to have no ice of their own. Fresh Pond, a beautiful sheet of water in Cambridge, is the great ice factory; and every year, during the season for shipping it, the roads from thence to the harbour are all cut to pieces by teams loaded with ice. We cannot have it so. Our second great "staple" must be better accommodated. The first railway ever made in the United States was made to transport our rocks to the ocean, and our ice shall be treated with equal respect. We are actually hard at work making a railway from the harbour in Charlestown, near the Navy-yard, to Fresh Pond. It will have three terminations at the pond to accommodate the greater number of icemen. It was commenced more than than a year ago, and is rapidly advancing to its completion. Its cost, I am told, will not be less than 80,000 dollars. What other people have an *Ice Railway?—Boston correspondence of the Journal of Commerce.*

RAILWAY COMMUNICATION WITH SCOTLAND—MEETING AT CARLISLE.

[From the *Carlisle Journal*, October 9]

On Saturday last, a meeting of great importance was held in the Town Hall, Carlisle, to adopt measures for the promotion of the projected line of railway from Lancaster to Glasgow and Edinburgh, by way of Penrith, Carlisle, and Beattock.

It will be remembered that a meeting was held some time ago in Liverpool, consisting of deputations from the different lines of railway interested in the promotion of this great undertaking, and of several gentlemen connected with the landed and commercial interests along the projected line, and that it was resolved to take measures for ascertaining the feelings of the landowners through whose properties the railway would pass, and obtaining their assent to the undertaking. In pursuance of this a central committee was formed at Carlisle, and committees in various towns along the line, through whom applications were made to the proprietors of land; and the meeting of Saturday was called to communicate the result of these applications, and to meet deputations from the Grand Junction, the North Union, and Lancaster and Preston Railways. The deputies were Capt. Huish, of the Grand Junction; James Chapman, Esq., of the North Union; and S. E. Bolden, Esq., of the Preston and Lancaster. There were also two deputies present from the Kendal committee, John Wakefield, Esq., and Mr. C. Nicholson. Amongst the gentlemen present, besides the deputies, were Lieut. Col. Graham, of Moss Knowe, P. H. Howard, Esq., M. P., of Corby; H. Howard, Esq., of Greystoke; Sir James Grant, of the Hill; John Dixon, Esq., of Knells (Mayor of Carlisle); James Thompson, Esq. of Kirkhouse; George Cowen, Esq. of Dalston, &c. &c.

On the motion of the Mayor of Carlisle,

Lieut.-Colonel Graham took the Chair. He said he had received a letter from Lord Lowther, the Chairman of the central Committee, expressing his regret that the pressure of official duties prevented him from attending the present meeting. It gave him (the Chairman) great pleasure to be able to announce to the meeting, that the signatures of 600 landowners had been obtained, giving their assent to the proposed railway. (Hear, Hear.) They included, he might say, almost the whole of the influential country gentlemen through whose property the railway would pass. Besides these the Committee had letters from all the noblemen and gentlemen who had not signed the document, stating that they would offer no opposition to the line. (Hear, hear.) Indeed, he might say that the Committee had not met with one dissentient. (Hear, hear.) Amongst the assents were those of the Duke of Hamilton, and Lord Belhaven. The Duke of Buccleugh had not signed, but he would not oppose. Lord Lonsdale had given his assent: and Lord Carlisle, it had been signified to him through Mr. Charles Howard, would sign.

Mr. Howard, of Greystoke, said he had no doubt Lord Carlisle would have signed before now, but that his absence abroad had prevented him.

Sir James Grant inquired if it was true that the Duke of Hamilton was about to construct a railway himself from Hamilton to Glasgow.

The Chairman said, he believed that was the fact; that he was about to form a line twenty miles in length: and it was his intention to adopt the line laid down by Mr. Locke as part of the line from Carlisle to Glasgow, and would so construct it that it could be taken as a part of the great undertaking when required. (Hear, hear.)

The Mayor of Carlisle said a great advance had been made in obtaining the assents of so many of the landowners, as the Chairman had just announced, and he believed the time had now come, if they wished to accomplish the great object they had in view, when they must make another move forward. (Hear, hear.) The most strenuous exertions were being made by those interested in the line by the East coast, to secure it as far as Newcastle, in the hope that from thence they might be able to press forward to the capital of Scotland. A meeting had last week been held at York on the subject, at which one of the Directors of the Newcastle and Carlisle Railway attended, and which the plan for uniting Darlington and Newcastle, laid down at a previous meeting, was confirmed. That plan, they were probably all aware, was to form a new Company to unite the various lines between Darlington and Newcastle, by way of Durham, Sunderland, Shields, &c., with a capital of 500,000*l.*; and for the purpose of inducing persons to take shares in the Company, the Railway Companies interested in the matter, agreed to guarantee a payment of six per cent. for ten years upon the capital advanced. This was doubtless a great step in advance or there could be little doubt but the money required would be raised on these terms. It was manifest, therefore, that the time had come when those interested in the Western line from Lancaster to Glasgow should make a decided movement to obtain this great object. (Hear, hear.) The Western line had received the sanction and approval of the Government Commissioners, as that which would be most advantageous to the public. If this line were fairly started, he could not doubt but it would receive general sanction; for no one would think of going all the way round by Durham to Glasgow, if a line by Carlisle and Penrith were open. Those on the East side did not at present propose to go farther north than Newcastle; so that they would still leave unaccomplished the great object of uniting Scotland with England. Let a decided step be now taken in favour of the Western line, and he believed they would secure it. (Hear, hear.)

Sir James Grant said he could scarcely believe that such a line as that proposed from Darlington to Newcastle, could be sanctioned by the Government, as a line of mail communication. There would be such a clashing of interests by the necessity of making use of so many different railways—no less than five or six, if he was correctly informed; and there would be so much danger to the public, and so much uncertainty as to time, in consequence of having to cross so many lines of railway used for coal, that Government would scarcely consent to allow the mails to be conveyed by such a route. If, on this side of the island, a determination was shown to obtain a railway from Lancaster to Glasgow, it was scarcely probable that the Eastern line would be permitted to go on.

Captain Huish (Secretary to the Grand Junction Railway) said, that when the Chairman of the Central Committee (Colonel Graham) visited Liverpool, and attended the meeting of different Railway Companies interested in the formation of a railway to Scotland, but little was known of the feeling which existed amongst the landed proprietors along the line through which the railway must pass. The plan seemed feasible; but had been so little considered that it could not be looked upon as in a tangible shape for adoption. At the same time it appeared so desirable, that it was deemed advisable to adopt measures for ascertaining the opinions of the landowners. The course then recommended had been fairly and promptly followed, and the paper, now before him, containing, as he understood it did, the assents of 600 proprietors of land, showed a strong feeling in favour of the proposed undertaking; while it was also gratifying to learn that there did not appear to be a single dissentient. The Directors and proprietors of railways were naturally cautious in ascertaining the feelings and intentions of landowners, before embarking in any new scheme, for probably no class of capitalists had suffered so severely from the exactions imposed upon them in the shape of cost of land. (Hear, hear.) But the time was now passed when railways were looked upon as a moral pestilence, and Railway Engineers as the pioneers of mischief. (Hear, hear, and a laugh.) The Directors of the different railways, who met at Liverpool, requested Colonel Graham to take the steps which had led to the obtaining of these 600 signatures. The stipulations had thus been fairly complied with, and he was enabled to see what was the feeling of the country from hence to Glasgow. Now, then, had come the time to take another step. The line from Carlisle to Glasgow had been most carefully surveyed by Mr. Locke and his assistants; and from Carlisle to Lancaster a survey had been made by Mr. Larmer, which he was told had received the approval and sanction of the Government Commissioners, Sir Frederic Smith and Mr. Barlow. The Report upon the Glasgow line had been drawn up with unusual care, and came before the public, as everything did which proceeded from Mr. Locke, stamped with the impress of his genius, and its accuracy guaranteed by his unsullied integrity. (Hear, hear.) In making the survey, Mr. Locke was associated with Mr. Errington, a gentleman of high scientific attainments, who went over the ground with minute care, and was at great pains in preparing the estimates contained in the Report of the Commissioners laid before Parliament, and which he now held in his hand. He (Captain Huish) had worked with Mr. Errington in Scotland for some years, and from the knowledge thus acquired of him, he felt the most entire confidence in the soundness of his views and the accuracy of his calculations. To show in what degree Mr. Errington's estimates on this line were entitled to confidence, Captain Huish detailed the particulars of one which that gentleman had formed at the Nethan Viaduct. This work he had put down at 47,700*l.*; and he had received a tender to perform the contract, from a first-rate contractor, at some hundred pounds less. (Hear, hear.) From Mr. Errington's Report, then, he found that the cost of a railway from Carlisle to Glasgow, would be 1,776,841*l.*, and making the allowance for contingencies of 177,684*l.*, or 10 per cent., the cost would still be under two millions—the exact sum named by Mr. Errington was 1,954,525*l.*—but say two millions. The value of the land was estimated at 172,997*l.* He had no detailed estimate of the cost of the line from Carlisle to Lancaster; he understood, however, that it could not exceed 1,200,000*l.* But he might fairly calculate that by improving the line, reducing the embankments, and avoiding several cuttings now set down, the total cost could easily be reduced to three millions or less, upon the whole line from Lancaster to Glasgow. (Hear, hear.) He might here observe, that he was anxious to impress upon the meeting the policy, if the line was made, of not dividing it into portions, with different proprietors and different interests; but to aim at one grand trunk—to look to it as a great national undertaking. (Hear, hear.) If it was allowed to be divided amongst a number of small Companies, the end would be that the heaviest part would be thrown aside, and, probably, might never be completed. His advice was that the bad and the good should go together; and if this were done, he had no doubt but the line would yield a satisfactory remuneration to those who subscribed to it. (Hear, hear.) Mr. Locke, who, though he might not have spent so much money upon railways as some engineers, had certainly spent it to better purpose than most others, was of this opinion; and he himself had come to the same conclusion after a full consideration of the subject. (Hear, hear.) The question then arose, how was the money requisite for the undertaking to be raised? The Directors of the Grand Junction Railway had formed a decided opinion upon the subject, and were ready to lend all the assistance in their power to the undertaking. (Hear, hear.) At the same time they were desirous that the landowners whose property would be so materially benefited by it should also give their aid, and stand in the foreground. In this spirit he was authorised to make a proposition on behalf of the Grand Junction Company, which would be considered fair and liberal The basis of it was that the landowners should take the amount of the value of their property, required for the railway in shares, and that it should be understood, moreover, that no extravagant price should be given for it, but that the owners should be content with a fair agricultural value, taken (say) at a 30 years' purchase on the rental. This was the primary step, and though doubtless there would be peculiar cases of damage to be provided for, and

Digitized by Google

instances in which there would be a legal disability to agree to the condition, it was the foundation of the offer he was commissioned to make. Provided it were entertained by the parties interested, then the Directors of the Grand Junction Railway were prepared to recommend to their proprietors (without whose concurrence, it must be remembered, they could not act) that the Company should take stock to the extent of 200,000*l.* (Cheers.) He believed the North Union Company, who were so ably represented at that meeting by Mr. Chapman would subscribe 50,000*l.*, and he doubted not the same would be done by the Lancaster and Preston Company, whose Secretary, Mr. Bolden, was also present. (Hear, hear.) Now, the value of the whole land, he found, was about 280,000*l.*, and thus with the above subscriptions, a sum of 580,000*l.* could be calculated upon. But there were other Railway Companies interested also; and who would doubtless find it to be their object to assist, and he must allude to the great Company who was really most deeply interested in the question—he meant that splendid undertaking the London and Birmingham Railway. (Hear.) He was of opinion, that when the very able managers of that line were fully satisfied on the subject, and when it should be fairly and fully brought before them, they would see the advantages which the proposed extension would afford them. By an eastern line, thirty miles of the most expensive portion of their railway, namely, from Rugby to Birmingham, would be cut off from the benefits of the traffic with the north; recollecting that, they would see that their interest, and that of the meeting which he was addressing were identified. He hoped, therefore, there could be no question but that they would come forward with their aid; and if they did so, their quota, taking the proportions of the other subscriptions, would be 300,000*l.* (Hear, hear.) Thus nearly one million would be raised, or one-third of the entire sum required. From a paper prepared by Mr. Dundas, and sent him, he saw, that were the expected north traffic between London and Birmingham diverted at Rugby, as it must be to get upon the east line, the income of the London and Birmingham Railway would be affected by 38,000*l.* a year. If this estimate were true, it was impossible that that Company could allow so large a portion of traffic to be abstracted from their line; and when they saw that this must be the case, unless the line from Lancaster to Glasgow were opened, they would acknowledge the necessity of giving it the greatest support in their power. (Hear, hear.) Under these circumstances, therefore, and supposing the London and Birmingham Company to take this view, nearly a million of the capital would be raised at once. Intimating their suggestions and remarks, I am of course speaking in my individual capacity, as in any other character, its not for me to decide what should be the conduct of other than my own Company. Now, he believed, there never was before a Company able to go before the public with 30 per cent. of the capital raised, without having issued a prospectus, or taken any steps to secure the support of the monied interest. (Hear, hear.) He could not say what assistance Government might be inclined to give to the undertaking; but he considered it so purely a national one, that it was fairly entitled to it, and of one thing they might be satisfied, viz., that approved as this line had been by the Government Commissioners, and thereby satisfied as to its being the best line, it was the only one entitled to support. It would next be asked, where was the other part of the money requisite to come from? In the present state of the country, it was probably not to be looked for immediately, but the clouds which now obscured our prosperity, would, he trusted, soon be dispelled, and he could not doubt, that when a fair prospect of a remuneration return was shown; when it was seen that 3,000,000 of enterprising Scotchmen were to be thus brought into close contact with this teeming country, the remaining two millions would be forthcoming. (Hear, hear.) It was unnecessary for him to go over the estimates of traffic; if the project went on, these would, he presumed, be laid before the public in a proper shape. He might mention this, however, that the present traffic by sea on the two coasts, should return between 3,000*l.* and 4,000*l.* a week, and this would, of course, be an addition to the great land traffic which ought to be diverted to the line, and which would afford a good return on the three millions required in construction, to say nothing of the increase that had ever followed increased facilities of communication. (Hear, hear.) With reference to the observations made as to measures adopted on the East coast of the island, to secure the railway in that direction, he must say that he honoured their spirit, and he could only add his testimony to the vigour with which those measures were pursued; and hold it out as an example to those interested in the matter on this side of the island, and urge it as a spur to their exertions. (Hear, hear.) For his own part he felt a personal interest in the undertaking. He had felt so long before he was connected with the Grand Junction Railway; and he felt it still more deeply now that he found it so intimately connected with the prosperity of that company. He had been deputed by the Directors of the Grand Junction Railway to make the proposition he now submitted, viz., to take shares to the amount of 200,000*l.* on the conditions he had stipulated. He trusted that this would show that the scheme was something more than a chimera, as it had been represented by some, and that it would prove to the people of the East, that those in the West were in earnest—not to prevent them from having a line, but to have one of their own. (Hear, hear, hear.) With respect to the line itself, the projectors must above all things consider economy. They must be prepared to accept a good workable railway, and thus reduce the cost in gradients—they must be satisfied to go *over* hills, instead of *through* them. The question of gradients was daily assuming less importance, and that which a short time back was looked upon as entailing a heavy additional working expense, was now regarded as a matter of no moment. As locomotives were improved, this would be still less felt, and thus the heavy cuttings and embankments, the tunnels, the quantity of land, and many other expenses, might be reduced. The line under discussion would thus be made cheaply, and he repeated his belief, that it would be profitable, if so constructed. (Cheers.)—He apologised for the length of the remarks he had made; he felt greatly interested in the exertions and the object of the Committee he was now addressing. He hoped they would continue their labours as zealously as possible, and that they would at no very distant day have the satisfaction of seeing the Railway carried into Scotland. (Hear, hear.)

J. Chapman, Esq., Secretary to the North Union Railway, said, the object of his attendance at that meeting had been so clearly explained by Captain Huish, that little remained for him to say. The Directors of the Company with which he was connected, felt strongly the necessity of supporting the proposed line to Glasgow, and would do all in their power to promote it. (Hear.) They would be ready to recommend to the shareholders of their line to take shares in this great national undertaking, to the amount of 50,000*l.*; and knowing the feeling which prevailed on the subject, he had no doubt but that recommendation would be at once complied with. Something had been said about the principle of a guarantee, as had been proposed on the east line. He felt assured that the Directors would adopt either that, or the plan of taking shares as had already been proposed, whichever should be deemed most advantageous to the new line; and that, in the mean time, any aid or assistance that might be required at their hands would be most readily granted and cordially given. (Hear, hear.)

S. E. Bolden, Esq., Secretary of the Preston and Lancaster Railway, said he had only heard of the intention to hold the present meeting on the preceding day, while he was in Liverpool, and therefore there had been no time for bringing the matter under the consideration of the Directors of the line with which he was connected. All he could say under these circumstances was, that he knew a strong feeling existed amongst the Directors in favour of the projected line, and that he felt sure, whatever the North Union and the Grand Junction thought it proper to do in aid of the undertaking, would be done also, in fair proportion, by the Preston and Lancaster Railway. He was not authorised to make any offer, but he believed in what he had said he spoke the sentiments of the Directors.

Henry Howard, Esq., Greystoke Castle, wished to say a few words on the subject; and first of all he had to thank Captain Huish for the information he had communicated, and for the candour of his statements. (Hear, hear.) Nothing could be more fair than his proposal; but there were some circumstances of which Captain Huish was probably not aware, but of which it was but candid to inform him. Those who knew this part of the country—indeed he might say the whole line from Carlisle to Lancaster, were aware that the land belonged to a great number of small proprietors, and therefore it might be difficult, if not impossible, to get all to take shares in the undertaking; at the same time, he must say, that he had no doubt but shares to the full amount named would be taken by the landowners generally, though not by those who owned the land through which the railway must pass. (Hear, hear.) Landowners, of course, took different views of these matters, but he knew there were many in Cumberland and Westmoreland who, like himself, had land not immediately adjoining the line, but within reasonable distance of it, who looked upon the undertaking as one of great importance, and to which they would lend every assistance in their power. (Hear, hear.) It would be wrong to tell those gentlemen who attended that meeting on behalf of different railways, that all those who had given their assent and signed the paper now on the table, would take shares—though, as he had already said, he believed the full amount named would be taken up by landowners. (Hear, hear.) It was gratifying to say, that there were very few who dissented. In the part of the line to which he had more particularly attended, he knew but of one dissent, and that was by Mr. Burn, of Orton, who would not oppose if a very slight deviation were made in the line. Of course he could not pledge himself that that which he had stated would be done, but from his knowledge of the parties he believed it would be so.

The Chairman said, he believed the feeling on the Scotch side was universally in favour of the line, and there was no doubt but the landowners would take shares at least to the amount of the value of the land taken up by the railway. There were a few small proprietors who might do this; but the full sum which had been named would be subscribed by the landowners.

Sir James Grant said, it appeared somewhat strange to him that there had been no demonstration in Glasgow, and that no deputation from that city had attended that meeting. The subject was of great importance to Glasgow, and from the spirited inhabitants of that city they ought to look for great assistance and support. He suggested that one or two gentlemen from the Committee should be authorized to communicate with the authorities of Glasgow, and endeavour to get up a public meeting in favour of the railway.

The Chairman said he had a letter from Lord Belhaven, suggesting the same thing. If a meeting were called, he (the Chairman) believed the Duke of Hamilton would attend it.

Sir James Grant said, as such was the feeling, he would move that a deputation be appointed for the purposes he had already named.

P. H. Howard, Esq., M. P., seconded the motion. He thought it of great consequence that the feeling of Glasgow upon the subject should be ascertained with as little delay as possible.

Captain Huish said, he knew that there was a very strong feeling in Glasgow in favour of the line. This, indeed, had been shown in the most unequivocal way—for money to pay for the surveys made by Mr. Locke and Mr. Miller, had been raised by subscriptions in Glasgow.

Sir James Grant inquired if there had been any

Digitized by Google

communication with the London and Birmingham Railway? The question was of great importance to them; for if a line should be opened on the east, and that on the west be neglected, thirty miles of their line would be rendered almost useless. To Birmingham itself the question was very important, as it would cease to be a terminus, if the line should be diverted at Rugby to the east.

Mr. CHAPMAN said, it would be of the utmost advantage to the undertaking if it were shown that the landowners whose land would be required would be content with a reasonable, in fact an agricultural price for it; and it would be equally useful to prove that the Directors who might be appointed by the new Company would be satisfied with a good working line, with reasonable gradients, and not aim at what was usually called a first-rate line. He knew that the Directors of the line between Lancaster and London, and the Directors of various other Companies, who had been compelled to pay most extravagant prices for the land they required were extremely sensitive upon these points; and that the assistance they afforded would mainly depend upon their being satisfied that there would be no wasteful expenditure under the two heads he had named. (Hear, hear.) If the people of Liverpool and Manchester, but especially of Liverpool, were well assured and satisfied on these points, he was convinced nothing would contribute so materially to inducing them to look favourably on the project, and that if the assistance of those great communities was to be calculated upon it must be on such an understanding. (Hear, hear.)

Mr. NICHOLSON, of Cowan Head, (deputation from the Kendal Committee) rose and said, he desired to make a few observations called forth by previous remarks of the meeting. (Hear, hear.) Captain Huish had vouched most satisfactorily, on the authority of Mr. Locke (which authority he, Mr. N., deemed to be quite unquestionable) for the accuracy of the surveys and estimates from Carlisle to Glasgow. He begged to put in a voucher for the remaining portion of the line from Carlisle to Lancaster, on behalf of Mr. Larmer. (Cheers.) The Government Commissioners had tested the most difficult portion of Mr. Larmer's work by another engineer, and found it strictly correct; and with regard to the estimates of traffic for this portion of the line, he had heard Sir Frederic Smith distinctly declare that he had not had estimates submitted to him which were built on such solid and satisfactory data. (Cheers.) With regard to the proposal to this meeting by Captain Huish from the Railway Companies, he, Mr. N., conceived that the value of the shares required to be taken by the landowners from end to end of the line, was so small, that he quite agreed with the respected Chairman, Col. Graham, in the belief that the landowners' portion of the money would certainly readily be subscribed. He thought they might consider that so far decided, and proceed now to take further active measures. (Hear, hear.) He had been gratified with the proceedings of the meeting, so far, but it must not terminate with talk. (Cheers.) If the requisite preliminaries were not taken, and the Parliamentary notices not deposited before the first of March next, all that had been done was idle, and the measure was lost. (Loud cheers.) Some understanding, therefore, should be immediately come to as to the preparation of these preliminaries; and he appealed to the experience of Captain Huish and Mr. Chapman for a suggestion. Who was to take the initiative? That should not only be considered, but instantly decided and acted on. (Hear, hear.) He would say a word with regard to the probable cost of this railway and its prospects. (Hear.) Several opponents of this line had compared it, from Lancaster to Carlisle with the Manchester and Leeds line, as respected the magnitude of the works. They had told the public to look at the hilly regions, and say whether the line could be made for less money than the Manchester and Leeds, which cost something like 50,000*l.* per mile. But, these opponents of ours do not tell the public how small a portion of the 50,000*l.* per mile arises from the earthworks! He knew the earthworks on the Manchester and Leeds line were enormous—about 200,000 cubic yards per mile, but this enormous quantity at the average cost of one shilling per yard, only made 10,000*l.* out of the total cost of 50,000*l.* per mile. Now Mr. Larmer would tell the meeting that the earthwork between Lancaster and Carlisle would not exceed 80,000 cubic yards per mile, and taking the average cost—which there was really no need to do, considering the present competition of railway labourers—at one shilling per yard, that made just 4,000*l.* per mile for the earthwork. A Mr. Oxley, of the Great North of England Company, had stated at a public meeting that they, in the East, could proceed as far north with 500,000*l.* as we could do with five millions! (A laugh.) That the line from Lancaster to Carlisle was to cost five millions! He (Mr. N.) had not the honour of knowing Mr. Oxley, but he was quite sure, and the gentlemen around must be ready to admit, that Mr. Oxley was a gentleman possessed of an extraordinary genius for off-hand computations—(laughter and cheers)—a genius moreover, so exalted, that it would not descend to the common practices of reading and inquiry. (Hear, hear.) If this had not been the case, Mr. Oxley would have perused the Government Commissioners' Reports of this line, where very different estimates of cost were certified. (Cheers.) With respect to the cost of this line, and the probability of its paying, he would undertake to convince the most sceptical that it would pay well if it could be made cheap—and it could be made cheap, there was not a doubt of it, if it was properly managed. There never was a project put before the public with such advantages and facilities as this line possessed. If the Chairman would permit him—(hear, hear)—he would just glance at a few facts and circumstances which proved that this line must be made out of all comparison cheaper than any line hitherto constructed. (Hear, hear, hear.) In the first place, there was no bonus of bribe required for buying on great opposing landowners! (Cheers.) He cited names and instances where 50,000*l.* and 100,000*l.* had been given by Companies to great and noble landowners to propitiate their favour, and he regarded it as a high honour to the North when they could go from Lancaster to Glasgow and Edinburgh, and not meet with a single nobleman or landed gentleman actuated with those mercenary feelings. (Loud cheers.) Nor had they any opposition to fear in Parliament. On the contrary, their path had been smoothed by the Government Commissioners, and instead of having to squander among Parliamentary agents and lawyers from 100,000*l.* to 200,000*l.* as some Companies had done, they might put their Bill through the Houses for 500*l.* to 700*l.* They had all the leading members of Government already in their own ranks—the noble lord the Chairman of that Committee, Postmaster-General—(cheers)—who was a powerful host in himself; the Home Secretary; and Colonial Secretary; together with Alderman Thompson; Mr. Green; Mr. Loch; the Earl of Lonsdale; the Earl of Carlisle; the Duke of Devonshire; and the Duke of Hamilton; who had himself proposed to make above twenty miles of the Line! and many more Peers and Members of the Commons whose names did not occur at the instant. In the next place the land required for this railway could certainly be obtained for 300*l.* to 500*l.* per mile. A liberal price this would be deemed by those who had already displayed such laudable exemption from selfishness. Now the ordinary cost of land for railways had hitherto been as many *thousands* per mile as this would cost *hundreds*, viz., from 3,000*l.* to 5,000*l.* per mile. (Hear, hear.) The earthwork, as before stated, was light in comparison, and would be executed at a time when the greatest competition would exist among both contractors and labourers—when, perhaps, this may be the only line in the kingdom in course of construction. Another important saving might be effected by the conduct of the engineering department. The two general practice had been to call in a great Engineer, with a *great* name, who had given unto him unlimited power, and who became the Dictator of the Company, wielding it to his purposes of self-aggrandisement. (Hear, hear.) A great name was once thought necessary to get the share lists filled; but if it was still necessary, it was most undesirable. He believed, however, such had been the experience of the public, that a "great name" would now have the very opposite effect. It was found that those who had property at stake constituted the best government, and that the "pure despotism" of a great engineer was a great evil. All these facts and circumstances (which might be increased in number if time permitted) showed that this project stood altogether on new and most favourable grounds. (Hear, hear.) Many flattering hopes and promises had no doubt been held out on other railways, which in the end proved costly, but the public could comprehend that the facilities here alluded to were not fictitious or chimerical, but were really grounded on fact. (Hear, hear, hear.) In conclusion, Mr. N. urged the meeting to take prudent and vigorous steps without further delay, and the success of the measure was past a doubt. (Cheers.)

Mr. NICHOLSON subsequently proposed a resolution for securing the necessary "minute surveys," but after a general conversation, this was postponed till after the proposed meeting in Glasgow.

Mr. HOWARD (Greystoke) said, the proposition of Captain Huish appeared to him so important, that it became necessary to know what would be done in Glasgow, in order that their arrangements might be made complete, for pressing the question forward. He should therefore support the motion of Sir James Grant.

After some further conversation the motion of Sir James Grant was agreed to, and the Chairman, the Mayor of Carlisle, Sir James Grant, and Henry Howard, Esq., of Greystoke, were appointed a deputation to communicate with the Provost of Glasgow, and attend any meeting which might be called in that city upon the subject.

It was stated by the Chairman, that the expense of a survey to lay before Parliament would be about 3,000*l.*, and it was understood, that after communicating with Glasgow upon the subject, immediate steps would be taken to get the surveys completed and lodged with Parliament in March next—as required by the standing orders of the House.

MEETING OF THE GREAT NORTH OF ENGLAND COMPANY.

The adjourned meeting of the proprietors of the Great North of England Railway Company took place on Tuesday last, at the Company's office, Darlington. Present—Messrs. E. Oxley, Joseph Stephenson, James Coffey, Joseph Addison, Richard Oxley, J. S. Peacock, D. O'Brien, George Chapman, G. A. Thompson, H. Hutchinson, F. Mewburn, W. O'Brien, T. Smith, N. Plews, T. Cargill, I. C. Hopkins, H. Smales.

On the motion of T. Cargill, Esq., Edward Oxley, Esq., took the chair.

The CHAIRMAN said, we are met in pursuance of a resolution passed at our last general meeting, adjourning that to this day. I believe those present are fully aware of the object of this adjournment. The Directors hoped that they would have it in their power to have reported the result of the negociation which is now going on between the Directors of the Great North of England Railway Company and several other Railway Companies, with reference to the disposal to a new Company of that portion of our line extending from the part already executed to Newcastle. For the information of the meeting I may just state, that the negociation has gone on to a certain extent, but that at present it is incomplete, and that we are not enabled to lay before this meeting the result of this negociation. It is a disappointment, I am aware, to many gentlemen who may be here, but I may state that the negociation so far as it has gone, has been carried on with an anxious desire to arrange equitably the several points brought before the gentlemen assembled, and up to a given point these arrangements have been made satisfactory to this Company. There are still some important negociations which will be brought

Digitized by Google

on this day, by a deputation from the new Company, who are to meet us as soon as the present meeting is over in this room. That is all I have in my power at present to communicate to you. It is the intention of the Directors to call a special general meeting, to lay before the shareholders the final arrangements with the new Company. I believe there is every prospect of their being successfully carried out; and the shareholders may have entire confidence in the Board, that they will do the best they possibly can to their own constituency. So far, a special general meeting will be announced, and the whole matter will be laid again before you. The negociation not being complete, it would perhaps be improper for me to explain any part. So far as it has gone, the negociation has been very fair and satisfactory to all parties concerned, and we hope very soon to be enabled to call a special meeting, when the whole matter will be laid before the shareholders, for them to give their judgment respecting it.

The meeting then broke up.—*Yorkshire Gazette*, October 9.

RAILWAY COMMUNICATION WITH SCOTLAND—YORK AND NORTH MIDLAND RAILWAY.

To the Proprietors of the York and North Midland Railway.

GENTLEMEN,—Permit me to offer a few observations on the measure to be proposed for your consideration the 19th instant. I dissent from this measure for several reasons.

It is, I think, rather too much to call upon us to guarantee 6*l.* per cent. on any fixed per centage upon an amount of capital not yet ascertained.

We shall no doubt be told at the meeting, as we have been told in the circulars, that the cost of the proposed line will certainly not exceed 20,000*l.* per mile. But it does not require very great experience in railways, to know that very little confidence is to be placed in the accuracy of estimates of works not yet commenced. The Birmingham Railway was estimated to cost 2,500,000*l.* Its actual cost is little short of six millions, nor is this a solitary instance, or even an extreme case.

But it will be said, that we ought to run a small risk to secure a great permanent advantage, and the great permanent advantage in this case held out to us is the passing of the Scotch traffic over our line. In answer to this I would suggest that in all human probability, sooner or later, the line recommended by the Government Commissioners will be constructed, and then what becomes of the Scotch traffic, two-thirds of it, at least, will be substracted from us? Again, supposing that the line recommended by the Government Commissioners should not be formed, who, I will ask, is to guarantee us against the formation of a direct line from London to York?

At present the formation of such a line appears very improbable. Why? because of the small amount of the thorough traffic between London and York. But when to the York, London traffic is joined the Scotch London traffic, which by the supposition will pass through York, the aggregate amount of traffic between London and York will be very considerable, and if considered permanent, will hold out a very strong inducement to the formation of a direct line from York to London, by lengthening the northern and eastern, or otherwise; and the immediate and necessary effect of this direct line would be to take from us not merely the accession of the Scotch traffic, to procure which we shall have incurred not a small but a great risk, in fact, an almost certain loss; but also what we now possess, and what, but for our own folly, we may long continue to possess, the York London traffic which, though not considerable enough to notice the formation of a long line of railway, is still worth having, and forms a pretty addition to our other sources of profit.

Gentlemen, it is not for the *permanent* interest of our Company, or of the North Midland Company, or of the Midland Counties' Company, that the eastern line of communication with Scotland should be adopted.

A SHAREHOLDER IN THE YORK AND NORTH MIDLAND.

9th October, 1841.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—Charity should begin at home, and individuals, or townspeople, should improve and shorten the ways leading to their homes before they look abroad.

I see no reason in such a number of Liverpool and Manchester gentlemen, being large and influential proprietors in the West London, Eastern Counties, South Eastern, and other lines, not connected with the county in which those gentlemen reside, the expediency of which would have been best judged, the expense best borne, by the inhabitants of the district through which they pass.

It is a matter of regret that those gentlemen have embarked in lines foreign to their county, when a line recommended by the Commissioners as the most eligible for railway communication to Scotland, passing through the very heart and whole length of their county (viz. Lancaster) should languish, and may perhaps never be completed, because the necessary funds are expending by their having embarked in other undertakings at a distance.

If the London and Birmingham proprietors unite with the Grand Junction, Liverpool and Manchester, Birmingham and Manchester, North Union, Preston and Lancaster, the line recommended by the Commissioners would soon be completed; shares would be taken up immediately.

Leaving out the consideration that the East line can be effectually opposed by steamers direct from London to Hull, Newcastle, and Edinburgh, nor taking into account that no opposition can exist by steamers direct from London to Liverpool, Carlisle, and Glasgow, against a west line, it is manifestly the interest of the London and Birmingham Company, to support this line, it being the most eligible.

The Manchester and Leeds line is abstracting, (*via* Hull) a considerable portion of the direct London traffic, from the whole length of the Grand Junction, and London and Birmingham Railways.

If the London and Birmingham supports the East and Midland lines, to their detriment, and the East line becomes complete in the North, what is to prevent the Leicester people, or the Midland Counties' Railway from obtaining a Bill to make a line from Leicester to Northampton, effecting a junction with the London line near that place; thus cutting 30 miles more off the London line, and saving 20 miles length to the Midland and North Counties between them, and the London terminus?

They would have good reason to show for such a Bill, and even my Lord Stanley, could not oppose such a measure effectually.

The continuation of a railway from Cambridge to join the York and North Midland, would take away totally all north direct traffic from the whole length of the London and Birmingham. Such a railway has been projected, and may be carried into effect, as it will pass through a rich agricultural country, and near many towns now shut out from railway communication.

This ought to convince the proprietors of the London and Birmingham, that no other line, is so conducive to their interest as the west line, continued as recommended by the Commissioners, from Lancaster to Carlisle, and northwards to form a junction with the Edinburgh and Glasgow, halfway between those cities.

Lord Stanley, as member for Lancaster, Lord Lowther, as Postmaster-General, through whose grounds the west line will pass, are not likely to oppose a Bill for a route of railway, because the same was advised by a Whig Commission.

I am, Sir, your's, very respectfully,

AN OPERATIVE.

London, October 13, 1841.

FARES ON RAILWAYS—GREAT WESTERN RAILWAY.

THE following is the article from the *Bristol Magazine* to which we referred a few weeks ago:—

On resuming this article, and referring to the letter published in our last number, defending the measures adopted by the Directors of the Great Western Railway Company, in respect of their second-class train of carriages, we wish it to be understood that we consider the question as one of policy alone. It is a subject for discussion, but by no means for dispute. It is eligible to every individual to exercise his discretion as to how he will travel, or whether he will travel or not; and it is equally at the discretion of the Directors of the Railway Company to offer him greater or less inducements to do so; and whatever sacrifice the Directors may choose to make to public opinion, we have no right to claim more than is consistent with their common interests and general expediency.

If, as stated in the letter, it be "the object of the Railway Company to provide accommodation for various classes of passengers," the natural inference is, that the second-class train is intended for the middle ranks of society—by far the most numerous class of travellers, who, standing firmly by the respectability of "their order," neither desire nor pretend to force themselves into the "highest seats." What sort of compliment then does the Company pay this class, in putting them into machines rather resembling large hencoops than comfortable travelling carriages?

"But," says our correspondent, "the railway does not profess to give inside accommodation for outside fare, any more than a stage coach does:" but this is a complete abandonment of the previous argument, and losing sight of the "various classes" which it is said to be "the object" of the Company to accommodate, and it seems to us to amount to an admission, that the real object of the Company is to jumble all classes together in the most expensive train, as they studiously make it *penal* for the passenger to travel, especially in bad weather, by any other! Here again, however, our correspondent is ready with a reason. "If we make the second-class train more comfortable, some persons who now travel by the first class will become second class passengers, to the injury of the proprietors;" which is no more than saying, that the sins of the few must be visited on the many, and that a whole class in society must be deprived of comfortable accommodation, in order to keep out occasional interlopers; or such persons as, having some regard for their health, and being able to pay more, might still think it incompatible with their present object, to incur a greater expense than the second class train. But is not this adopting a very narrow policy, and one that is unworthy of the cause?

In our theatres, for instance, and places of public amusement, we do not find that increasing the accommodation of one class materially affects or interferes with the emolument derived from another: we will venture to say, that a family accustomed to sit in the pit are far more likely to visit the boxes than the usual occupants of the boxes to resort to the pit; though the accommodations, as far as regarded personal comfort in the latter, were put on a par with the former: and if any increase of accommodation in the second class train of carriages is found materially to lessen the numbers in the first, the inference is, that many persons are inconveniently compelled to travel by the first class trains, for the sake of their health, who more properly belong to the second; and if this be the case, the advantage of such a system to the Company must, in our opinion, be more than questionable.

To compare the railway carriages to stage-coaches, or attempt to establish a principle by assuming a parallel case between them, can only tend practically to illustrate the fallacy of endeavouring to regulate a new and mighty engine, by an insignificant precedent with which it has nothing in common. Our much be-praised English stage-coach system we have always considered one of the blots on our national escutcheon; it was a tolerated abo-

Digitized by Google

mination, distinguished chiefly by pure unadulterated selfishness in every department; and which, if it did not sanction, often winked at imposition and brutality, particularly in the case of the needy and defenceless passenger. Civility by it was commonly a dearer commodity than all the necessaries of life on the journey; and even at that price, some years ago, it was doled out reluctantly on almost every road where there was no opposition; in speaking thus strongly we allude only to the system at large; many public-spirited attempts were made and sustained to reform and improve it, but these were the exceptions, not the rule. Outside and inside fares, however, were matter of necessity; and to insure superior lightness and rapidity, without increasing the danger, was supposed to be some excuse for affording no shelter to the outside passenger: but in France, where the price is slower, and a disposition to accommodate and oblige more general, even the outside passenger is protected from the weather.

We imagine the public will not consider themselves very much obliged to the Great Western Railway Company, for adopting one of the worst features of a bad system, for no other purpose, confessedly, than that of rendering it inconvenient, while the remedy with them is so obvious, so easy, and so inexpensive. It is admitted that the second class train is intended to accommodate a class of passengers, and we presume it will not be denied that the greater portion of respectable persons of limited incomes, find it sufficiently expensive, and quite as much so as they can afford, to travel by the second class train; and are not this class of persons as fairly entitled to the consideration of the Company, as the more wealthy and less numerous one, for whom the best carriages are provided? Again, so far are the Company from giving inside accommodation for outside fare, that it appears pretty clear, they are giving outside accommodation for inside fare. We have been at some pains to ascertain what the cost of travelling by railway is comparatively in America, and in no case do we find their first class carriages so expensive as our Great Western second class.

The Yankees have this advantage over us in their new institutions: they are not tied down by precedents and old-fashioned ideas; nor do they think it necessary to measure every invention by the exploded standards of "ancient and immemorial usage;" the consequence is, they not unfrequently strike out a new and bold course for themselves, which begins by exciting our ridicule, and ends by compelling our admiration. If it be permitted to use a nautical simile in such a case, we should say, that while we are exploring our musty charts, and worm-eaten "sailing Directions," and beating about to avoid imaginary rocks and quicksands, the Americans "take the responsibility" and dash fearlessly through all; and at the very next tack we find those who started after us a long way ahead of us. Here we rejoice to follow the tortuous windings of long-established custom, and are frightened at the idea of giving so much for the money in the mighty resources which steam is unfolding. It jars on our aristocratic ideas and conventional prejudices, to think of extending all the advantages of wealth and independence in travelling, to a class of persons hitherto seldom aspiring to any thing beyond the luxury of a walking-stick, or an occasional eighteenpenny family-drive on a holiday afternoon.

Even so near us as Ireland, however, and without the intervention of steam, the sagacious Mr. Bianconi long since perceived the advantage to the speculator, of rendering travelling as cheap, as expeditious, and as convenient as possible; and there the humblest pedestrian who has business to transact is induced to travel by car, at an expense little exceeding, on an average, a shilling for ten English miles, with a comfortable cushion to sit upon, and a waterproof apron to defend him, at least partially, from the weather; and on many roads inside accommodation is afforded without increase of expense; and by this system a large fortune has been amassed by the off-handed projector.

The charge for travelling by the first class trains in America in no case exceeds four cents, or two-pence English per mile, where the passenger is taken up by the way, as from one station to any other station on the line, and it is less for long distances, or as it is termed, "all through;" thus, for a distance equal to that from Bristol to London, by a first class train in America, the charge would not exceed 19s. 6d. while here it is by our second class a guinea. It is true, the Americans confine themselves chiefly to the need and utility of the case, and have not expended vast sums in magnificent buildings at the termini, and such expensive and ornamental bridges and causeways on the route; and our Directors may argue that the Great Western Railway cost eight times more than the best railway in America of the same length. But this though true in fact, is immaterial to the argument—whether the railway originally cost 6,000*l.* or 6,000,000*l.*, does not affect the point at issue: the real question is, how, consistently with the principles on which it was undertaken, it can be rendered most profitable now it is made; and whether it be not at once more creditable, and more advantageous to the proprietary, to consult public convenience, than to oppose it.

It appears that the expense of an engine does not exceed 1s. 8d. per mile; or, in round numbers, that, to send a train from Bristol to London, costs no more to the Company than about 9*l.*; and we believe we speak within bounds when we say, that each engine is capable of drawing 200 tons, at the rate of 20 miles an hour, and allowing 12 persons only to the ton weight, with their luggage, 2,400 persons might be carried from Bristol to London in six hours, at an expense to the Company of about 9*l.*; so that if the 2,400 persons were to be had each time, and ten trains per day forwarded, both up and down, exclusive of the luggage trains, all of which is quite within the range of possibility, the Company would clear a profit of upwards of 5,000*l.* per day, by carrying passengers from Bristol to London at half a crown per head!

But it will, perhaps, be argued, the idea is altogether ridiculous; where are such numbers of travellers to be found? and it is here that we think a great misapprehension is entertained. The regulations of the Company appear not to be made with a view to invite travelling generally, but merely to make the most of such as are obliged to travel. We do not mean to say that the Company ought to lower their fares to an average of half a crown a head; but we have not the slightest doubt, but, that for every five shillings lowered in the fare, every class of carriages being made, at least, comfortable, the amount of travellers would be speedily doubled; nor is it necessary to calculate upon so great a number of separate individuals, as many persons, when the fare becomes inconsiderable, would be almost daily travellers by it; perhaps the public mind is scarcely yet prepared to look upon the railway as perfectly safe, on account of a few accidents of a serious nature, which have occurred on other lines; and this feeling might for a while retard the full success of a bold and thoroughly liberal policy; but no one of common sense will long retain a prejudice, when they learn that on the Great Western Railway it is a million to one against any accident happening to them; as it is, from its construction and the greater breadth of carriages, by far the safest in the kingdom; and the risk of danger in making a diurnal trip to London and back to Bristol, would probably be infinitely less on the whole line than a daily drive by an ordinary stage-coach through Piccadilly or the Borough.

There is, doubtless, a high and a low price—a maximum and a minimum—in approximating to either of which, the advantages of the Company must diminish, and probably the real *juste milieu* is much nearer the case we have supposed, than the unreasonable (proportionate) charges now maintained by the Company. If there never had been such things as stage-coaches in existence, in all likelihood such fares would never have been dreamed of; and if a sufficient number of persons can be found to travel at these prices, to remunerate the Company for their enormous outlay, we should imagine there was plenty of room for another line or two in the same route, at prices which would admit the humbler classes of society to a participation in the advantages of travelling. To continue the argument would only be to repeat what we have already stated in our previous articles on the subject; but we hesitate not to record our conviction that it would be more profitable, as well as more dignified and becoming, on the part of the Company, to provide for the convenience of the "various classes of passengers," and make a second class train suitable to the respectable class of persons who naturally resort to it, and who can entertain no feeling of cordiality towards the Company till this has been done.

The respected correspondent, whose letter has elicited from us these remarks, himself admits, that in some instances, he found the second class accommodation on other lines, "superior to that of the Great Western," and no other argument ought to be necessary to induce the Directors at once to remedy this abuse, for such it really must be considered. It is not necessary that the second class train of carriages should be in all respects equal to the first; but a very considerable improvement may take place without danger of their identity being destroyed. The first class train is in every respect worthy of this great establishment, and some of the carriages are elegant little saloons, and delightful lounges, in which the most delicate of our fair countrywomen would probably find herself perfectly at her ease. Let not the Directors be afraid of giving too much for the money. Knowing what we do of the power of steam, and the effects it is producing on society, we should, as a matter of worldly policy, be far more inclined to become a shareholder in the Great Western Railway Company, if all the fares were reduced fully one-half, and every consistent accommodation given, than we should be under its present high rate of charges, and in our opinion, very objectionable and unworthy policy.

Nothing is more possible than that even now the communication between Bristol and London, as regards the transmission of goods and passengers, is capable of a ten-fold increase, on a diminution of charges to one-half, and nothing more certain than that the increase will eventually be enormous, if the fares be liberally reduced to encourage it.

RAILWAYS IN THE UNITED STATES.*

The national spirit of the people of the United States is utilitarian. The mass of the population of the republic is devoted to those objects which promote material happiness and personal comfort. Their future fame will be based on the real, and not on the ideal or imaginative.

After the achievement of independence, the first object of the American people was to frame systems of laws suitable to the peculiar cycle of government they had adopted. Having thus raised the walls of their social edifice, they proceeded to develope the industrial resources they had encircled by law and system. The great obstacle to this development was the vastness and extent of their territory, stretching thousands of miles from ocean to ocean. With an unequalled extent of sea frontier, they have but few large and accessible sea-ports; and though their fine country be intersected with magnificent rivers, the rapidity of their currents and the severity and length of the seasons throw difficulties in the way of their continuous navigation. Canal navigation was first resorted to to obviate natural impediments, but canal navigation, though it facilitates the transmission of heavy goods, does not quicken or materially increase inter-communication. Steam navigation overcame many obstacles, but still left as many unconquered. The American people felt the want of an agent which should limit distance, defy seasons, and overcome territorial inequalities. Scarcely had this feeling become general, although, perhaps, unexpressed, when a new power presented itself. The spirit of the republic grasped it at once,

* Extracted from *Chambers' London Journal*, an amusing and instructive little work, issued weekly.

Digitized by Google

and has applied it to the wants of the widely scattered Union with practical sense and political foresight.

The united legislature of Great Britain has allowed the capital of its subjects to be applied to the formation of railways without system or uniform object; the thirteen state legislatures of the United States, though distracted with local partialities and territorial jealousies, have laid down something like a practical scheme in the construction of their lines.

The lines of railroads in the United States completed, in progress, and projected, are destined to run along the Atlantic seaboard, and to connect all its principal cities, Portsmouth, Boston, New York, Philadelphia, Baltimore, Norfolk, Fredericksburgh, and Charleston. From this sea-board they run into the far west, and thus connect pasturage and agriculture with trade and commerce. At Charleston, Pensacola, and New Orleans other lines run into the interior of the west, even to the borders of the Missouri. In the interior of the western territory from Indianopolis and Cincinnati, from Milwaukie Chiccago and Detroit, other lines extend to the borders of the lakes, interlocking with numerous canals, and from the banks of these lakes and streams direct lines run eastward to the principal cities; thus furnishing to the whole country commercial arteries through which its life-blood circulates. This has been the labour of twelve years only.

These lines traverse the most settled portions of each state, and terminate at the most important points from the borders of the Western lakes and rivers to the places of shipment on the seaboard. If we survey the map we shall see the termini, at both ends, resting at the principal commercial towns, both in the east and the west. The principal termini of each track upon the Atlantic lines may be found in Boston, New York, Philadelphia, Norfolk, Wilmington, Charleston, and Savannah. And here we may remark, that these lines must be taken in connexion with the routes laid out in British North America, running across the English and United States territories, and designed to connect the upper parts of the St. Lawrence with the ocean, and thus to overcome the obstacles which a Canadian winter opposes to commercial enterprise.

The commencement of the railway lines of the Atlantic frontier already constructed is at Portsmouth, in New Hampshire. From this point a line (40 miles) has been nearly completed to Boston. Thence a northward track (26 miles) diverges to Lowell—the American Manchester—and from that place another line is laid out to Concord. The first section, however, of what is strictly termed the Atlantic Railroad Line, extends from Boston to Norwich, and to Stonington, both in Connecticut. The Boston and Worcester line (44 miles) joins the Norwich railway (58 miles) at the latter town. At Norwich the line unites with steam navigation, and furnishes a rapid conveyance to New York. The Boston and Stonington line passes through the most flourishing towns of Massachusetts to Providence, the capital of Rhode Island. Through Long Island Sound it furnishes a safe mode of communication between Boston and New York all the year.

Passing from New York, we arrive at the line which leads directly to Philadelphia, and from that city another extends to Baltimore, and from Baltimore one to Washington. Crossing the Potomac, there is another track marked out in Virginia, from Alexandria to Fredericksburgh, from Fredericksburgh to Richmond, from Richmond through the low pine lands of North Carolina to Wilmington, with a diverging track to Norfolk, at the mouth of the James river; and also two lines marked out across the whole length of the state of Delaware. From Wilmington, North Carolina, a line is also projected, if it be not already laid out, along the shores of South Carolina to Charleston.

Thus we have a continuous line projected and in the greater part executed, along the Atlantic frontier, including the most powerful and populous states, which, when completed, will afford the most splendid route of travel and conveyance to be found in the world, extending from the northern to the southern metropolis of the United States.

From the principal Atlantic cities, as points in the Atlantic line, railway routes have been projected to the west, for the purpose of connecting its vast agricultural treasures with the markets of the east, and also of affording channels of transportation for the western population to the eastern cities, and for the conveyance of eastern goods to the western markets.

Massachusetts seems to have started first in this most brilliant career of internal improvement by railways; and to this it was impelled, fully as much by necessity as by the possession of capital. A few years ago, this state, then considered as of an isolated position, exported only granite and ice; and it was then a matter of doubt whether its commercial capital, Boston, was not, in fact, retrograding in population and prosperity; all is now altered, the keen forecast and energetic enterprise of its population have burst forth in the establishment of works, which, considering the time in which they have been accomplished, appear almost unexampled, and which must render their city hereafter the great European port. Besides the introduction of a line of steam-ships from England, there has recently been nearly carried out a line of railways that will connect that city with the shores of Lake Erie, and another line has been projected from it across the Rocky Mountains to the shores of the Pacific, and so connect it by steam navigation with the Pacific states of South America, with Australia, New Zealand, India, and China. Whoever will cast a glance at a map will at once see that the Cunard line of steamers from Liverpool to Halifax and Boston, must become the great line of intercourse between Europe and North America, and this fact, when taken in connexion with the lines already executed from the last-named port to the far west, and with the great scheme projected, will show that our assertion that Boston will hereafter be the great port of the Union is not wild or visionary.

The lines to connect the trade on the west with Boston are worthy of some detail. A route has been commenced and is nearly finished between that city and Albany, which is connected with lines running directly to Buffalo upon the shores of Lake Erie. This railway continues the line from Boston to Worcester, running to West Stockbridge, and there it intersects the Hudson and West Stockbridge line, passing by the towns of Charlton, South and West Brookfield, Palmer, and Wilbraham. The length of this section, east of Connecticut, is 54 miles, and of that on the west side of the Hudson is 62 miles; the whole length from Worcester to the state line, being 116 miles. The line which this last-named railway meets, commencing at West Stockbridge, Massachusetts, possessing a branch to Pettsfield, and passing through Lebanon Springs, and through Rensellaer and Columbia counties, proceeds in a south-easterly direction to Greenbush, opposite Albany: its length being 41 miles. This railway will soon be completed, and will come into keen competition for the western trade with the navigation of the Hudson—at present the most important channel of travel in the Union.

At Albany commences a series of railways that is continued from that city to Buffalo, and which terminate the great chain of communication from Boston to the Lakes. The first link in the series is the Mohawk and Hudson line, extending for 15 miles from Albany to Schenectady. From the latter place a track diverges off to Saratoga Springs, a distance of 21 miles. The Renselaer and Saratoga railway also reaches the same point, commencing at Troy. From Schenectady a railway has been finished to Utica, a distance of 27 miles, running through the most fertile portion of the Mohawk valley. The Syracuse and Utica railway is an extension of this line for a distance of 53 miles, and is deemed the most productive work in the State of New York. It passes up the southern acclivity of the Mohawk, nearly parallel with the Erie canal, which it crosses when about to enter the town of Rome. Leaving Rome, it re-crosses the canal, and terminates at Syracuse. This route is continued to Buffalo by the Syracuse and Auburn line, which runs a distance of 26 miles, through a beautiful, fertile, and thickly-peopled country, and then unites with the Auburn and Rochester line. This latter road is not as yet completely executed. The great western track from the latter point is continued by the Tonawanda railway, extending from Rochester upon the Gennessee river to Attica, a distance of 43 miles. From this point the Attica and Buffalo railway, 30 miles in length, terminates the grand chain of inter-communication from Boston to the Lakes. This great northern line of railways to the west would, it was anticipated last winter, be completed throughout its whole extent in July of this year, and would open a channel of transportation for agricultural products and manufactured goods from the Atlantic to the lakes.

From this great line many minor routes connect it with the principal towns of the states through which it passes. And in the great northern line, before described, projected tracks diverge to the shore of Lake Ontario; and on this from Saratoga to the banks of Lake George.

RAILWAY SALARIES—NORTH MIDLAND RAILWAY.

THE following are the documents alluded to in another column:—

To the Proprietors of the North Midland Railway Company.

GENTLEMEN,—In laying before you the enclosed memorials, addressed by us to the Directors of your Company, in consequence of a resolution of the Board to reduce our salaries 10 per cent. from the 1st July last, we beg to state, that in accordance with our wish therein expressed, the Directors have kindly delayed putting into execution the proposed reduction until the 1st of October next, whereby you might have an opportunity of expressing your opinion, as to the propriety and justice of enforcing so large a sacrifice from your clerks and other servants of the Company, for the sake of securing a trifling advantage to yourselves.

We believe that none of your servants are paid higher in proportion to the duties they perform, than those on other lines, and some of them are paid much lower.

The saving by deducting 10 per cent. from salaries chargeable to revenue exceeding 100*l.* per annum, and 1*s.* per week from the wages of porters, policemen, and others, will be about 2,300*l.*, and assuming the capital of the Company to be 3,000,000*l.*, the proposed reduction will add to your dividend about 10¼*d.* per share per annum, or about 1*s.* 6¼*d.* per cent., but will be seriously felt by those whom it will affect.

We therefore trust, that for the sake of the very trifling gain to yourselves as stated, and the great discouragement to us, you will by an expression of your opinion at the approaching half-yearly general meeting, on the 26th instant, induce the Directors not to enforce the resolution referred to.

We are, gentlemen,
Your most obedient servants,
THE CLERKS AND OTHERS,
Employed on the North Midland Railway.

August 14th, 1841.

To the Honourable the Chairman and Directors of the North Midland Railway Company.

THE MEMORIAL OF THE UNDERSIGNED,

Humbly Sheweth,—That your memorialists have heard with surprise and regret, that it is the intention of your honourable Board to make an immediate reduction in the existing salaries of 10 per cent. exceeding 100*l.*

That your memorialists entered the service of the Company under the impression that (far from being liable to any diminution in the amount of their remuneration) their salaries were fixed at a certain rate, to be increased when the prospects and returns of the Company should permit.

That your memorialists beg to state, that their

Digitized by Google

domestic arrangements have been made upon the faith of their present salaries having been determined upon, subject to their efficiency and good behaviour.

That your memorialists will be subjected to much inconvenience, and in many instances to embarrassment, should the reduction take place.

That should the affairs of the Company render it imperatively necessary that the reduction of 10 per cent. must be enforced, your memorialists will undoubtedly bow to the decision of your Board, but in that case they respectfully submit, that sufficient notice should be given to afford them the opportunity of revising their arrangements according to the reduced scale of salaries, and that the matter may be delayed until the 1st day of October next, before which time an opportunity will be given to your honourable Board, to inform the proprietary of your intention, who, in consideration of the very trifling advantage to be derived individually by them, may be of opinion, that so important a sacrifice on the part of their clerks should not be enforced.

Your memorialists have refrained from expressing their opinions of the illegality of so material a reduction, attended by so short a notice, and respectfully suggest, that the engagements they had entered into were considered binding for twelve months, subject, of course, to the results of inefficiency or misbehaviour, and your memorialists will ever pray.

To the Honourable the Chairman, Deputy Chairmen, and Directors of the North Midland Railway Company.

THE PETITION OF THE UNDERSIGNED GUARDS, POLICEMEN, PORTERS, AND OTHERS,

Humbly Sheweth, That your petitioners beg most respectfully to state, that they entered the service of the Company at certain weekly wages, with an allowance in case of sickness or accident.

That recently the sick allowance has been discontinued, and your petitioners have been compelled to join the Friendly Society, and provide for themselves in sickness, at the expense of 2s. 6d. per month, an amount they can ill afford to pay.

That the recently proposed reduction of 1s. per week in your petitioners' wages will be most severely felt by them, inasmuch as it will entirely prevent them availing themselves of the benefits offered by the Friendly Society, in addition to the diminution of their means for supporting themselves and families.

Your petitioners therefore humbly pray that your honourable Board will favourably consider their case, and your petitioners will ever pray.

RAILWAY SALARIES.

To the Editor of the Railway Times.

SIR,—I have seldom met with a more injudicious letter than one which you have permitted to appear in your last publication, signed "A Friend to the Subs." A grosser libel cannot well be imagined than is contained in that production; nor does it seem to have any other object in view than to make the parties whose "friend" he professes to be, dissatisfied with their situations, and to point out to the worthless and unprincipled, if such there be amongst them, the easiest way of cheating their employers. In doing so, he broadly insinuates that the "conductors" and "contractors" are a set of rogues, who only want the opportunity of leaguing with dishonest clerks, to cheat and defraud the Companies who place confidence in them. It would appear, too, from your correspondent's account, that passengers by railways are in the habit of practising "every species of insult" to the men who have "most trustworthy situations," and that the "superior officers" are a "constant annoyance" to their subordinates. If this be a correct statement of what takes place at the London ends of railways, all I can say is, that they order these things better in the country, where the insolence of officials towards passengers is a more frequent, and as I believe, a more just, cause of complaint. As to the miserable salaries of which your friend complains, I apprehend those who are in the receipt of them are not forced into the situations, and whenever they can *better themselves* there will be no difficulty in finding twenty applicants for every vacancy, as well qualified to discharge the duties as those who quit them. A person who in these times quarrels with salaries of 80*l.* to 120*l.* per annum for clerks in railway offices, and of 150*l.* to 180*l.* per annum for the junior departments in the engineering establishments, must have but a slender knowledge of what is passing in the world. There are thousands now eagerly looking out for such situations, who would not only perform the duties satisfactorily, but who would scorn to league with either conductors or contractors, to defraud their employers of one penny.

Yours truly,

AN OLD CLERK.

11th October, 1841.

RAILWAY ACCIDENTS.

FATAL RAILWAY ACCIDENT.—On Wednesday night, a fatal accident occurred to the keeper of a gate near Brough, named Heesom. It appears that the last train reached the gate kept by deceased, about half-past nine o'clock, it being then quite dark, the engineer, a very steady man, and one of the most valuable of the Company's servants, found that the keeper had not opened it, and on arriving at Hull he reported the neglect of the keeper, and it was intended that he should be severely reprimanded the next day. Early in the morning, however, his body was found lying on the line, with his hand and the back of his head crushed. It is supposed that the deceased had fallen asleep in his box at the time the train was coming up, and being startled by the whistle of the engine, had run to the gate, but had been too late to open it, and had been knocked down and run over by the train. From the wounds on the body it is supposed that deceased must have died instantaneously.—*Hull Rockingham.*

ACCIDENT ON THE MIDLAND COUNTIES' RAILWAY.—On Saturday afternoon an accident occurred on the Midland Counties' Railway, near Loughborough. A large quantity of ballast had been taken from a field adjoining the line on its eastern side, between the Nottingham road and the meadow lane, and a short but much inclined branch has been laid from the main line to the bottom of the excavation. Unfortunately the points at the junction of the lines were on the arrival of an up train so placed as to turn it upon the branch, where it came in contact with a train of earth waggons that had been placed there. The concussion shattered four of these waggons to pieces, and completely disabled the engine, but no person received any serious injury. The train was compelled to wait until another engine could be got from Leicester.—*Leicester Herald*, October 9. [We trust this occurrence has been inquired into.—ED. R. T.]

ACCIDENT ON THE NORTH MIDLAND RAILWAY.—On Monday an accident happened on the North Midland Railway to a train which was going at a rapid rate about one mile and a half south of Wingfield Station, when suddenly one of the axles of a coal waggon gave way. The workmen on the line, seeing the waggon off the rails, instantly gave an alarm to the engine man, who as soon as possible stopped his engine. Several of the waggons were more or less damaged, but not seriously. The engine man detached his engine from the broken waggon, proceeded as quick as possible to Amber Gate, and presently returned with three more waggons well laden with men from Mr. Stevenson's lime works, who lost no time in re-loading the materials into the empty waggons, and clearing the line as soon as possible. The train which was due at Wingfield Station about 11 o'clock a. m. was obliged to be turned on to the down line as far as Amber Gate, also the train which passes Wingfield Station. Soon after the 12 p. m. train was obliged to be removed also. After this the line was quite cleared, and the trains took their regular course. It is common for a guard to attend these coal trains, and he happened to be standing on the bumpers of the waggon that broke, but fortunately he escaped with only having his finger badly crushed.—*Derby Reporter.*

ANOTHER ACCIDENT ON THE BRIGHTON RAILWAY.—It was generally reported last evening that a fall of earth had taken place on the line near Hayward's-heath, covering one of the rails. The only inconvenience occasioned by the accident was, that the up and down trains had to run a short distance on one line. A number of labourers have been set to work to clear away the obstruction.—*Courier of Thursday.*

FATAL ACCIDENT ON THE ULSTER RAILWAY.—We regret to learn that an accident occurred yesterday, near the Dunmurry station, by which a highly respectable gentleman, Mr. Hugh Kidd, of Newry, lost his life. It appears Mr. Kidd went in the one o'clock up-train, with the intention of visiting Dr. Montgomery at Dunmurry, and, of afterwards proceeding, by a later train, to join the first conveyance for Newry. The train stopped for the usual time at Dunmurry, but Mr. K., from having been engaged in conversation, did not get out at the proper time. After the train got in motion again, he rashly leaped from the carri ge in which he was sitting, and the consequence was, that the wheels of the hindmost carriages ran over and crushed one of his legs in the most frightful manner; the unfortunate gentleman, we understand, also received severe internal injuries, arising from the fall. He was immediately conveyed to the house of Dr. Montgomery, where, in a short time, he expired. As soon as the train reached Lisburn, an engine and carriage were instantly despatched with a surgeon, in order that every assistance should be rendered to the sufferer; Dr. Montgomery also procured the attendance of Dr. Purdon, of Belfast, as early as possible, but we regret to say, that Mr. Kidd had expired before that gentleman arrived.—*Ulster Times*, October 12.

COACH ACCIDENT.—As one of the few coaches that are now left on the road, was on its way to Brighton last Friday, the wheels, which were new, ignited from the friction, near Albourne. The passengers became alarmed, and quitting the vehicle, proceeded on their journey as they best could, some being fortunate enough to procure other conveyances, while most of the remainder trudged to Brighton on foot. Another set of wheels having been at length procured, the coach proceeded to Brighton, with a few of the passengers who would not leave, and arrived there about two o'clock on Saturday morning, six hours after the usual time. No inconvenience was occasioned to the passengers beyond the delay.—*Brighton Gazette.*

—o—

DUBLIN AND DROGHEDA RAILWAY.—This railway is rapidly progressing towards completion. Hundreds of masons, quarrymen, labourers, are to be seen employed on the works, from the Crescent of Clontarf towards Swords, which are now so far advanced as to be worthy of a visit.—*Limerick Chronicle.*

Mr. Henderson, an English railway and canal engineer of considerable eminence, has settled in Dublin. We hail this as indicative of the increased progress of useful public works in this country.—*Limerick Chronicle.*

MANCHESTER AND BIRMINGHAM RAILWAY—BRICKLAYERS' STRIKE.—On Tuesday last, all the bricklayers, amounting to above 300 trowels, and engaged at the terminus of the Manchester and Birmingham Railway, struck their work, in consequence of the Company having engaged three or four men not belonging to the Bricklayers' Club. There are of course as many labourers lying on their oars, making a tolerable regiment. From inquiries made, wages form no part of the dispute. The daily earnings of these men, one-half of whom are voluntarily idling away their time, and the other half necessarily so, will amount to 130*l.* or 140*l.* per day, and should the strike last a week, the sum approaching 1000*l.* will be lost to these labouring men.—*Leeds Mercury.*

2. Toll to London and Birmingham 161*l.* 17s. 0d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 27*l.* 18s. 0d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,668*l.* 1s. 11d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

25. The receipts for goods, &c. include, carriages, 47*l.* 15s. 6d.; horses, 23*l.* 19s. 0d.; dogs, 3*l.* 16s. 9d.; parcels, 208*l.* 8s. 2d.; cattle, 81*l.* 0s. 0d.; corn, 6*l.* 13s. 1d.; heavy goods, 454*l.* 1s. 4d.; coal, 124*l.* 3s. 4d.—Total, 949*l.* 17s. 2d. The dividend is from the time opening.

27. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway. The dividend is from the commencement.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Edinburgh, Leith and Newhaven Railway.—*In the early part of the week we received a very long letter from Mr. Richard Dawson, of Liverpool, "agent" to this scheme, partly in reply to two or three of our correspondents, and partly in attempted vindication of himself and the Directors of the Company. As Mr. Dawson was anxious that this letter should appear in our number of to day, we had put it into type, and intended giving it, when lo! there came yesterday a letter from Edinburgh, signed "Allen George Field, Secretary," in which the writer states, that Mr. Dawson had forwarded to him a copy of the letter referred to with a request that if not approved of, Mr. Field would write to us to stay the publication. "Having submitted it to the Board, we presume," I am instructed says Mr. Field to request that it may not be published." The reasons assigned by Mr Field for this request are two. One of them is, that the explanations volunteered by Mr Dawson "are sadly defective from want of knowledge evidently of many of the most important and leading features." We leave Mr Dawson and the worthy Secretary to settle this point between them. The other reason is, "because the Board of Directors have long since determined they will not notice the absurdities and imaginary grievances of contemptible and anonymous scribblers, much less ALLOW their agents to walk out of the immediate line of their duty, particularly in any attempt to make an UNCALLED FOR 'vindication of their conduct, through the medium of any public journal." We expected no less. We never yet knew a body of public men whose acts had been called in question who did not profess a thorough contempt for the medium through which their misdoings had been exposed to the world, at the very moment they were writhing under the well merited castigation of "contemptible, anonymous scribblers." Our readers are, happily, spared the infliction of Mr. Dawson's rigmarole, to which we had felt it our duty to append a few editorial observations, but we beg that, next time that gentleman proposes honouring us with an epistle intended for publication, he will make up his own mind before sending off his letter, and save us the trouble and expense of putting a page and a-half into type, only to be cancelled on the following day. We comply in this instance with the Secretary's request, without in the smallest degree recognising the right of Mr. Allen George Field, or his employers, or their agent, to exercise any control whatever over matter that has once been forwarded to us for publication.**

London and Brighton Railway.—*Perhaps A Shareholder and Resident will deem a letter which appears in another column sufficient to answer his purpose. If not, we will publish his communication next week.*

Veras, who writes in reference to the Great Western Railway, dwells we think too much upon minor points, many of which would we are sure be at once corrected if represented in the proper quarter. By the way, we wish our friends would vary their signatures somewhat. Last week we had a correspondent signing himself Veras; to day appears a letter with the same sobriquet; and now we are replying to a third—all three communications coming from different parties.

Great Western Traffic.—*By some mistake we received last week, instead of the proper returns, a duplicate of the returns for the previous week which we had already given. This was discovered at too late an hour to enable us to rectify the mistake in our last. We now therefore give the results for the week, ending October 3 —*

Passengers	£11 193	16	9
Goods	1,922	0	9
Total	£13,115	17	6

South Eastern Railway.—*One Interested in Railways will find in another column a short notice of the present position of the works upon this important line.*

We shall be most happy to receive the communications referred to in the private notes of Mr. H. E., of Liverpool, and of our old correspondent who dates from the Weands worth road.

A. Z. (whom we noticed last week).—*We find the account is rendered not more frequently than once a month, and then not regularly.*

Mr. W. J. D. declined, with thanks. The MS. shall be returned, if required.

We cannot assist our Darfield correspondent. He must advertise in the usual way, and take his chance.

T. S.—*Appointed 1837; resigned 1839. We believe the party has since gone abroad. To the other inquiry—Yes.*

J. K. Z. *may safely trust us; we shall be happy to do what we can to assist him.*

Grand Junction Railway.—*In the letter of Observer S, inserted in our number of last week, the words "Docks' flats" should have been "Duke's flats" alluding to the Trustees of the late Duke of Bridgewater. In like manner "convenience of the Docks" should be read "Duke's."*

We feel much obliged to our Southam correspondent for his expression of opinion, and shall not lose sight of the matters to which he alludes. His position must have given him cognizance of many facts which we should have great pleasure in making public. With respect to the accommodation offered by second class trains, he should recollect that the Companies have to guard against making them too comfortable. If they were to fit them up in a superior manner, what would become of their first class?

W. H. B.—*The arrangement referred to would entail a considerable degree of additional labour, without, as far as we can perceive, doing much good.*

No Shareholder *was anticipated by another correspondent.*

Esau.—*The same answer.*

Liverpoolensis *is much too modest. We shall be glad to hear from him again.*

Mr E.—*The letter has been forwarded.*

Blackwall Railway.—*In answer to A Country Proprietor, who inquires if the dinner to the Directors proposed at the late general meeting has yet been given, we have to state, that as far as we know it has not. We presume that the affair has miscarried from want of some active person to arrange the details. The Directors and officers of the Company cannot of course interfere. Why does not Mr. Crawshay, with whom the proposal originated, see to the matter? No man could do it more effectually.*

Homo *forgets that the new shares were issued at a heavy discount.*

Will Economicus *enable us to carry his suggestion into effect.*

Kolmann's "Safety Railway."—*A correspondent wishes to obtain some information respecting the present position of this invention. We believe a Company was formed, or attempted to be formed, to carry it out.*

Four wheeled Engines.—*A long letter appeared in the Times of yesterday from Mr C. Hood, of Earl street, Blackfriars, one of the Directors, we believe, of the Eastern Counties' Railway on the superiority of four wheeled engines over six wheeled. Mr. Hood promises a further paper, and should none of our correspondents in the interim take that side of the question, we may hereafter perhaps give the substance of Mr. Hood's remarks.*

The Proposed Railway in Brazil.—**Mr. H. R. Forest's strictures on this scheme shall appear next week.**

Mr Francis's *letter next week.*

THE RAILWAY TIMES.

SATURDAY, OCTOBER 16, 1841.

So much had been written and spoken on the subject of a railway route to Scotland, without any symptoms of measures being taken to carry a feasible scheme into effect, that we had begun to fear the whole would terminate, for the present at least, in profitless talk. We are glad to find, however, that such is not to be the case, but that the plan laid down by the Parliamentary Commissioners now stands a fair chance of being fairly and efficiently carried out.

We allude to the proceedings of a very important meeting recently held in Carlisle, and of which ample particulars will be found in another part of our present number. It will be seen that the scheme has been taken up in earnest, not only by some of the most influential gentlemen of the district, but likewise by two or three of the most important Companies whose prosperity will be promoted by the adoption of the line selected. The Grand Junction Company have agreed to subscribe for shares, conditionally, to the extent of 200,000*l.*, the condition being that the landowners generally shall, in like manner, accept payment for the property required by taking shares to their several amounts of compensation. This is a very liberal offer, and as such has been followed by the North Union and Bolton and Preston Companies, and we have no doubt will be cheerfully followed also by the London and Birmingham Company, who are as much interested in the success of the west coast line as it is possible for any other Company to be. Among the many other advantages which this scheme for raising the requisite funds presents, it is not the least that the shares thus subscribed for by the existing Companies will of course be firmly held, without any risk of speculation in the stock-market on the one hand, or inability or unwillingness to pay up the several instalments as they become due, on the other. To a Company so powerful and so flourishing as the Grand Junction happily is, the investment of 200,000*l.* in shares for so legitimate an object can be of little consequence; and we have no doubt that the arrangement will be cordially approved of by the proprietors at large. Whatever may be the immediate and direct returns for the money so laid out, assuredly the construction of the line proposed would produce to the Grand Junction, and the other Companies in connection with it, a most satisfactory dividend, by contributing to swell the revenue of their own several undertakings.

But *will* the landowners consent to accept in shares the amount of the compensation to which they may be deemed entitled? We think they will, and this for more reasons than one. In the first place, the days are gone by, when, as Captain HUTSH very justly remarked at the meeting, railways were looked upon as a moral pestilence, and Railway Engineers as the pioneers of mischief. Fortunately, the results even to the landowner himself, have been such as to enlist his self-interest in their support, while at the same time the public generally have gained more correct notions of the importance of such works, and as a necessary consequence begin to regard with different feelings from those which at one time prevailed, the conduct of those who would obstruct their progress from wantonness or caprice, or for the sake of extorting an undue remuneration for the property which their promoters may require. In a word, self-interest and shame, two of the strongest moving principles of human action, will combine to render the landowners in the North less exacting than the past experience of other Companies might suggest, and more disposed to lend positive assistance to the prosecution of a scheme which not only will advantage themselves so sensibly, but which, if obstructed and opposed at the outset by grasping cupidity or apathetic indifference on their parts, is almost certain never to be carried into effect. The strong exertions which are now making to secure another route between the capitals of the two countries cannot but have a beneficial effect upon the owners of property upon the line which has received the high sanction of the Commissioners. They must be fully aware that if *they* do not step forward to secure the boon which is so far within their reach, others will; and that if the present opportunity is suffered to glide by unimproved, it may be long, very long, before such another offers itself. This is not an affair of mere speculation—an affair got up on the Stock Exchange or for Stock Exchange purposes; it is an attempt to carry out in good faith a scheme which, whatever may be its results as a pecuniary investment, cannot but be greatly conducive to the true and permanent interests of the district, and likely to contribute in no trifling degree to the general benefit of the two kingdoms. Seeing these things, and being satisfied, moreover, from the aid offered by Companies so influential as the Grand Junction, that it is seriously intended to carry the scheme into effect, we cannot believe that the landowners will be so blind to their own interest, or so careless of the interests of their several localities, as not at once to fall into the plan of

Digitized by Google

receiving payment for their land in shares, thereby securing not only the valuable assistance of the Companies referred to, but inducing other parties to embark their capital in furtherance of so noble, so national a work.

It appears that allowing for the landowners' shares, and for those to be taken by the Grand Junction, and other Companies, very nearly *one-third* of the entire capital required for the construction of the line may be looked upon as already secured! This certainly is a most gratifying circumstance. Were Government fully sensible of the vast importance of the scheme, they would at once advance another third (at least) of the necessary amount upon terms such as Government only can reasonably be expected to grant, and then the immediate success of the plan would be placed beyond all question. We fear, however, that under present circumstances this is scarcely to be expected; and with so good a foundation as landowners' subscriptions, and subscriptions by the great southern Companies, we hope it will not be required. We are strongly of opinion, and have always been so, that a line to Scotland, whether by the west coast or the east, would *pay* much better than is generally supposed, enjoying as such a line for some time must (whichever of them is carried into operation) a complete monopoly of railway traffic. Local traffic might in certain parts of the route not be very abundant, but the through trade, the most profitable of all, cannot fail to be great. Conveyance by land will always be preferred to conveyance by water, notwithstanding the greater cost of the former mode, and those who are at all acquainted with the immense business which has of late years been carried on by water between the metropolis and Edinburgh, and Glasgow, and other Scotch towns which the formation of a great trunk would sooner or later bring within the sphere of railway operations, will admit that the prospects of a large and profitable traffic for such a line as that of which we now treat are most promising.

We sincerely hope that the very sensible views of Captain HUISH as expounded at the Carlisle meeting, will be acted upon in the formation of this line, and that the efficiency of the undertaking and its adaptation to the wants of the district and of the two countries, will be more looked to than its splendour and perfection as a work of art. Great, nay fatal, mistakes have been committed in many Companies from a disregard of so salutary and so self-evident a maxim. *Cheapness* is the grand desideratum in railway-making, we mean of course a cheapness consistent with efficiency—for there may, and indeed we have many instances of the fact, be an apparent economy which in the end proves to be the very reverse. Much, however may be done to keep down the expenditure of lines now to be constructed, and most certainly the dear-bought experience of other Companies could not be more effectively turned to account than in the case of such a line as is now under consideration. The projectors must take care to secure the services of an engineer who will look more to the interests of his employers than to his own professional fame. It is pleasing doubtless to be pointed at as the contriver or constructor of a magnificent work, but if such magnificence has been secured at the cost of the dividends of the proprietors, the retrospect must be anything but agreeable to an engineer who is impressed with a conscientious feeling of duty towards those who have called his talents into exercise.

It speaks well for the success of the west coast line to Scotland, that it has already secured so much local support, but more than all, that it has called forth so little opposition. It appears that, so far as has yet been ascertained, there is not a single dissentient on the proposed route, while the high and influential names of Sir JAMES GRAHAM, the Earl of LONSDALE, and other distinguished noblemen and commoners afford a guarantee that it will meet with no factious obstruction in high quarters. We anticipate, indeed, a remarkable economy in the preliminary expenses of the undertaking. There will be no great landowners to buy or bribe off—no Parliamentary opposition to encounter—none of those underhand bargains, into which the promoters of railway projects have too frequently the weakness to enter; a fair price for the land required, and the formal passing of an Act through Parliament will enable the promoters of the line to proceed at once to its construction and completion.

Measures are, it seems, to be taken to give the usual March notices for the prosecution of a Bill in the next session of Parliament but one. This is a very useful and a very necessary precaution. We trust, however, that no means will be left untried to induce the legislature to dispense with these notices, so that the project may be prosecuted without delay. We have strong hopes, that when it is discovered how influentially the scheme is taken up, and above all, how generally it is supported by those for whose protection alone these notices are necessary, Parliament will be induced in its wisdom to dispense, in this instance, with their enforcement. No possible injury could ensue to any party, while very material benefit would be secured in the prosecution of a most important work.

It will be seen that the advocates of the rival line by the east coast are by no means idle. Our preference is awarded certainly to the Commissioners' line, but let us have either line rather than none at all; *both*, we fear, we cannot at present hope to secure.

ELSEWHERE will be found copies of certain memorials presented to the Directors of the North Midland Railway Company, from the clerks and other subordinate officers in their establishment, praying that a contemplated reduction in the amount of their several salaries may not be carried into effect. The memorials bear date about two months back (although it is only within the last few days that they have been brought under our notice), and one of the objects which they were intended to accomplish was to procure a postponement of the proposed reduction from the 1st of July, the day from which it was originally intended by the Board it should take effect, to the 1st of October, in order that the matter might be discussed and determined upon, at the half-yearly meeting in August last. That meeting, however, passed over without any reference having been made to the subject, and we presume, therefore, that by this time the resolution of the Board has been reduced to practice.

We shall not be suspected of encouraging or conniving at a lavish or needless expenditure in the conduct of the daily operations of railways, but we cannot help thinking that such an attempt to cut down the previously inadequate allowances of inferior servants is altogether uncalled for; nay, if it be true, as stated in the memorial, that the parties on the North Midland establishment are not "paid higher in proportion to the duties they perform than those on other lines," and "some of them are paid much lower," we would add that any reduction of the kind contemplated is as ill-judged, and cannot but be as injurious to the Company's interest, as it is harsh and unjust to the sufferers themselves. How can the Company expect that their servants will feel an interest in the prosperity of the undertaking, when they find it difficult to exist upon the scanty pittance allowed them? How can they look for that zeal and enthusiasm in their work, without which no responsible duty, such as devolves upon many of these persons, can ever be adequately performed? If, as mentioned in the memorial, the proposed reduction will subject them to "much inconvenience, and in many cases to embarrassment," can it be supposed that kindly feelings will spring up between the employed and their employers? Or is it not certain, on the contrary, that these hard-worked individuals will contrast their own ill-remunerated labour with the comparatively light and well-paid duties of their so-called superiors, and draw inferences by no means conducive either to their own comfort, or to the efficient discharge of their several duties?

The fact is, that these economical alterations (as we remarked in a recent article) are commenced at the wrong end. The North Midland Board are very laudably anxious to secure economy in the working of the concern, but might not reduction, like charity, begin at home? We know that the aggregate amount awarded to the members of the Board has recently been reduced, but this is owing to a reduction in the number composing the Board. The allowance to individual Directors appears to remain as before. We do not say that they are too well paid for the anxious labours which they have to encounter, but as we take it for granted that it is not the *pay* which leads them to undertake their arduous office, perhaps it would be as well that they should inquire whether some reduction in their own honorary allowances might not judiciously be made, before they summarily strike off, by an official resolution, one-tenth part of the wages of those who have nothing beyond their own daily labour and "their good spirits, to feed and clothe them." To a gentleman accustomed to the comforts and luxuries of life it may appear of little importance that 10 per cent. should be lopped off his means of expenditure; he has still enough, and to spare; but by the poor clerk, burdened probably with a family, the smallest reduction, (aye, even to the extent of 1 per cent.,) is very sensibly felt.

And what, after all, will be the saving effected to the proprietors, supposing these economical schemes to be carried to their fullest extent—supposing the clerk who is starving upon 100*l.* a year to have his salary reduced to 90*l.*, and the policeman with 20*s.* per week to have a shilling deducted from his hard-earned wages—what will be the practical, tangible benefit to the shareholders? If we may credit the memorial, it will amount to about 10½*d.* per share per annum, or about 1*s.* 6½*d.* per cent.! And to secure this magnificent augmentation of dividend, murmuring and discontent are to be excited, and much serious inconvenience occasioned to a very deserving class of men! If we can appeal to the proprietors upon no higher considerations, we beg of them to consider how far the proposed (perhaps the accomplished) reduction is likely to add to the efficiency of their servants. Upon this point some wholesome truths were told in a letter last week by one of our correspondents. How can the Companies expect that their officers will feel permanently attached to their establishments

Digitized by Google

if, as occasion offers, or a display of pseudo-saving can be made, they are to be at the caprice of a Board of Management, or of a cheese-paring executive? If 90*l.* is to be substituted for 100*l.*, in order that 10½d. per share may be added to the dividend, why not reduce the allowance to 80*l.* and make the saving 21*l.* at once? Is 90*l.* the minimum, or how much further is the allowance of a poor clerk to be reduced?

Are there no sinecure, or all but sinecure, offices in the North Midland establishment? Are there no over-paid functionaries—no unnecessary places or persons in connection with the line? If there be *not*, the Company are more fortunate than most of their neighbours. We have no doubt, however, that a little inquiry would elicit a good deal of information upon this point, and that it would be found that a really useful reduction in the Company's expenditure might be effected, without harshly screwing the subordinates down to starvation pitch.

Here is another illustration of the evils resulting from a lavish expenditure of money on the construction of a line. Had the same apparent anxiety to economise the Company's funds been displayed somewhat earlier in the Company's career, the poor subs. might at this moment have been suffered to retain their full allowance undisturbed. Thus do the innocent suffer for the guilty!

We have learnt since the preceding observations were in type, that the reduction of 10 per cent is definitively fixed to take effect from the 1st inst. Mr. NEWTON, of Derby, is generally understood to have been the author of the proposition, and as that gentleman has been elected to succeed Mr. GLYN in the Chair, the *employees* of the Company have not much to look forward to, as regards a return to the old scale. We must reiterate our opinion that the proposed saving (if saving it turn out to be) is to be effected in a way wholly unworthy of a great Company, and that the reduction is extremely hard upon those parties who have laboured zealously in the Company's service from the commencement, and who at a time when they were probably looking forward to an increase of salary, are subjected to a diminution of their income in common with those who have just entered upon their duties.

VERY great inconvenience is occasioned to individuals travelling from London by railway, in consequence of the frequent alteration of trains upon some of the metropolitan lines; and this inconvenience is much aggravated by the circumstance, that a particular train will call this week at certain second class stations, and the next week pass them by without stopping at all. We do not think that sufficient publicity is usually given by the several Managements to these alterations, or to the times of starting generally. No doubt this arises from a wish to economise the funds of the Companies, but a few pounds more or less expended in the course of a half-year in advertising or bill-printing, could not sensibly affect the net profits of any of the lines, and would, we are persuaded, contribute very materially to the convenience of the public, as presenting to intending travellers a ready means of reference.

A very useful arrangement might easily be entered into among the several Companies, namely, to open one or two offices (say, one in the City and one at the west end of town) were time bills of *all* the railways, and every information relative to the hours of arrival and departure and to the scale of fares, could at once be obtained. At present, if a pleasure trip by railway is contemplated, and the party is in doubt which of the lines will best suit his convenience, as to the time of starting or rate of charge, he has to hunt over town for bills of the different Companies, and very frequently he hunts for some of them in vain. Bills of the leading lines may, it is true, be obtained at some of the coach offices, but not to mention that the officials at these places are not overburthened with civility, it often happens that the very bill you are in search of is not to be obtained, because the particular office to which you apply does not "book" for that Company.

The expense of two such offices need not cost the metropolitan Companies and those immediately associated with them (such as the Midland Counties', North Midland, &c.) more than 10*l.* or 12*l.* a year each, and if the proprietors of horse-coaches, steam-boats, and other conveyances in connection with such railways were to join in the arrangement, the cost would of course be still further reduced.

The frequent alterations in the Companies' time tables to which we have already referred, are often the cause of much disappointment. We have known instances in which persons trusting to a time bill hanging up in a coach-office, have on reaching the railway station found that there was no conveyance to their destination for hours afterwards, the trains having been altered in the interim. A very good plan to guard so far against this evil has been adopted on the York and North Midland line. We have now before us a time-bill of that Company which bears at top in prominent characters, the date "*October* 1, 1841," and underneath it is stated that "*bills are printed on the 1st of every month and those of a previous date are not always to be depended on.*" We recommend this simple expedient to the notice of other Companies.

A correspondent, practically conversant with the conduct of railway traffic, suggests that much benefit would accrue to the proprietors and to the public, if each Company were to supply all other Companies with time and fare bills, in order that every station clerk might be enabled to furnish information, when required, concerning other railways besides that upon which he may be engaged.

OUR correspondent "Investigator," in his letter of the 27th September, on the Manchester and Leeds Railway, gave it as his opinion that the economy of coke alone is not likely to occasion any great saving in locomotive expenses; and taken abstractedly it certainly does not embrace the whole question, for if the price of coke on that line be only 14*s.* per ton, and their average consumption 36½lbs. per mile, a saving of half the coke would only be equivalent to one-seventh, or 14¼ per cent. of the entire locomotive expenses. On lines, however, in the south of England, where the coke has to be made of Newcastle coal, it cannot be manufactured by the Companies for less than from about 34*s.* to 36*s.* per ton, and the saving on the total expenses would, under such circumstances, become about one-fifth or 21 per cent., which is of itself a consideration well worth attending to. On a line of the extent of the London and Birmingham Railway, would amount on this supposition to 19,000*l.* per annum, and of course any saving would be in proportion to this extreme case.

We however attach great importance to economy in this heavy item of locomotive expenses on other grounds, for we are convinced that general attention should be directed to economy of the machines while executing the work required of them, instead of endeavouring, as has been too often the habit of inexperienced Directors, to obtain the smallest possible number of engines for their expected traffic, at the least possible cost, that they might acquire some credit for economising the expiring funds of their undertaking, while they would carefully provide that outward show might not be wanting.

We should not consider the mere economy of coke so important if along with the attention required to watch its daily consumption there did not also spring up a rivalry among the individual workmen to excel each other in the general economy of their engines, and causing immediate complaint of any derangement of machinery requiring repairs, which might tend to cast him in any degree behind his compeers. It is the infusion of this careful system of watchfulness which is so much required to pervade every department in these large undertakings, and ensure (to use a homely phrase) that one stitch should be promptly applied, instead of waiting until nine are required. Were this generally the case, we should hear but little complaint of the vexatious detentions and misfortunes that now attend the opening of most new lines, for it would oblige the Directors of railways to provide a sufficient stock of really well-built and substantial engines, in readiness to meet the immediate traffic, and give an opportunity for that careful examination and repairs for which such machines constantly require to be for a time laid aside. It might moreover induce Directors to consult, more frequently than has been their wont, such engineers as have especially directed their study to the mechanical working of railways, rather than to the construction of bridges and earthwork, for we fear there are but few of the present day who can boast a practical detailed acquaintance with both these branches of engineering at all commensurate with the advance in each department. The consequence has been that we frequently find that the locomotive engines have to be remodelled at great expense before they are enabled to compete with those employed upon older lines.
